consistent with giving a general support to the Constitutional policy which M. Buffet is supposed to represent, the Extreme Right ought never to have been admitted into it.

Probably M. Buffet was conscious that his explanation halted, for he lost no time in providing it with a crutch in the shape of Marshal MacMahon. The business of the electors, he said, is to send up two Chambers determined to support the Marshal in his resistance to anti-social programmes. Without this the task which he has undertaken will become impossible, "for it can never enter anybody's mind "that the Marshal of France, the victor of Magenta and the "Malakoff, can ever make himself the docile instrument of "the Radical party and the instrument of subversive pas-"sions." There are two senses in which these words may be taken. In the most natural sense they contain a threat of resignation. In that case the "task" to which M. Buffet refers will mean the work of governing the country, a task to which the Marshal will no longer feel equal if he has not a Legislature in which he can feel confidence. But this "task" may also stand, though less obviously, for the work of governing the country under the present Constitutional Laws, in which case the implied threat relates not so much to resignation as to some act in the nature of a *coup d'état*. Marshal MacMahon has never shown any disposition to put himself above the law, but the hints which have from time to time been put forward by his partisans seem rather to point in that direction. No one who bears in mind how critical the situation of France is, and how much more critical it may easily become, will deny that circumstances may arise in which it might be an open question, or something much less than an open question, whether the duty of the President to the country could be squared with his duty to the Legislature. There are conceivable cases in which a *coup d'état* may be the least of two evils. But it can never be wise to hint at this beforehand. Even threats of resignation, uttered by or in the name of a constitutional President, ought carefully to be avoided, because they encourage the idea that the Chief of the Executive views one Parliamentary party with more favour than another, and is so far disqualified for holding the balance even between them. M Thiers gained nothing by indulging in such threats, though in his case the objection which applies to them in Marshal MacMahon's mouth did not hold good, since he virtually held office at the pleasure of the Assembly, and was avowedly his own First Minister. A still greater mistake was committed by M. Buffet, or by some subordinate in the Ministry of the Interior, in the communication to all the newspapers of a semi-official note, in which the Marshal was made to congratulate M. Buffet on having so clearly defined the line Conservatives to whom the Government appeals, and to express confidence that the majority of the electors will comprehend these sentiments and concur in them. Supposing that the Marshal's confidence is justified, and that the electors really comprehend and share M. Buffet's sentiments, the value of the tribute rendered to the Government by the country will be lessened in proportion as it is made less spontaneous. The enemies of the Government will maintain that the official pressure brought to bear on the elections makes them no index to the feelings of the constituencies, and that most necessary and hitherto unattainable element of French politics, the existence of a genuine and unmistakable public opinion, will nowhere be found. If, on the other hand, the Marshal's advice is to be mistaken, and the electors return a Senate and a Chamber of Deputies resolved to [illegible] M. Thiers, the [illegible] consideration [illegible] whether, by [illegible] Council-General of Magnate and the [illegible] among the [illegible] threats are usually the [illegible] however wise they may be, [illegible] followed without a sacrifice of [illegible]

[illegible] spoke again. This time he [illegible] heads of the Government not to [illegible] Paris, Lyons, and Marseilles. [illegible] There are few reasonable men [illegible] in their hearts feel a sense of [illegible] the Government on this point. [illegible] no [illegible] justification for the maintenance of the state of siege in the three principal cities of France, but [illegible] whether the Liberals would not be the [illegible] to [illegible] which might encourage the extreme [illegible] party to demonstrations which would certainly have their first result in the alarm given to timid voters. If a Liberal Government were in power, it would be very difficult to persevere in a policy of repression for which circumstances seem to give no excuse; but as the maintenance of the state of siege in these three cities will chiefly injure the Radical orators and journalists who cherish a wise dread of the General in command, the moderate Liberals may for once be thankful that M. Buffet has saved them from their friends. That this view was taken by a certain number of the Left was shown by the result of the division. A formal protest against the obnoxious principle was made on the question that the state of siege should be raised universally; but the minority of 329 which mustered in opposition to the Government on this point dwindled to 273 on the question that the state of siege should be raised in Paris. The more peacefully the elections are conducted and the more completely M. Buffet's forebodings are discredited by events, the better is the chance that wavering voters will pluck up courage and vote for the Republic in which they are slowly learning to feel some trust.

THE MALAY WAR.

HAPPILY the Malay war appears to be at an end, or if any fresh disturbances arise, there is every probability that they will be on a very small scale. The incidents of the outbreak have still to be learnt in detail, but many of the principal events are to be gathered from the information with which various correspondents have supplied the *Times*. The causes of the war are known to have been of the kind which always threaten a great Power when it tries with very small available resources to control, without governing, barbarous tribes. Disputes as to the chieftainship of such tribes are sure to be referred for settlement to the decision of an authority which is known to be just and well-intentioned, and is believed to be capable, if it is desirous, of enforcing its decisions. An English Governor, when an appeal of this sort is made to him, does not like to decline the opportunity of establishing peace among troublesome neighbours, and he selects the person whom he considers most fit or best entitled. But when his nominee proceeds to take possession of his prize, his defeated opponent, and all those who have been mortified by the choice made, very naturally consider how they may practically reverse the decision of the Governor. It is found that a pretender is in the field, and the pretender waits to see whether the power of England will be used against him. The Governor has no notion of guaranteeing the chieftainship to the candidate whom he has selected. He leaves him to take his chance. But still as this particular chief has been recognized, he is the person with whom all [illegible] are to be carried on. [illegible] British officer of [illegible] rank is therefore sent to [illegible] headquarters, and to advise him as to [illegible] dealings with [illegible]. Nor is this all. Even when [illegible] acknowledged chief, and no question of [illegible] leadership arises, it may seem very necessary to restrain the acknowledged chief from doing mischief to his neighbours, and from thinking himself at liberty to treat [illegible] as such wanderers from British territory as may [illegible] way into his district. The advice given is [illegible] heeded, and then it has to be put [illegible] shape, and to take the shape of an [illegible] the English Governor is announced in [illegible] English official is charged to make the [illegible] the Governor and the official are con-[illegible] peace will be made, no precautions are [illegible] Colonial goes into a nest of barbarians to do [illegible] strikingly offensive to them without anything [illegible] own courage and the majesty of [illegible]. Under such circumstances a catastrophe [illegible] happen. England seems far off, while the [illegible] is very near, and, if violence is resolved on, [illegible] easy prey. All these causes combined to lead to the murder of Mr. Birch. We had set up a chief in Perak whose authority was purely nominal. We had passed from giving advice to giving orders to a variety of petty rulers. Mr. Birch had no hesitation in going without any adequate protection to post up a proclamation announcing the reinstatement of England in distant Malay dominions. He had served for some years in Ceylon, and he was sent to Perak to [illegible] the mistake of thinking that the

Malays were of a nature as submissive as that of the Cingalese. The consequence was that he was treacherously murdered while in his bath. It may, however, be observed that, so far as he made the mistake of over-confidence, he did not make it alone. Those who sanctioned his expedition could not have been deluded by memories of Ceylon, and another English official was sent even further up the Perak river to post up a proclamation, and managed to get back safely. If British officials were not willing to take risks of this sort, it is not indeed easy to see how such control as we may think proper to be exercised over savage outlying tribes could be exercised at all. An adequate support, if given to our officials, would demand too many soldiers and cost too much money. They do their duty, prepared to die if necessary, and their only security is the conviction that, if they are killed, their death is sure to be avenged.

The murder of Mr. BIRCH has been duly punished; and the Malays have reason to feel sure that, if they venture to kill British officials, something very bad will happen to them. If there is but a handful of Englishmen within reasonable distance when such an occurrence as that of the murder of Mr. BIRCH takes place, the first thought of the handful is immediately to strike a blow which will serve as a punishment for the past and as a warning for the future. Here, again, it may easily happen that, the force employed being wholly inadequate, a new calamity ensues. If this first band of avengers is defeated, the enemy is encouraged, begins to think himself invincible, and prepares for resistance on a wider scale. This is what happened in Perak. A small British force, led by Captain INNES and other officers, endeavoured, by striking a sudden blow, to nip the outbreak in the bud. The force was too small; it was repulsed, and Captain INNES was killed. The outbreak gathered new strength, the discontented chiefs fortified numerous positions, and a considerable effort had to be made in order to render their defeat certain. But almost immediately after the expedition in which Captain INNES lost his life was repulsed, a British vessel, the *Pluto*, ascended the Perak river, drove with rockets the native inhabitants out of their stockades, burnt some villages, and made the Malays feel that, at any rate for those who live on the banks of a river, it is a very unsafe thing to defy the power of England. In this case a small expedition, acting at once, was successful, in the other case such an expedition was unsuccessful. But here again it may be said that, unless Englishmen showed this readiness to strike an immediate blow when the murder of an Englishman is to be avenged, it would be impossible for England to exercise any supremacy over wild tribes. The first available check on such tribes is that an unprotected Englishman, if instructed to do so by his Government, is ready to go among them and tell them to do what they may very much dislike doing. The second check on them is that, if they kill the lonely official, the first handful of English troops and sailors that can be got together will try to punish them. These checks may fail. They may murder the official; they may repulse, owing to local or numerical advantages, the handful of avengers that immediately attacks them. Then an organized and adequate force has to be collected, sufficient artillery, if possible, provided, and a regular plan of operations has to be designed. Such an operation has just been conducted in the Malay peninsula with conspicuous skill, courage, and success. While the main force under General COLBORNE advanced to the central position of Kinta, a detached body of Ghoorkas was sent to carry a strong position occupied by the enemy on the hills; and, owing to a dexterous flank movement, this position was carried without any serious loss. This virtually decided the war. Kinta was taken without fighting. The heads of the rebellion fled for refuge to the jungle or to Siamese territory, and the minor chiefs gave in their submission.

The whole history of this outbreak from the date of its actual commencement may be regarded with legitimate pride and satisfaction by Englishmen. Whether all that preceded the outbreak can also be looked on as satisfactory, whether it was wise to nominate a chief and take him into our especial favour, if not under our avowed protection, although he had no real following in his own district, whether the issue of such a proclamation as that which Mr. BIRCH and his colleague posted up passed, or did not pass, the bounds of prudence, are questions which no one can pretend to answer who does not know all the facts. If mistakes were made to which the outbreak can be fairly attributed, let us hope that what took place may be a warning for the future. But the unhesitating courage with which these officials undertook their dangerous task, the sense of personal superiority and reliance on their country which their action implied, the promptitude with which efforts were made to strike an immediate and telling blow, the effective manner in which the final operations were conducted, and the usefulness in the field of troops drawn from our Indian possessions, when led by British officers, are all matters that deserve recognition and admiration. What has been done has been done well, and it now remains to be determined what use is to be made of victory. It may be thought indispensable to place the whole peninsula, up to the Siamese boundary, under the direct authority of England. No general rule can be laid down as to when British territory is to be extended or not. Each case has to be decided on its own merits. Many very different considerations, most of which are unknown to Englishmen at home, have to be taken into account before it is decided what is to be done with the Malays. But besides the general objection to annexation as involving an increasing burden of government, there is one objection to which it appears due weight ought to be given. There always must be a region beyond our boundaries where we have to exercise influence, or control, or some kind of half-rule. We cannot endure too much disorder just beyond our limits. If we annex one set of barbarous tribes, there is always another set a little further off. In dealing with this crowd of series of outlying barbarians, we must at some point terminate the checks on their wild action which we have at our command—the check of the courage of military officials, the check of the promptitude of the scanty handful of Englishmen, and the final check of a more organized expedition. The presumption ought to be in favour of these checks; are sufficient. In the case of the Malays not nothing is as yet known that can make us doubt that this presumption is not well founded. We have applied our final check, and it has acted with little loss of time, life, or money. If this is not enough, we ought to have it shown very clearly why it is not enough. The Ashantees defied us; we punished them, broke their power, and left them alone. The Malays defied us; we have punished them, or can punish them, and break their power as effectually as may be thought proper. This is the treatment on which, as a rule, we must rely as adequate in dealing with barbarous tribes lying on our borders. The Malays may be a necessary exception; it may be indispensable to do more, and to annex them. But until it is demonstrated that they are an exception, it may be fairly assumed that they come within the rule.

LORD STANHOPE.

LORD STANHOPE never held high political office, and he was not possessed of brilliant ability, but he occupied a distinct position which he had created for himself. Among contemporaries of his own rank he was almost the only professed author. It is not a little remarkable that, of four or five hundred hereditary peers, not half a dozen have ever published a volume. Many of the number are highly accomplished; almost all can command leisure, and a few have studied science; but, with the exception of two or three new peers, and of the Duke of ARGYLL, they have not sought to achieve literary fame. Lord STANHOPE was perhaps attracted to the subject of his first important historical work by the part which his ancestor, the founder of the peerage, took in the wars and negotiations of the time; but his selection of the Spanish War of Succession also displayed the tact and sound judgment which were employed in every business that he undertook. The ground was unoccupied by any considerable English historian, and the stirring episode of the Spanish War both admitted of separate treatment and naturally connected itself with the general history which might, as the result showed, furnish materials for future labours. His greater work on the History of England from the Peace of Utrecht to the Peace of Versailles is still the standard and popular account of one of the most important parts of English history. The style is neither faultless nor especially vigorous; but the book is thoroughly readable. In Lord STANHOPE's youth the philosophy of history had not been

invented; and his intellect was not of the subtle kind which delights in proving that all which happens might have been foreseen, if competent prophets had been forthcoming. Students who are familiar with the voluminous Letters and Memoirs of the period may perhaps think that the historian is not happy in depicting characters, and that his imagination was not active enough to reproduce the characteristic features of Parliamentary and aristocratic supremacy; but a connected narrative greatly facilitates the comprehension of original documents; and some of the principal events lay outside the scope of autobiographers and correspondents. The story of the Jacobite insurrection of 1745 had never before been so well told, and probably the majority of educated Englishmen have first learned from Lord STANHOPE the history of the unlucky American war. The beginning and end of the period were happily chosen. The wars of MARLBOROUGH had bequeathed to England a legacy of thirty years of peace, which was employed by the great Whig statesmen, and especially by WALPOLE, in consolidating the tenure of the House of Hanover, and the system which had been founded in 1688. Another twenty years of almost continual war with France ended with the splendid triumphs of the elder PITT, and with the foundation of the Indian Empire. From the accession of GEORGE III. to the Peace of Versailles new political conditions had been established; and the adherents of the PRETENDER or their descendants had become the warmest supporters of the reigning dynasty. The time included in the history is neither too long nor too short; and it admits of a certain unity of treatment. Lord STANHOPE's chief merits as an historian are veracity and fairness, qualities which are often wanting in the compositions of more ambitious writers. His last considerable work on the Reign of Queen ANNE to the Peace of Utrecht formed a curious contrast with MACAULAY'S History, of which it was intended to be a continuation. In force, in eloquence, in imagination, there could be no comparison between the two historians, who happened to be intimate friends; but it was some compensation for Lord STANHOPE's inferiority that his sole object was to report the truth as far as he could ascertain it. Lord STANHOPE'S Life of PITT also may be compared with one of the most brilliant of Lord MACAULAY'S biographical Essays. Notwithstanding the family connexion, and the domestic relations between Lady HESTER STANHOPE and her uncle the great Minister, Lord STANHOPE added but little to the facts which were already known, but the statesman whom he describes is, like the rest of mankind, consistent and intelligible. Lord MACAULAY, according to his favourite method, exaggerated PITT'S merits and defects, and made one-half of his career an antithesis of the other. Antithesis is an effective figure of rhetoric, but there is no antithesis in human nature. The English nation trusted PITT to the day of his death, not because they recognized an organic change in his character, but because they knew him to be the same. Lord STANHOPE seems to have had no reason, except some casual literary impulse, for selecting BELISARIUS and CONDÉ as the subjects of separate historical treatises; but the Life of CONDÉ was a not inconsiderable feat, because it was written in French. The style, though it probably falls far short of the requirements of fastidious French critics, seems to ordinary English readers neither inaccurate nor ungraceful. Composition in a foreign language is at best an amusement or a scholastic exercise; but Lord STANHOPE deserves credit having done with tolerable success what few of his countrymen could do at all.

Having fairly established his position as a man of letters, STANHOPE by his rank and station naturally became a putative, and on occasion a patron, of his craft. One [illegible] the chief advantages of a graduated form of society is [illegible] facility which rank affords for evading invidious competition. It is highly desirable that the Prime Minister or Lord Chancellor should be the ablest candidate who can [illegible] selected from the party or the profession; but ordinary [illegible] and honorary distinctions cause far less jealousy when they are awarded with some regard to social prece- [illegible] It is difficult to adjust to the satisfaction of all [illegible] ive eminence of popular authors; but who is at the same time an Earl is accepted [illegible] onvy and without hesitation as a leader; nor is [illegible] erence entirely conventional. The head of a political [illegible] even of the second rank, unless he is utterly devoid [illegible] tual faculty, acquires unconsciously an historical [illegible] cation. The history of Rome or of the Roman aristocracy is to be learnt more accurately from CICERO'S writings than in the laborious treatises of modern scholars who have exploded fabulous traditions. The personages of his philosophical or oratorical Dialogues are always selected from the families which built up the greatness of the commonwealth. CATO, SCIPIO, LÆLIUS, SCÆVOLA, CRASSUS, and an earlier C. JULIUS CÆSAR, incessantly diversify the stately courtesy of their discourse with anecdotes of their illustrious contemporaries or ancestors, who anticipated them or shared with them in the custody of the national tradition. Lord STANHOPE also belonged to a consular family, whose annals he had carefully studied, and his rank, his character, and his literary reputation gave him access to the society of the greatest statesmen of his time. He preserved and arranged with methodical care his correspondence with many eminent men. He had letters from TALLEYRAND and from the Duke of WELLINGTON; and he was joined with Lord CARDWELL in the trust of publishing Sir ROBERT PEEL'S cumbrous apologies. Lord STANHOPE'S collections of earlier family papers were still more interesting. One series of letters was addressed by Lord CHATHAM to Lady STANHOPE, wife of the second Earl, who was then Governor of Gibraltar. By permission of his friends CHATHAM was temporarily occupying Chevening, where his active mind was bent on designing a new approach through the park to the house. His offer to do the work for a small sum was accepted by Lord and Lady STANHOPE, and a beautiful drive which is still used is the result, though, as might have been expected, the estimate was exceeded in the proportion of eight or nine to one. Some of the letters are from Lord STANHOPE'S bailiff, whose puzzled reverence for the great and restless stranger is both amusing and instructive.

With so many advantages, natural and acquired, Lord STANHOPE was naturally placed at the head of many institutions which were more or less concerned with history and letters. He was a fitting President of the Society of Antiquaries, not because he had any special knowledge of antiquities, but as one who appreciated the value of the raw material of history. He was also President of the Corporation of the Literary Fund, Trustee of the British Museum, and a conspicuous member of half a dozen other Associations. In all his various capacities he conscientiously discharged the duties of office; and his courteous bearing secured him the cordial aid of colleagues and subordinates. In the House of Lords Lord STANHOPE uniformly adhered to the moderate form of Conservatism which he had preferred when he was a follower of PEEL. While he voted with his party, he from time to time showed remarkable sagacity in discerning the time for abolishing some obsolete practice. Lord STANHOPE proposed and carried the discontinuance of the party pamphlets in the form of occasional liturgies which stigmatized the memory of GUY FAWKES and celebrated the advent of WILLIAM III., or which to the confusion of Puritans recorded the martyrdom of CHARLES I. The discontinuance of the creation of Irish peers will have been in great measure due to Lord STANHOPE'S dislike of useless anomalies. The National Portrait Gallery, which will hereafter possess great historical value, was established on Lord STANHOPE'S proposal. In all respects he invested to the utmost advantage the respectable sum of talents which had been entrusted to his care. Although he had no pretension to be great, his life was greatly and variously useful, and he has perhaps left no successor who will exactly fill his place.

THE ADMIRALTY.

NAVAL questions of all kinds seem to be continually turning up, and there can be no doubt that the most urgent and important duty of Parliament, as soon as it meets, will be to take the whole subject of the navy into earnest consideration. The gallant little fellows of the *Goliath* have illustrated, in a particularly noble and affecting manner, the splendid materials which are at hand for the formation of a navy equal in pluck and steady discipline to the best we have ever had. The issue of a revised edition of the Fugitive Slave Circular has rescued the Admiralty from an utterly false position; while, on the other hand, the announcement which has just been made as to the inquiry into the collision between the *Monarch* and the *Halcyon* brings out very strongly the side of naval administration which at present seems to be the weakest.

It must be presumed that the Foreign Office is —

free from responsibility for the publication of the Slave Circular as it first appeared, but it is amazing that any officer at the Admiralty could, in his sober senses, have signed such a document. It will be remembered that it laid down "the broad rule" that a fugitive slave must not be "permanently received" on board a British ship, "unless his life would be endangered if he were not "allowed to come on board." The writer's imbecile confusion of mind was thus shown in his assumption, first, that any person, whether slave or not, could under any circumstances whatever be permanently accommodated on board of one of Her Majesty's ships, unless he had business to do there; and, secondly, that British sailors are the sort of people who would allow a poor wretch to be drowned under their eyes merely because he might happen to be a slave. The maritime rights claimed by this country were also stated in a very confusing manner, which might be supposed to imply a partial surrender of the territorial character of QUEEN'S ships; and the Circular wound up with some weak-minded twaddle about advising slave-owners to be kind to their slaves. What Lord DERBY meant when he said that this farrago of nonsense came from the "highest legal authority" will perhaps one day be explained; but the extreme contempt which Lord DERBY in the same breath showed for this authority, whoever he may be, by promising to tear up his Circular if anybody did not like it, was certainly justified by the nature of the document. Government departments must be very badly managed when it is possible that such a thing could happen, and it is surprising that the mistake should not have been instantly rectified. This, however, has at last been done, and we must acknowledge, on the whole, very fairly. The main objection which we see to the new Circular is that it is perhaps too long and wordy. Officers of the navy are now informed that "when any "person, professing or appearing to be a fugitive slave, "seeks admission to one of Her Majesty's ships on the "high seas, beyond the limit of territorial waters, and "claims the protection of the British flag, the command-"ing officer is to bear in mind that, although Her "Majesty's Government is desirous by every means in its "power to remove or mitigate the evils of slavery, yet Her "Majesty's ships are not intended for the reception of "persons other than their officers and crew." A commanding officer is therefore "to satisfy himself, before re-"ceiving the fugitive on board, that there is sufficient "reason in the particular case for thus receiving "him." The fugitive may then be retained on board the ship until he can be landed in some country or transferred to some other ship where he will be at liberty. It is next laid down very justly that "within the territorial waters of a foreign State com-"manding officers of Her Majesty's ships are bound by the "comity of nations, while maintaining the proper exemp-"tion of their ships from local jurisdiction, not to allow "them to become a shelter for those who would be charge-"able with the violation of the law of the place." In such a case, therefore, a fugitive slave is to be received on board only if his life is in manifest danger, and must not be permitted to remain after the danger is past. But—and this is important—"commanding officers are not to entertain "any demand for the surrender of such person, or enter "into any examination as to his status." If a fugitive not in danger of his life pleads for protection on the ground that he has been kept in slavery contrary to treaties to which England is a party, he may be retained while inquiry is made, and it is suggested that this should be done through the nearest British consular authority. Special reports are also to be made in every case. The Circular, as it now stands, seems to meet the main principle of the case—that English ships are not to interfere with the private affairs of other countries, either in the way of helping slaves to run away or, on the other hand, by becoming slave-catchers in the service of the owners. The demand of the Anti-Slavery Society, that the scope of the instructions should be extended so as to make the deck of a QUEEN'S ship under all circumstances a refuge for slaves, is easily answered. England has never undertaken, and cannot undertake, the Quixotic task of attempting to suppress slavery by force of arms in independent countries all over the world.

We are glad to see that the Government is disposed to profit by the important lesson which has been given by the training-ship boys at Grays. Here we have a lot of workhouse boys in an old ship on the Thames, under a half-pay staff commander, who is not only content with his modest work, but gives his heart to it, and is perhaps hopeless of anything better, though evidently a most careful and efficient officer, with the true ring of the old British tar about him. "Boys," he said, when the poor little fellows clung about him, and besought him with tears, and even clinging about his neck, to go before them, "that's not the "way we do in the navy." He used to exercise the company every Friday in boating to quarters, leaving the ship, and rowing round her, in half an hour altogether; nor was this exercise confined to fine weather, for it was equally practised when the wind was blowing "a fresh." On every occasion they got out every one on board, women and all, in half an hour. Mr. BARRINGER, the Chairman of the joint-parish Committee managing the ship, stated that he had often seen the company called to fire quarters, and that the time from the bell being sounded to the water coming out of the ports was only a minute and three-quarters. It may be believed that, if Captain BOUCHIER and his lads had been on board the *Vanguard*, that ship might have had another and very different history. But the Captain is probably an obscure person, without any influence. Ironclads are reserved for the friends of great people to be drowned in, or at least to run that risk. An ironclad has of late got to be like a crack regiment, and its accommodation is reserved for the pets of the Admiralty. The chief occupation of these vessels appears to be to go on jolly trips, with lots of dancing and dinner parties; how much the fortnight's festivities on the Irish coast may have had to do with the obfuscation of the Reserve Squadron will perhaps never be publicly known. What is wanted most of all in the navy is a liberal extension of the training-ship system, and the encouragement of hard-working, practical officers.

It is important to observe how discipline is practised at Grays, an obscure and insignificant station beyond the reach of Admiralty interference, and in other branches of the service. What does Mr. WARD HUNT do for discipline? H.M.S. *Alberta* runs down a yacht with loss of life, and, instead of instituting a searching public inquiry into the cause and circumstances of the collision, he favours the officer who is *primâ facie* responsible for it by an exemption from the ordinary rules of the service as to staff appointments. The *Vanguard* is sunk in trying to avoid running down a strange vessel; and the heaviest punishment is awarded to the officers. Lieutenant EVANS of the *Iron Duke*, in his eagerness to be safe in a fog, steers the ship to one side, and, if she had been kept to that course, no collision would probably have occurred; but he is disgraced, while his Captain, who was below during an important movement, whose steam-whistle was dumb in the fog, and who had not the faintest idea of the rate at which the ship was going, is absolved. Rear-Admiral TARLETON is expressly justified in going at full speed through a dense fog, at the moment of a critical operation on the part of the squadron, and in leaving his ships without any guidance as to speed. Then, again, the *Iron Duke* fills suddenly with water, and the crew are about to go off in despair, when happily the leak is at last discovered. The Admiralty publishes offhand an audacious assertion that there was "no possible "danger"; then it holds a secret inquiry, and, although there can be no question that somewhere or other there must have been gross neglect in allowing valves which, when opened, let the sea into the ship, to remain marked "shut" —a blunder which nobody discovered—yet the Admiralty has no more to say on the subject. The thing is hushed up. Then the *Monarch* runs down a Norwegian sailing vessel, which has her lights burning, and to which she was bound by the rules of the sea to give way; and here is the account of the Admiralty's decision in the papers:—"The "decision of the Admiralty respecting the *Monarch* and "*Haldene* collision has been communicated officially to the "members of the Court of Inquiry held at Devonport. It "is that the explanation given is so far satisfactory that "no one on board the *Monarch* can be held sufficiently to "blame to render him liable to trial by court-martial." The whole of the evidence is suppressed, and the public is expected to be satisfied with this conclusion. It is hardly too much to say, under such circumstances, that to leave the present FIRST LORD at the Admiralty would be deliberately to incur a public danger. Nothing which folly and perversity could think of has been left undone to encourage carelessness and blundering, and to break up the discipline of the service.

THE DEAN OF WESTMINSTER AND THE *NONCONFORMIST*.

THE Dean of WESTMINSTER has lately been engaged in a controversy with the *Nonconformist* newspaper, as to the precise scope of which the parties to it are not agreed. The DEAN conceives himself to be arguing out the general issue between comprehension and disestablishment; the *Nonconformist* insists that all that is actually in dispute is the question, raised by the DEAN himself, "Whether those "who urge disestablishment are fairly chargeable with the "policy of extermination and destruction." It is not our business to decide which of the two has the best of the quarrel upon a point which both would admit to be, by comparison, of little general interest. The *Nonconformist* may have a fair ground of complaint against the DEAN for changing the inquiry whether the objects which the advocates of disestablishment propose to themselves are rightly described as a policy of extermination and destruction to the inquiry whether the policy so described is "injurious to the best interests of freedom, of charity, and of "progress." But, at all events, the issue raised, fairly or unfairly, by the Dean of WESTMINSTER is one of greater moment than the issue to which his adversary, quite reasonably it may be, desires to pin him. Perhaps we may go further, and say that, in the present position of the controversy, the Dean of WESTMINSTER'S own attitude towards it is the most interesting point of the three. It is one of the advantages incident to the present stagnation in English politics that we can go to church or stay away from it without the least apprehension that before our next visit the fabric will have been either secularized or assigned to the members of some religious or irreligious persuasion with whose doctrine and ritual we are not acquainted. Disestablishment has ceased for the time to be of much interest, except such as it derives from the sword play of the particular controversialist who is preaching or deprecating it. It is unnecessary to add that when the Dean of WESTMINSTER is in the field there is always something to attract the spectator's attention.

If the object of the disestablishment policy were simply to destroy Episcopacy, the DEAN would seemingly regard its success with little or no alarm. He concedes that after disestablishment there would remain an institution bearing the episcopal name, "probably with its sacerdotal and "exclusive pretensions enormously developed, with its "bishops perhaps indefinitely multiplied, and its separation "from Nonconformists certainly intensified." But while disestablishment would leave Episcopacy untouched, it would destroy "Erastianism, and in the judgment of many" Erastianism "is far more beneficial than mere Episcopacy, "and far less liable to superstitious abuse." The DEAN describes Erastianism by four principal characteristics. It gives the nation a share in the government of the Church; it subjects the fancies of the clergy to the control of the most intelligent portion of the laity; it secures to at least one institution in the country a liberty which admits of almost every school of theology within its pale; and it encourages as much intercourse with Nonconformists as the nation represented in Parliament desires. The last of these alleged advantages is really a particular instance of the first. If the nation has a share in the government of the Church, it can plainly use its power for the encouragement of as much intercourse with Nonconformists as it happens to desire. It does not seem to have occurred to the Dean of WESTMINSTER that there is some reason to doubt whether the nation as represented in Parliament is altogether at one with him upon this question. Mr. FREEMANTLE'S aspirations after intercourse with Nonconformists were frowned down by his own counsel; and if the nation represented in Parliament is to have that weight in ecclesiastical matters which Erastianism attributes to it, the simplest way for those who think the counsel in question wrong would be to have a Bill providing for a free exchange of pulpits between Nonconformist ministers and the clergy introduced into Parliament, and to submit to be guided by the event. As all the world knows, this is not the Dean of WESTMINSTER'S view of the matter. On the contrary, he makes it a special point in his case that, under the beneficent Erastianism which at present prevails, Dr. MOFFATT can lecture in Westminster Abbey—a privilege which would certainly not be conceded to him if the Church had been disestablished and the Abbey had been sold either to the Roman Church or to the "small but wealthy section of High Church Episco-"palians." It is painful to have to state that the *Nonconformist*, with an absence of sweetness which entirely justifies Mr. MATTHEW ARNOLD'S criticism, has described this "miracle of catholicity" as "indicative of a vein of "humbug running through our Church administration," and has further asserted that "the DEAN'S contributions to "the present controversy" have only confirmed its impression of the "utter unreality of the whole movement "towards comprehension." Even a yet more terrible consequence of disestablishment which the DEAN hints at makes no impression on his heartless adversary. If, says Dr. STANLEY, "the government of the Church were "to be transferred from Parliament and the courts "of law . . . . to Convocation, or any like body, ". . . it is certain that neither the present Dean of WEST-"MINSTER nor those like-minded with him would either "obtain or retain or desire the places they now occupy." There is something mysterious about this impersonal way of describing himself which is very impressive, and the picture which it conjures up of a Church without Dr. STANLEY is one which we do not wish to see realized. But we are sorry to say the *Nonconformist* is not a bit impressed by it. On the contrary, it declares, first, that it does not for a moment believe that in a disestablished Church there would be no place for the Dean of WESTMINSTER; and, secondly, that, if the disestablished Church rejected him, a dozen others would contend for him. It is plain that the DEAN has mistaken the adversary with whom he has to deal. Westminster Abbey does not count for so much in the eyes of Dissenters as it does in the eyes of the Dean of WESTMINSTER. They do not feel that a system under which Dr. MOFFATT finds admission to the nave is worth preserving at any price, or that a change which might conceivably banish the present DEAN from the choir is necessarily to be resisted to the death.

The two remaining advantages of Erastianism are not more certainly secured by the present ecclesiastical system than the encouragement of intercourse with Nonconformists. We should like to see the provisions which subject the fancies of the clergy to the control of the most intelligent portion of the laity fully set out. That they are subjected to the control of the laity we do not deny. Inasmuch as the laity are the paymasters, this is pretty much the case under every ecclesiastical system, though less perhaps in the Church of England than in most others. But where is the provision ensuring that this control shall be exercised by the "most intelligent portion" of the laity? We do not suspect the Dean of WESTMINSTER of having the House of Commons in his mind when he wrote these words, because he is doubtless aware that where religious questions are concerned the House of Commons knows no mean between utter indifference and unreasoning panic. It must therefore be taken as a complimentary description of Lord PENZANCE, who as Judge of the new Court may in a sense be said to have the fancies of the clergy under his control. We have every disposition to believe that, as soon as Lord PENZANCE has the opportunity, he will prove himself a most intelligent portion of the laity; but it seems rather a dangerous narrowing of the issue between establishment and disestablishment to make the Public Worship Act one of the four pillars on which the existing system rests. What if the Act should prove a dead letter, and the Church should by consequence have to go for the future on three legs? A year hence, perhaps, Lord PENZANCE may have covered himself with glory, and have put all the fancies of the clergy under his feet, and then, of course, the DEAN will have a perfect right to point to the new court as a matchless guarantee "of freedom, of "charity, and of progress." But it would have been more prudent to wait to see what "the most intelligent portion "of the laity" actually does before using him as a principal argument against disestablishment.

The fourth recommendation of the existing ecclesiastical system, if it came in a will, would, we think, be pronounced void for uncertainty. Erastianism secures "to at least one "institution in the country a liberty which admits of "almost every school of theology within its pale." No doubt Erastianism, as exemplified in the Church of England, admits a good many schools of theology. But then it does this on no principle, and consequently, though almost every school of theology may be admitted, it is difficult to say, without a law-suit, whether any particular school of theology can be admitted. The *Nonconformist* hints that Mr. VOYSEY and Mr. MARTINEAU each represent a school of theology, and yet they cannot be

admitted into the Church of England, at all events not further than the lecturer's desk in Westminster Abbey; and then it goes on to say, with the same distressing plainness of speech which we have before mourned over, that "to "talk of a Church with three creeds, each narrower than "the other, and a liturgy pregnant with mediæval doc- "trine, and a rigid Act of Uniformity in force, as receptive "of 'every school of theology,' is simply to describe it as "an institution for the cultivation and encouragement of "evasion, reticence, and hypocrisy." Of course it is very sad that the Dean of WESTMINSTER should have fallen in the way of Dissenters so blind to the merits of his engaging comprehensiveness as the conductors of the *Nonconformist*. But it may be profitable to him to learn that there are some Dissenters who hold that "the claim of com- "prehensiveness in the Church, as its own documents "define it, simply sickens the conscience." At all events, it may teach him that the line of defence which he has set up, however intellectually interesting, does not promise to go for much with the advocates of disestablishment. To say that the comprehensiveness of the Church of England is a happy, though accidental, result of its relations with the State is one thing; to say that it is a result which was contemplated when its relations with the State were determined, or that it can be justified by legal argument based on those relations, is another and a very different thing.

SPALATO.

THE main object of centres of all historical and architectural inquiries on the Dalmatian coast is of course the home of Diocletian, the still abiding palace at Spalato. From a local point of view, it is the spot which the greatest of the long line of renowned Illyrian Emperors chose as his resting-place from the toils of warfare and government, and where he reared the vastest and noblest dwelling that ever arose at the bidding of a single man. From an œcumenical point of view, Spalato is yet more. If it does not rank with Rome, Old and New, with Ravenna and with Trier, it is because it never was, like them, an actual seat of empire. But it not the less marks a stage, and one of the greatest stages, in the history of the Empire. On his own Dalmatian soil, Diocles of Salona, Diocletian of Rome, was the man who had won fame for his own land, and who, on the throne of the world, did not forget his provincial birthplace. In the sight of Rome and of the world Jovius Augustus was more than this. Alike in the history of politics and in the history of art, he has left his mark on all time that has come after him, and it is on his own Spalato that his mark has been most deeply stamped. The polity of Rome and the architecture of Rome alike received a new life at his hands. In each alike he cast away shams and pretences, and made the true construction of the fabric stand out before men's eyes. Master of the Roman world, if not King, yet more than King, he let the true nature of his power be seen, and, first among the Cæsars, surveyed himself with the outward pomp of sovereignty. In a smaller man we might have deemed the change a mark of weakness, a sign of childish delight in gewgaws, titles, and trappings. Such could hardly have been the motive in the man who, when he deemed that his work was done, could cast away both the form and the substance of power, and could so steadily withstand all temptations to take them up again. It was simply that the change was fully wrought, that the chief magistrate of the commonwealth had gradually changed into the sovereign of the Empire, that Imperator, Cæsar, and Augustus, once titles lowlier than that of King, had now become, as they have ever since remained, titles far loftier. The change was wrought, and all that Diocletian did was to announce the fact of the change to the world. So again, now that the Roman city had grown into the Roman world, a hill by the Tiber had long ceased to be a fit dwelling-place for rulers who had to keep back hostile inroads from the Rhine and the Euphrates. This fact too Diocletian announced to the world. He planted his Augusti and his Cæsars on spots better suited for defence against the German and the Persian than the spot which had been chosen for defence against the Sabine and the Etruscan. Jupiter of the Capitol and his representatives on earth were to be equally at home in every corner of their dominions. Nor is it wonderful if, with such aims before him, he deemed that a faith which taught that Jupiter of the Capitol was a thing of nought was a faith which it became his votary to root out from all the lands that bowed to Jove and to Jovius. What if his work in some sort failed? what if his system of fourfold rule broke up before his own eyes—if his Bithynian capital soon gave way to the wiser choice of a successor, if the faith which he persecuted became, almost on the morrow, the faith of his Empire? Still his work did not wholly fail. He taught that Empire was more than kingship, a lesson never forgotten by those who, for fifteen hundred years after him, wore the diadem of Diocletian rather than of Augustus. In some sort he founded the Roman Empire. What Constantine did was at once to undo and to complete his work by making that Empire Holy.

Such a man, if not actually a creator, yet so pre-eminently one who moulded the creations of others into new shapes, might well take to himself a name from the supreme deity of his creed, the deity of whom he loved to be deemed the special votary. The conception which had grown up in the mind, and had been carried out by the hand, of the peasant of Salona might well entitle him to his proud surname. Nor did the organizing hand of Jovius confine its sphere to the polity of the Empire only. He built himself a house, and, above all builders, he might boast himself of the house that he had builded. Fast by his own birthplace—a meaner soul might have chosen some distant spot—Diocletian reared the palace which marks a still greater epoch in Roman art than his political changes mark in Roman polity. On the inmost shore of one of the lake-like inlets of the Hadriatic, an inlet guarded almost from sight by the great island of Bua at its mouth, lay his own Salona, now desolate, then one of the great cities of the Roman world. But it was not in the city, it was not close under its walls, that Diocletian fixed his home. An isthmus between the bay of Salona and the outer sea cuts off a peninsula, which again throws out two horns into the water to form the harbour which has for ages supplanted Salona. There, not on any hill-top, but on a level spot by the coast, with the sea in front, with a background of more distant mountains, and with one peaked hill rising between the two seas like a watch-tower, did Diocletian build the house to which he withdrew when he deemed that his work of empire was over. And in building that house, he won for himself, or for the nameless genius whom he set at work, a place in the history of art worthy to rank alongside of Iktinos of Athens and Anthemios of Byzantium, of William of Durham and of Hugh of Lincoln.

And now the birthplace of Jovius is forsaken, but his house still abides, and abides in a shape marvellously little shorn of its ancient greatness. The name which it still bears comes straight from the name of the elder home of the Cæsars. The fates of the two spots have been in a strange way the converse of one another. By the banks of the Tiber the city of Romulus became the house of a single man; by the shores of the Hadriatic the house of a single man became a city. The Palatine hill became the *Palatium* of the Cæsars, and *Palatium* was the name which was borne by the house of Cæsar by the Dalmatian shore. The house became a city; but its name still clave to it, and the house of Jovius still, at least in the mouths of its own inhabitants, keeps its name in the slightly altered form of Spalato.

He placed his home in a goodly land, on a spot whose first sight is striking at any moment but special indeed is the good luck of him who for the first time draws near to Spalato at the hour of sunset. It is a moment to be marked in a life, as we round the island headland, one of the stony Dalmatian hills rising bleak and barren from the sea, and catch the first glimpse of the city, the tall bell-tower, the proud rampart of mountains which forms its background. But the sight is more spirit-stirring still if we come on that sight at the very moment when—in sight of the home of the great persecutor we may use the language of mythology—the sun-god has just sunk into his golden cup. The sinking sun seems no unfit symbol, as we look on the spot where the lord of the world withdrew to seek for rest after his toils. Another moment the headland is rounded; its top is kindled like Vesuvius in the last rays of the sunlight; the lesser light is kindled before the greater has wholly failed us, and, by the light of sun and moon together, we can trace out the long line of the sea-front of the palace which became a city. No nobler site could surely have been found within the bounds of the Empire of the two Augusti and their Cæsars. The sea in front, the mountains behind, the headlands, the bays, the islands scattered around, might indeed have formed a realm from which the prince who had there fixed his home would have been unwise to go forth again to wrestle with the storms of the world which lay beyond its borders. The mountains have drawn nearer to the shore; the islands have gathered round the entrance of the haven, as if to shut out all but the noble bay and its immediate surroundings, as if to fence in a dominion worthy of Jovius himself.

We land with the moon lighting up the water, with the stars above us, the northern wain shining on the Hadriatic, as if, while Diocletian was hidden by Salona, the star of Constantine was rising over York and Trier. Dimly rising above us we see, disfigured indeed, but not destroyed, the pillared front of the palace, reminding us of the Tabularium of Rome's own Capitol. We pass under gloomy arches, through dark passages, and presently we find ourselves in the centre of palace and city, between those two renowned rows of arches which mark the greatest of all epochs in the history of the building art. We think how the man who reorganized the Empire of Rome was also the man who first put harmony and consistency into the architecture of Rome. We think that, if it was in truth the crown of Diocletian which passed to every Cæsar from the first Constantius to the last Francis, it was no less in the pile which rose into being at his word that the germ was planted which grew into Pisa and Durham, into Westminster and St. Ouens. There is light enough to mark the columns put for the first time to their true Roman use, and to think how strange was the fate which called up on this spot the arrangement which had entered the brain of no earlier artist-arrangement which, but a few years later, was to be applied to another use in the basilica of the Lateran and in St. Paul without the walls. Yes, it is in the court of the persecuter, the man who boasted that he had wiped out the Christian superstition from the

world, that we see the noblest forestalling of the long arcades of the Christian basilica. It is with thoughts like these, thoughts pressing all the more upon us where every outline is clear and every detail is invisible, that we tread for the first time the court of Jovius—the columns with their arches on either side of us, the vast bell-tower rising to the sky, as if to mock the art of those whose mightiest works might still seem only to grovel upon earth. Nowhere within the compass of the Roman world do we find ourselves more distinctly in the presence of one of the great minds of the world's history; we see that, alike in politics and in art, Diocletian breathed a living soul into a lifeless body. In the bitter irony of the triumphant faith, his mausoleum has become a church, his temple has become a baptistery, the great bell-tower rises proudly over his own work; his immediate dwelling-place is broken down and crowded with paltry houses; but the sea front and the Golden Gate are still there amid all disfigurements, and the great peristyle stands almost unhurt, to remind us of the greatest advance that a single mind ever made in the progress of the building art.

At the present time the city into which the house of Diocletian has grown is the largest and most growing town of the Dalmatian coast. It has had to yield both spiritual and temporal precedence to Zara, but, both in actual population and all that forms the life of a city, Spalato greatly surpasses Zara and all its other neighbours. The youngest of the Dalmatian towns, which could boast neither of any mythical origin nor of any Imperial foundation, the city which, as it were, became a city by mere chance, has outstripped the colonies of Epidauros, of Corinth, and of Rome. The palace of Diocletian had but one occupant; after the founder no Emperor had dwelled in it, unless we hold that this was the villa near Salona where the deposed Emperor Nepos was slain, during the patriciate of Odoacer. The forsaken palace seems, while still almost new, to have become a cloth factory, where women worked, and which therefore appears in the Notitia as a Gynæcium. But when Salona was overthrown, the palace stood ready to afford shelter to those who were driven from their homes. The palace, in the widest sense of the word—for of course its vast circuit took in quarters for soldiers and officials of various kinds, as well as the rooms actually occupied by the Emperor—stood ready to become a city. It was a *chester* ready made, with its four streets, its four gates, all but that towards the sea flanked with octagonal towers, and with four greater square towers at the corners. To this day the enceinte of the walls is nearly perfect; and the space contained within them must be as large as that contained within some of the oldest *chesters* in our own island. The walls, the towers, the gates, are those of a city rather than of a house. Two of the gates, though their towers are gone, are nearly perfect; the *porta aurea*, with its graceful ornament, the *porta ferrea* in its stern plainness, strangely crowned with its small campanile of later days perched on its top. Within the walls, besides the splendid buildings which still remain, besides the broken-down walls and chambers which formed the immediate dwelling-place of the founder, the main streets were lined with massive arcades large parts of which still remain. Diocletian, in short, in building a house, had built a city. In the days of Constantine Porphyrogenitus it was a κάστρον—Greek and English had by his day alike borrowed the Latin name; but it was a κάστρον which Diocletian had built as his own house, and within which was his hall and palace. In his day the city bore the name of Aspalathon, which he explains to mean παλάτιον μικρόν. When the palace had thus become a common habitation of men, it is not wonderful that all the more private buildings whose use had passed away were broken down, disfigured, and put to mean uses. The work of building over the site must have gone on from that day to this. The view in Wheler shows several parts of the enclosure occupied by ruins which are now covered with houses. The real wonder is that so much has been spared and has survived to our own days. And we are rather surprised to find Constantine saying that in his time the greater part had been destroyed. For the parts which must always have been the stateliest remain still. The great open court, the peristyle, with its arcades, became the public piazza of the town; the mausoleum on one side of it and the temple on the other were preserved and put to Christian uses. We say the mausoleum, for we fully accept the suggestion made by Professor Glavinich, the curator of the museum of Spalato, that the present *duomo*, traditionally called the temple of Jupiter, was not a temple, but a mausoleum. These must have been the great public buildings of the palace, and, with the addition of the bell-tower, they remain the chief public buildings of the modern city. But, though the ancient square of the palace remains wonderfully perfect, the modern city, with its Venetian defences, its Venetian and later buildings, has spread itself far beyond the walls of Diocletian. But those walls have made the history of Spalato, and it is the great buildings which stand within them that give Spalato its special place in the history of architecture. In the face of them we hardly stop to think of the remains of Venetian or even of earlier times. Yet both within and without the palace walls scraps of Venetian work may be found which would attract the eye on any other spot, and hard by the north-western tower of Diocletian there remains a small, desecrated church of the Byzantine type, which out of Spalato might be set down as a treasure. But, as we stand beneath the arcades of Jovius, things which would elsewhere be treasures are as nothing. They, and the other buildings which stand in the connexion with them, form, as we have assumed throughout, an epoch in the history of art that they may claim some special notice in their strictly artistic character, apart from the general history and general impression of the city which they have at once created and made famous.

SEASONABLE NOVELTIES.

THE dustman's annual visit may well draw a protest from the long-suffering householder. Though the man has so often neglected to remove the dust during the year that is past, he yet expects, at the cost of his victims, the materials for a good week's drinking. The postman, too, must be remembered, though to memory dear at half-a-crown; by a cruel fiction we are compelled to thank him for delivering letters which we had much rather not receive, and to remunerate him handsomely for doing his duty to our great discomfort and constant annoyance. The irony of civilized life is so well exemplified by these yearly impositions that it is not until the turncock and the organ-blower call for their Christmas boxes that it occurs to us to expostulate. Do they not receive their wages? Are they not sufficiently paid? Does not the money come out of our pockets? And so, offering to forward a complaint to the vestry on their behalf, we may dismiss them unrewarded, and in all probability unsatisfied. But there is a heavier tax, and, what is worse, a tax against which it is hardly seemly to grumble. We must give presents to our friends and relations—nay, we must even receive presents from them. The postman and the dustman may be supposed by a stretch of benevolence to need our benefactions. They may perhaps be hungry. They are certainly thirsty. But there are people who have no real necessities, to whom a favouring Providence has afforded every possible blessing, and presents must be made to them also. It is easy to give a red cloak or a pound of tea to an old woman, and such a gift is not unreasonable. In a majority of cases it only injures the receiver, and no one else. But what are we to do for the gratification of an old gentleman, say with plenty of money and no particular tastes? We cannot offer him bonbons, for he probably dislikes them, and he has certainly no teeth to eat them with. He has no weakness for old china, nor does he collect tobacco-pipes, or even walking-sticks. The safe course would be to write him a pretty letter and give him nothing, but this idea never occurs to us. Our charitable intentions [illegible] our venerable and wealthy friend must be carried [illegible] the and expense to ourselves, and with a mere mockery of gratification to him. The recipients of such favours are obliged, no matter at what cost of truth, to express overwhelming delight, and people who under ordinary circumstances would not tell [illegible] lie to the world must perjure themselves and imperil their salvation for the sake of a Swiss châlet or a Punch-and-Judy peepholder, which is relegated to the lumber-room within the next few weeks. The great and sudden spread of Christmas cards, which cost little and are often worth as little, may be attributed to the want everywhere felt at this season for some more inoffensive and less soul-endangering way of testifying affection. But even Christmas cards already show signs of turning themselves into a tax. One great manufacturer has announced that he has spent many hundred pounds on the elaboration of a single card, and such a wonder of art must be handsomely paid for, of course. We have an awful warning before us in the French New Year *étrennes*, which have become so unmitigated a nuisance that Parisians are driven at this season into exile, and come over to study our Christmas *fêtes*, in order to escape the intolerable and costly observances at home. A pretty and simple tribute of regard has become one of the torments of life; and if we do not sternly repress the tendency to development in our own Christmas cards, a new agony will have to be added to the second column of the *Times*, so that people who are blessed, or cursed, with a large circle of acquaintance or a widely-branching family-tree, may advertise "No cards" in a new sense, the only alternative being the engagement of a secretary. His duties, when Valentine's Day is well over, would consist in directing envelopes, selecting cards and putting initials on the back, until Advent, Christmas, and Epiphany bring St. Valentine round again.

It seems to be quite certain that a very large sum of money has been spent during the past few weeks upon costly, and for the most part useless, articles. Few of the objects bought for Christmas presents have had any artistic beauty or any real value. We argue from the things shown in the shop windows of the principal thoroughfares and the arcades, nor does it seem unfair to judge from them of the prevailing tastes of the British public. The lady who encouraged her husband in racing, betting, and cards, "because they kept him out of mischief," must have had the terrors of Bond Street or the Burlington Arcade before her eyes. There must be people to buy the ivory thermometer in the shape of a cutter yacht. There must exist in somebody's mind an admiration for the dog-and-ring style in toothpick-stands. Unless such things are sold by the thousand, they will not pay the cost of production. And for novelties—that is to say, monstrosities more monstrous than anything before seen—an enhanced price, quite out of proportion to their value, has to be paid. The man who can torture a natural form into some utterly unmeaning shape expects, and probably receives, a handsome sum for his ingenuity. Yet it is sad to reflect that this vast outlay does

absolutely nothing for the encouragement of good art, and a great deal to foster the false and vulgar notions with which all our society is honeycombed. Of all that has been spent, it may safely be doubted if a hundred pounds found their way into the pockets of deserving artists. A hideous bonbon box often costs more than a picture, and its contents soon disappear, having only caused indigestion. True, the makers of bonbon boxes must live; but it is the fault of tasteless buyers which forces them to live by making ugly things; and artists nowadays may be found to design anything or to decorate anything. Many young artists are already employed in the production and ornamentation of china. Many more have taken to mural decoration, and are on the staff of great firms. There is no want of such taste among us; but the public, as we are constantly told, will not support high art. Poor ornament and meretricious work are encouraged, and the manufacturers are obliged, sometimes against their will, to meet the demand. The beautiful wares now produced in Staffordshire or at Lambeth have no chance with imitation Dresden and Sèvres which never crossed Mr. Gladstone's silver streak. If a firm of manufacturers attempts to improve the taste of its customers, it must proceed with the utmost caution, very gradually, and with almost the certainty of a loss. An experienced man can tell to a nicety which of his productions will sell the best, and it is almost always proved that the popularity of a design is in an inverse ratio to its merit. Some progress has unquestionably been made. Manufactures of artistic beauty do sell. We are beginning, though slowly, to perceive the niceties of harmonious colour in dress; true, we have not got beyond the tentative scale of neutralized semitones, and cannot yet manage contrasts; but in the choice of our Christmas presents, in the encouragement we give through them to real art, in the appreciation of true beauty either in form or colour, our generous public is yet in the experimental mazes of blundering infancy.

Fashion has as much influence upon nicknacks as it has upon dress, and Paris is often the arbiter for both. It is curious to watch how some particular form seems to become epidemic, and is to be seen reproduced in countless materials, and for all sorts of different purposes. Some time ago wheelbarrows were the rage. They were filled with salt, they dangled at watch-chains, they were used as pincushions, or employed as ornamental coal-scuttles. Then came the day of gipsy pots. Not only did we have them as egg-boilers and coffee-retorts, but as flower-glasses, inkstands, tea-kettles, and scent-bottles. At present manufacturers are evidently suffering from hats on the brain, and people who have more money than they know what to do with, and are amused by the small joke of buying incongruous forms for articles of everyday use, may gratify themselves by becoming the happy possessors of the exact imitation of a straw hat for a butter-cooler, and a "topper" for a biscuit-box. The ideas suggested are no more pleasant than those felt by a fastidious person who receives burnt almonds in a pair of exquisitely made top-boots. There seems to be a poverty of invention when we see the same form employed to collect ashes from a cigar, to hold a lady's thimble, and to be a watch-stand. Yet all these can now be had in the dainty and graceful shape of a gentleman's tall hat. Strange enough, it is in flower-vases that bad taste and ingenuity run riot most wildly. Ever since some manufacturer brought out the model of a hand grenade cup, there has been no cessation of designs which are only witty at first and out of place without being funny. In a ladies' newspaper it was lately announced that "rabbits are taking the place of squirrels as the presiding genius over plates and dishes, as well as flower-vases, and a donkey between panniers is a really charming receptacle." People whose taste is guided by fashion and novelty may further decorate their rooms by hanging round the walls white tame herring with blue ribbons round their necks and their mouths wide open to receive monthly roses instead of marine infusoria. We hear that "one of the newest receptacles for flowers is a broken vase in delicate green and white, with a couple of Cupids mounting over the broken portion." This is evidently intended to supply the place of the Louis Quatorze shoe with the Cupids asleep in the toe and the high heel made to hold violets. It was so successful attracting, it is said, not only the patronage of the aristocracy, but that of Royalty itself—that it could scarcely be produced fast enough. Whenever fashion comes to be stronger than art, which has now for a long time been the case, popular taste will remain uneducated and childish. A much admired and very "chaste" inspiration of inventive genius may be seen in a blue or pink china Eden lying on its back, and holding a ball for flowers between its paws. To harmonize with this table ornament a sweet thing in candlesticks is of equally admirable design. A Cupid on his back kicks a drum with his upraised foot, the drum being supposed to form a suitable socket for the candle. A pair of windmills in ormolu, [illegible] and the Bear talk in carved wood, may be obtained for [illegible] same purpose, and if the purchaser should chance to be [illegible]arch [illegible]amps instead of candlesticks, he may gratify his zoological as[illegible]s his æsthetic tastes by buying stuffed monkeys. These [illegible] be had in all sorts of poses and impossible attitudes, grasping glass globes in their hideous [illegible]. The [illegible] dress and undressed, and the pair of [illegible] imaginary Irishmen and his wife are never without a [illegible] group of people to stare at them. Those whose taste is entomological can rejoice in the acquisition of a stuffed pheasant, not for stewing, but to hold on its back a rose-coloured globe with a lace-paper shade. The proper inkstand for a table already furnished with some of these costly works of art might perhaps be the anvil with its hammer and pincers, or, in the country, a more rural conception in which the pen-rests are formed of croquet hoops, balls, and mallets. At the seaside the "dolphin" would be appropriate, with its "body and tail in a double twist," while nothing can form a more fitting paper-weight than one at present popular which represents a swan standing on a mirror with a pincushion on its back, although for our part we prefer one in the form of a beehive, as it seems to teach a moral lesson. A present was once defined as a thing of value which cannot be bought. Few such presents are now even attempted. A death's head forms a fashionable breast-pin; and a brilliant sarcasm is supposed to lurk in the bowl of a spoon which contains the letter U, and fulfils the duties of a brooch.

DR. PUSEY ON UNION WITH THE EASTERN CHURCH.

DR. PUSEY'S great learning is ennobled by unusually fine moral qualities, but he fails in some of the essential attributes of a leader. To a degree far beyond the other leaders of the Tractarian movement he has always led the life of a recluse, hardly ever mingling personally in the general society of the great world, and knowing but little comparatively of the currents of thought and feeling which agitate the common-rooms even of his own University. The result is that he sometimes makes mistakes from which a better knowledge of the world would have saved him. Some of these will be fresh in the memory of our readers, and the last, and not the least, of them is the letter which he has just addressed to the *Times* on the subject of union with the Eastern Church. It was a mistake to write on such a theme at all to the *Times*, and we have no doubt that when Dr. Pusey saw his letter in juxtaposition with the entertainments of Harlequin and the revelries of Cremorne he must have been struck with the incongruity. It was a mistake to choose Christmastide for what was certainly a message of anything but glad tidings to men of good-will to the cause of Christian reunion. But the greatest mistake of all was to rush into print before he had made himself acquainted with the facts which he has criticized with such curious maladroitness. He tells the readers of the *Times* that he has resigned his membership in the Eastern Church Association "on the ground of the aggressive line as to the English Church adopted by Russian ecclesiastics, and of some other apprehensions." The "other apprehensions," we suppose, are those which are unfolded in the body of the letter, and we shall examine them presently. But we regret that he has not explained more fully "the aggressive line as to the English Church adopted by Russian ecclesiastics." We happen to know something of the *animus* of Russian ecclesiastics towards the Church of England, and we confess ourselves in total ignorance of what Dr. Pusey means. As a matter of fact, Russian ecclesiastics have delivered lectures in the capital of Russia, within the last year, in defence of Anglican orders and of the catholicity of the English Church. Surely Dr. Pusey knows better than to mistake the spiteful impertinences of Dr. Overbeck for the real feelings of Russian ecclesiastics. Let him read the Report of the last Bonn Conference, and he will find the line "adopted by Russian ecclesiastics" towards the English Church the very reverse of "aggressive." Indeed it seems to us that it is Dr. Pusey who has adopted an aggressive line, not only towards Russian ecclesiastics, but towards all who do not look at these questions from precisely the same point of view as himself. The explanation probably is that his letter was written hurriedly on the impulse of the moment, and fails to express his calm and deliberate judgment.

The explanation of the *Filioque* adopted at Bonn "really prepares," in Dr. Pusey's opinion, "the way for the abandonment of the expression of our belief in the mode of existence of Almighty God—*i.e.* in God as He is." This is a most serious accusation, and ought to be supported, we take leave to say, by something more cogent than even Dr. Pusey's *ipse dixit*. He charitably acquits "the framers" indeed of any such intention. But the alternative is a charge of constructive heresy against a theologian of the calibre of Dr. Döllinger, to say nothing of the eminent divines with whom the venerable President of the Bonn Conference was in daily consultation. Dr. Pusey is a man of profound and varied learning, and of acknowledged eminence as a theologian; but he would be the first to admit that Dr. Döllinger is at least his equal in these respects, and the fact that Dr. Döllinger saw no lurking heresy in the formula respecting the *Filioque* might have suggested to Dr. Pusey a doubt as to the correctness of his own interpretation. Nor does the gravity of the accusation end here. Dr. Pusey, by implication, accuses the whole Eastern Church of material heresy. For if the *Filioque* is so absolutely essential to "the expression of our belief in the mode of existence of Almighty God—[illegible]hat the abandonment of it, even in deference to the ruling of an Œcumenical Council, would be equivalent to the abandonment of our belief in God, it follows that the Eastern Church has for centuries erred from the faith in respect to the very first article of the creed. But though this is implied in Dr. Pusey's proposition, it is impossible that he can mean anything so extravagant. And indeed, towards the end of his letter, he recommends the very course which was practically adopted at Bonn. "It would have been much better," he says, "to claim, in case of reunion, the possession of our here-

ditary Creed (with which our faith is practically bound up), while disclaiming any error which the Greeks have erroneously imputed to it, or any wish that they should adopt it." This is precisely what the Western theologians did claim at Bonn, and their claim was allowed. They admitted that the introduction of the *Filioque* into the Creed was an "ecclesiastical irregularity," but the question of its removal was left in abeyance. The aim of the Conference was to ascertain whether East and West meant the same thing under their different modes of expression, with a view to the "building of a house," as Dr. Döllinger expressed it, "in which they might both dwell together," leaving the ecclesiastical status of the *Filioque* to the determination of a future Œcumenical Council. Dr. Pusey is in error if he supposes that the propositions agreed upon at Bonn were intended to be adopted as substitutes for the *Filioque*. They were intended as an explanation of the sense in which the Westerns use the expression, and of nothing more. If Dr. Pusey had read the Report of the Conference, he would have found that "the question of abandoning the expression of our belief" was not seriously debated at Bonn, much less decided.

Dr. Pusey's third proposition is so perplexing that we must quote it in full before we venture to criticize it:—

> That one of the propositions to which we are requested to express our consent is misleading, and calculated to raise prejudices against the truth, since the reception of the Nicæno-Constantinopolitan Creed in the Western Church, for itself, together with the addition of the *Filioque*, is no more "ecclesiastically irregular" than the additions to the Nicene Creed by the Council of Constantinople, wholly a Greek Council, for its necessities in the East. The Creed also, with this addition, was notoriously received under the impression that it was the Creed, enlarged by the Council.

Dr. Pusey, we are sure, would admit, on reflection, that the doctrine broached in this paragraph is dangerous and revolutionary. What does he mean us to infer from the fact that "the Council of Constantinople" was "wholly a Greek Council"? The Nicene Council was almost "a Greek Council." But what of that? Was it therefore not œcumenical? What constitutes the œcumenicity of a Council? Certainly not the number or the variety of its members, but its acceptance by the Church. The attendance of Councils always bore a representative character, and in all of those which are received as œcumenical only a moiety of the Episcopate of Christendom was present. The second Œcumenical Council was attended by only one hundred and fifty, the third Council by about two hundred, and the Council of Nicæa itself by only three hundred and eighteen, the whole number of sees in Christendom meanwhile being about eighteen hundred. The test of a Council's being œcumenical, therefore, was the acceptance of its authority and decrees by the Church dispersed. A Council which did not answer this test, however general or numerous—and some of the heretical Councils outnumbered some of the orthodox in the proportion of three to one—was not considered œcumenical. A Council which did answer the test, whether "wholly Greek" or not, was truly œcumenical. Now the Council of Constantinople was not only accepted by the Church dispersed, but its œcumenical character was emphatically asserted by the Fathers of Chalcedon, a Council which was certainly not "wholly Greek." The authority of the Council of Constantinople is therefore quite on a par with that of any other undisputed Œcumenical Council. The fact then stands thus. The Council of Constantinople made an addition to the Nicene Creed which all Christendom has accepted. Into the Latin form of the Creed, on the other hand, an expression (*Filioque*) found its way—nobody seems to know how—which was for a while authoritatively repudiated even in the West; but which the Bishops of Rome eventually attempted to impose, on their own sole authority, upon the whole of Christendom, and thereby caused that rent between East and West which is still unhealed. Yet Dr. Pusey asserts that this tyrannous imposition of the Western formula "is no more ecclesiastically irregular than the additions to the Nicene Creed by the Council of Constantinople." He "thinks it also a misstatement that the words 'and the Son' have for so long time divided the East from the West," and this because "writers on the Greek side have said that 'the dispute was not about the Creed, but about the Sees'—*i.e.* the absolute authority claimed by the See of Rome over the Eastern Patriarchates, so different from the relations of earlier times." But there is no contradiction between the two statements. The claim to make an addition to an Œcumenical Creed on the sole authority of the Bishop of Rome was a proof and symbol of "the absolute authority" arrogated to that see, and was resisted on that ground to the last extremity of schism. Let us not be misunderstood. We do not advocate the surrender of the *Filioque*. We agree with Dr. Pusey that its surrender now by any authority short of œcumenical might shake the faith of many. It is, in fact, just because we deprecate [illegible] surrender that [illegible] lament such an untenable defence of it [illegible] may lead, by [illegible] the recoil, to an agitation in favour of surrender.

Dr. Pusey's attempt to prove a contradi[illegible]tween one of the Bonn propositions and "our Creeds and [illegible]s" is as onesided and exaggerated as his defence of the eccl[illegible]cal irregularity of the *Filioque*. In the first place, he is not [illegible]te in saying that the proposition which he condemns "states *falsely* [the italics are his] that the Holy Ghost goes not forth [illegible] the Son." It is very elaborately explained that what [illegible]eant is that He does not proceed from the Son as the ἀρχή, or *aitia*, or the πηγή of the Godhead, but only as the *instrumental* cause of His mission; and the mission was acknowledged by the Easterns to be from eternity. There is not even a verbal contradiction between this and the declaration of the Western form of the Creed, that the Holy Spirit "proceedeth from the Father and the Son." To "proceed from," and "to proceed out of," are not exact equivalents. Every word in the Bonn proposition was the result of prolonged discussions, and is charged with meaning; but the meaning is necessarily lost when, not even the whole proposition, but one of its clauses, is torn from its context and history, and presented to an ignorant public in its naked and mutilated isolation. The proposition denies nothing but the existence of two ἀρχαί in the Godhead, which "our Creeds and Articles" do not affirm. Dr. Pusey goes on to assert that "any proceedings on the part of the English Church with regard to the Creeds on this great truth would be utterly useless as to the object alleged, 'the removal of our unhappy divisions,' since there are other grave points which would hinder the Eastern Church from accepting our communion." He does not explain what these grave points are; but he would admit, we suppose, that the Easterns themselves are the best judges as to that, and it has been stated publicly that the lamented Archbishop Lycurgus declared at Bonn, on behalf of himself and the other Orientals, that, the difficulty as to the *Filioque* once removed, they saw nothing to prevent intercommunion between the Eastern Church on the one hand and the English Church and Old Catholics on the other.

We find ourselves unable to follow the logic of Dr. Pusey's sixth proposition. He objects to majorities overriding the convictions of the minority, as in the Vatican Council, and draws the illogical conclusion that, since "it is manifest," as he thinks, "that in the English Church also the majority is not now prepared to enter into communion with the Eastern Church," therefore the minority, which is prepared, ought not to be allowed to remove obstacles out of the way of such intercommunion, but must still remain under a self-imposed paralysis. It may be true that the Lower House of Convocation "inadequately represents the clergy," but, such as it is, it is the only representative they have, and it represents them, on the whole, very fairly.

Dr. Pusey thinks that negotiations like the Bonn Conferences would probably "end in the disruption of the English Church," and "would, while pending, increase divisions among ourselves, rather than promote unity with the Eastern Church." If he can find time to read the reports of the Conference, he will see cause to change his mind. What the divines assembled at Bonn aimed at was simply the removal of obstacles to intercommunion. But Dr. Pusey knows that the Church of England has never forbidden the fullest intercommunion between her members and the Eastern Church. The Bonn Conferences, therefore, can do nothing in this respect which is not already an accomplished fact. The Church of England, as such, has never broken communion with the Eastern Church, and does not forbid it now; and Dr. Pusey's fears are accordingly purely chimerical. The clergy and laity of the Church of England are as free now as they ever can be to hold communion with the Eastern Church, and the main object of the Bonn Conferences was to remove misunderstandings on the part of the Orientals. In short, Dr. Pusey has evidently written under an entire misapprehension as to the facts; and when he comes to see this, we believe he will be too generous not to acknowledge his [illegible]take. The same manly spirit which has prompted him to write the *Times*, without consulting any one, the moment he saw what seemed to him a peril to the faith for which he has suffered so much, will doubtless induce him to renew his labours in the cause of Christian reunion as soon as he finds that the danger which he has sought to avert is purely imaginary. He has lately given to the world his high estimate of the theological learning and acumen of the late Bishop of Brechin, and the last official act of that lamented prelate was to draft a resolution for his Synod by way of cordial approval of the propositions which have so unnecessarily excited Dr. Pusey's alarm.

QUEBEC.

THERE is no one among the many who cherish pleasant memories of Quebec who will not feel thankful that that ancient town has escaped a danger from its own citizens greater possibly than an enemy would have inflicted on it. The spirit of so-called improvement has been rife within its walls. Some of its inhabitants have visited the methodically planned cities of the West, and have talked with Yankee tourists about the beauties of their flourishing, but painfully dull, towns, until the idea seized them of pulling down those memorials of a past age which Quebec, almost alone among the cities of the Western Hemisphere, possesses, and of assimilating it to the [illegible]rn of a fifth-rate Chicago or St. Louis. [illegible]e the departure [illegible] British troops and the withdrawal of the [illegible]ering care of the [illegible]al Engineers, the ramparts which [illegible] rounded the [illegible]er town, dividing its aristocratic quarters [illegible] the busy suburbs [illegible] the [illegible]fs and warehouses that [illegible]rder the St. Lawrence, have fallen [illegible] disrepair. The guard-houses [illegible] sentry-boxes stand deserted [illegible]e walls, and the [illegible]e pushed aside and overturned by the [illegible]s who use the [illegible]ed ramparts as a playground. The gates were found to be [illegible]uments to traffic, the walls were said to obstruct the view, and the Town Council became persuaded that they were living in the old-world corner, and that if they could only sweep away these memories of former times, and lay out Quebec with right-angled streets and avenues as

well as its unfortunate site would permit, they would be handed down to future ages as men who had done much to regenerate their native land. Fired with these ideas, a deputation composed of some of the leading citizens went to Ottawa, and laid their plans before the Dominion Government, whose sanction was required before any step could be taken. Happily, on their arrival at the capital, the deputation met with men of greater breadth of view than themselves; they found that those who had visited Europe had learnt to appreciate the value of historical remains; and, when they sought the approval of the Governor-General, they discovered that their contemplated act would be looked upon in England as a piece of unmitigated vandalism. No doubt the deputation had something to allege on their side of the question; but it was pointed out to them that the end they had in view could be attained without the sacrifices they proposed to make, and that modern improvements were not incompatible with the preservation of the memorials of former years. With great good sense, Town Council adopted the plans submitted to them by Lord Dufferin, and decided to consult an eminent engineer and architect, so that Quebec, like the more ancient walled cities of England—York and Chester—might, whilst adapting itself to modern requirements retain most of its picturesque characteristics. A scheme was approved, money was voted by the municipality which it is hoped the Dominion Government may supplement—and the threatened danger has been averted from a city unique in its historical interest.

So many Englishmen have visited, either as soldiers or as travellers, this ancient city of Canada, that any description of it seems almost superfluous. But a slight sketch of its situation and present condition may serve to convey a general idea of the contemplated changes to persons who have never seen it, and to refresh the memories of others who have proved some of the pleasantest years of their lives within its walls. The citadel—still garrisoned by soldiers wearing the uniform of the Royal Artillery, and not unworthy of their predecessors of the Imperial army—stands on the highest point of the promontory formed by the junction of the river St. Charles with the St. Lawrence. Connected with it are the upper town, making a sort of second city, the extensive suburbs, the fertile valley of the Charles and the hills and forests stretching away to the north, while immediately at the foot of the rock on which the citadel stands is the broad stream of the St. Lawrence, dividing it from the villages of Point Levis and the three modern forts—a portion of the system of defence that looks towards the United States. There are few views that can surpass in natural beauty that obtained from the citadel of Quebec; but nature has been greatly assisted by the picturesque combination of ramparts, convents, churches, and high-gabled houses roofed with tin, shining like silver, that fill up the foreground. The fortifications of Quebec are unlike those of any other town: they possess much of the picturesqueness of mediæval architecture, with the reality of modern ramparts, and the relics of our civil wars in regard to armour, they represent a period in military history which their destruction would leave unrecorded. But to the painter they possess qualities of even greater value than to the soldier, and it is a matter of regret that so few of our artists have availed themselves of the mine of wealth that Quebec would so bountifully supply. To have levelled these ramparts, to have cut down the poplar trees by which the French colonists invariably marked their settlements, to have destroyed the houses and streets which witnessed the death of Montcalm and the entrance of the victorious army whose leader fell at the moment of success, would have been a sacrilege which Canadians in future ages would never have forgiven. The country is only now awakening to the value of historical landmarks. The struggles inseparable from early colonization, the necessity of providing for the means of each day's existence, and that habit of continually looking forward which characterizes young and energetic nationalities, have hitherto prevented the due appreciation of the antiquities of Quebec, even by those who are more especially interested in their preservation.

In 1534 Jacques Cartier found the Indian village of Stadacona occupying the present site of the city, and his successor, Samuel de Champlain, with a true perception of the value of the position, established a trading post which gradually grew into a fort, a village, and a town, and which became the seat of the Government that so long contested the empire of North America with the English race. The issue of this contest is well known; and when Quebec fell in 1759, the French colonists, secured by treaty in the possession of their laws, their religion, and their liberties, continued to occupy the cultivated lands between Montreal and the sea, leaving to the English the task of pushing forward civilization into the forests that bordered the great lakes. Although selected as the residence of the new Governors, Quebec preserved the impress which the French had given to its buildings and to its society, and retained somewhat of the appearance of an old Norman town transplanted to the further side of the Atlantic. Its colleges, convents, and churches, its narrow streets, and the people who throng them, are unlike anything that America can show elsewhere. They indicate a race and a society completely different from the almost unvarying type of American civilization, and, whilst affording a contrast to its restless energy, they present a picture of happiness and contentment which some may admire, even if they would not desire to imitate it. As wealth increased in the western part of Canada, claims were put forward by other towns to be the seat of Government, and Kingston, Montreal, and Toronto were successively selected. Quebec, however, maintained her position as one at least of the capitals of Canada, whilst she was always looked on as the principal fortress, and in fact as the key, of the country. For some years previously to the formation of the Dominion by the union of the several provinces, and to the selection of Ottawa as its permanent capital, Quebec had regained the privilege of being the place where the Governor resided and where Parliament assembled; but when the seat of Government was removed, and almost simultaneously the troops withdrawn, she felt the double blow, and for a few years lived somewhat on the retrospect of her former prosperity. Now, however, fresh life seems to have animated her. Her citizens are determined that the French metropolis shall take her place among Canadian cities, and are desirous to increase her commerce and her wealth. A railway has been begun along the north shore of the St. Lawrence as an additional means of communication with Montreal, and it is hoped that this and other improvements will insure an influx of prosperity. It was with the avowed object of opening fresh streets that the destruction of the ramparts was proposed; but now that the Town Council are convinced that all that they desire can be attained without the sacrifice of so much that induces tourists to visit Quebec, they have agreed to spend a considerable sum of money to effect the necessary changes, and at the same time to preserve its picturesque beauty.

The ramparts are to be kept in repair; wherever it is necessary to pierce them in order to create fresh thoroughfares, light bridges will be thrown across the streets, and the openings will be flanked by towers which will break the somewhat dead level of the walls. The enceinte will be preserved, and even extended, as it is proposed to prolong Durham Terrace—on which the old château of St. Louis recently stood, and which overlooks the lower town—under the walls of the citadel, and so to the fields adjoining the historic Plains of Abraham, where, outside the St. Louis gate, a garden is to be laid out. It is even hinted that the summer residence of the Governor-General, adapted from the officers' quarters in the citadel, may be improved, and that the château of St. Louis may be rebuilt on the angle of the fortress which commands the unrivalled view well known to all visitors to Quebec. If these improvements are carried out, Canada will possess a city which no town in the Empire can surpass or even equal in its peculiar style of beauty. More than this, the Canadians will have afforded a proof that they have advanced in growth and in the education that should accompany material progress. By their appreciation of historical remains, and by their preservation of the memorials of the past, they show a desire to build up a history connected with the early events that characterized the birth of their country, whilst they will be able to point with pride to the evidence of French culture which exercises no inconsiderable influence on the national character. Coming from a Government which is supposed more especially to represent the energy of Ontario, the voting of money towards the improvement of Quebec is a satisfactory indication of the consolidation of the Dominion, and of the unity of feeling between the French and English populations.

Whatever future may await Canada, Quebec must always be identified with the most striking episodes of her earlier history. The pioneers of civilization lived, traded, and fought within its ancient stockades; the priests who first taught the Christian faith to North America suffered and died within sight of the convents which were the first public buildings to rise within its walls; and the able men who endeavoured to carry out Richelieu's ambitious policy of extending the French power up the valley of the St. Lawrence, through the great Lakes, and down the long extent of the Mississippi, organized from Quebec the half-warlike, half-trading expeditions that pushed civilization into the deserts of the West. The military revers that befel the French need leave no soreness among the descendants of those who under Montcalm fought so bravely, and for a long time so successfully, to preserve the inheritance bequeathed to them; whilst the victory gained at so great a cost on the Plains of Abraham will always count among the events that have exercised a powerful and enduring influence on the destinies of the world. To have wiped away the mural records of old Quebec would have been to have blotted out one of those pictures of the past which instruct more vividly than any written history; and as their loss would have been felt beyond the precincts of the Dominion, so would those who failed to appreciate their value have been condemned by the public opinion of the two nations which boast to have contributed more than any others towards the civilization of modern times. Even in England it is only in recent years that the effect of the culture of art on the education of the community has been fully recognized; and it is satisfactory to perceive that, under the guidance of a Governor-General well known for his appreciation of what is excellent in art and literature, the leaders of the Canadian people have shown a determination so far to profit by the lessons of the mother-country as to make some sacrifice to retain and improve that which indirectly, but not the less surely, tends to the intellectual progress of the nation.

MR. BEECHER AGAIN.

An eminent, or at least conspicuous, Nonconformist minister in London is said to have declared that, when he heard of the result of the Beecher-Tilton trial, he felt an irre-

sistible desire to hug somebody; and it may be admitted that a more appropriate method of rejoicing on such an occasion could scarcely be imagined. It is possible that Mr. Beecher's friends in this country will be again moved to similar transports when they hear that the unsavoury notoriety which he has of late acquired has been attended by a marked advance in the popularity of Plymouth Church. At the annual meeting of the members, which was held the other day, a highly satisfactory rate of progress was triumphantly exhibited. "The front part of the room," we read in one of the New York papers, "was filled entirely" with what the reporter calls "ladies"; and there were "fewer than a dozen men in eight rows of seats." Whatever may be thought of the conclusiveness of the evidence as to Mr. Beecher on the specific charge against him, there can be no doubt that he had indulged in scandalous familiarities with the wife of one of his flock, and diverted her affection from her husband, and that he had also given countenance to the worst suspicions against himself by the peculiar relations which he continued to maintain with his accusers until he found them bent upon exposure. Under these circumstances, there is a curious and disagreeable significance in the feminine enthusiasm which has been excited on his behalf. The Annual Report of Plymouth Church states that it now numbers 2,490 members, being an increase of 100 during the year, and there has also been a corresponding increase in the collections. The Report concludes by declaring that the church has cause to thank God for the many blessings He has showered upon it. Mr. Beecher himself was present at the meeting, and "offered an unusually long and fervent prayer." It would appear, however, that though the fame of his philandering and osculatory habits has apparently added to his attractiveness as a pastor among a certain class of women, his triumph has not been wholly unalloyed. Several members of his church have declared themselves by no means satisfied that he has cleared his character, and demand further inquiry. Moreover, a very bad spirit towards Mr. Beecher has—so, at least, he complains—been shown by rival churches which apparently continue to attach some importance to the ordinary decencies of life. Dr. Parker's insidious attempt to fasten upon English Dissenting ministers a participation in some of the improprieties of the Beecher system has been promptly and indignantly repudiated by the persons thus calumniated; and it appears that in the United States also the Congregationalists are by no means willing to be identified with the kissing and cuddling of Brooklyn. At a recent meeting of his church Mr. Beecher broke out into a protest against the persecution to which he says he has been subjected. Plymouth Church, he said, "now stands alone, separated by a barrier as it were from its neighbours, and in a peculiar position." "Those from whom we had a right to expect sympathy have not shown it, nor have they extended to this church the soft side of the hand; but when they came, it was never with the palm, but always with the knuckles." He went on to complain that he had been pelted with "fiery ice"—this might be a better description of his own character, as he himself represents it, which is that he is ice that never melts even under the warmest provocation—and had suffered long and patiently; yet "they had now come to that point at which it was very plain that the campaign had but begun." These remarks seem to have had especial reference to the doubting members of Plymouth Church, whom the pastor and his friends have been trying to get rid of by the process of summary ejection without trial or hearing. Other Congregational bodies have been shocked by this unscrupulous despotism; but the Beecherites contend that each church is a separate church, absolute and competent to govern itself, and having exclusive jurisdiction over all its affairs. There is no doubt that this is a correct description of the legal position of a Congregational church as regards other churches; but the members of such a church have, under the law, rights of which they cannot be deprived.

When the case of Queen Caroline was before the public, Mary Lamb, Charles Lamb's sister, and in a certain way a woman of keen insight, remarked, "I should not think the better of her if she were what is called 'innocent,'" meaning that mind and character are of more significance than a particular and casual act. This applies very strongly to Mr. Beecher's case; into whatever depth of the pit he may himself have fallen, he has set a bad example to other people in, by his own confession, going so near the slippery edge. It is necessary to understand the exact position which Mr. Beecher at present occupies. He submitted for several years to hear accusations constantly made against him, and to hear them assumed as undeniable, by persons before whom he grovelled in the most abject and despairing manner. When the secret could no longer be suppressed, an attempt was made to get out of the difficulty by a church council, which, being under the influence of Mr. Beecher's special friends, decided, after an imperfect and onesided investigation, in the pastor's favour. This, however, had no effect on public opinion, and Beecher, after much hesitation, brought an action for libel against Tilton. There was a long trial, and the jury could not agree on a verdict. Beecher had, however, another opportunity of getting the case tried, for he had also raised an action for libel against Moulton, one of his chief assailants; but, being overcome by a spirit of Christian forgiveness, he voluntarily applied to have the case withdrawn, in spite of the defendant's energetic opposition. Yet, in the face of this, Mr. Beecher, at a meeting of the church on December 17, professed to be still anxious for another trial, only it must be one to his own taste. He will not go to a civil court, he has had enough of that. Nor will he submit to a general council of ministers. "When," he said, "I am asked to re-open, on this issue, the record of the former proceedings, in what fills four large octavo volumes, when I am asked to take the measure of this entangled and obscure mass of iniquity, and ask it to be brought into the hands of a council of ministers, gathered together from all parts of the country, that must come on Tuesday and then get home by Sunday again, then I do object." "I will not," he added, "sit before a jury of foxes and wolves." Therefore, as Mr. Beecher has no stomach for any more civil proceedings, and regards other ministers of his own school as "foxes and wolves," there will be some difficulty in providing him with any form of inquiry which will please him. What he himself suggests is a picked body of church delegates, to be selected at the discretion of his own Committee, to decide in the first instance whether it is the duty of Plymouth Church to reopen the investigation; and it can hardly be doubted what would be the result of such a farce. The spirit in which the Committee has already acted in arbitrarily striking off the roll Mrs. Moulton, Deacon West, and other members of the church without a hearing, because they have declared themselves still dissatisfied with Mr Beecher's conduct, sufficiently indicates what might be expected from them. A telegram from New York announces that, whatever the churches may do, Mr. Moulton has determined to enter an action against Mr. Beecher for malicious prosecution, so that the whole question will then come up again before the Supreme Court.

It is unfortunate that this loathsome subject should be kept before the public in this way, but the unabashed and brazen manner in which Mr. Beecher has paraded himself since the last trial perhaps renders it inevitable. As we have said, even those who do not think that everything has been proved against him must acknowledge that he behaved with a scandalous disregard of the primitive elements of ministerial decency; and under such circumstances it would have been his duty to indicate some sense of that contrition which he professed to feel when he used to crouch and whimper, like a whipped hound who has committed an offence against propriety, at the feet of his accusers. Instead of this, during the whole of this inglorious business he has been perpetually thrusting himself into [illegible] and doing his utmost to make capital out of a nasty, prurient [illegible]osity. He has been giving his sympathetic help to Mr [illegible] Sankey. In his own church he is more triumphant and [illegible] than ever; his platform is gay and fragrant with [illegible] bouquets, and the reporters never fail to note his good [illegible] and how "ruddy and [illegible] he always is. Even [illegible] would have been [illegible] But Mr. Be[illegible] he has to deal with [illegible] Tweed [illegible] by [illegible] examination of his [illegible] probably be sorr[illegible] as affords him another opportunity of showing how easily he could again escape. And Beecher, after all the disgraceful exposures he has gone through, finds his audiences and his collections increasing, has more flowers than ever showered on him by fervent devotees, is more widely reported at the Bar, and, in short, enjoys all those attributes of notoriety which he regarded to the risk [illegible] The spe[illegible]ch the characters of such men in themselves, as the indication which the tolerance extended to them affords of a general unsoundness of opinion and morality.

DECLINE OF LIBERAL CATHOLICISM.

THE Canadian Correspondent of the *Times* gave the other day some rather curious statistics as to the state of religious parties in Lower Canada or Quebec, which it will be remembered is chiefly French and Roman Catholic. The Guibord burial case is still fresh in every one's memory, and would alone suffice to illustrate the prevalence of the *odium theologicum* there in a somewhat virulent form. But it is not pleasant to learn that this miserable affair is so far from being anything exceptional that it is merely one out of many passing indications of a general and established fact. The *Institut Canadien* to which Guibord belonged, and his membership of which was the sole cause of the refusal of Christian burial to his remains and the solemn cursing of his grave, is said to include pretty nearly the whole Liberal Catholicism of French Canada, and it was till lately a large and influential society to which men of mark and high position deemed it an honour to belong. But since the Vatican Council—which its plausible advocates in this country are never tired of assuring us has changed nothing and introduced no novelties—all this has been completely altered. The word has been passed from Rome that Liberal Catholicism is to be put down, and the "Institute" is done accordingly. Its members have sunk to a mere fraction of what they were—there are said to be now only 165 of them—and one of its most prominent representatives, who had warmly espoused the cause of Guibord's widow in the recent suit, found it necessary to retire from all connexion with it on the eve of the last general election, as the only means of securing the clerical support which was essential to his return to Parliament. That the great body of educated Catholics in Canada are really liberal in sentiment is not disputed, but they dare not avow their real sentiments. The Catholic vote is completely under the control of the clergy, and they of course are under the dominion of Rome. So entirely is this the case that in all questions of the general policy of the

Confederacy in which the hierarchy care to interest themselves, the Quebec vote is exclusively Ultramontane. Our readers may recollect that in 1867 the new Dominion, comprising Upper and Lower Canada (Quebec), Nova Scotia, and New Brunswick, was formed into a Confederation under the name of Canada, certain rights, however, being reserved to the several Provincial Legislatures. In Lower Canada, as was before observed, the great majority are French Roman Catholics, while in the other provinces there is a considerable and active Catholic minority. By an Act of the Imperial Parliament passed in 1774 —when politicians of all classes were [illegible] to laugh at Popery as a harmless and effete superstition—certain privileges, the precise nature and extent of which has recently been made matter of dispute, were secured in perpetuity to "His Majesty's subjects professing the religion of the Church of Rome" in Quebec. But it is not only in Quebec that the Ultramontane and aggressive party is making itself felt. The Common School Act, passed four years ago by the local Legislature of New Brunswick, making assessment compulsory, and restricting legislative aid under its provisions to non-sectarian schools, has all along been vehemently opposed and denounced by the Roman Catholic minority, whose schools—in common with those of the Episcopalian and some other communions—were thereby deprived of the State grants they had previously enjoyed. We need not enter here on the details of the controversy, which is still raging, further than to say that desperate attempts were made to override the action of the Provincial Legislature by an appeal to the Dominion Parliament; and since the latter has very properly acknowledged its constitutional incompetence to interfere, an address has now been voted to the Queen, requesting Her Majesty to use her influence for the modification of the obnoxious Act. Meanwhile the Government of New Brunswick, backed by an overwhelming majority of the Legislature, declines to recede from the position it has taken up. And so matters rest for the present, till it is known what course will be taken by the Imperial Government on the address to the Queen.

We have dwelt thus far on the state of religious discord in Canada, not so much for its own sake as because it supplies an apt illustration of the changed and changing attitude of what has now become the dominant section of the Roman Catholic Church generally. Catholicism has always been the leading religion in Canada; but these troubles are of very recent growth, because till lately it was not only possible, but very common, to be a Roman Catholic without being a "Romanist"—as the word is frequently used by German writers—or, to adopt the less courteous phraseology familiar to our own ears, a Papist. With the exception of a diminishing and then discredited school, chiefly confined to the Jesuits, and which the leading representatives both of the Roman Catholic hierarchy and laity in the British dominions treated with unconcealed contempt, the Church and the Pope were at this time very far from being convertible terms. That, for all practical purposes, the one means the other is now a recognized commonplace of every tiro in Ultramontane theology, an axiom to adopt Lord Macaulay's formula—with which every schoolboy at a well-conducted and orthodox seminary must be familiar, and which the Vatican Synod has elevated to an article of faith. It is obvious that under such a *régime* Liberal Catholicism at once becomes an anachronism; it must resist or cease to be. That its powers of resistance are exhausted, or that it will not hereafter assert itself with even more and effect intensified by the force of reaction, we are very far from saying. But that for the moment it is down there can be no doubt, and as little that the triumphant faction is never weary of crying *Vae victis* over its prostrate foes. Montalembert is dead, and, so far as the Pope was concerned, narrowly escaped being [illegible] without Christian rites; Döllinger and Hyacinthe are excommunicate; a death-bed retractation was wrung from the unwilling lips of Father Gratry; the German Episcopate, if we may be allowed an expressive colloquialism, shelladdled *en masse*; Newman is reduced to sorrowful silence, and delivered over to the tender mercies, cruel in their contemptuous politeness, of the leading organ of English Ultramontanism. Rome for the time has succeeded in making a solitude, and her satellites call it peace.

In saying this we may perhaps seem to be merely re-echoing the cuckoo cry of Ultramontane preachers and journalists for the last five years, and they will be ready to congratulate us on our at last acknowledging the great fact which they have been so sedulously employed in dinning into our ears. It was Cardinal Manning, if our memory serves us rightly, who said, in one of his newspaper letters on the Gladstone controversy, that he could count the opponents of the Vatican dogmas in the Church. There was an Anglican prelate some years ago, and one of the ablest and most sober-minded of them too, who said he could "count on his fingers" the clergy who maintained the doctrine of Apostolic succession. Even Bishop Baring would hardly venture on such an assertion now. Cardinal Manning gauged the number of anti-infallibilists by the few, like Lord Camoys and Mr. Petre, who happened to have occasion to write letters on the subject to the *Times*; but there are cases where "de non apparentibus et non existentibus eadem *non* est ratio," and it is more than probable that this will turn out to be one of them. The habits of a lifetime are not easily broken through, and few habits are stronger or more deeply ingrained into a man's whole nature than that of deference to ecclesiastical authority in a devout Roman Catholic. It must have been evident to all who took the trouble to watch the course, how slowly and reluctantly even a man of Dr. Döllinger's powerful intellect and force of character could wrench himself, so to speak, from all complicity with a system which his judgment and conscience alike condemned. And what was difficult to him would be tenfold more difficult to others whose strength, whether of conviction or character, cannot be supposed to equal his. It is no proof, therefore, if for a time they are reduced to silence, that Liberal Catholics have changed their opinions or lost courage. A despotic rule under which, as was shown not long ago, a casual letter to the newspapers may expose a gentleman of unimpeachable character to prompt excommunication at the hands of his bishop, was sure of course to produce some effect on those who have always been taught to regard ecclesiastical judgments as sacred and solemn things. The authorities who have adopted this drastic policy knew that they could reckon on at least a temporary success, and they have not been disappointed. It remains to be seen whether it will be equally successful in the long run. For the present, no doubt, Liberal Roman Catholics must have something of the feeling so oddly described by Bishop Dupanloup when he says that he is "cast, like Daniel, into the fiery furnace at Babylon": but still there were some—though Daniel was not one of them—who not only managed to endure the fiery furnace, but also, as was said of a later victim of persecution, lighted a candle at the flame which was not soon put out. Rome triumphs just now over her disaffected subjects by an opposite policy to that of her Imperial namesake. She cannot subdue the mighty, but she crushes the timid and submissive. Such victories are apt to be suicidal. Some years ago a very distinguished Roman Catholic writer, on whom the iron heel of authority pressed heavily, observed, as for the moment he laid down his pen, that "the silent thinkers of the Church" were doing a work the fruit of which would be hereafter manifested. The Ultramontane journalists of the day covered him with their bitterest ridicule, but he may yet live perhaps to see his words come true. If Liberal Catholics are silenced, their rivals may be pretty sure that they are neither converted nor convinced.

MR. IRVING AND *PUNCH*.

It may be thought perhaps that it would have been wiser if Mr. Irving had treated the attack which has been made on him in a Pall Mall Gazette paper with dignified contempt, instead of giving an opportunity of advertising its obscure existence in a police court. But there can be no doubt that the attack in question was, from every point of view, quite unwarrantable. We have no desire to discuss the question in its legal aspects; but it is obvious that the article complained of was, on the face of it, a violation of the proprieties of journalism, and that it was clearly intended to hold up Mr. Irving to what French lawyers would call "hatred and contempt." The article, which was in the form of a letter addressed to 'A Fashionable Tragedian,' began by assuming that the performance of *Macbeth* at the Lyceum had been a failure; which, it appears, it was not, at least in the ordinary managerial sense, seeing that the play was performed eighty times—a longer run than usual of this play—and that it is intended to reproduce it at some future time; but of course it has not been so successful as *Hamlet*, always a more popular piece, and there has no doubt been some disappointment with regard to Mr Irving's conception of the principal character. The writer of the article begins by beseeching the tragedian whom he is addressing, "in the name of humanity, to which, in spite of your transcendent abilities, you cannot avoid belonging," and "for the sake of order and morality," to abandon the idea of following up *Macbeth* by *Othello*. And then he goes on to draw up a sweeping indictment against the fashionable tragedian for the injurious influence which he is alleged to have exercised on the dramatic art. "For some years past you have been the prime mover in a series of [illegible]s which, carried by you to the utmost point of realistic ghastliness, have undermined the constitution of society, and familiarized the masses with the most loathsome details of crime and bloodshed. With the hireling portion of the press at your command you have induced the vulgar and unthinking to consider you a model of histrionic ability, and pioneer of an intellectual and cultured school of dramatic art. Having thus focussed the attention of the mob, you have not hesitated nightly to debauch its intelligence, to steep it in an atmosphere of diabolical lust and crude carnage, to cast around the foulest outrages the glamour of a false sentimentality. You have idealized blank-verse butchery until murder and assassination have come to be considered the natural environments of the noble and the heroic." In short, the writer maintains that "for the disgusting bloodthirstiness and callous immorality of the present day," the tragedian in question is "in a great measure responsible," having "pandered to the lowest passions of our nature by clothing in an attractive garb the vilest actions of which we are capable"; and he winds up by saying that, if the subject of his v[illegible] on in this way, he will "increase the epidemic of murder one-hundredfold," besides degrading the drama. It may perhaps be imagined from this rhapsody that, if the Whitechapel murder had not happened before the production of *Macbeth*, the writer would have added the instigation of that atrocity to the catalogue of the fashionable tragedian's crimes; and there [illegible]ubt that Mr. Irving is here re[illegible]

This is obviously not fair or reasonable criticism, and the best defence that could have been made for it would have been that it was only a bad joke, and intended to reflect ridicule on Mr. Irving's

hostile critics. This must have been its effect on any intelligent mind, and therefore we think that an actor of established reputation, even though a tragedian, could have afforded to laugh at it. It will be observed that, as regards the charges first advanced against Mr. Irving, they involve an even more serious accusation against the author of *Macbeth* and *Othello*, whose words Mr. Irving merely recites, as several generations of actors have done before him; and it will be thought rather late in the day to gibbet Shakspeare as a corrupter of the public mind. There is a reasonable objection to such plays as *Jack Sheppard* which present crime in an aspect which has undoubtedly a fascination for weak intellects, especially when accompanied by vicious propensities; but we should have thought that there was nobody out of Bedlam who could possibly fancy that *Macbeth* or *Othello* had a tendency to encourage murder. The distinct moral of each play is to show at once the folly and agony of yielding to a murderous impulse. Any one who sees *Othello* feels impressed with a deep sense of the danger to which even a naturally generous and loving nature is exposed from the insidious influence of an imaginative jealousy; and *Macbeth* demonstrates not only the paralysing remorse, but the futility, of murder for purposes of ambition. We do not know what may be Mr. Irving's conception of Othello, but we should imagine from his rendering both of Hamlet and Macbeth, that he would probably lean to a more tender and refined interpretation than has been usual in the traditions of the stage, and possibly as a protest against some of the brutalities of the Italian school. Indeed, the main charge against Mr. Irving's Macbeth in the criticism of the day has been that he has failed to do justice to the rude manliness of the character, and has made him too despicable a sneak. Argument on this point is, however, a mere waste of time, and when a writer accuses an actor of debauching public morality by bringing before the public the works of the greatest and noblest of all poets, every one must know what to take him for. The motley is conspicuous, and it is easy to recognize the poor folly which thinks to be funny by being spiteful and extravagant.

With Mr. Irving's Shakspearian personations the writer in *Fun* ignorantly couples some modern pieces in which this actor has also made himself known. "As a burgomaster," he says, "a schoolmaster, a king, a brother, a prince, and a chieftain, all of murderous proclivities, you have deluged the modern stage with the sanguine fluid"—this is, we suppose, what is called "bees-lud!" at transpontine theatres—"and strewn it with corpses." The modern characters in which Mr. Irving has appeared are certainly not to our own taste, for we think them sickly and unpleasant. His Charles I., however, rather suggested how sweetly and prettily one may walk to the axe than showed a taste for murder; and, though the heroes of *The Bells* and *Eugene Aram* are both really murderers, the representation of their agonies is calculated rather to deter than to encourage any imitation of their example. There is, however, we allow, something morbid and unwholesome in both of these plays. In Shakspeare nothing horrible is introduced for its own sake, and such horrors as there are lose their brutalizing influence in the large humanity which surrounds them. In *The Bells* and *Eugene Aram* we have merely a dismal study in the morbid anatomy of crime, without any subtlety of character or anything to elevate and exhilarate the mind. A critic who puts the interpretation of Shakspeare on a level with the representation of such parts as the burgomaster who has murdered a Jew for the sake of his pelf, and the equally sordid crime of Eugene Aram, at once attests his own utter imbecility. It has been with a deep and natural satisfaction that sincere believers in the value of the stage as an important agent in forming, if not exactly public opinion, yet public taste and moral sentiment, observed an actor so intellectual and accomplished as Mr. Irving abandoning those errors of his earlier career by which he gained attention, and using his hold upon the multitude for the purpose of making it acquainted with the highest creations of dramatic art. It is possible that in choosing Othello as his next experiment Mr. Irving may have made a mistake, but it would be both ungenerous and unjust to assume this before we see what he has to offer us. At the same time, the range of Shakspeare is so wide and varied that it is impossible not to regret that a competent artist should restrict himself to a comparatively narrow range of parts. It is not every tragedian who, like Garrick, is as much at home in comedy as in tragedy. But experience has shown that the best actors have been those who avoided the temptation of an overpowering mannerism by the choice of a judicious and refreshing variety of subjects. There was undoubtedly too much of Eugene Aram in Mr. Irving's Macbeth; and, without attempting actual comedy, he might find more than one Shakspearian character—Richard III. for one—in which that capacity for keen and graphic delineation of character which he showed a few years ago in a small part in the *Two Roses* might be worthily displayed. The sensitive nature of an artist stands especially in need of the healthy relaxation of occasional change of work. It is impossible to imagine anything more debilitating than these one hundred and two hundred repetitions of the same part, and it may be doubted whether even the most robust and elastic of the great actors of the past could have kept up with it.

REPRESENTATIVE BREWERS.

THE editor of a publication called *The Licensed Victuallers' Year-Book* thinks that the "Trade" for which he writes cannot fail to be interested in a series of portraits and biographies of men whose names are, as he truly says, familiar in his subscribers' mouths as household words. It may be interesting even beyond the "Trade" to hear what its organ has to say of the characters and careers of the "Representative Brewers of England," of the methods by which they or their fathers attained success, and of the position they now hold and the duties it involves. It may be expected that, in writing the lives of heroes of any class, a mythical element will be introduced and great results attributed to disproportionately small causes. A deceased judge liked to tell an audience of barristers that he ascribed his own professional success to the habit of staying late at chambers; but his hearers were aware that, besides his own ability, audacity, and perseverance, he was helped by a discreet marriage. In the same way, when we are told that one of the firm of Truman, Hanbury, and Co. was never two minutes late for business in his life, we feel that punctuality, although a valuable quality in business, goes but a little way towards brewing good beer. It must be remembered, too, that the subjects of these notices are not only great brewers; they are leaders of a class which conceives itself to have been threatened with Parliamentary confiscation; and in leaders those who follow expect to find higher qualities than industry and regularity in business. Accordingly, this editor, in presenting to his readers the portrait of Mr. Robert Tennant, M.P. for Leeds, mentions that "on both sides he is descended from the famous Dalesmen who, in so many crises of English history, have come to the front." With an eloquence which we regret to spoil by abridgment, he tells how these Dalesmen withstood the Norman conquerors until they made peace as equals, built world-renowned abbeys and priories, gave the great Earl of Warwick his choicest troops, and also gave Edward of York the troops with which he defeated his too powerful subject. Thence came the men who followed Fairfax, "himself an Otley man," the men who died with Derwentwater and Nithisdale, "the stalwart horsemen of the Household Brigade," and, finally, Mr. Robert Tennant, who "proved the strength of courage of a good cause" by getting returned for Leeds at the election of 1874. We remark, but not as an objection to this history, that the Dalesmen seem to have thought any cause, good or bad, better than none. It were pity indeed that their fighting qualities should not shine in use, and therefore we are not surprised to find that they followed with equal valour and fidelity Warwick and York, Fairfax and Derwentwater. That stalwart horseman Captain Dalgetty, surveying with impartial eye the contending parties of his native land, cannot precisely say which is the best cause; but he can say that he has fought knee-deep in blood for a cause that was many degrees worse than the worst of them all. The Dalesmen no doubt made excellent soldiers for any leader, and this writer seems to forget that mercenaries or even clansmen are rather a low type of heroes. But he writes under the genuine local enthusiasm which makes his district and its people the finest in England. He thinks that there is nothing more beautiful than the course of the Wharfe to its junction with the Ouse, although probably this, like other rivers of the West Riding, is now black and poisonous from the refuse of cloth works on its banks. It might be interesting to know the source of the water used by the Brunswick Brewery Company of Leeds in which Mr. Tennant is a partner.

We are told in the notice of Mr. Bass that "the peculiar virtue of Burton water" for brewing purposes was discovered in early times, but whether Burton beer is now brewed from Trent water we are not told. The firm of which Mr. Bass is the chief invented pale or bitter beer, and substituted this article for the strong brown ale which first made Burton famous. The original brewers of "India Pale Ale" were Londoners, and it was in attempting to rival them in the production of an article that would bear the voyage to the East and suit the climate that Mr. Bass managed to hit the taste of his countrymen alike in India and at home. A shipwreck introduced his beer in Liverpool, and the Great Exhibition of 1851 made it generally known as draught beer in London. Afflicted humanity may confess that it finds in pale ale some compensation for the nuisance of perpetually recurring International Exhibitions. "The great London brewers," says this writer, "openly laughed to scorn the efforts of the Midlandmen to poach on their manors." But pale ale rapidly overran the territory of porter, and now these rivals meet equally and peacefully under the popular form of "half-and-half." As we understand, the business of Bass and Co. is now the largest in the kingdom, and its rapid and marvellous growth contains, we are told, a valuable lesson for all who are willing to learn it. "It has been produced neither by puffing nor luck, but by steady hard work, constant determination to produce the very best article that capital and science combined could wring from malt and hops, and unswerving, undeviating integrity." The writer allows that it is possible, although not probable, that without this last qualification the house of Bass and Co. might have heaped up colossal fortunes, but he is sure that they would not stand as high as they do in the estimation of their fellow-men. It is a comfort to hear the organ of a powerful trade grinding such excellent morality as this. But although principles are grand things, they must in general be combined with capital, and helped by time, to make colossal fortunes. Mr. Bass's grandfather began to brew beer at Burton in 1777, and the business has been growing ever since. Several of the London firms are older than this, and the lesson to be learned from their history is that the steady pursuit of one object for several generations will make the fortune of a family. The business of Barclay, Perkins, and Co. was carried on early in the eighteenth century by Mr. Halsey, who made a fortune out of it,

and sold it to Mr. Thrale, whose son's executors sold it to Mr. David Barclay of the banking firm, who put his nephew, Robert Barclay, and Thrale's old manager Perkins, into the brewery. This was in 1781, and twelve years afterwards this business was the third largest in London, while that of Truman, Hanbury, and Co., which has now existed for a century and a half, was fourth. For more than twenty years these two firms have been indisputably before all other London breweries. We are told that Mr. Robert Barclay, the first brewer of the name, made up his mind that he must throw in his lot with the London Retail Trade. He discouraged private customers, and told them they could only obtain his porter through a licensed victualler. He was a man "of broad views and wide intelligence," and no doubt showed it in this instance. Yet it would have been rather hard on private families in London if all brewers had held equally "broad" views. The house of Truman and Co. numbers among its former partners Sir T. F. Buxton, who had so much to do with the abolition of the slave-trade. As might be expected from his connexions, the firm to which he belonged was brought strongly under Sabbatarian influence; and Mr. Robert Hanbury expressed his regret that, do what they would—and they had done a good deal—their beer would work on Sundays.

The portrait and notice of Mr. Drew, of the Shadwell Bakery, may remind scoffers of the proportion between Falstaff's sack and bread. Mr. Drew has largely extended the business of his firm by adopting the "broad" views of Mr. Barclay. He makes cakes and biscuits for licensed victuallers alone, and he supplies not only edibles, but also glass dishes and covers and ornamental tablets, by which it is supposed that cakes and biscuits are made more attractive. It would only be a further extension of the same principle if this firm supplied ribbons and other ornamental articles to the young ladies who are the real attractions of refreshment bars. It may be easily supposed that a bakery which supplies the Crystal Palace and Messrs. Spiers and Pond does a large business. And the head of this firm, like the great brewers, has a house where he farms, gardens, and acts the country gentleman, and he also patronizes art, and supports, as well he may, the "Trade" charities. We are told by the editor, and he ought to know, that a quarter of a century ago no one would have dreamed of a biscuit baker having so much influence with the "Trade." Still, after accurately taking stock on the so extensive premises, we might ask, what is this among so many? We can better understand the power of the public as after viewing these sketches of their leaders. The editor would seem to be personally Conservative, but he properly treats all political questions as secondary to the interests of the "Trade." Not that he advocates these interests extravagantly or in discord to public health and morals. We observe that he twice commends the subjects of his sketches for advocating a uniform early time of closing public-houses. And although he is sometimes bitter with the Permissivites, as he calls Sir Wilfrid Lawson's followers, his prevailing tone is that of gentle pity for fanatics who are blind to the virtues of beer. He tells us that the monks were the best brewers in the middle ages, and their beneficent work has been continued by the great establishments whose chiefs he delights to honour. Although beer is no longer brewed in St. Augustine's Monastery at Canterbury, yet a site for the "Original" Brewery has been found in the immediate neighbourhood. Whether the water from St. Augustine's Well is still used in brewing we do not know, and perhaps had better not inquire, as we might thus bring ourselves in face of the all-pervading difficulty of sewage. Let it suffice that Canterbury adjoins some of the best barley land in England, and is near the finest hop grounds. These "representative brewers" may be fairly called a commercial aristocracy, and the organization of which they are the head, and the licensed victuallers are the body, works harmoniously for the common good. They are all wealthy, and the younger members, at any rate, have been at school and college, and are well qualified to be active and successful in business in middle life, and to be models of country gentlemen and magistrates in riper years. The licensed victuallers are content, and even proud, to contemplate the greatness they help to make. Chairmen can be found for the annual festivals of their charities able to make conventional speeches without faults of grammar or pronunciation, and "munificent donations" are forthcoming, as well they may be, from the chairman and his friends when the plate goes round after dinner. These wealthy brewers cannot escape the influence of the ideas which prevail in cultivated society, and their advocacy of the interests of the "Trade" is necessarily mitigated, if not by moral or economic considerations, at least by sensibility to ridicule. This aristocracy, if prudently guided, may long withstand the assaults of organized fanaticism.

THE THEATRES.

AN advertisement which has appeared this week is characteristic of modern management. It is announced that Mr. Irving will perform Hamlet for a few nights "prior to his appearance as Othello and to the production of Tennyson's *Queen Mary*, in both of which plays Mr. Irving and Miss Bateman will appear." It is complacently assumed that, if the public knows that these two performers will appear in any play, that will suffice: but we venture to think that, at least as regards *Othello*, something more might be expected. If the public wish to see a foreign actor in this play who comes to England for a short time, they may put up with a mere "scratch" company to play with him. But when an English manager proposes at leisure to produce *Othello*, he ought to do his best to fill all parts in it efficiently, even at the risk of allowing it to be perceived that other actors are comparable to Mr. Irving. We shall know when the play is produced, if not before, who undertakes Iago. Where is the respectable mediocrity who will avoid glaring failure while disclaiming all pretence to divide honours with Mr. Irving? We do not assume that the representative of Iago has been chosen on this principle; but we may infer from experience that, if the management had anything particular in store, it would have found its way into the advertisements. The best actors of the best time were content to play in turn Othello and Iago, and thus they at once improved themselves and interested the public. However, it is something gained when one play does not stand in the bills at this house for an entire season, and the appearance of Mr. Irving as Othello, however accompanied, will excite and probably repay curiosity.

Managers, observing the diversity of opinions among critics, may comfort themselves by inferring that they represent the public. Where tastes are so various it must be difficult not to please somebody; and when an actor has attained a certain position, a meaning will be found for everything he does. The manager of the Gaiety Theatre, slightly anticipating Boxing Day, produced a piece which we should have described as a seasonable drollery. There are two acts of drama fairly written and well acted, and then a third act, in which Mr. Toole commits all the absurdities he possibly can within the time. The analogy to a pantomime beginning with verbal jokes and ending with clown stealing eggs to load a blunderbuss is close, and we should have the right appropriate. But it appears that when Mr. Toole as waiter spills salad over a guest's white waistcoat, he means as much as Lord Burleigh meant when he shook his head. We do not know whether appreciative criticism has been written on the after-piece called *Toole at Sea*, and we can only say that it deserves to be thus treated quite as well as the third act of *Uncle's*. The first two acts might be seen with pleasure at any time, and as regards the third act it may be remarked, that Christmas comes but once a year, and both Mr. Byron and Mr. Toole could do better if they thought it necessary. At the Globe Theatre, as we lately observed, they have pantomime all the year round, and it is easy to believe that the "Christmas edition" of *Bluebeard* is worthy of its name.

There is an opening in life for a modern Dick Whittington whose cat could destroy the "rats" which infest our ships, but youthful ambition is not now greatly stimulated by the prospect of being thrice Lord Mayor. As the Frenchman said of a fox-hunt, "I have been," and one term of office would probably satisfy any ordinary desire for distinction or notoriety. We do not know whether this is one of the nursery stories which are supposed to have a moral purpose, or whether the embarcation by Dick's master of his entire stock-in-trade in fraud of creditors is an orthodox tradition or an embellishment by Mr. Blanchard. It is at any rate certain that the cat in the pantomime of *Whittington* will do much to make the fortune of Drury Lane Theatre. It may be remarked that, in the ages before Sir John Lubbock, City clerks who desired to make merry on a holiday had to do so before business hours in the morning. It is long since a may-pole was erected in Cornhill; but we believe that a month ago a skating-rink existed in Cheapside, and therefore it would not be true to say that all fun has been banished from the City. Dick's master ships himself, his goods, his daughter, his apprentice, and his cook, for Zanzibar, and they are accompanied by the inevitable cat, who makes the fortune of the whole party by killing the rats which infest the Sultan's table. The Sultan returns with the party to England, and it is rather an inadequate issue of his visit to make him marry the cook. We have been lately visited by a Sultan of Zanzibar, who made, with the help of an interpreter, speeches which displayed surprising familiarity with English habits and modes of thought. Mr. Brittain Wright, who is a very competent autocrat of burlesque, has little to do, and indeed the piece depends wholly on the Vokes family for its success. The cat is specially meritorious, but the other parts afford no particular opening for talent, and the performers only do what they have done before. It may be said, on the whole, that this is not a strong pantomime. It is pleasantly written, like all Mr. Blanchard's compositions, and he does not pun with the audacity of other writers. But there is no exuberant drollery in Whittington's adventures, and the harlequinade is dull.

The "good old English farce," as the playbill calls it, of *A Roland for an Oliver* begins the evening at Covent Garden, and, as it is tolerably played, it is at least as amusing as the pantomime which follows it. The date of this farce, if any one is curious about it, may be inferred from its mentioning Buckle, who won the St. Leger in 1800, as a well-known jockey. Its reception by the audience, or so much thereof as has arrived, might perhaps induce managers to revive the old practice of combining a drama of some merit with a pantomime in the same evening. The modern pantomimes are too palpably spun out to the length which vicious custom requires; and although we do not complain of the clown and the policeman for doing exactly the same as they have done for years, yet poverty of invention might counsel brevity. We must allow that at this house the harlequinade is shorter than at Drury Lane; but if the manager explained its brevity by saying that he did not wish to be tedious, we might be tempted to retort, "But you were tedious." He has, however,

been fairly successful in the earlier and more important part of his work. The familiar story of *Cinderella* is made to carry a good deal of boisterous fun. The toilets of the two elder sisters before the ball are performed with all the solemnities proper to the occasion, including the knocking of an attendant through a looking-glass, and the procession of guests to and from the ball is cleverly contrived. The dances at the ball have more variety than is usual in the ballets which now help to make out a pantomime, and the last of the series, by girls dressed as sailors, receives a well-deserved *encore*. The life, light, and gaiety of the scene would have tempted any girl to linger as Cinderella did, and almost the only unreality lies in the supposition that anybody could be expected to quit a ball at twelve o'clock. Like the farce which preceded it, the story of Cinderella bears internal evidence of its antiquity. There is nothing in this pantomime so good as the cat at Drury Lane, but if it were not for the special talent of the company at that house, we do not think there would be much to choose between the two pantomimes.

That "favourite comedy," as it is well called, *A Lesson in Love*, is now performed nightly at the Strand Theatre, with deserved applause, and furnishes an agreeable relaxation after the laborious round of pantomimes. The burlesques at this house have of late been rather heavy, and it is, therefore, pleasant to acknowledge the genuine fun of *Antarctic*, of which the scene is as wide as possible from that suggested by the title. Captain Ultramarine has gone on an expedition to the South Pole, where he has been frozen up or otherwise detained for so long that his daughter has grown up and become a serious embarrassment to her guardian, Paletot, a Parisian tailor. He is about to be married, and fears that it will be impossible to explain satisfactorily to his bride his relation to a girl who is almost as old as she is. A friend whom he consults assures him that his bride will never believe in the South Pole, and he is reduced to the desperate expedient of himself personating the absent father. This is all very well when he first goes down to the school where the girl is, but when his bride and her father, who has been a detective, arrive there the plot thickens considerably. He tries to get rid of his father-in-law by thrusting him into a dark closet. A struggle ensues, and his coat-sleeve is torn off. He supplies its place with a bent stove-pipe, and finds himself unable to give his arm to his wife. Ultimately a telegram arrives from the real Captain Ultramarine, and his daughter, called Flo, in compliment to the polar ice, is to be married to a lover who has courted her under the disguise of a professor lecturing on the geography of Africa to the class in which she is at school. She has another suitor, a farmer, who comes up to Paris to inquire whether marriage is against the covenants of his lease. The songs and dances in all these burlesques and pantomimes have a strong family resemblance, and only the Vokes family at Drury Lane display eminent talent in grotesque dancing. Some dancers of both sexes take a good deal of trouble to be awkward, being apparently under the impression that they are thus showing cleverness. Among houses which have not offered any special novelty at Christmas, we should mention the Charing Cross Theatre, where Mr. Tom Taylor's comedy, *An Unequal Match*, has been creditably performed. Mr. Sothern has resumed his old part of David Garrick at the Haymarket. At several houses no change at all has been lately made, and the plays which seem to be most permanently attractive are all of a high class. But people who like to be amused without the trouble of listening or thinking have ample opportunity.

REVIEWS.

LLOYD'S AGE OF PERICLES.*

In one sense it is unfortunate that Thucydides chose to write the history of the years of war rather than that of the fifty years of peace that preceded them. It was in his power to have given to the world as a "possession for ever," not the melancholy picture of the disruption of a society stored with all the richest endowments of life, but the happier picture of its construction and development. He chose, however, as was perhaps inevitable, the story which was most present to his mind when he wrote, the story of passion and struggle, and he dismissed the πεντήκοντα ἔτη in a few chapters. The result is that the world is literally left without any direct account of what is most valuable and most characteristically Greek in Greek history. Herodotus, it is true, even outside the main line of his epic narrative, represents for us one of the great achievements of Hellas, its diffusiveness; his own travels and the travels of his pen from Egypt to Scythia, from Lydia to Thurii, are a reflection of that one great work which Hellas did, the spread of its own culture round the shores of the Mediterranean and the Euxine. But Herodotus tells us little, and Thucydides tells us less, of the culture itself. Both have their eye upon the Greek soldier rather than on the sculptor, upon the battle-field rather than upon the market-place. So that while the Roman historians have seized accurately enough upon the central fact of their own history, the line of constitutional development, the Greek historians never saw that the central facts in Greek history were neither military nor political, but artistic and speculative. In this sense the real lessons that we learn from Thucydides are more from what he puts into the history than from the history itself; more from the speeches than from the narrative, more from his generalized remarks upon the Corcyrean revolutions than from the account of the sea-fights between Corcyra and Corinth. Of course Thucydides is valuable from all points of view—valuable as a model of condensed narrative, as an authority for the political history of the time nearly free from bias, as the first historian whose method has been scientific, however limited his aim. But for those who really wish to reconstruct for themselves a picture of Hellas as a whole, Thucydides is singularly unsatisfactory, and the very extent of his actual performance makes a modern reader look upon its limitations with a feeling almost of resentment.

Modern writers have followed Thucydides too exactly, and it was quite time that some one should come forward in England to write the history of the Fifty Years in a comprehensive way. Grote's treatment of them cannot be called satisfactory; he gives far less space to them than to the details of the war, and of the two hundred pages which they do occupy, only three are given to art. Phidias is the only artist on whom he dwells at all; Polygnotus, the painter of the Stoa, is dismissed in a line, and Praxiteles is never mentioned. Grote, however, was a politician of politicians, and his History of Greece is really a history only of Greek politics. In that field he is without a rival, and this generation ought never to forget the debt it owes him. But he was without some of the qualifications for an historian of Greece—he had neither the calmness of Thirlwall nor the geographical and artistic insight of Curtius. Grote's account of the administration of Pericles may no doubt be more exact than that of Curtius; but the impression of Athenian life as a whole left by the latter is truer than that left by the former, simply because the German is the more poetical historian of the two. But from the nature of the case neither writer has attempted to go very far into the details of the Fifty Years; the amount of the ground they covered forbade it. Mr. Watkiss Lloyd has tried in the book before us to supplement their work by a special history of Athens during the interval between the Persian and Peloponnesian wars—an interval which he rather unfairly calls the *Age of Pericles*. "The Age of Themistocles and Pericles" would have been a less misleading title; for Themistocles is at least as much the hero of the first volume as Pericles is of the second. The book begins with the battle of Salamis; it goes on through the lives and policies of Cimon and Themistocles, through the poetry of Pindar and Æschylus and the sculptures of Ægina; and it is only in the thirtieth chapter, half way through the book, that we begin to hear of the statesman who gives it its name. This is a serious blemish. Pericles is undoubtedly the greatest, the most essentially Athenian of the Athenians; but language ceases to have any meaning if his name is given indiscriminately to a whole period with a part of which he had everything, and with a part of which he had nothing, to do.

Mr. Lloyd begins his preface by complaining of the scanty treatment which the period has received from Thucydides, whose summary is sufficient for his own purpose, but, "compared with our present rational requirements, is jejune and unsatisfactory." The history of the arts escapes his notice altogether, and yet—

> The life of the people during this happier and more tranquil period was as much engrossed by poetry and the arts as by politics; of the two interests, at present so distinct, each is found among the Greeks reacting on the other, and it is often difficult to determine which is predominant. Notices dispersed and incidental, doubtless, are fortunately recoverable from other sources, that go some way to supply what did not fall within the plan of the historian, it is in the belief that these have not hitherto had full justice done to them as illustrations of the progressive Hellenic story that attention is invited to yet another presentation of the history of Hellas.

Accordingly the author proceeds to state the results of his study of these "notices dispersed and incidental." The two chief features of his book are its consistent attempt to unravel the chronological difficulties of the time, and its effort to draw out the relation which art, philosophy, and religion in Greece bore to one another and to politics. In point of chronology Mr. Lloyd's endeavour has been "to disentangle confusion that was indifferent to biographers intent exclusively on the illustration of character, to compilers who were more concerned to be comprehensive than critical, to theorists who cared more for general philosophy than its particular development, to say nothing of writers only on the look out for opportunities to be smart in the first place, and in the next picturesque." With regard to the second feature of which we spoke, he has given an account of Greek poetry from Pindar to Euripides; of architecture from the theatre of Agatharcus to the Parthenon and the Propylæa; of sculpture from the early days of Sicyon and Ægina to the supreme achievements of Phidias; of music from the times of the tetrachord to those of Pherynis, the Wagner of the Periclean age; of philosophy down to Anaxagoras; of religion, with its attendant ceremonies and superstitions, down to the death of Pericles. By far the most original part of the book is the way in which, by a skilful use of what is known or conjectured about the chronology, works of art and literature are made to illustrate the political events or the political temper of the time that produced them. Where other historians have been content merely to summarize tendencies—to call Æschylus a conservative and Euripides a sceptic and a sophist—Mr. Lloyd attempts to show the reaction between art and opinion, and between art and history, by a careful noting of actual events and of contemporary poems or buildings.

* *The Age of Pericles: a History of the Politics and Arts of Greece from the Persian to the Peloponnesian War.* By William Watkiss Lloyd. 2 vols. London: Macmillan & Co.

For instance, not only does he point, as every other historian has pointed, to the *Persæ* of Æschylus as the obvious product of the Persian wars, but he calls attention to the exact date (473–472 B.C.) as the very moment when "the fame of another naval victory over the barbarians at the western extremity of Hellas, achieved by Hiero of Syracuse," was reaching Athens. Then with great—perhaps with too great—ingenuity, he proceeds to reconstruct the trilogy or tetralogy of which the *Persæ* forms part. The *Phineus*, which introduced it, "referred to the preliminary trial of Athenian strength with the Persian at Artemisium"; the mythical story of Phineus telling how he, the son-in-law of the Athenian nymph Oreithyia, is freed from the tormenting harpies by his kinsmen the sons of Boreas; and the story of Artemisium, as recorded by Herodotus, telling how Athens was bidden by an oracle to invoke the aid of her son-in-law Boreas, and how, accordingly, the north wind blew and scattered the harpies of Persia. Again, the title of the third play survives as *Glaucus of Potniæ*—the offending hero remembered by Virgil's line, "Potniades malis Glaucum absumpsere quadrigæ." Glaucus in the story is overthrown in a chariot race, and torn to pieces by mares maddened by a draught of the sacred spring of Potniæ. Now Potniæ "may be said to be on the very battle-field of Platæa"; at least, Pausanias, the traveller, saw it on his way from Platæa, at about ten stadia from Thebes, on the very ground covered by the Persian retreat. The great services of the Athenians in the battle were against the Persian cavalry, which we may suppose to have choked or ruined the sacred spring; "and it is at least easy to see how the fate of Masistius and Mardonius on their Nisæan chargers and the rout and carnage of the mounted Immortals may have been brought into connexion with interference or desecration at the maddening waters of Potniæ, close to their encampment." And, lastly, the concluding satyric play, *Prometheus the Fire-bringer*, may, Mr. Lloyd thinks, be taken as symbolizing the return of brightness to Hellas after the dispersion of the dark barbarian cloud; and "had a further specific appropriateness from the renewal of pure fire from Delphi after the Persian evacuation and preparatory to the sacrifice to Zeus Eleutherius."

We have taken this treatment of the *Persæ* as a good instance of Mr. Lloyd's ingenuity in weaving together history and literature. Other examples are frequent, so frequent indeed as to throw much new light upon the way in which Greek tragedies were composed. A new meaning is given to Aristophanes's description of the tragedians as "the political and moral monitors of their countrymen," if the Danaid trilogy of Æschylus is shown to have reference to an Argive alliance; the *Antigone* of Sophocles to be suggested by the crime of the Sybarites and the desertion of Telys by his own soothsayer Callias; the *Medea* of Euripides, and the trilogy of which it forms part, to have been a poetical plea against the cruelty of the decree which expelled the Megarians. As Mr. Lloyd says:—"A poet who addressed a serious play to such an audience as the Athenian, that came to the theatre thrilling with all the agitated and suspended interests of the politics of the time, could scarcely hope to retain attention unless he so chose his theme and treated it as to affect, however covertly, whatever sympathies were likely at the time to be most alert and sensitive." Here indeed lies the charm of Greek history, not in the fact that Greece produced unrivalled sculptures, unrivalled religious tragedies, but in the fact that life in Greece was so simple and harmonious that a poet brooding on the right and wrong of a political act produced a tragedy, and that the joy of Hellas in her liberation from the Mede found expression in the Zeus of Olympia. The clear way in which this book brings out this interpenetration of art and politics in Greece is its chief merit.

Besides this there are many other views which strike us as for the most part original, though here, as occasionally in the main lines of the book, the author's characteristic fault of over-subtlety is apparent. For example, here is an explanation of the common Athenian boast:—

> It was the great pride of the Athenians that they were autochthonous, a boast which was founded on the principle that neither their history nor their legends, which would have been accepted as equal in authority, could tell of their nation having ever been, like so many others, ejected in a body from their territory.

The real reason for the *lot* is suggested:—

> In fact, in the most democratical of ancient societies it was well understood that offices which were obtainable through election must needs be gained by those who could intimidate, or bribe, or command deference, even independently of special qualifications, and must fall to an aristocracy, whether of birth or of wealth.

In Chapter XV. an ingenious collation of hints about the relationship between the families of Miltiades, Thucydides the historian, Peisistratus, and therefore Pericles, brings out very forcibly the small extent of the noble society of Athens. In the next chapter is an excellent account of the connexion of the name, not of Themistocles, but of Aristides, with the concession of political rights to the "nautical throng." The whole treatment of the question of Athenian bigotry and obscurantism—the blackest stain on the Athenian character—is excellent; and the application of the author's remarks to the persecution of Pericles through his friends is very happily expressed:—

> Without constituting ourselves guarantors of the morals of Pheidias and Pericles, to say nothing of Aspasia, we may perceive that these charges were combined with a skill that knows too well how to fix a moral slur by a doctrinal prejudice, or, as alternative, a still more hated and perilous doctrinal prejudice by a moral slur.

While acknowledging the merits of this book, it would be unfair not to notice its faults, which are by no means inconsiderable, although they are mainly faults of form. The whole arrangement of the subjects treated is difficult and somewhat obscure, though, as the preface says, "the very varied evidence which comes under consideration renders necessary an occasional and even frequent shifting of point of view." But no such excuse can be made for the obscurity and harshness of Mr. Lloyd's style, which indeed reminds the reader more of a German professorial treatise than of an English work. The passages which we have quoted will give some indication of what we mean; but here are one or two more—chosen almost at random—which will exhibit the author's defects of manner more conspicuously:—

> The world is familiar with the experience that a political party does not at once relinquish the reins of power because all independent guidance is so utterly lost as no longer to leave choice between repugnant alternatives. Then the veriest Eupatrid, whether by descent or predilection, can anticipate sagaciously at last, though it may be only after prolonged resistance has proved useless, that from the vantage ground he holds the influence of class may be made to tell but little less effectively in the new state of things than in the old.

This is a perfectly true remark, when one gets at what it means, but as it stands it is like bad German, or like Mr. Browning put into prose. Again, here is a sentence more difficult still:—

> The Philoctetes seems to have presented the healing by reconciliation of a breach of much the same nature as is hopelessly angry in the Medea, a reconciliation effected by Ulysses, who, not unaided by divine interposition, countervails the appeals of the Phrygian envoys to the vindictive passion of the so deeply injured hero.

Æschylus, whom Mr. Lloyd admires so much, and Thucydides, whom he has studied so profitably, may have written as obscurely as this, but they never wrote in a style so contrary to the spirit of their own language. We fear that all the positive merits of the book, its learning, its solidity, the completeness with which it conceives Greek life, will struggle with difficulty against the dead weight of a style which even students will find it hard to master.

PICCIOTTO'S SKETCHES OF ANGLO-JEWISH HISTORY.*

It is surprising how little is known in this country of the early history of the Jews amongst us, and of their rise after centuries of oppression, contumely, and degradation to their present position of political and social equality. Even among the Jews themselves, save those exceptionally well informed, such knowledge seems to be rare, or imperfect enough to form matter for surprise. Mr. Picciotto, who makes this statement the ground for putting together a work of interest and value upon the subject, has done much to cast off this reproach from English literature, and to do justice to an important phase of modern history. No one perhaps, unless, like himself, of the race of whose second exodus from bondage to liberty he has given us the record, would have felt equal to the task, so scanty and scattered were the materials, and so slight the aids to be found from any formal archives or annals of the Hebrew community, or from any literary efforts of his fellow-countrymen. Absorbed, as he conceives them to have been, in the work of money-making, their undeniable genius and perseverance found no congenial outlet in literary culture. Thus our author found the field all but unirodden. Even the archives of the older synagogues, treasures of useful and valuable lore, remained scarcely explored, or even known. Besides being jealously guarded by their official custodians, who themselves had but a faint notion of their contents, these records were written mainly in the Spanish and Portuguese languages, or in the Jewish-German dialect, inaccessible to more than an extremely small number of readers. To these Mr. Picciotto has had the privilege of free access, with every assistance that the good will of the officials was able to yield, and he has supplemented his researches by diligent ransacking of libraries, public and private, and hunting up of family archives and other depositories of information. Originally put forth in the columns of the *Jewish Chronicle*, in a series of papers headed "Sketches of Anglo-Jewish History," his labours have now been recast in a more systematic form, and he offers them to the public at large with a modest plea for consideration as being the first Israelite who has given a full and connected account of the vicissitudes passed through by the Jews of Great Britain from the days of the Heptarchy to the middle of the present century.

Harrowing tales come at times to our ears of outrage and persecution committed upon the Jews in Eastern and Southern Europe. But the worst of these fall infinitely short of the horrors perpetrated upon that unhappy people by our remote forefathers. No race of inferior tenacity or endurance could have passed through the ordeal and lived. From almost the earliest times to which historical research goes back this irrepressible stock is found taking root in England and thriving, out of sight indeed, but with a persistent and even vigorous growth. Their genius for money-making made them at once a power in the land and a mark for the spoiler. What little toleration or favour they received had for its motive to give breathing time for the accumulation of fresh hoards for prey. The bees must not be killed outright, but the combs left to be stored with new honey. Fabulous tales of the settling of Jews in these islands have been based upon fanciful etymologies of Cornish and other names of

* *Sketches of Anglo-Jewish History.* By James Picciotto. London: Trübner & Co. 1875.

places, as well as upon speculative notions of Jewish merchants being associated with Phœnician navigators in the tin trade with Britain. The first authentic trace of their presence in England is found in a canon of Ecbright, Archbishop of York, issued between A.D. 740 and 751, that no Christian shall presume to eat with a Jew, or shall judaize. A charter of Wihtlaf (whom Mr. Picciotto queerly calls Whitgiaff), King of the Mercians, in 838, confirms the Abbey of Croyland in the possession of all lands, tenements, and gifts bestowed upon them by Christians and Jews. It has been asserted, but without certain evidence, that the Jews were banished from England at the beginning of the eleventh century, and returned with William the Conqueror. It is known, however, that many Jews settled here under his reign, that he encouraged their immigration hither from Rouen, and assigned them as a residence a city which is not named. Numbers of them subsequently took up their abode at Oxford, holding most of the houses in the parishes of St. Edward and St. Aldate's, which had thence the names of the Great and Little Jewries. They also built a synagogue there. Some of their houses, being resorted to by scholars, came to be designated as Moyse's Hall, Jacob's Hall, and Lombards' Hall, and it is possible that Jewish learning and science may have made itself felt in the teaching of the University. Under Rufus, who was an indifferent son of the Church, great freedom had been given to the Jews both in trade and in the exercise of their religion. By his orders a theological contest was publicly held in London between certain bishops and Jewish rabbis, the King swearing by the face of St. Luke that, if the rabbis had the best of it, he would become a Jew. Happily, say the Christian chroniclers, the bishops triumphed, the Jewish historian significantly pointing us to the comment of the lion upon the picture of a lion conquered by a man. Mr. Picciotto has a queer story of Rufus taking pay from the Jews for forbidding any of their body to turn Christians, and receiving sixty marks from a certain Israelite father, bidding with his favourite oath the Jew's son, whose name was Stephen, to revert to Judaism, which he had given up; but the bold young convert refused, and, being suffered to go free, his father received back half the reward from the King. The strongest proof of the power and influence attained by Jews is their having had church benefices, kept vacant by the King, given to them to farm. Alarmed at the progress made by the Jews, the Church under Henry I. sent monks to preach against them in various cities. At this time only one burial-place was allowed them in all England, and thither their dead had to be carried from all parts of the country. It was called Jews' Garden, the site of the present Jewin Street, in the parish of St. Giles's, Cripplegate. The toleration they enjoyed under the first three kings after the Conquest was not destined to last long. Popular clamour became rife against them, and they were ground down by heavy taxes and contributions enforced by torture and outrage of every kind. In the ninth year of Stephen the absurd charge of crucifying children was for the first time trumped up against them at Norwich, and this was followed up by similar proceedings at Gloucester and St. Edmundsbury. A tallage of a fourth part of their goods was levied upon them at one time under Henry II., and nearly half of the sum of 60,000*l.*, raised for the King's journey to the Holy Land, was exacted from the Jews. With Richard began special enormities against the unhappy people, with which the pages of *Ivanhoe* have made the modern public familiar. On the slightest pretext they were hurried to the stake, and the tragedy of York Castle, in which the horrors and the desperate heroism of the siege of Jerusalem were re-enacted, gave a climax to an ascending series of atrocities. All this while the light of Jewish life was not put out. The learning of their rabbis drew scholars to Oxford, Cambridge, Lincoln, York, and other centres, as well as to London; and, in 1159 A.D. or thereabouts, the great Aben Ezra is believed to have lectured in England. In medicine, logic, philosophy, and geometry they were pre-eminent, though their skill in leechcraft was popularly set down to unholy arts or to cabbalistic lore. John, who had for good reasons wished to stand well with the Hebrews, granted them unwonted safeguards and immunities, signing two charters in the second year of his reign, one for the Jews of England, the other for those of Normandy. But, whether designed as a blind and a snare or not, this merciful policy was soon changed for the most pitiless persecution and spoliation, the barons joining in the exactions of the King. The reign of Henry III. brought happier days, though it may be doubted whether good will dictated the wearing of the distinctive badge which every Jew, and soon afterwards every Jewess, was by law compelled to wear upon the breast. This ordinance was re-enacted in the Statutes of Jewry, early in the reign of Edward I. Of this code, as well as of the other statutory enactments affecting his fellow-countrymen, our author has made diligent and careful use, and his book throughout shows that he has spared no pains to exhaust the materials available for his subject. He has thus been enabled to trace in minute detail the advance of public policy and private prejudice to the monstrous decree of utter expulsion which went forth against the whole community under Edward I., when (in 1290) not less than 15,000 Jews, according to the closest computation, quitted the shores of England, their houses and the bulk of their property being appropriated by the King, and their valuable store of books enriching the libraries of Stamford and Oxford.

A race so irrepressible as the Jewish was not to be permanently excluded from a country which held out such opportunities for commercial enterprise and the accumulation of wealth. How soon or in what numbers they began to creep once more into the forbidden realm it is difficult to determine. But in the reign of Elizabeth we hear of their visiting England freely. The Queen herself had a Jewish physician, Rodrigo Lopez, who, however, fell a victim to popular jealousy on a fictitious charge of compassing the death of the Queen by poison. It was not till the tolerant rule of Cromwell that the Israelites obtained a safe and permanent settlement in England. A Jew named Jacobs is known to have opened a coffee-shop in Oxford in 1650. A deal of apocryphal talk has come down to us concerning negotiations with foreign Jews for the sale of St. Paul's Cathedral and the Bodleian Library, Oxford, for half a million of money. What, however, is of historical interest is the mission of the learned and liberal-minded Menasseh Ben Israel, who pleaded with effect the cause of his English brethren before the Lord Protector and the Privy Council, despite the violent and narrow opposition of Prynne. Cromwell was made ridiculous by the attempt of some over-zealous partisans to make him out a descendant of the Messiah, if not Shiloh himself. No formal decision in favour of the Jewish claims can be authenticated beyond the loose jotting of Evelyn, under date December 14, 1655—"Now were the Jews admitted"—and Burnet's statement of Cromwell having brought a company of them over to England, and giving them leave to build a synagogue. It was in 1662 that Jewish worship was for the first time openly set up, a house in King Street, Aldgate, being fitted up for a temporary synagogue. The oldest congregation, however, in London is stated by our author to have been that of the Sephardim, or Spanish and Portuguese Jews. A curious list is given by him, of uncertain date, but probably belonging to the reign of Charles II., handed down from the papers of Emanuel da Costa, an eminent natural philosopher of the time, containing the names of the original settlers. Some of these are hard to penetrate through the disguise of the spelling of that period, but nearly all are of Portuguese or Spanish form. The heads of families are twenty-five in number, proving the inaccuracy of the statement in *Anglia Judaica* that the whole body of Jews in London in 1663 did not exceed twelve. Dr. Chamberlain at the same time speaks of thirty or forty families, and one Thomas Greenhalgh, who visited the King Street synagogue the year after it was opened, found therein upwards of "one hundred men, apparently of affluence, and the ladies were very richly attired."

To the rules carefully laid down for the organization and discipline of this little community is in no small degree owing the firm foothold and growing security which from that time to this the Jewish body has held in London. With no severer powers of control than those of fines and the *Beracha* or *Herem* (excommunication), the founders of the Sephardic congregation laid down a code of laws which the good sense and loyalty of the body sufficed to enforce and to keep in respect. These laws may be roughly classed under three heads—the internal service of the synagogue; the maintenance of the congregation, with the raising and administration of its funds; and, finally, the regulation of the social conduct of Jews both towards each other and towards Christians. Under the guidance and control of wise and cautious rulers the slender commonwealth of Israel grew imperceptibly, but surely, and at a rate so rapid that in 1670 the House of Commons was moved to direct an inquiry to be made into the number of Jews in this country, and on what terms they were permitted to reside here. Unfortunately the report was not published, and the important information which it might have afforded us has been lost.

Mr. Picciotto has given a clear abstract of the Naturalization Act of 1753, and its abrupt repeal in the year following, in deference to the blind panic and prejudice of the public, and in spite of the more liberal pleadings of Earl Temple, Pelham, and Pitt. The successive stages by which the Jews won their way to the complete emancipation and political equality which has been secured to them during the present reign are easily to be followed under our author's guidance. For a large class of readers the most attractive part of the book will probably be that in which he traces the origin and rise of the Jewish families which have made themselves a name, not in England only, but throughout Europe, for financial and commercial ability, for the wealth which has swayed national counsels, affected the fortunes of war, and turned the flood of monetary panic. How the Goldsmids, the Bernals, the Ricardos, the Rothschilds, and other millionaire magnates built up their colossal fortunes; how the names of the elder and younger Disraeli rose to fame in letters and politics, while others have contributed by their talents and labours in learning, in the arts, in political life, and in philanthropy, to dispel the cloud which for ages hung over the Jewish race, will be found drawn out in full and interesting detail in Mr. Picciotto's closing pages. All classes of readers will feel grateful for the mass of varied information which he has presented to them.

THE MIGHT AND MIRTH OF LITERATURE.*

MR. JOHN WALKER VILANT MACBETH is a person of a cheerfully sentimental disposition, benevolent intentions, and moderate parts, who has had the misfortune to read, write, and talk a great deal more than is good for him. It has therefore occurred to him to write an exhaustive treatise on Figures of Speech, which "claims to be of the greatest value in studying

* *The Might and Mirth of Literature: a Treatise on Figurative Language, &c. &c.* By John Walker Vilant Macbeth. London: Sampson Low & Co. 1876.

language and literature." We may concede to him that the subject is sadly neglected:—

Writers generally, even the ablest, are wholly in the dark as to the precise distinction between a trope and a metonymy; and very few even of literary men have so much as ever heard of Implication or Hypocatastasis, one of the most important figures, and one, too, that is perpetually shedding its light on us.

So Mr. Macbeth laments in his Introduction: and certainly we do not remember that we ever consciously blessed the useful light of Hypocatastasis. The worst of it is that we seem doomed to remain in our ignorance, for we have failed to discover anything about Implication or Hypocatastasis in our author's own text, though he has "added up the mortal amount" of two hundred and twenty-five figures of speech by the use of his own and other men's perverse invention. At the end of this singularly unassuming Introduction comes the first appearance of the one feature of the book on which we feel bound to speak with some seriousness. Mr. Macbeth appears, by the publishers' advertisements, to be a Professor in the University of West Virginia, and by internal evidence to be a cultivator of pulpit oratory and religious fine writing. The particular style he cultivates in this matter is one which we fear is not uncommon in America, but happily has not yet established itself in England; we mean the assumption of an offensive and patronizing familiarity with persons and things whose names all men of education and right feeling in this country, whatever may be their theological or even anti-theological opinions, are accustomed to hold in respect, are unwilling to invoke for trifling occasions, and are careful to mention, when they do mention them, with a certain reverence and decent reserve. This writer goes out of his way to cry anathema upon "men such as Darwin and Mill; such as Herbert Spencer and Dr. Tyndall." His wiser and more instructed countrymen have given ample and various proof that they know better. But of one thing we are sure, speaking quite apart from any disputed points of speculation, and simply on behalf of civilized literature and good manners, that the nauseous and maudlin sentiment scattered broadcast through this book in the name of religion would excite very much the same feelings of disgust in any of the heretics who ought to be "branded" along with Mr. Darwin—we use the writer's own charitable and clerical epithet—and in the Moderator of the Scottish General Assembly or the Archbishop of Canterbury. We can hardly give specimens of the writer's performances in this kind without justly offending our own readers. Enough to say that he delights in using the words and actions of the Founder of the Christian religion, whom he is pleased to think "the most poetic personage that ever walked the earth," by way of specimens for the demonstration of his figures of speech, not without fluent commentary in such tone and language as we have indicated. When he vouchsafes to let us know that he, Mr. John Walker Vilant Macbeth, likes the Old Testament more the older he grows, or that some volume of Mr. Spurgeon's is "soaked in Gospel," we can afford to be merely amused; and we may now pass with a sense of relief from the category of offences to that of absurdities.

The quantity of literature, good, bad, and indifferent, which has been turned over by Mr. Macbeth in the course of his omnivorous and undigested reading is manifestly very large. The quality of the knowledge he has derived from it is remarkable, and in some ways unique. We are quite accustomed to people who do not know that English is English, or who claim to know that it is something else. We are also aware of a fortunately increasing number of people who do know this elementary truth. But we now fall in with a writer and professing teacher of English who has worked himself into such a state that at the same time he knows and does not know it: and this not by any subtle imagination or recondite process of confusion, but by the much simpler method of not letting anything he learns penetrate more than skin-deep. When we find a man calling Sir John Maundeville's Travels the first prose work published in England, or talking about "Anglo-Saxon, the mother-tongue of our mother-tongue, and so our venerable grandmother-tongue," we generally know what more to expect. But, thirty pages after this last flower of filial piety, we find Mr. Macbeth complacently telling us that, "in strict accuracy," he knows very well that English is a great deal older than the fourteenth century, and that in fact the tongue of Alfred and Cædmon was neither "Anglo-Saxon" nor "Semi-Saxon." In like manner our author professes a vast admiration for Chaucer, but pays Mr. Morris a compliment for which assuredly Mr. Morris would not thank him, by remarking that the *Earthly Paradise* has "far more than Chaucer's melody, for nobody has been able to tell what was the great old writer's law of rhythm—it is doubtful if our poetry at that time had any." To say in the right place that "nobody knows" is the mark of the truest knowledge; to say it in the wrong place is the mark of impudent ignorance. Our amazement in this place is somewhat qualified when we observe that elsewhere in the book Mr. Macbeth quotes a familiar passage from the prologue to the *Canterbury Tales*, and prints it in such a fashion as utterly to ruin the metre. So, again, it is hardly credible that a man who has read any old English should give the words *mazed, ware, fore, gin* (begin), as examples of the figure *aphæresis*; or that one who has read any English at all should torture Marvel's "Mexique bay" into "Mexic" (short for Mexican!), as an instance of *apocope*. For a writer whose rudiments of grammar and prosody are in this condition, it is natural enough to define archaism as "a form which consists of old modes of spelling," and to give just half a page to it; clearly it is the safest thing he can do.

Mr. Macbeth's judgments of English authors, past and present, are not without their curious infelicities. He lumps together all the Elizabethan dramatists, including by name Ben Jonson, as "men of very great genius—undisciplined, but genuine." He has formerly spoken with contempt of the *Faery Queen*, but is now pleased solemnly to retract his censure, having discovered that (along with the Old Testament) it improves on acquaintance. He undertakes to give a list of the classical allegories of the English language, and leaves out the *Tale of a Tub*. To contemporaries he is, as a rule, gracious, and chiefly to himself, drawing largely on his own verse for illustrations. We can only say of this that it is worse than his prose. We are thankful to know, on Mr. Macbeth's authority, that George Eliot is a very able novelist, and the *Spanish Gypsy* well worth reading, and that the poems of Matthew Arnold are superior; but his charity outruns us when he finds "many good things" in Mr. Gilfillan, whom our readers may know—or not know—as a writer of gushing prefaces to editions of British poets. Yet he does draw a line somewhere, for Dr. Cumming's works do not rise to genius. Mr. Stedman, a critic of really considerable merit, of whose work we had a good specimen under our hands some weeks ago, will no doubt be proud to find himself here set down as "deft and original" in verse. Mr. Macbeth is not much happier when he takes excursions into classical and Continental literature. He shows with what diligence he has read his Rabelais by writing down Panurge a "fat monk." He has discovered by some inscrutable process that Goethe's *Iphigenia* is a "noble Christian drama"; but perhaps we are to understand the epithet as expressing only vague laudation in the school of religious sentimentality to which Mr. Macbeth belongs. As to the classics, he cries, "O for a truly judicious expurgator!" but, as far as his own allusions go, he shows a disposition to add rather than take away; for he finds a "thousand-laughtered sea" in Homer, presumably by a confused recollection of the extremely well-known "countless laughter of the sea waves" in the *Prometheus* of Æschylus. For an example of Aristophanes's parody he chooses the *Clouds*, where there is remarkably little (if anything) of genuine parody; no scholar who had read Aristophanes to any purpose could thus ignore the elaborate and admirable parodies of the rival tragedians in the *Frogs*. He further displays his scholarship by going into raptures over the beauty of *telegram*, a convenient but barbarously formed word whose barbarism was amply discussed and exposed when it was new; and he offers "to risk his fame for the future age in which he believes so strongly, on a word which he now invents. It is the word—Cosmarch; from Cosmos, the world, and Archon, a ruler." The Cosmarch will be the president of the universal commonwealth of the future. We must let our author speak for himself here; it involves giving a specimen of the peculiar manner which we had meant to spare our readers, but there may as well be one specimen to show that we have exaggerated nothing:—

The word is regularly formed, precisely expressive, compact, musical; a word which invites and defies criticism; another proof of how exhaustless our language is. But will it ever be needed? It will; for our Hero, King Jesus, reigns; and hath resolved. The adoption of this word will be our test of success as a writer.

After this there is no occasion to be surprised at Mr. Macbeth quoting from himself in preference to Shakspeare, as it happens in this wise. He speaks of the colloquial use of "your," perfectly common in Shakspeare (for example, "Your water is a sore decayer of your dead body"; "Your serpent of Egypt is bred now of your mud by the operation of your sun—so is your crocodile"), catalogues the figure as "Proprietorship," and thereupon "your author supplies an instance" in a piece of ridiculous bombast of his own. Nor were we at all startled on coming, about three-quarters of the way through the book, on this modest estimate of the value of the writer's instructions:—

Altogether, the man who will not labour, for many a year, to make himself exceedingly familiar with all these exquisite weapons of oratory is too mean-minded to deserve to be let into a pulpit.

We shall never deserve to be let into Mr. Macbeth's pulpit; but we confess that we have been partially rewarded for wading through his book by finding one joke in the wilderness, and here it is:—

It sometimes happens also that the mere name of a place may be the very climax of the ludicrous. Many years ago, a preacher in Newburyport, whose warm imagination drank in the nautical beauties of the locality, was descanting before a large audience upon the perils of unrepentant sinners as they drifted down the stream of time. He compared them to a tempest-tossed bark, bowing under the hurricane, every bit of canvas torn from its spars, and driving furiously upon adjacent breakers. At the climax of his skillfully [*sic*] elaborated metaphor, the minister shouted,

"And how, O how shall the poor mariner be saved?"

An old salt in the gallery, with his whole soul absorbed in the scene, sprang to his feet and screamed,

"Let him put his helm hard down, and bear away for Squam."

And so we take leave of Mr. Macbeth and his two hundred and twenty-five—or two hundred and twenty-six—figures of speech, probably for ever; for if we should hereafter come in sight of any companion or sequel to them, we shall hardly face another such hydra-headed monster, but rather without more ado put our helm hard down and bear away for Squam.

PARISH'S SUSSEX DIALECT.*

IT would hardly have been worth while to notice this book, did it not appear to be in some way connected with the English Dialect Society, a Society which has Mr. Skeat to its Secretary. Indeed we read in the preface that the author "owes more than he is able to express" to Mr. Skeat "for the guidance that he has given him, and the pains which he has taken to render the work as free as possible from imperfections." The author adds, "Without his assistance I could never have presented it to the reader in the form it now assumes." The question which occurs to us on reading this, and on looking through the book, is what its amount of imperfections would have been, and what form it would have taken, if Mr. Skeat had not given it the advantage of his guidance. To us it seems simply one of those old-fashioned glossaries, the use of which is not easy to understand, in which a man undertakes to set down the dialectical peculiarities of a certain district, and then goes and puts down every word used in that district which differs from high-polite book English, whether it is in any way characteristic of that particular district or not. Here we have what professes to be a Dictionary of the Sussex Dialect, while a very large proportion of the words in it belong to Sussex simply in the sense in which they belong to any other county. We turn over page after page, and find words which we have known all our days in parts far away from Sussex. In the pages at the end of the book which come from the English Dialect Society we find a reference to certain rules for "word-collectors." Now we can quite understand that, for a mere word-collector, it may be very well that he should set down every word or phrase or pronunciation differing from book English which he hears in his own district. This may very fittingly be the first stage in making a glossary. In the mere process of collection it is always well to take note of a hundred things that are not wanted rather than to fail to take note of one thing that is wanted. But surely this first stage ought not to be the last stage. Surely, before the results of such a collection appear in a book, labelled as a glossary of a particular district, the collection should be sifted to see what really does and what really does not illustrate the dialect of the district. It may happen that the collector may be able to go through this process of sifting for himself, or it may be better that some one else should do it for him. At any rate, it should be done by somebody. Some kind of classification should be made before the thing is put into the shape of a book. But here Mr. Parish has simply gone and put down every word which he has heard in Sussex which he would not be likely to find in his morning's newspaper or in the last book from Mudie, whether it is in any way characteristic of Sussex, or illustrative of Sussex, or not. He seems to have no kind of notion what Sussex is. Yet the name of the land pretty well tells its own history. Sussex is the land of the South-Saxons. The South-Saxons are part of a greater whole, the Saxons; the Saxons are again, as far as Britain is concerned, part of a greater whole, the English. Such obvious facts as these lie on the surface, and they ought to be present to any one who sets to work on the South-Saxon dialect. Of words, phrases, forms of words, used in Sussex, there can hardly fail to be four classes. There will be first the words and forms which the tongue of Sussex has in common with the tongue of the rest of England, written as well as spoken. Secondly, there will be the words which have dropped out of written English, but which are retained in popular speech everywhere. Thirdly, there will be the words and forms common to Sussex with the rest of Saxon England, but which are peculiar to Saxon England. Lastly, there will be the words or forms which are absolutely distinctive of Sussex, and which mark off the special South-Saxon dialect from the wider Saxon tongue. The first three classes there cannot fail to be; and in a shire which once was a distinct kingdom, and which always has had a very distinct history of its own, we should expect to find examples of the fourth class also. There may of course be any number of other classes besides—words borrowed either from foreign tongues, or from other dialects of English which have become in any way characteristic of the district—words which have grown up in later times or have acquired a special use in later times through any circumstances characteristic of the district. No doubt a man may make a very useful word-collector who is quite unable to classify the words that he collects in any such fashion as this. Such a man may be very well employed in making a mere list, which some better scholar may afterwards sift. All that we say is that, till the sifting process has been gone through by some one or other, the list should not be called a glossary, nor should it appear before the world in the shape of a book.

Mr. Parish seems to think that he has guarded himself against this objection by the title of the book, which he bids us remember "is not only a dictionary of the Sussex dialect, but also a collection of provincialisms in use in the county of Sussex." What is here meant by "provincialisms?" Mr. Parish says just before, "The rule of my selections has been to include any provincial word not likely to have been adopted from a book, which I found in constant use among people who, as far as I could ascertain, had never been out of the county." And just before that he says that his "chief difficulty has been in dealing with provincialisms unquestionably used in Sussex, but also in such common use elsewhere as apparently to deprive them of a distinctive character." By a provincialism then Mr. Parish understands anything which is not likely to have been learnt out of a book. That is to say, he puts into the Sussex glossary everything that he has heard in Sussex which differs from high-polite English. In short, as we set out by saying, we are still in the first stage, we have still a mere unsifted list of words.

It seems that one of the rules of the English Dialect Society is to abstain from etymology. This again is a very good rule for the mere word-collector. As we have already implied, a man may be quite fit to make a list whose etymological notions may be not a little wild. Even the Gloucestershire antiquary who thought that the local nomenclature of Gloucestershire was Hebrew might be quite capable of making a list of words in use in Gloucestershire which are not in use in high-polite English. The etymology should not come in till we come to the sifting process, but with the sifting process it should come in. Mr. Parish certainly seems to us to be still in a stage in which he would do well to leave etymology alone; but a man who is in that stage, though he may make a useful list, is not yet fit to make a glossary. Mr. Parish, busy as he has been among the South-Saxons, seems not yet to have grasped the great fact that the South-Saxons are the South-Saxons. They have been Saxons of the Saxons for fourteen hundred years; and what should they speak but the tongue of their forefathers?

Δωρίσδεν δ' ἔξεστι, δοκῶ, τοῖς Δωριέσσαι.

And right good Saxon, by Mr. Parish's account, they seem to speak. They have their *d* for *th*: their pronunciation is "broad and rather drawling"; that is to say, they stick to the diphthongal forms which distinguish Southern from Northern English. But the simple fact that Saxon people still talk Saxon is too simple for Mr. Parish, and he gives us instead a much more learned-sounding explanation:—

> The dialect of the Sussex people has been affected by the geographical position and the history of the country. It may be traced chiefly to Anglo-Saxon, Old Dutch, Old Welsh (or British), with a dash of 14th century French, and a little Scandinavian, the latter due to the sea-coast, which has for many generations invited hosts of friendly invaders to our shores, and has twice witnessed the landing of armies destined to influence the history and language of the whole country.

We might ask what is meant by South-Saxon being "traced chiefly to Anglo-Saxon"? But this is a trifle compared to what comes next. What can be the tongue which Mr. Parish means by "Old Dutch"? Then we should like to know something about the Old Welsh and Scandinavian. The two landings, Mr. Parish goes on to explain, are those of Romans and Normans. If by the former is meant the landing of Cæsar, a Kentish man might have something to say on that head. As to the Normans, Sussex undoubtedly saw plenty of them; but when the Normans have arrived, and their large monastic establishments have been founded, Mr. Parish goes on further to comment:—

> But it will be observed that most of our words now in common use, denoting agricultural and domestic implements, are either to be traced to an Anglo-Saxon derivation, or actually retain their original Anglo-Saxon names in all purity of spelling and pronunciation. From this source also nearly all the Sussex surnames and names of villages and farms, (noticed in the Appendix) are derived. Nor must I forget to remark that when the Sussex peasant speaks of the sun as *she*, he uses an expression which clearly asserts his German origin.

Here we were going to ask again, What should Mr. Parish expect his South-Saxons to speak except South-Saxon? only the puzzlement arising out of the last clause checks any such commonplace remark. What can be meant by "the German origin" of "the Sussex peasant"? Is this "German origin" the same as the "Anglo-Saxon," or the same as the "Old Dutch," or something different from both of them? Mr. Parish can hardly mean that Sussex has a specially High-German peasantry, and, if not, what is the force of the distinction? In short, as far as Teutonic philology goes, Mr. Parish seems to be altogether in the court of the Gentiles, or perhaps of the Semi-Saxons. But, when he gets out of those dangerous centuries thick set with thorns and thistles, he begins to tell us facts that are both curious and important. It seems that intercourse with French fishermen, the settlement of French refugees, the quartering of French prisoners, and a practice of "exchanging children with French families, in order that each might learn enough of the other language to be useful in after life," has brought in a good many modern French words. This fact and the explanation of the fact is just what we want a local observer for; only how is this modern French, which dates from 1562 onwards, to be reconciled with the statement quoted above about the "dash of fourteenth-century French?" Or is this last peculiar to the fishermen?

Mr. Parish goes on to tell us a great number of things as peculiarities of the South-Saxons, which are simply common to the South-Saxons with the rest of mankind. It is not only in Sussex that people catch at long words which they do not understand, and pronounce them in strange ways. Nor is it peculiar to Sussex to use what Mr. Parish calls "words of substitution." We can quite believe that in Sussex, and doubtless in Northumberland also, "a person hears a word which he does not quite understand; he does not take the trouble to ascertain either the meaning or the pronunciation of it, but he uses a word something like it." Thus, it seems, "bilious" becomes "rebellious," and "bronchitis" "brown crisis." This last is perhaps more ingenious than the form "bran Titus," by which this last ailment is called in another Saxon shire, but mere accidents of this kind cannot really illustrate the dialect of any district. To confound "fairies" and "Pharisees" is in no way peculiar to Sussex. The same practice flourishes in Hamp-

---

* *A Dictionary of the Sussex Dialect and Collection of Provincialisms in Use in the County of Sussex.* By Rev. W. D. Parish. Lewes: Farncombe & Co. 1875.

no doubt in many other counties as well. But it is hing when we are told that

A Sussex man was once asked, "What is a pharisee?" and answered, with much deliberation and confidence, "A little creature rather bigger than a squirrel, and not quite so large as a fox," and I believe he expressed a general opinion.

Mr. Parish adds:—

Since writing the above, I find that polecats are called varies in Devonshire; so that possibly the person who gave this answer had been brought in contact with some west-country folk and had heard the word from them. It is not Sussex.

As we are among the *ps*, what is there particularly South-Saxon in the common seventeenth-century word "painful" applied to a preacher, or in the common phrases of being "partial" to a thing, or being "piqued," or "peert," or "poor," in the sense of thin, or "proper" in much the same sense in which Charles the First applied the word to Cornet Joyce's troopers? What is there characteristic of Sussex in "pargeting" a wall? We have heard the word in Gloucestershire, and we have no doubt that it may be heard anywhere. It will certainly be found, as a received architectural term, in Mr. Parker's Glossary. The willow is surely, if not during the rest of the year, at least on Palm Sunday, known everywhere, and not only in Sussex, as the "palm;" and will Sir William Harcourt allow that "pannage," defined as "the mast of the oak, and such on which swine"—Mr. Parish makes no mention of the other class of inferior animals—"feed in the woods," belongs to one shire more than another? We can fully believe that "a copyhold right to these existed in one of the manors at Brighton"; but surely it may just as well have existed in a manor in Cornwall, or in the land which used to be North Durham. But we should like to know something about a "paul," which is defined to be "a division of tenantry land at Brighton, usually containing about the tenth part of a tenantry acre." Mr. Parish refers to "*Pal*, Ang. Sax., a stake," which is of course simply "pale"; but that sets us thinking what may be the connexion between "pale" and "palus," and also sets us wondering why Mr. C. H. Pearson left out "pale" in his list of real and imaginary words which he makes English in its earliest stage to have borrowed from Latin. "Pountle" is a word which we do not remember to have heard. Mr. Parish suggests that it is "probably a corruption of 'punctual,'" and he explains it to mean "honest, reliable." If this last word has really got into Sussex, could not the rest of England make a bargain that the South-Saxons should keep it to themselves?

So we go through the book, lighting at every page on words which belong to Sussex only as they belong to the rest of England. "Rape," as a local division, is very properly put down as specially South-Saxon. Why should Sussex claim any exclusive right in the "reeve"? This jumbling together of things which are characteristic and which are not destroys altogether to our mind the use of the book. No doubt in going through Mr. Parish's glossary, among many words which are familiar to us elsewhere, we come to many which are strange to us; but the example of the others takes away all certainty whether these are in any way distinctively South-Saxon. It is just as likely that they too may be simply common to Sussex with other districts, though we happen not to have come across them. After looking through Mr. Parish's glossary, we know no more what the real peculiarities of the Sussex dialect may be than we did before we opened the book. The thing of special interest to know would be what are the points, if any, in which South-Saxon differs from West-Saxon. But about this there is not a word. All that we really learn from the book is that the South-Saxons have in later times picked up a good many French words. In short, if Mr. Skeat's name had not been connected with the book, we should have cast it aside as one of the old-fashioned, unscientific glossaries. But, as Mr. Parish has brought Mr. Skeat's name in, we certainly are a little curious to know how far Mr. Skeat really approves of Mr. Parish's way of treating his subject.

DEAR LADY DISDAIN.*

MR. McCARTHY'S last novel has, to begin with, the merit for which one must always be thankful, of being better than the one which preceded it. In *Linley Rochford*, while there were such good qualities as a certain grace of fancy and a pleasant style, there was also considerable improbability and inconsistency, and some savour of dulness. In *Dear Lady Disdain* there are fewer defects. The characters are life-like; some of them, what is more rare, original. The interest, though it turns upon no very startling occurrences, is sustained throughout; and the novel would stand well out from the common herd of three-volume novels if it had nothing to recommend it but the pleasantness of the style and excellence of its style. The fault of the book is in its construction. There are incidents which seem to demand explanation and receive none; there are others which delude the expectant novel-reader by leading him to expect a complicated chain of events to issue from them. He looks confidently for the revelations which custom teaches him to foresee; and, not finding them in the places where he imagines they are to occur, he supposes that the author has baffled conjecture in order to make his effect more startling when it comes, that he has diverted the attention of his readers as a conjuror does that of his spectators by a feigned trick, while he is secretly preparing the surprise which is to overwhelm them with astonishment. But the surprise never comes. The confidences made by Mrs. Jansen to the hero, upon which one cannot but conclude something was originally intended to hang by the author, produce no result at all, and for every purpose of the story might as well have been left out.

It would be unreasonable to demand that every incident connected with the characters of a novel should have some direct influence upon its course; and it would be undesirable that any such rule should be imposed upon writers. But that every incident upon which any stress is laid should have an evident relation to the matters in hand, should carry with it an evident and adequate cause for its existence, is surely advisable. In the writings of Tourguenef and of Mérimée, upon whom the Russian author has formed his style, it constantly happens that one is told of various episodes which at first sight may seem superfluous; but a very little observation and reflection will convince the reader that each of these episodes has a proper and necessary part to fulfil; and that, if any of them were taken away, there would be a perceptible loss in the effect of the character to whom it belonged. But the episodes in Mr. McCarthy's work, whatever their intention may be, fail to accomplish any purpose of revealing or illustrating character. This is, however, the only notable fault we can find with *Dear Lady Disdain*, and it must be remembered that the faults in a work of art assume importance according to the excellence with which they are contrasted.

The hero of Mr. McCarthy's novel, a young man bearing the singular name of Christmas Pembroke, is discovered at the beginning of the story established in an old-fashioned lodging in one of the streets running from the river to the Strand. He has returned to London from San Francisco and Japan; and a year before the date of the story his father, a clever engineer, died pronouncing the name "Dione." He has just received a letter signed Dione Lyle, purporting to be from an old friend of his father's, and asking him to pay her a visit at a place called Durewoods, in one of the Southern counties on the sea. While Christmas is talking to Captain Cameron, a chance acquaintance, the Captain hears a footstep outside the door, and, calling to its owner by the name of Sir John, invites him into Christmas's room:—

Sir John Challoner was one of those men whose presence seems to fill a room. Captain Cameron was tall and sinewy; Sir John was tall and full. He had a splendid head of dark hair, and his beard and whiskers were glossy in their darkness. His forehead, his teeth, the one hand which was ungloved were very white. He looked a little too large for a lady's doctor, and a little too well dressed for a banker. He might have been a president of the Royal Academy, or the chairman of a School Board perhaps. There was something at once grave and gracious about him which diffused an atmosphere of dignity through Christmas's little room.

Presently the Captain asks Sir John, "And how are you all at Durewoods? And how's my Lady Disdain?" Thus by a clever touch the author brings two of his characters who are destined to have a marked influence upon each other together, and arouses his reader's expectation without any appearance of effort. A few days later, arrived at the little village of Durewoods, to which he has steamed across a quiet bay, Christmas "seized his little portmanteau and strode on the pier, with a delicious sense of fragrant hedgerow smells and summer evening atmosphere, and the breathing of trees and the salt savour of the water all blended with an odd feeling of perplexity—not quite knowing where he was or what he was to do next. Nobody expected him apparently, or paid the least attention to him." But a young lady driving a pair of ponies down to the pier sees and compassionates his forlorn condition. 'Learning from him that he is, as she has guessed, the guest expected by Miss Lyle, she drives him up to Miss Lyle's house, where he is met by "a tall, grey old man dressed somewhat like a boatman." The manner of his reception by this personage is strange. He is led by him in silence through a covered passage full of ferns and flower-pots which lies between the house and the outer wall. "Christmas at first supposed that his guide was deaf or dumb, but as he began to descend the steps with careless foot, and eyes wandering over the flowers and ferns, the old man touched him on the arm, and said, with grave deliberation, 'Mister! Slow—None-quick. All right!'" It turns out that this curious being, who like many people in the book has a curious name—Merlin—is a Breton boatman and fisherman, whose first idea in life is devotion to Miss Lyle, whom he has served for years, while his second is that he is an accomplished English scholar. Miss Lyle—who is one of the characters about whom the reader is told too much and too little—takes a great liking to Christmas, and amongst other good advice warns him against falling in love with Lady Disdain—Marie Challoner. It is needless to say that he entirely neglects this advice. They go out together in a boat with Merlin, and are landed at one of Marie's favourite view points:—

They stepped ashore, and began to ascend a winding path that mounted upwards through the woods, and Christmas entered upon his first walk under trees with a young woman. For the woods and the path, and the soft bright mosses beneath their feet, and the little streams that sometimes sprang from under green-covered stones and ran to meet them; for the sunny openings here and there between the trees, and the deep blue overhead, Christmas had no eyes. The sweet-singing English birds sang in vain for him. Yet not perhaps quite in vain. Perhaps some tone of music coming from some outer source, from the skies and among the trees, did blend itself into his consciousness. Perhaps the voice of a song-bird will always from that hour bring back to his mind delicious associations of happy expansive moments, when his soul seemed to be filled with exquisite emotion. Not

* *Dear Lady Disdain.* By Justin McCarthy, Author of "Linley Rochford," "A Fair Saxon," "My Enemy's Daughter," &c., &c. London: Chatto & Co. 1875.

quite in vain, perhaps, did the startled squirrel bound so prettily away, and then peer so knowingly from his shelter in the high branches. Not in vain was the sky so blue. All went to make up the hour, and the picture, and the dream. But Christmas did not then know it. He only knew that he was walking by the side of Marie Challoner, and that his heart was beating, and he could have vaguely said with Browning's lover, "Who knows but the world may end to-day?"

Christmas Pembroke is not the only young man who falls a victim to Marie Challoner's charm. There is one Nathaniel Cramp, or Nat Cramp as he is commonly called, who has returned to his native village from London, where he has been studying under a distinguished hair-dresser. But he has a soul above hair-dressing. "There was his real life when he worked and drudged faithfully in the calling which grew every day more and more distasteful to him. There was his ideal life when he sat up of nights in his bedroom reading" a mixture of Browning, Carlyle, Tennyson, Mill, and Darwin, and making of them all "a mélange of half-comprehended poetry and quarter-comprehended philosophy and science." This poetic hair-dresser hears with agony of the intimacy which has sprung up between Marie and Christmas. While he is wandering on the pier at night he meets Christmas, from whom, not knowing who he is, he accepts a cigar. Presently his suspicions are aroused, and he asks, "Perhaps you are staying at Miss Lyle's?"—

"I am staying there," said the amazed Christmas. "Why do you ask? Have you any objection?"

"Take back your cigar—I want none of it! Take back your cigar!"

"My good fellow," said Christmas, coolly, "people don't usually take back lighted cigars which other people have begun to smoke."

"Then let it perish!" Nathaniel exclaimed, and he flung the cigar wildly out to sea, and stared with excited eyes.

"Let it perish by all means; but the next time anybody offers you a good cigar let me advise you to make up your mind first whether you mean to smoke it and be civil before you take it in your hand. Now may I ask who you are? No, though. I don't want to know. You are the rudest and most uncivil person I have ever met. But I suppose you have been drinking."

"Drinking!" Nathaniel cried. "Drinking! It's false! You insult me! It's a lie!"

The end of the meeting is that Cramp attacks Christmas, and in the struggle falls into the sea, whence Christmas rescues him full of gratitude and penitence. When Christmas's visit at Durewoods comes to an end, Sir John has seen the danger of an attachment growing between him and Marie, and has laid his own plans to counteract it. The course of the story is continued in London. We will not spoil the interest of readers by indicating what that course precisely is. But we may mention one or two of the characters, who are drawn with singular skill. There is Mrs. Seagraves, Captain Cameron's sister, whose peculiarities can be best explained by quoting one of her speeches. On hearing that Nat Cramp, to whom she has been listening, is a barber:—"A barber!" said Mrs. Seagraves, "how charming—what a very delightful idea! I do so love to know a barber—when he has intellect and high thought: not a common barber of course. I never knew that barbers had such advanced views. I shall always love barbers for the future—not love them really, you know, but feel that they are men and brothers. So very, very refreshing!" There is also Miss Sybil Jansen, the enthusiastic girl who makes foolish eloquent speeches in favour of women's rights, and whom one cannot help liking and pitying in spite of her folly. And there is Ronald Vidal, who is perhaps the best drawn, as he is certainly the most original, character in the book. In him Mr. McCarthy has caught, and caught very accurately, a type which is characteristic of these times, and which no previous author has used. Besides the social scenes at Durewoods and in London, the book contains some very interesting passages of life in America. Altogether *Dear Lady Disdain* is the cleverest and pleasantest novel we have seen for some time.

AUTOBIOGRAPHY OF SIR JOHN RENNIE.*

THE discussion upon the widening of London Bridge has brought to remembrance the circumstances under which it was built, more than forty-five years ago, by the eminent civil engineer whose life and works are here described by himself. It was, like the naval docks at Sheerness and Chatham and the breakwater of Plymouth Harbour, a work designed by his father, who died in 1821. The Plymouth, Chatham, and Sheerness works indeed were more than half executed by the elder John Rennie. He had also completed both Southwark and Waterloo Bridges, and had commenced that of Vauxhall, before his design for a new one upon the site of the famous Old London Bridge was approved by a Parliamentary Committee. The task of its construction, but a few yards higher up the river, was entrusted to the second John Rennie, who then had to prepare the working drawings and specifications of detail. Its difficulty was greatly increased by the necessity meanwhile, for traffic accommodation, of keeping up the old bridge, with its large projecting pier-feet, called "starlings," buttressed by great piles of stone. The stream, both at ebb and flood tide, used to rush down between these massive obstructions in a series of formidable cascades. Mr. Harrison Ainsworth has turned them to account in one of his sensational romances. Their effect on the bed of the river, above and below the old bridge, was to scoop out deep holes, into which fell many of the loose stones heaped round the feet of the piers. It was in the upper hole, and at a great depth of water, 28 ft. low [illegible] of spring tides, with a rapid current so near the cataracts of old bridge, that John Rennie the younger laid his foundations. He managed the building of each of his piers in an oval cofferdam made of several rows of wooden piles set close together and caulked with tow and pitch, filling the spaces between the rows with puddled clay. Rennie had too much cause to remember these cofferdams, for he tumbled into one of them and was nearly killed by the fall. He relates the opposition that was raised by great coal-owners and statesmen to the new approach with an arch over Thames Street, the cost of which was to be defrayed by the City tax on coal. Lord Durham and Earl Grey were opposed to the Duke of Wellington upon this question, some time before the debates on the Reform Bill. But the Whig Premier had, in 1830, to bring his Majesty King William to the opening of the bridge, and of the present approach by King William Street, instead of Fish Street Hill. "Stare super vias antiquas" had been Lord Grey's motto in this affair of private Bill legislation.

Sir John Rennie, after his retirement from business, wrote from memory this account of his professional labours, and of his occasional travels in different parts of Europe. It has been edited by his son, Mr. C. G. C. Rennie, of whose share in the work we have only to say that the volume abounds with misprinted names, demanding careful revision when it shall again be sent through the press. Besides much that is tolerably interesting to the general reader, Sir John Rennie's commentary upon his own works is likely to be useful to the younger men of his profession. It might, indeed, have been rendered more instructive by the addition of a few maps, plans, and diagrams. Without such aids one cannot readily understand some of the matters described: such as the Eau Brink Cut near King's Lynn, the outfalls of the Nene and the Witham, the embankments of the Wash, the drainage of the Ancholme Level, and some harbour improvements. The talents of Sir John Rennie were most beneficially applied to these problems of managing water. He knew what to do with it, both in estuaries where bars are formed by the conflicting currents of river and sea, and likewise in lowlands which are marshy or flooded. These branches of engineering science have not, we suspect, of late years gained their full share of attention, compared with the more quickly profitable undertakings of railway construction. To say nothing of the storage of water for irrigation, which might, by the way, produce most valuable results in Australia, many of our rivers are still left without due regulation of their course and preservation of their outlet. It is scarcely creditable to the enterprise and skill of this age that half the midland shires of England, though remote from mountain torrents, have been twice laid under water in the past six months. Sir John Rennie, who was the author of a book on harbour works, intended also to write one treating of "hydraulics generally," and the drainage of fens and lowlands in Great Britain. We hope that the second edition of this autobiography will be furnished with plans, at least, of the Bedford Level and the Wash, and of the Ancholme or Axholm Level, in North Lincolnshire, with all the "hydraulic" cuttings and embankments.

An instance of the progress which mechanical contrivance has made since the early years of this century is the difficulty, at that time, of conveying a twenty-five ton block of granite from its quarry to be shipped at Peterhead. It was in 1813 that young John Rennie performed this feat, to the admiration of his contemporaries, for the building of Southwark Bridge. His next employment was in the interesting task of marine and trigonometrical surveying, under Mr. Francis Giles, for the choice of harbours and a packet line between the south-west coast of Scotland and the nearest Irish shore. In the survey also of the river Tyne, and in those for several canals to be made in different parts of England, he gained further experience at the age of twenty-one. He assisted, soon afterwards, in examining the position of Woolwich Dockyard, which his father had in vain advised the Admiralty to give up, together with that of Deptford, concentrating all the establishments for naval construction, repairs, equipment, stores, and armament in one great dockyard and arsenal at Northfleet. This scheme, which was approved by Pitt and Melville, would in Rennie's judgment have rendered it needless to create the now existing dockyards at Sheerness and Chatham. We have lately seen the abolition of the Woolwich Dockyard, upon which 340,000*l.* was spent under his supervision; but it was hardly possible for any Government, fifty or sixty years ago, to foresee that changes in naval architecture would make it useless for our present fleet. There is perhaps a little too much disposition to test the discernment shown by long past Administrations in any particular decision by the measure of subsequent experience or later acquirement in science. The projected ship canal from Portsmouth to L[illegible] one hundred yards wide and twenty-four feet deep, passing Guildford down the valley of the Wey to the Thames, might have been made, as Sir John Rennie thought, at half the cost of the London, Chatham, and Dover Railway. Whether it would have proved so useful, at this day, as to supersede the London and South-Western Railway is another question; he evidently did think so in the railway times.

Among the harbour works of this able engineer are those of Portpatrick and Donaghadee, Kingstown, [illegible]ven, Sunderland, Ramsgate, and East Hartlepool, with others in the British Islands; and he furnished designs for Oporto, St. Ubes, and so on, at the request of the Portuguese Government. Besides these improvements, more fully described in his book on British and

* *Autobiography of Sir John Rennie, F.R.S., Past President of the Institution of Civil Engineers; comprising the History of his Professional Life, together with Reminiscences dating from the Commencement of the Century to the Present Time.* E. & F. N. Spon.

Foreign Harbours, he recommended, jointly with Mr. Murray, some desirable measures for making Portsmouth harbour accessible at low tide. The various inventions of machinery in which he was associated with his brother George as partner, were applied sometimes to the public service. They are used in the royal victualling establishments of Stonehouse and Portsmouth. This firm supplied the steam-engines for our ships of war at an early period. Sir John Rennie claimed the merit of having induced the Admiralty to adopt both the high-pressure condensing system and Penn's oscillating engines. His connexion indeed with some of these improvements was extremely slight, amounting to little more than an influential opinion in their favour. In other cases, as in that of the screw propeller, when he and his brother had been employed merely to construct what other persons had invented, Sir John Rennie led the Government to take it up. His precise enumeration of every piece of work, advice, or suggestion contributed by himself to the material conveniences of this age is characteristic of a prudent economist of professional renown.

In the railway department of engineering, on the contrary, Sir John Rennie was the author of many projects which were destined not to be carried into execution. He was, indeed, with his brother and Mr. Vignolles, and with George Stephenson, engaged on the Liverpool and Manchester line, and he laid out the Brighton and the Blackwall railways in 1838; but for other designs of this nature he failed to gain support. He would have conducted the London and Birmingham line by way of Aylesbury, Banbury, Bicester, and Warwick, which would have been more natural and agreeable to ancient habits of traffic. At the same time George Rennie would have continued the railway from Birmingham to Liverpool by Stafford and Runcorn, with a bridge there over the Mersey; and the Trent Valley line might have been spared. The first-mentioned plan was superseded by the Stephensons' line to Birmingham following that of the Grand Junction Canal; the second was put aside for Telford's canal continuation from Birmingham to join the Bridgewater Canal to the Mersey. We have not much fault to find with the London and North-Western as it is; but there would have been some advantages in the combination which the Rennies had in view, making Birmingham the middle point of communication from Manchester or Liverpool to London. In like manner, with regard to the Great Northern line, which was laid down in 1845, it may be admitted that a line taking Lincoln on the road to York, as proposed by the Company with which Rennie and Giles were connected, had prescriptive custom in its favour. The railway bridge over the Severn on Rennie's Bristol and Chepstow line might perhaps have prevented the need for the tunnel under that river now in construction, since it would have brought South Wales nearer to London as well as Bristol nearer to Liverpool. Sir John always regretted the neglect by the South-Eastern Railway Company of his Central Kent line, by Gravesend, Rochester, and Maidstone, to Dover, with a length fourteen miles less than what they made of their Dover line. The unlucky shareholders of the London, Chatham, and Dover Railway, which long afterwards came into existence, upon a hollow financial footing, to answer the same ends of traffic, have yet more cause for regret. Another case in which serious competition might have been averted, by the timely adoption of a more direct line offered to a Company already in possession of the traffic, is that of the Midland line to Manchester, or something like it, taking in Leicester and Burton. The London and North-Western Company did not exactly see it.

The simple mention of all Sir John Rennie's various engineering tasks, and of his unfulfilled schemes, or those performed by other people, would occupy too much of our space. In this multiplicity of business, which left him, after all, not a wealthy man, he sometimes enjoyed with keen mental relish the opportunities of foreign travel. His more leisurely tour in Italy, Greece, Turkey, and Egypt, during the two years before his father's death, is slightly flavoured with a romantic quest of adventure, congenial to the British rambler in those regions and in those Byronic days. Among ferocious klephts and banditti, the Suliotes and Mainotes and the lordly Moslem of the classic peninsula, this young Scotchman from an office in Stamford Street, Blackfriars, soon felt himself quite at home. One wonders if he wrote any poetry more or less in the strain of *Childe Harold*. He studied meantime, with commendable taste and zeal, the antiquities, the topography, and architecture of Athens and other Greek cities. It will not of course be supposed that he could have anything to tell us, from his observations in 1821, that is not now familiar to all the world. Some features indeed of the old Turkish rule in the Levant, before the Sultan's empire was half reformed, dismembered, and partly ruined, might be noted as tokens of regretted past. The same remark would perhaps apply to experiences of Spain in 1833, at the outbreak of the first [illegible]; and with the suggestion of a similar doubt whether [illegible] is absolute and universal. Of both those countries, perhaps of the Mediterranean shores all round, it is scarcely [illegible] to affirm, as he does of Tunis, that they are still capable of prosperity with a different sort of people and government. That reflection does not accompany Sir John Rennie and his readers to the fens of Holland, or even to Sweden and Russia, where he surveyed or superintended particular undertakings, though with results less satisfactory, from defects or mistakes of their chief administration, than he had hoped to achieve. The Swedish railway scheme is associated with the exemplary career of John Sadleir, who may stand as a set-off against the typical brigand of Calabria and of the Morea, to prove the superior blessedness of our civilization. But Sir John Rennie did not travel as a sentimental moralist; he took a robust pleasure in meeting with rough folk and hard fare on the byroads of Southern Europe. At the Portuguese frontier village of Ocana, being warned that the whole population was in a plot to rob him, he invited them all to a feast and dance at both the two village inns. He then, having played the agreeable host, and paid the bill overnight, decamped early in the morning without taking leave of his guests, a trick worthy of Ulysses. With compliments to the women, cigars and glasses of liquor for the men, and frank good-humoured civility to all, he could make his way in safety among the wildest mountaineers beyond reach of a protecting police. Sir John was one of the founders of the Travellers' Club, but was never what is now considered a great traveller. His only expedition further than those we have mentioned was to inspect and direct some harbour works at the Azores, which he twice visited, in the winters of 1861 and 1863. These personal reminiscences of foreign life, manners, and scenery form an entertaining mixture with the account of his engineering labours and designs. It deserves to be carefully reprinted, with the special illustrations which we have ventured to suggest.

THE GENERAL STAFF AND ITS PEACE DUTIES.*

THE name of Colonel Bronsart von Schellendorf is familiar to many persons as that of the officer entrusted on the German side with the brief negotiation which ended in the surrender at Sedan. Before and during the war he occupied an important position among the assistants whom Count Moltke kept at his side; and his appointment subsequently to the charge of the staff of the Guards Corps is a testimony at once to his efficiency and to the thoroughness of the conditions of the service of which he is a member, which require that headquarter duties should be interchanged ever and anon with those more directly connected with the care of troops. The volume he now offers us, confined purposely to the peace duties of the staff, is of far wider scope than the title signifies. Indeed, so various and interesting are its separate sections that we can do little more than indicate generally the contents of the greater part of them. The service, as treated of here, excludes of course the actual operations of war, since staff duties in relation to these are reserved for another volume. In this part, however, are to be found, completely elaborated, such distinct subjects as the meaning and duties of staff organization in its theory and practice; the growth of the present system of Prussia—it should perhaps be said of Germany; the conditions of the same service in each of the other great armies of the world, our own included; the whole peace arrangements of the German army on its present footing, as viewed apart from the same force in the gigantic proportions which it attains when mobilized; the means of bringing it suddenly into the field if the word be given; finally, the practical work of the staff in its three great peace duties of the bureau, the ordering of grand manœuvres, and the practice of reconnaissance. As one of the least known of these subjects we select the second, in dealing with which Colonel Bronsart gives us a complete historical treatise on his own special service. He here shows at once breadth of view and severe study of detail; and where he errs, the errors are so far excusable that they are national, and that he writes above all for his own comrades.

In the old days of the Prussian army the notion of a staff seems to have been restricted to certain high officers, who were found to be necessary by the Electors of Brandenburg when first forming a standing military force, just as a similar discovery was made by our own Parliament about the same time, when fairly committed to the Civil War. Thus an ordinance of 1657 provided for the pay of a Commissary General, a Quartermaster-General (at first known as the General-Wachtmeister), and two Adjutants-General, besides two so-called Quartermasters-General, charged especially with the engineer services of the Electorate. A deputy to the Quartermaster-General or Chief Engineer (for the functions were originally united), and two other engineers of rank, not specified, were soon afterwards added. It is clear that the duties of the Quartermaster-General's department were for a long period supposed to be inseparable from the engineer branch of the army; or, as Colonel Bronsart tells us:—

> Although the commissariat staff was formed specially for each campaign, the Quartermaster-General and his assistants had constant employment during peace time in the engineer branch. And it followed from these conditions that the historical development of the Prussian Quartermaster-General's staff is from the first associated with the latter, and its very one-sided functions among the general staff; and that the close connexion of the general staff with the corps of engineers lasted through more than a century down to the year 1806, when the Chief Engineer, General Geusau, was at the same time Quartermaster-General.

To which it may be added, since the author here rather states the facts than explains them, that the original connexion was a natural one enough, and the complete distinction which began when Scharnhorst, coming into power after Jena, first made of the scattered regimental units or bodies of engineers a fourth field arm of the service under his friend Gneisenau, was but the adoption of a proper division of labour. That most sagacious of organisers saw

* *Der Dienst des Generalstabes.* Von Bronsart v. Schellendorf. 1ter Theil. Mittler: Berlin. 1875.

that the time had come when armies could no longer be left to wait till the staff should prepare and assign a suitable force of engineers for each specific operation, but must carry what was necessary of this branch with them wherever they move, just as they did their guns and horses; and that this could only be done by making it part of the regimental forces to be combined in each division. Even he, however, so little leaned to what is now the tradition of the service that he chose for the head of the engineers a simple staff officer who happened to have distinguished himself in the defence of Colberg. The change was an important as well as a just one; and if the engineers lost for the time in position, they gained so largely in efficiency that the Prussian model of their employment for field duty as devised during Scharnhorst's administration has become the standing pattern for the armies of the world.

Having mentioned this later separation rather briefly, Colonel Bronsart goes back in point of time, and we follow him, to note the changes made by Frederick in the system of the staff as bequeathed to him. This had consisted, as before mentioned, mainly of the appointments of certain heads of departments. But at the time of his first Silesian campaign of 1741 we find added to these eight colonels, acting pretty much as what we should call divisional adjutants-general, and certain majors as aides-de-camp. On the other hand, the Quartermaster-General's staff was reduced to four officers, and a year later to two, a fact which is explained by our author as follows:—

> Frederick II. kept but few officers on his Quartermaster-General's staff. The great King was not only his own chief of staff, but he also filled in manifold ways the functions of staff officers of the lower grades. The King himself wrote out the proposals for operations, orders for the general distribution of troops, and special instructions, or at the least he dictated them. Orders for battle he gave by word of mouth. If he wanted help he had his aides-de-camp, some engineers, and mounted orderlies. The Quarter-master-General's staff hardly existed therefore even in name.

All this intense, and it may be said, with due deference to Mr. Carlyle, somewhat meddlesome and dangerous activity, is the very antipodes of the modern German military ideal, which is to create a system that shall not leave success dependent on any single man's brains. However much Frederick's biographers may hold it up to admiration, it stands self-condemned by the fact that he abandoned it as soon as Prussia was relieved from the terrible pressure of the Seven Years' War and the Peace of Hubertsburg gave him time for thought. Then he began at once to reverse the practice he had clung to during the ever-recurring exigencies of the struggle, and set about the foundation of a staff such as modern ideas make it, composed not merely of a set of heads of departments, but of selected officers taken for the time from regimental work for the purpose of assisting their superiors in the higher duty of organizing and leading the whole mass. Its beginning was modest enough. Six lieutenants were "posted to the staff for general duties," according to the modern phrase, soon after peace was signed, though no distinctive uniform was given them. But the number in the following year, as the King's ideas grew clearer, was increased to twelve, and this again a little later to fifteen. And, having once selected them, Frederick paid great attention to their proper instruction, and enforced a preliminary strict examination on those specially educated officers, as Colonel Massenbach, who, having already gained a local reputation for knowledge, were allowed to join the new service from armies belonging to other States of Germany.

Much is told us of this officer, whose connexion with the unhappy events of 1806 has made his name of peculiarly ill odour with Prussians. Colonel Bronsart declares that justice all the more demands the recognition of the services which he performed as deputy to the veteran General Geusau, the head of the department, in introducing that sort of practical training on the ground which is now recognized as the A B C of a staff officer's education. He laid out a regular course of this each summer, the winter following being devoted to indoor instruction, chiefly in the subjects raised by reconnaissance. Many of his favourite ideas, notably that of registering exactly all the available positions to be used in a country in the event of war under every possible contingency, have been condemned by experience. But he had the merit of first instituting a course which should throw each student for the higher staff on his own individual resources, and making him work alone so as to teach him to think for himself. Much comment is added on the errors which marred his conception. But they may be compressed into the one statement that he gave theory and fixed rule altogether too large a place in his system, and, in fact, made the mistake, so common with closet strategists, of imagining that bodies of men were to be as easily handled as pawns on a chessboard. The key to his notions of the qualifications for the service over which he presided may be found in the test he prevailed on King Frederick William to enforce. All candidates for admission were to be subject to an examination in geometry, trigonometry, fortifications, tactics, the art of war, and military history; as though, supposing officers to be found really qualified in all these, there could be any need of instructing them for years afterwards in theory. A competitive examination of this highly professional type was held in 1804, and of thirty-nine candidates the twenty-two best were admitted as probationers. Some, however, will be ready to condone this excessive zeal for pen and ink when they learn that, out of the grants made for the education of the staff, 1,500*l.*, or more than one-sixth, was for the expenses of the summer reconnaissances. But the fatal day of Jena was now at hand. Massenbach and his theorists were carefully distributed over the Prussian corps, "but failed to turn misfortune from their side." And this teacher of war by compass and measure himself undying ignominy by counselling the first shameful surrender in the open field, the capitulation of Prenzlau, "an evil example" (to our author) "which worked perniciously" elsewhere.

Nevertheless, as the book well shows, his successor, Scharnhorst, had the foundation of a better system ready to his hand. His genius, as appears from Colonel Bronsart's details, seized on all that was worth retaining, and eliminated the unpractical and pedantic. He taught the staff to work with the generals and troops as well as alone, and bequeathed to Prussia in this, as well as so many other parts of the military organization he established, a system so sound and efficient that it survived and grew in strength through the lassitude of the long peace that followed Waterloo, and burst on the astonished enemy in all its powers in 1866. The world looked on with amazement at the celerity and certainty with which a quarter of a million of soldiers who knew no training but that of peace burst over the Bohemian mountains before Benedek could concentrate his veteran army to meet them, converged on his position so suddenly that he was forced to fight at an utter disadvantage, and finally came into decisive action with such steadiness and vigour that lookers-on declared their tactical training to surpass even the strategical leadership which had won them their first advantages. Nor must it be forgotten—and a study of the pages before us will prove useful to those who would ignore it—that the same ever-active system has led the Prussian General Staff, under its present famous chief, to utilize the experience of two great wars so as to fill up every possible defect discovered by the events of 1866 and 1870. "Think nothing done while aught remains," the motto put by the poet into a conqueror's mouth, might well be assigned to this indefatigable corps; and it is drawing fresh strength from the fact that a grateful Empire acknowledges its public services in the past, and looks to it as a chief guard in the future. Colonel Bronsart evidently feels the power of this sentiment, though the coldness of a semi-official style, which much mars in our view the attractiveness of his work throughout, forbids him to dilate on that popular side of the military question which in Germany just now, with the growing freedom of her Diet, is certainly not the least important.

We have not space for even glancing at the contents of the other sections of this instructive volume. It is professedly not critical, and the author rarely comments on the facts which he brings together. Had he done so in that chapter which treats of our own staff the result would have been full of lessons, for so clear a view of its organization and condition was never put together before, and Colonel Bronsart evidently possesses the qualities of a perfectly impartial judge. In the few pages devoted to ourselves no point of importance is omitted. We note such points as the credit given to the practical character of our administration for the contrivance of putting the whole army thoroughly under a civilian administrator, whilst reserving for military authority the disciplinary care over its members. We admire the insight which enables a foreigner to understand how thoroughly dual this administration was not long since, from the fact that bringing the Horse Guards to the War Office lessened the receipt of letters at the latter by six hundred a day. We also mark the shrewd observation that our Intelligence Department appears so short-handed that the mere correspondence of the military representatives of the Foreign Office alone might keep it occupied; the judgment as to our minor expeditions, that the staff is out of all proportion to the number of troops employed; the sly remark that, though we in theory adhere to the old subdivision of duties between the adjutant and quartermaster-general throughout, in the lowest grade the brigade-major manages to perform both; and, finally, the striking comments on our overmanned War Office, where, as Colonel Bronsart truly says, much of the time of the higher military staff goes in ceaseless communication on details with the clerical officials. He further remarks that their position in this respect differs entirely from that of any other military staff in the world. In fact, want of personal responsibility, want of confidence in others, want of unity in action—relics of a past age when military jobbery had to be met at every turn—are the tribute now paid to an evil system which its defenders in their blindness suppose to be a cheap and honest administration.

MELINDA THE CABOCEER.*

MR. SKERTCHLY has undoubtedly enjoyed ample unities of studying the customs of the natives of the Coast. In 1871, in an evil hour for him, he accepted the pro invitation of the King of Dahomey to pay a friendly visit week. The monarch overwhelmed his white guest with and honours, but declined altogether to speed his depa was worse, he never permitted the distinguished stra from his capital except under a strong guard; and Skertchly did get leave of absence in the inte[illegible] orders to keep moving at the rate of thirty mile[illegible] Mr. Skertchly, who seems to be a highly intelligent man, made the best of a disagreeable situation. He struck up acquaintanceships with dignitaries of the Court and officers of the army, and informed himself minutely as to many things in the country which he was not permitted to judge of with his own eyes. He came

* *Melinda the Caboceer; or, Sport in Ashanti. a Tale of the Gold Coast.* By J. A. Skertchly, Author of "Dahomey as It Is," &c. London: Chapman & Hall. 1875.

back to publish an entertaining account of his experiences in Dahomey, which we had the pleasure of noticing in a former number; and now he has supplemented it with a volume of sport and adventure, of which, however, the scenes are chiefly laid within the borders of the Ashantee country. His present book, as he tells us, is fiction founded on fact. The thread of romance which runs through the chapter is spun out of the personal narrative of a Caboceer (officer) in the service of King Koffee Kalcalli, who, having lost at once his liberty and his bride, ultimately recovered the one and the other; "while many of the hunting scenes," he adds, "are taken from my own adventures in Western Africa."

We should say that the book is likely to be more successful with enthusiastic youth than with critical middle age. There is abundance of "go" in it, and it is overcharged with thrilling incident. But the most obvious reflection is that nothing short of an almost impossible amount of marvellous good fortune could have brought the heroes, Danvers and Fortescue, through the manifold perils that beset them; while the victories they achieved over the savage animals they encountered are only to be paralleled by the labours of the heroic demigods of mythology. They emerge with honour and trophies from the midst of troops of ravening lions. They bag elephants by braces and leashes, bringing down the infuriated monsters with unerring aim when death in its most appalling form has approached them almost within arm's length. They have hand-to-hand grapples with gigantic pythons, who steal on them in the darkness in their very sleeping quarters. Scorpions, eleven inches long, drop down on their persons and get entangled in their boots and gaiters. They fall among hordes of driver ants, who stick them over with their remorseless stings as thickly as the quill points upon the fretful porcupine. Fetiche men armed with the murderous knife come thundering at the slightly barred doors of their dwelling. Revengeful savages tender them poisoned viands. Nor is the happy impunity they enjoy limited to their own persons. It extends to their black retainers, in whom they were most exceptionally fortunate, and in whom from the first moments of acquaintance they inspire a devoted attachment. Aziza, the mighty hunter whom they have been lucky enough to engage in their service, risks his life for one of his white masters the first day of his engagement. He and Melinda, the Ashantee Caboceer, twice snatch themselves from the jaws of death in the shape of infuriated alligators and a current hurrying them to a waterfall, by swinging themselves at the critical moment into the drooping boughs of a tree that chanced to hang convenient. At Coomassie they reverse the actual experiences of Mr. Skertchly in Dahomey, for the terrible Koffee Kalcalli not only receives them cordially at their coming, but dismisses them tolerably promptly with gifts. Up the country they have the misfortune to get involved in native quarrels; their presence inspires courage and discipline in a panic-stricken tribe, while their breechloaders turn the tide of battle against a host of warriors in the flush of victory. Finally, they assist the love-lorn Caboceer to recover his ravished bride, much in the manner of Cooper's Indian romances; and in a frail canoe they run the gauntlet of lurking dangers down an unfamiliar river swarming with savages. But, in spite of luck, coolness, and courage combined, we doubt if they could have extricated themselves with credit and safety had they not got on as admirably with the natives as if there had never been any confusion of tongues. Aziza and Melinda speak English with such purity and fluency that we should have imagined, as a matter of course, that their speech was translated, were it not for the occasional interpolation of such stereotyped phrases as "for true." This is the less surprising, however, since the village headmen in the remote interior have apparently mastered our idioms even to the length of indulging in graceful antithesis and appropriate slang. A chief beyond the inland frontier of Ashantee congratulates them in the following easy terms on the glorious victory the Englishmen have helped him to gain:—"Truly white people know how to fight too much, they never say die, and are as fierce in war as they are peaceful in their friendship." In fact, next to the piled-up sensationalism of the narrative, the general tone of the conversation tends to dispel illusion, and reminds us that the author is making a book and taking liberties with prosaic reality. For, in its way, the talk of himself and his English companion is as little probable as that of Aziza and the Caboceer. They enliven the most critical situations with chuckling over old Joe Millers; and, on the occasion we have referred to, when they and the fetiche man are on opposite sides of a frail enclosure, Danvers takes the opportunity of entertaining Fortescue with an incident that happened to him in High Holborn.

But, on the other hand, the volumes contain much that is interesting with regard to African sport, zoology, and scenery, as well as the manners and mode of living of the natives and the horrible "customs" of their Court ceremonial. As to the latter, it would seem almost hopeless to put them down; because, strange to say, though the people are their victims, they are countenanced by a strong popular sentiment. When a king dies, and there is a massacre in celebration of the funeral, the courtiers and their attendants pass through the gates of a bloody death into an existence more assured than the one they are leaving. When any event of importance occurs—when a white traveller, for example, arrives at Coomassie—it is etiquette that the king should formally announce it to his ancestors in the spirit world. He slays and sends off a couple of messengers, and, according to Mr. Skertchly, there need be no difficulty in finding volunteers for the errand. For those who carry such a commission will be taken every care of in the spirit palaces to which they are despatched; while the ordinary poor who die in course of nature are condemned to an eternity of torpid insensibility, with just vitality enough to make them sensible of their misery. That this theory is a just one seems confirmed by the demeanour of the doomed victims. Without being apparently under the influence of stimulants, they have been seen actually to beat time cheerfully to the music played in announcement of their imminent end. In most cases, however, they are effectually prevented from giving expression to feelings either of anguish or contentment, for a knife is skewered through their cheeks by way of gag, and their arms are firmly pinioned behind them. And the ceremony of slaughter shows a ghastly delight in butchery and bloodshed for their own sakes. The victim's head is struck off upon a war drum; the blood is suffered to stream into a calabash, and is afterwards smeared over the persons and weapons of the bystanders; while the affair is treated as a necessary interlude in the business which the monarch is transacting for the moment. At least it is likely to be more impressive to strangers than the dull details of our own Court etiquette, and it says much for the nerve of Fortescue and Danvers that they told the tyrant who had just paid them the sanguinary compliment, that no white man could think well of him so long as he sanctioned such practices. Making every allowance for its assuring one's future comfort, the custom of sacrifice must surely cloud the existence of many of the Ashantees if they ever give a thought to the future. The monarch's immediate Court circle is inevitably doomed in the event of his death, and the followers of men of any position have their lives bound up with that of their master. Even the twofold chance of death may perhaps scarcely count for much with a singularly unreflecting race; but the capricious tyranny of the fetiche is always present to every man. The fetiche is a superstition in which every one has firm faith, and according to native notions it may either be a blessing or a curse. Thus Aziza, the intelligent hunter, is persuaded that a strip of hide with the hair on will act as an infallible talisman against all perils of the chase. But, in compensation for such occasional mercies, he has to place himself absolutely in the hands of the ghostly go-between who interprets or executes the will of the supernatural power, and insists on implicit obedience to any commands he transmits. Thus the priest bears permanent sway in the savage community, and is tolerated and protected by the State in any license of crime. If he is not sufficiently bribed, or if he bears any grudge against any one, he simply accuses his enemy in the name of the fetiche, and insists on an ordeal which he himself directs. As likely as not, the test of innocence may be swallowing strong poison with impunity. Add to these sanguinary customs, and to the abuses of malignant superstition, the general insecurity of life and property even in the most settled districts, and Mr. Skertchly's pictures of Western Africa represent it as a hell upon earth; nor do we believe that the picture is greatly overcharged. The only villages safe from surprise and sudden destruction are those under the rule of some petty despot, who makes them pay dearly in one shape or other for his protection; as for the rest, the fact that the inhabitants may be sold for slaves is sufficient to tempt the cupidity of their neighbours. And not even the fact that a dead man is worth less than a living one will check that natural taste for carnage which breaks out in the excited savage. As for the climate, of course a native will thrive where a European would pine or die, but even among the natives loathsome and deadly diseases are exceedingly common. And unless they should ever set about reclaiming their swamps and clearing away their pestilential jungles, they will never get rid of the fevers, alligators, serpents, and four-footed beasts of prey, which make their life so precarious in the most favourable circumstances. We gather rather from Mr. Skertchly's former volumes than from his present one that he has but little faith in the perfectibility of the African, for we should say that, if there are many Melindas and Azizas, the race must have no small capacities for self-cultivation. But until things are changed considerably for the better, we should advise adventurous gentlemen fond of field sports to strike inland anywhere else than from the plague-stricken settlement of Cape Coast Castle. They can scarcely expect to have the good fortune of Fortescue and Danvers, or to re-embark themselves safely on board the English steamer, having escaped from men, beasts, and diseases.

FRENCH LITERATURE.

THE new series of M. Berryer's works * cannot be expected to meet with the general popularity which his political speeches obtained. The questions discussed before the Parliamentary assemblies of France were of European interest, and had more or less an international character. We are now asked to appreciate a lawyer's powers of logic and eloquence as brought to bear upon legal disputes of a private nature; and the *Plaidoyers* appeal to the sympathies of those persons only who can admire style and argumentative skill, independently of the special subjects which have called forth these valuable qualities. It would have been impossible, even if it had been desirable, to print all M. Berryer's legal speeches; many of them exist merely in the shape of rough notes, skeletons, or summaries; enough, however, is here preserved to give an excellent idea of the *finest specimens* among contemporary French barristers. The discourses contained in this

* *Œuvres de Berryer.—Plaidoyers.* Paris: Didier.

first volume range over the twenty years beginning with 1815, and amongst them will be found those delivered in defence of General Cambronne (1816), M. de Lamennais (1826), and M. de Chateaubriand (1833).

Two more volumes of M. Michelet's *Histoire du XIXe siècle* are now before us. The first, which takes us to the *coup d'état* of Brumaire *, is an attempt to rehabilitate the Directory, and to explain the struggle between the French Republic and the English Government headed by Pitt. Together with details on war and diplomacy, M. Michelet gives us curious particulars respecting the intellectual and religious movement of the day, and the various efforts made, on the one hand, to replace Christianity by a new form of religion, and, on the other, to reinstate Ultramontanist doctrines. Saint-Martin and the Théophilanthropists, Joseph de Maistre, and the Socialists of 1796, appear as the leading figures in this gallery of portraits, and a special place is reserved for that salon of the Rue du Bac where Mme. de Staël had raised the standard of constitutional liberty.

The period from the Consulate to the end of the First Empire † was one of spurious glory for France, and was characterized by a steady and progressive decay, physical, intellectual, and moral. M. Michelet, of course, ascribes this deplorable state of things to the fact that the philosophical principles of the eighteenth century were not duly carried out, and that the Imperial Government endeavoured to bring about an alliance between the doctrines of the *Encyclopédie* and the traditions of the Roman Catholic Church. We quite agree with him that such a hybrid system can produce no good results; but we must doubt whether the logical carrying out of the doctrines advocated in the *Contrat social* would be the best guarantee of liberty. M. Michelet is so impulsive that his work cannot seriously claim to be a history; but it is suggestive, and many of his estimates of men and events are striking. It may be regarded as a series of essays put together without much method, in which the strangest conclusions are often drawn from the most fanciful hypotheses.

The works of M. Philarète Chasles, now collected in one uniform edition, treat of every kind of subject, and deal with nearly the whole curriculum of literature, history, and philosophy. Happy in his selection of topics calculated to fill a lecture-room, M. Philarète Chasles unfortunately fancied that the popularity he enjoyed was due to an amount of erudition and a depth of thought which he never possessed; and his printed essays show this most conclusively. They are elegant improvisations, mixed with just enough of the scientific element to make them look profound without taking anything away from their agreeable character; but we are at a loss to discover the originality which is sometimes claimed for them. The present volume ‡ deals with antiquity; Greece, Rome, and Palestine are the fields where M. Philarète Chasles carries on his investigations; and the book ends with an essay on the sources of the Latin and Teutonic languages. The introductory chapter, the best in the whole series, is a sketch of the influence exercised upon literature by religious and social institutions.

The *conférences* § delivered by Father Didon, the Dominican preacher, have reached a second edition, and appear now with a new preface. The object of the orator is to solve the old problem of the reconciliation of science and faith, and to show that a return to Christianity is the only possible condition of life for modern society. It is curious to observe how all the modern apologetical writers belonging to the Roman Catholic Church are loud in proclaiming that, far from repudiating science, they welcome its teachings and sympathize with its votaries. This is of course highly satisfactory, but the error committed by Father Didon and most modern Roman Catholic divines consists in maintaining that their Church has always manifested the liberal mind which is characteristic of MM. de Montalembert, Lacordaire, Gratry, and Didon himself. The six lectures printed in this volume are written in a popular style, and may be recommended as an interesting summary of Christian apologetics.

One of the most melancholy facts in the present condition of France is the decrease of the population. The small number of births is no doubt the principal explanation of this state of things; but there is another cause — namely, the neglect with which children sent out to nurse are treated. In the case of foundlings the mortality resulting from the negligence of local authorities has reached enormous proportions, and the number of children still-born, now amounting to one-fifth of the total number of births, has increased five-fold in the course of twenty years. Dr. Brochard has devoted a very interesting little volume ‖ to a thorough discussion of this scandalous evil. Unfortunately, as M. de la Guéronnière remarks in his preface, bureaucracy—that leprosy of French civilization—has always prevented the working out of useful plans, and Dr. Brochard himself narrowly escaped being the victim of red-tapeism; so much easier is it to make revolutions than to introduce reforms. Dr. Brochard never ventures on a statement without supporting it by facts, and in so delicate a question as that which here occupies him he takes special care to be accurate. His conclusions are the following—(1) the *tour*, or place of admission for foundlings, should be re-established; (2) the [illegible] of relief now granted to the *filles-mères* should be consid[illegible] altered, so as to remove every possible encouragement to neglect; (3) the care of foundlings must be transferred fr[illegible] Government authorities to the hospitals; (4) the admini[illegible] inspection of foundlings must be replaced by medical supervision. An appendix of illustrative documents terminates the volume.

If we may believe M. Ribert *, Frenchmen certainly do not succeed as framers of political constitutions. He would probably say that the constitution promulgated by the First Republic is a perfect model; we do not think so, but we agree with him in many of his criticisms on the legislative work accomplished at Versailles during the course of last year. However, it has at any rate the merit of existing; it is destined to be for at least five years the guide of public life, and the instrument of the national will; it is wise, therefore, to make the best of it, and, instead of enumerating its defects, to show how it can be worked. M. Ribert begins by sketching the fundamental principles of this Constitution; he then examines in succession the parts to be performed respectively by the Chamber of Deputies, the President of the Republic, and the Senate; he defines the province within which each of these three can lawfully act; and, finally, he shows how even the least satisfactory political mechanism may be worked with a certain amount of satisfactory results. Although M. Ribert does not actually say so, he evidently ascribes to the monarchical factions of the Assembly the intention of what our neighbours call fishing in troubled waters, and of using a defective constitutional programme for the purpose of ruining the Republican cause.

Colonel Fabre has written an account of the Franco-Prussian war †, compiled from official sources, and illustrated with thirteen strategical maps. He shows that only men of first-rate genius can tell beforehand the results of a campaign; Turenne did so in 1674, and Bonaparte in 1800. The Germans, five years ago, were equally successful; not, however, in his opinion, because they possessed the same prophetic spirit, but simply through the blunders of their enemies.

The recent publications of Messrs. Didot include a work of much artistic as well as literary value; we mean the illustrated reprint of M. Wallon's *Jeanne d'Arc*.‡ First issued in an octavo form, it went quickly through two large editions. About the beginning of 1875 a duodecimo edition, completely revised and considerably augmented, made its appearance; and now it comes before us in the shape of a Christmas book, with all the resources supplied by the ingenuity of modern art, such as chromolithographs, woodcuts, and maps. We may describe this magnificent volume as a museum in which every detail connected with the Maid of Orleans has been collected and enshrined. In addition to M. Wallon's text we find here:—1st, an essay on the armour and military costume in use during the fifteenth century; 2nd, a map of France referring to the same epoch; 3rd, a note on the d'Arc family; 4th, a disquisition on the literary and musical compositions devoted to the heroine; 5th, an iconographic supplement; and, 6th, a facsimile of Joan of Arc's letters. A copious alphabetical index forms the fitting conclusion of the volume. As in the same publishers' editions of Joinville and Villehardouin, the illustrations are uniformly copied from contemporary sources, and may therefore be trusted as accurate specimens of fifteenth-century ornamentation.

As we are speaking of the Maid of Orleans, we may refer to a question connected with her which has often been discussed from different points of view. The English and Bourguignon chroniclers attempted to represent her as a mere instrument of the nobles who surrounded Charles VII., and even Sismondi gave his countenance to this absurd opinion. Other writers, such as Lingard and M. Henry Martin, have described her as acting under the influence of a sort of hallucination, while M. Villiaumé attributes her success to simple genius and military tact. We need scarcely say that M. Wallon examines and rejects these various theories in his monograph; M. de Bourbon-Lignières has taken the mission of *La Pucelle* for the theme of a distinct work §, in which he endeavours to prove that Joan of Arc was distinctly and clearly inspired by God to save her country from foreign invasion.

The expedition of the Duke of Guise against Naples is one of the least known episodes of the seventeenth century; it has suggested to MM. Loiseleur and Baguenault de Puchesse a volume of much value ‖, compiled with all the care and erudition to be expected from them. The documents here published are the official letters exchanged between the Count de Brienne, Secret[illegible] of State for Foreign Affairs under Mazarine, and the Marquis Fontenay-Mareuil, French Ambassador at Rome. All these papers belong to the public library of the city of Orléans, where M. Loiseleur, the curator, lately discovered them. The work begins with a long introduction explaining the cause of the expeditions undertaken by the Duke of Guise—expeditions conceived for the most trifling motive, and doomed to a melancholy issue.

The documents are, accompanied by copious notes, and analysed in a sort of calendar, terminated by an alphabetical index.

The small duodecimo recently published under the title *L'habitude et l'instinct* * is the last work composed by M. Albert Lemoine, one of the most distinguished professors of metaphysics in the University of France. It consists of two separate parts, the former of which, treating of habit, is the only one which the author was spared to finish. Previously to its publication it had been read at one of the sittings of the Académie des Sciences morales et politiques. The remainder is chiefly made up of sketches put together by M. Lemoine's friends, and left exactly as they were found amongst his papers, except where the meaning of certain passages required the addition of a few explanatory sentences. The admirable manner in which M. Lemoine explains the phenomena connected with habit makes us regret that he should not have been able to finish his researches. He begins by analysing the nature of habit, its effects, and its relations both to the intellect and the emotions; he then shows how it is affected by the will, and *vice versâ*, concluding his observations by remarks on the importance of habit in the economy of human life. The second part of the volume, which treats of instinct, contains a criticism of the opinions maintained on this subject by Montaigne, Descartes, and Condillac; the hypothesis of a connexion between instinct and heredity leads to an able discussion of Lamarck's views as expanded and illustrated by Mr. Darwin. M. Lemoine's sketch, fragmentary as it is, will be found very interesting by all readers who are attracted by metaphysical problems.

French literature boasts already of several valuable works on St. Anselm, his life and his philosophy; we need only mention the well-known monograph composed many years since by the late M. de Rémusat. The Royal Academy of Belgium thought, however, that there was room for another essay on the subject; and the Abbé van Weddingen obtained the prize in a competition which was accordingly opened.† In five chapters M. van Weddingen examines the philosophical and theological system of Anselm from every point of view, studying it not only in itself, but with reference to the numerous controversies which it produced. The volume before us seems to be the *coup d'essai* of the young author, and we can only hope that the success it has obtained will encourage him in the pursuit of studies for which he seems eminently qualified.

The pamphlet ‡ which M. Meydieu has translated from German into French is a psychological study of considerable importance. The fundamental principles adopted by the author may be briefly stated as follows:—Antagonism manifesting itself in combat is an essential condition of the idea of right, and an integral part of its nature. Every living being must resist attacks from outside; but physical existence does not constitute the whole of man; our greatness resides in our moral existence, the necessary condition of which is right. The man who defends his right does more, therefore, than struggle for a material object, a selfish advantage; his property is only accessory to his person, and thus, whilst he defends his possessions, he really struggles for the sense of his personality, for the condition of his moral existence. If the pamphlet before us has commended itself to the French translator, it is no doubt on account of the historical applications introduced in the second chapter, which have elicited from M. Meydieu some excellent remarks on the present state of France.

If we required a decisive proof that the most important works are not always the most voluminous, we might quote the remarkable essay lately published by M. Emile de Laveleye.§ One of the favourite theories of the materialists is that the destiny of nations depends on their physical constitution; MM. Littré, Taine, and Vacherot consider this as an axiom; they see nothing beyond, and in their fondness for physical causes they ignore facts as patent as the daylight. M. de Laveleye meets them with objections which they would find it very difficult to refute, and shows that religion is an element deserving at least as much notice, and carrying as much weight, as the qualities of the soil or the influences of the atmosphere. No one can call in question M. de Laveleye's competence to speak with authority on the dangers of the present situation. He is a religious and consistent member of the Catholic Church, and yet he brands Ultramontanism as the rock on which the civilisation of the nineteenth century must make shipwreck, *nisi Deus interesit*; his Liberalism cannot be impugned, and at the same time he reads to the French Republicans a lesson which they might well take to heart. We hope that his pamphlet will have a wide circulation.

The philosophy of history is a science for which data are constantly accumulating, and which can therefore be more satisfactorily studied now than was possible half a century ago. The civilisations of Assyria, Palestine, Greece, and Rome have few secrets for us; in whatever direction we move, we are treading comparatively safe ground. Bossuet, *sur l'histoire* on the one side, and Voltaire, *les mœurs* on the other, what the philosophy of

* *L'habitude et l'instinct.* Par Albert Lemoine. Paris: Ganmer-Baillière.

† *Essai critique sur la philosophie de St-Anselme de Cantorbéry.* Par Mgr. l'abbé van Weddingen. Bruxelles: [illegible]yes.

§ *De l'avenir des peuples catholiques.* Par Emile de Laveleye. Paris: Germer-Baillière.

was when written under the influence of prejudice by men whose conclusions were formed long before they put pen to paper; and M. Aloys Berthoud, in an exhaustive article contributed to the last number of the *Bibliothèque universelle* *, proves that, in history as well as in politics, the line of argument adopted by the Ultra-Catholics and Rationalists is fundamentally the same. Both parties alike deal in arbitrary and sweeping assumptions which they regard as above the reach of argument. "The Pope is infallible," exclaim the former; "A miracle is impossible," retort the latter; two assertions equally gratuitous, and equally illustrative of the logic of writers who beg the question at the very outset of their respective works. The number of the *Revue suisse* in which M. Berthoud's essay appears contains also an interesting criticism on Sir Arthur Helps's *Ivan de Biron*, and a tale by Mlle. Berthe Vadier which is much better worth reading than most of the numerous productions poured forth from the Paris press.

The *Seconde vie de Marius Robert* † is passable, notwithstanding the questionable character of certain situations, and the idea developed by M. Paul Parfait may be called a moral one; but the *Roman de Béatrix* ‡ has not even the merit of style to redeem it; seldom has anything more offensive been offered to the public, and it is the most disagreeable part of the duties of a critic that he is compelled to read such trash for the purpose of cautioning others. The same remark applies to M. Hector Malot's *Marquise de Lucilière* §, and it is a relief for us to take up M. Louis Rambaud's *République de Martin* ‖, although it belongs to a class of novels in which we do not feel much interested—namely, political and satirical ones.

Under the title *Les Dianes et les Vénus* ¶, M. Arsène Houssaye has collected a few sketchy articles on Rembrandt, Leonardo da Vinci, Holbein, and other celebrated painters, ancient and modern. The ladies occupy an important place in these half-dozen chapters, as might have been expected from an author whose favourite studies are always in the atmosphere of the boudoir.

M. de Laprade's vigorous satires ** will be welcome to the great majority of readers. The first two originally appeared in the *Correspondant*; the third seemed too bold for insertion, and is now given as a natural complement of the rest, after remaining unpublished for nearly five years.

INDIAN VICEROYS.

THE retirement of Lord NORTHBROOK a year before the expiration of his term of office is attributed to the strain on his health which his arduous duties have imposed. We are thus reminded of one of the most serious difficulties under which we govern India. The climate, although not destructive of energy so long as there is strength to respond to a call on it, uses up the springs of energy in all who go to India late in life, and in many who go there early. As a rule, we cannot profit by any long experience in the Viceroy except at the cost of his health or his life. Four years have brought us to the end of all that Lord NORTHBROOK can do for India without so serious a risk that common prudence warns him to shun it. And yet such difficulties as he has had to encounter are only those which in quiet and ordinary times every Viceroy must expect to encounter. The Bengal famine made a considerable call on his patience, courage, and ability, and he responded to this call in a manner which won him just and general admiration. But the crisis of the Bengal famine is not at all comparable to that of the Mutiny or of a great war. During Lord NORTHBROOK'S Viceroyalty there has been no native disaffection, no financial embarrassment, no serious war or threat of war on the part of the neighbours of India, no complication with Afghanistan, or Persia, or Russia, no cry about Indian affairs taken up in Parliament. No doubt Lord NORTHBROOK has himself largely contributed to this happy state of things. He has shown sense, ability, and rectitude of purpose, and he would not have got on so well as he has done with two successive Ministries unless he had deserved to get on well. He has had the ordinary duties of a Viceroy to perform, and he has performed them to every one's satisfaction. He has had a piece of accidental good fortune in the PRINCE'S visit coming just at the end of his career. To the success of this visit he has contributed in a very considerable degree by the excellence of the arrangements for the visit which were under his control. He has held a high and responsible post, and shown himself in every way worthy to hold it, and comes home having merited honour and obtained it.

It is necessarily difficult to form any precise judgment of a Viceroy's career, except under eventful and extraordinary circumstances, because it is impossible to know how far he does what he seems to do. He has the Secretary of State above him, and a whole host of able officials under him. Lord NORTHBROOK terminated the curious Baroda business by the deposition of the GAEKWAR; but Lord NORTHBROOK in taking this decisive step was only the agent of Lord SALISBURY. The expenditure of India on public works has lately been jealously watched and carefully restricted; but it is Lord SALISBURY who made and acted on the discovery that India cannot afford to construct with borrowed money works that do not pay. In all probability Lord NORTHBROOK thoroughly agreed with Lord SALISBURY as to the policy to be pursued both with regard to the GAEKWAR and as to public works; but he would have [illegible] SALISBURY'S policy [illegible] administration of affairs, in legislation [illegible] has also constant advisers at his [illegible] to recommend, the fruits of a [illegible] who understand [illegible] how to do it. He is the [illegible] and the force and advantageous [illegible] which he can always depend. For the adequate discharge of his duties under these circumstances a Viceroy needs two sets of qualities. In the first place, he is the head of Indian society. He ought to like the pomp and the pleasures of his office. He ought to be not only courteous, but sympathetic, able to win confidence, skilled in getting quickly out of very different men what he wants to hear from them. He must inspire a confidence in his integrity and justice. He must be willing to please and to be pleased. In the second place, he has to form an opinion on matters most of which are new to him; and, although willing to listen to every one who has a title to offer advice, he must make it felt that he at last forms an opinion that is his own. The Secretary of State cannot govern India unless there is some one in India on whom he can so far rely that he knows he may expect to receive from him a sensible and well-considered opinion. For India itself, too, it is indispensable that the Viceroy should be a man whom it takes sense, knowledge, and experience to persuade. Amiability alone, although the first requisite in quiet times, will not suffice, for it is the amiability of a master that is prized, and a Viceroy cannot be master if he is despised as weak or misjudging. Every one knows that a Viceroy cannot know much, but those who do know much very soon find that their knowledge is brought to its proper value when it is submitted to the criticism of a man who possesses great general ability, although he does not know their special subject. A Viceroy has also to satisfy in a vague way native opinion, and in a more special way the opinion of native princes and chiefs; but it can hardly be said that he needs any special qualities for this purpose. A courteous, amiable, honest, firm, able man is sure to satisfy the natives and their chiefs, if any one will. Occasionally a Viceroy finds an opportunity of doing, even in quiet times, something peculiarly his own, and, if he uses this opportunity well, he gains special credit. It is generally supposed that it was due to Lord NORTHBROOK'S personal enlightenment that the exportation of rice was not forbidden during the famine, in spite of much local clamour and the adverse criticism of those at home who ought to have known better. This piece of wisdom deserves special recognition. But, as a rule, a Viceroy proves himself to be a good Viceroy by being thought so. Two Secretaries of State have found in Lord NORTHBROOK a Viceroy in whom they could feel confidence. The world of Indian officials has dealt with him, and found him the right sort of man to deal with. The native princes have been satisfied with his bearing towards them. Indian society has liked and respected him. These are the tests by which the success of a Viceroy's career are to be tried, and it is because, in the case of Lord NORTHBROOK, these tests are satisfied, that he comes back with merited honour.

The appointment of Lord LYTTON as the next Vice[illegible] was received with general surprise, not because [illegible] had any reason for supposing that he was [illegible] post, but [illegible] except as a writer, he is [illegible] would have thought of [illegible] an [illegible] however, that [illegible] ought of him [illegible] is the business of a [illegible] pick out the right [illegible] even when their me[illegible] known to the world. Lord LYTTON has [illegible] many years in the diplomatic service, and has always shown great ability, industry and zeal in the limited sphere open to diplomatic servants of an inferior rank. He has

few months held a post in which he had a superior above him; and it is impossible to gather anything from a man being Minister at the very quiet place as Lisbon. The special knowledge which can be acquired by a diplomatist who has not reached the level of an embassy can scarcely be of any use in India. The notion that a Secretary of Legation at Paris has some occult power of estimating the bearings of Russian operations in Khokand has only to be stated to be dismissed. Lord LYTTON'S appointment must rest exclusively on his personal merits. He may be expected to show in a very high degree the first set of qualities which his office demands. He is sure to be courteous, amiable, and sympathetic; to discharge social duties gracefully; to please the world of officials and their wives; and to make people about him at their ease. Native kindliness and good sense are the foundation of all good manners; but Lord LYTTON has improved nature by the cultivation of a poet and the training of a diplomatist. Whether he will show the second set of qualities needed in a Viceroy, whether he will display real power, and will be able to act under a Secretary of State with sufficient independence and sufficient obedience, and to impress a sense of mastery on those with whom he has to deal, cannot be known until he is tried. His published reports on the countries where he has been stationed have always displayed a power of grouping and stating facts which no one but an able man could possess. But it is impossible from the best of reports written by a Secretary of Legation to judge whether he is or is not fit to be a Viceroy of India. His fitness can only be judged by a personal insight into character. The real reason to suppose Lord LYTTON fit is that Mr. DISRAELI has thought him fit. Mr. DISRAELI has gone out of his way to choose Lord LYTTON, and it may be assumed that Mr. DISRAELI has not gone out of his way without good grounds.

SIR WILLIAM HARCOURT AND THE DRUIDS.

SIR WILLIAM HARCOURT'S sanitary statistics of Oxford may possibly interest some of his graver and more intelligent constituents. If the Oxford Druids in general like to hear and talk about zymotic diseases after dinner, they are to be congratulated rather on their devotion to social science than on their participation in ordinary tastes. There is, indeed, some amusement to be derived from a display of versatility. Few advocates excel Sir W. HARCOURT in the professional faculty of acquiring and using any information which may suit his immediate purpose. In a few hours he knew all that could be known about the local death-rate, and he published the results of his hasty studies as fluently as if he had been discoursing on the shortcomings of the Government or the prospects of the Opposition. It is the duty of a member to defend the municipal administration of his borough, because the Town Council is elected by nearly the same voters as those whose names appear on the Parliamentary roll. It is satisfactory to find that works of drainage, worthy of Roman enterprise, have been at last projected for the diminution of the winter floods, which have long threatened the inhabitants of Oxford with malaria. The expenditure indeed seems to be almost unnecessary, as, according to the same authority, no place is more wholesome than an island rising out of a flooded fen. If any censorious Druid found the lecture on zymotic diseases inappropriate or dull, he had the satisfaction of remembering that his representative had only assumed a didactic character for the occasion. Sir W. HARCOURT was careful to state, before he plunged into the subject of diphtheria and smallpox, that he had deliberately resolved to say nothing which could amuse a frivolous hearer. His quips and his sarcasms delivered a few days before had provoked comments to the effect that his levity was excessive or unseasonable. He was now prepared to prove that he could deal as readily with the most depressing topics; but his constituents must understand that he was capable of better things than reading a sanitary paper at a Social Science Congress. Notwithstanding the criticism to which he had been subjected, he would perhaps have made another speech on current politics if the subject had been inviting.

Mr. HALL, who, as Sir W. HARCOURT said, had been elected to differ from him, intentionally or casually answered the objections which had been raised by his colleague to the policy of the Government. The Artisans' Dwellings Bill was a boon to the population of great towns; the Master and Servants Bill gave universal satisfaction; the Agricultural Holdings Bill had the paramount merit of not violating freedom of contract; the Suez Canal purchase, in spite of Lord DERBY, was a bold and patriotic act. Sir W. HARCOURT, having previously delivered his sanitary lecture, probably listened with good-natured toleration to the exposition of opinions which he had himself a few days before undertaken to confute. All facts have two sides as they are regarded from opposite quarters; and for the present it is Sir W. HARCOURT'S fortune to be placed on the seamy side of politics. As the Session will open in a month, it may be hoped that Oxford has witnessed the last retrospect of 1875. If no change takes place during the year in the position of parties, the next meeting of Druids will again learn from one member that the Government has blundered egregiously, and from the other that its practical legislation is calculated to render great benefits to the community. It is not impossible that foreign complications may provide more exciting subjects of discussion. The zymotic diseases of Oxford concern its inhabitants more nearly than the troubles of Turkey or the ambitious designs of Austria or Russia; but peace and war, and the growth or decay of empires, act on the imagination more powerfully than any hospital returns. The Suez Canal will alone furnish matter for an interesting debate. Sir W. HARCOURT perhaps already anticipates the pleasure of fastening the Ministry between the horns of a dilemma. If Mr. DISRAELI takes credit for a provident regard to English interests in the East, Lord DERBY must have created an erroneous impression when he described the purchase as a harmless financial operation.

It may be inferred, both from Sir W. HARCOURT'S party speech and from his willingness on a second occasion to leave politics untouched, that he is not seriously dissatisfied with the present state of affairs. It is of course his business to note the mistakes of his opponents and to rejoice in their occasional discomfiture; but he belongs to that not unimportant section of the Liberal party which has inherited Lord PALMERSTON'S judicious tendency to inaction. The Whigs are perhaps not equal in numbers to the advanced Liberals in the House, but they are for the most part on the staff; and they keep their more turbulent allies out of mischief. Both Lord HARTINGTON and Sir W. HARCOURT have explained, in not dissimilar language, their relation to more restless politicians. It is the duty of the leaders from time to time to check the ardour of petty factions by showing that discipline which is the condition of ultimate success requires acquiescence in differences of opinion. In a team of horses, or among a body of men on the march, the slowest regulates the pace. Until the Radicals can command a majority of their own, they must be content to wait for Liberals who are not in a hurry. If the alliance at any time becomes no longer tenable, the withdrawal of a restraint which now provokes impatience will not be found an unmixed advantage. It has always been the good fortune of England to be governed by parties which are not coincident with the social or economical stratification of society. When a French demagogue predicts the transfer of political power to a new class, he alarms all who are interested in the protection of property and in the maintenance of social stability. No similar anxiety would be caused in England by the accession of a Ministry which should include Lord HARTINGTON and Sir W. HARCOURT. In more revolutionary times, FOX'S violent language was the more readily tolerated or admired because friends and enemies knew that he was thoroughly steeped in aristocratic feeling and prejudice. Lord GREY, though he had belonged to the formidable Society of Friends of the People, excited no surprise or suspicion of inconsistency when he announced that he would stand by his order. Mr. GLADSTONE was the first Liberal statesman of the highest rank who discarded the Whig tradition. The consequence was that he alienated many hereditary supporters of the party, and that, as soon as the country desired an interval of repose, his popularity collapsed.

Although there is no fundamental difference of opinion between moderate Liberals or Whigs and Conservatives, only the shallowest politicians would attribute their party antagonism to hypocrisy or caprice. The distinction between Whig and Tory, while it is not the result of birth or of casual association, is one rather of temperament than of political theory. A Liberal of the older type has no superstitious aversion to change when he

is once convinced that it is expedient or necessary; but he requires his judgment to be satisfied that the balance of benefit is on the side of innovation. Lord MELBOURNE in the heat of the Reform agitation told Mr. GREVILLE that he doubted whether it would be possible to conduct the Government when the Reform Bill was passed. He had nevertheless made up his mind that the danger of a sweeping measure was less than the risk involved in resistance. When circumstances were less urgent Lord MELBOURNE was in the habit of asking a restless colleague whether things could not be let alone. There is no reason to apprehend the cessation of party contests through the failure of matter for dispute. The administrative miscarriages of every Government supply the Opposition for the time being with interesting and profitable topics. Great questions which tend to arouse strong passions are adjourned through the reluctance of Liberal leaders to disturb national institutions. Mr. FORSTER'S series of projected Reform Bills may perhaps be discussed, or even adopted, at some future time, but they will not become main political issues as long as Lord HARTINGTON is the official representative of the party. The assailants of the Established Church will have to consider whether they can afford to quarrel with Sir W. HARCOURT. Ready and passionate enthusiasm for the theories and measures which happen for the moment to be under discussion is a grave defect in a political leader, though it may be a useful element of possibly beneficent agitation. Neither O'CONNELL nor COBDEN possessed the qualities which are most valuable in a Minister or in the head of a party; but perhaps O'CONNELL would have found amusement in substituting for a political discourse a disquisition on death-rates and zymotic diseases, if sanitary science had been familiar to his generation.

THE FRENCH ASSEMBLY.

THE French Assembly has at last closed its long and troubled existence. It has come to the end of its varied history; and its wranglings, tumults, intrigues, and vacillations, its follies and its real services to France, are alike things of the past. Whatever may have been its demerits, it has at least left France in a much better state than it found it in, and it has done, intentionally or by accident, many good things. If the history of the Assembly is taken as a whole, and we forget for a moment how things happened, it is curious how much may be said in the Assembly's favour. It made peace; it freed the soil from the presence of the invader; it restored the financial credit of France; it rejected Protectionist theories; it renewed the Treaty of Commerce with England. It has been lavish of money for the reorganization of the army, and has put more men at the command of its generals than they know how to use. It has resolutely refused to have anything to do with crusades for the POPE, and has discountenanced the intrigues of Ultramontanism. It has maintained the national flag. It has damped the efforts of successive Monarchical pretenders. It has made all parties in turn disclaim a *coup d'état* as a treason to the nation. It has placed at the head of affairs a President who maintains order, and whom all alike acknowledge to be honest. It has given the country a Constitution by definitively proclaiming the Republic, and in establishing a Senate has so exercised its choice of a portion of the future Senators as to give, so far as in it lay, a decidedly Liberal colouring to the future Assembly. This is what the Assembly has done; and although it must be exceedingly astonished itself at some of its own performances, still it deserves in its collective capacity to have the credit of its good works. Nothing could have seemed so utterly improbable at the beginning of 1871 as that the Assembly then elected should last for five years, and that this should be the record of its works. It is true that this is not the whole record. The Assembly has passed some foolish measures, and deprived the country of the services of some able men. But of some at least of its pieces of unwisdom it may be fairly said that they constituted the price at which its good work was done. The new Press law, for example, is a very curious piece of legislation; but it is an engine which the present Ministry considers necessary, if it is to keep society sufficiently quiet to prevent recourse to a new dictatorship. To [illegible] men like the leaders of its present Ministry to devote themselves to preventing a new dictatorship is the first condition of the good work of the Assembly producing their fruit. It is also well that the Assembly has been the arena of the most [illegible] strife, of fierce political hatreds, of very [illegible] manœuvres. But the end of the whole [illegible] been that party spirit is less bitter than it was; there is a greater leaning to compromise, that violent men have become less violent, or have been forced into obscurity. Battles have been fought out in the Assembly which must have been fought out somewhere. Even personal rancour has in a measure exhausted itself. Such relief as the use of very bad language brings to the irritated minds of men has been largely enjoyed. Extreme theories have become discredited by being shown to be impracticable. Every party has had some rude lessons, and each has seen in turn that it cannot have its own way altogether. The five years that have witnessed the introduction of such a state of things cannot be said to have been spent in vain.

When the Assembly was elected the country cared for little except peace. The Imperialists were ruined by Sedan, and were thought the authors of the war. The Republicans were the war party. They had carried on the struggle with feverish energy, and their leaders were bent on protracting it after it had become entirely hopeless. The best representatives of the wish for peace seemed the adherents of the two sections of the BOURBON party. Accordingly a large majority of Legitimists and Orleanists was returned, and made the peace which France desired. But the Republic was the existing Government, and to have changed the Government would have caused a civil war. It was only by summoning to his aid a moderate Republican Ministry that M. THIERS managed to get power out of the hands of the Government of National Defence. The majority of the Assembly was well aware that, unless France were kept internally quiet, the peace so dearly bought might at any moment be endangered, and it had no choice but to acquiesce in being governed by M. THIERS and a decidedly Republican Ministry. The future might be considered open to any party that could win success; the Imperialists, however, being considered to be wholly disposed of by the almost unanimous vote of the Assembly deposing the EMPEROR. This was the famous *pacte de Bordeaux*, to which M. THIERS persistently stated that he added a clause of his own. The Assembly was, according to his view, to decide on the ultimate form of government, but he personally was pledged to the constitution of a definitive Republic, and was at liberty to give effect to his views in any way he thought proper. The Assembly might choose what government it pleased, but M. THIERS was to show it that it could choose nothing but a Republic. M. THIERS could not do without the Assembly, and the Assembly could not do without M. THIERS. To have constituted the Republic by the aid of a new Assembly would have endangered peace, and M. THIERS cared for peace above all things. To have overthrown M. THIERS would have endangered peace, and the Assembly cared about peace above all things. M. THIERS and the Assembly had to work together, and they worked together in a very peculiar fashion. From the date of the suppression of the Commune to May 1873 there was one long struggle between these strange allies. In all that concerned the establishment of peace M. THIERS was eminently successful. He kept on good terms with the Germans; he found the money to pay them; he made a new arrangement for the early evacuation of the territory of France. The Assembly admired and approved of his efforts in this direction, and desired to support and profit by them. But there its admiration and approbation began and ended. It differed from M. THIERS not only on the fundamental point of the establishment of the Republic, but on almost every minor point. It had views totally opposed to his on the reorganization of the army, on decentralization, on the taxation of raw material, on the formation of the Council of State, on almost every important Government measure. It was especially vexed by the constant interference of M. THIERS with its decisions. He spoke incessantly. He took everything on himself. He made everything a personal quarrel. He constantly obtruded himself as an indispensable person. He insisted on having his own way on the avowed ground that he was wise and the Assembly was foolish. There were innumerable grounds on which a rupture might any day take place; but, M. THIERS conceiving it to be his mission to establish the Republic by managing and persuading the Assembly, and the Assembly fearing the indignation of the country if it displaced so eminent a public servant, some sort of com-

promise on minor points was generally effected. The real reason why the majority of the Assembly decided to quarrel with M. THIERS was that it thought that he would effect his object and establish the Republic. From different causes one-fourth of the seats in the Assembly had become vacant, and these seats were mostly won by Republicans. M. GAMBETTA made himself a Parliamentary power, and constituted himself the special ally of M. THIERS. The majority of the Assembly believed that the Government of the day could do anything it liked in the country. The country was becoming Republican because M. THIERS favoured a Republic, and because it saw him leaning on the support of the Republican deputies. If the Government was changed, all this would, it was assumed, be changed at once. The recent elections did not represent the feelings of the country, but of the Government. It was only necessary to have a Government which would tell the country to be Legitimist or Orleanist, and it would be Legitimist or Orleanist as it was bid. Such were the sneers of the majority; and to get M. THIERS out of the way was therefore the only thing to be done. As soon as he had concluded the treaty with Germany by which the early liberation of the territory was assured, and he had thus ceased to be indispensable, the majority got rid of him, and put the Duke of BROGLIE in office to show what he could do for a Monarchy of some sort.

It must be owned that, according to the ordinary maxims of French parties, there was not much to complain of in the conduct of the majority. It was not really a question of recognizing the services of M. THIERS, although the majority was unfairly cold in its recognition of those services after it had benefited by them. However great might have been those services, M. THIERS, as head of the State, wished to set up a form of government of which the majority disapproved. To the objection that the voice of the country was against them, the majority replied that what was called the voice of the country was the voice of the Government for the time being; and there was much in the history of France during the last seventy years to justify the reply. It may also be said that, as things have turned out, it was much better for France that the Republic should be established in 1875 than in 1873. Unless the Duke of BROGLIE had come into power, the bubble of Legitimism would not have burst; the Orleanists would not have quarrelled with the supporters of HENRI V.; the experiment of a fusion would not have been shown to be impracticable; the Orleanists would not have been converted into Republicans by the Imperialists. It is true that the Imperialists have gained much by the delay. They have not only recovered from the stupor of an overwhelming defeat, but they have reconquered a good part of the official world, and they have managed to present themselves as the only possible Monarchical party. But if France, having tasted all the evils of a military despotism, wishes to taste them again, it does not deserve anything better. It can now have a Republic if it wishes for it, and the Republic is presented to it in a shape in which it can be accepted by those who do not much like a Republic. The Assembly has ended by giving the Republic a better chance than it would have given it if it had kept M. THIERS in power. The end of all its struggles and manœuvres has been to convince such men as the Duke of AUDIFFRET-PASQUIER that they have to choose between the Republic and civil war, exile, or Cayenne. This is really a revolution of which the Fusion, the negotiations with Frohsdorf, the Septennate, the Constitution of February, the elections to the Senate, and the dissolution of the Assembly have been so many stages. The Assembly has rendered to France the great service of making it possible that this revolution should be effected gradually, without violence, and within the walls of a Chamber. The majority has, indeed, done precisely the reverse of what it meant to do. But it has done it, and France may accept what has been done, and be content to forget much of what happened while it was being done.

SIR RUTHERFORD ALCOCK ON EASTERN POLITICS.

IN an Essay on the Relations of the Western Powers with the East, published in the current number of the *Fortnightly Review*, Sir RUTHERFORD ALCOCK deals with questions so vast as to be almost bewildering. In the East the writer includes European Turkey and the whole of Asia; nor can it be denied that England is directly or indirectly concerned in the affairs of all Oriental countries. Ethnological relations perhaps suggest some political connexion between the most distant countries which are described by the common name of the East. From the Adriatic to the Western coast of the Pacific the entire space is wholly or partially occupied by two great races. The Turkish language in its various dialects is spoken by settled populations and by wandering tribes from European Turkey to places far within the frontiers of China. The Chinese Empire is said to be twice or thrice as large as Europe, and it contains double the population. All the Turks are Mahometans, while those of the Chinese who profess any religion are Buddhists. For some years past the two races and religions have been engaged with various fortune in a contest which is not yet decided. At one time large districts in the west of China had thrown off their allegiance to the Imperial Government; and it seemed probable that one or more powerful Mahometan kingdoms would be established in the revolted territory. Since that time the obstinacy of the Chinese, backed by inexhaustible numbers, has gradually recovered a great part of the conquered provinces. The only remaining Mahometan potentate in that region is YAKOOB BEY of Yarkand, an able adventurer who has hitherto held his own, though he is threatened on either side by a powerful Empire. The recent mission to his Court from India found him well disposed to cultivate friendship and commercial intercourse with England; but, as the only access to his dominions from the South is over precipitous passes, it will scarcely be possible to afford him any political support. It was against this ruler that the *Times*, in a fit of cosmopolitan enthusiasm, lately urged the Russians to begin an unprovoked war. There can be little doubt of a favourable response to the overture as soon as the Russian army in Central Asia is ready for new enterprises; but the conquest and complete annexation of Khokand at present furnish the Russians with sufficient occupation. Unfortunately for himself, YAKOOB occupies the most convenient route from the Asiatic dominions of Russia to the northern provinces of China. In the interests of monopoly it will be found expedient to acquire Eastern Turkestan, unless indeed the Russians are anticipated by the former possessors of the country.

The relations of England with Eastern Turkestan happily require no action, inasmuch as it is impossible to render the actual possessor any practical aid. It is irritating to English producers and injurious to Asiatic consumers that the countries which are subjected to the monopoly of Russian manufacturers should be constantly extending; but it is out of the question to compete by force or diplomacy for the markets of Central Asia. If the Chinese succeed in reconquering Eastern Turkestan, the limit of Russian progress in that direction will be further west. As the main object of the Russians in that direction is to secure a trade with China, it matters to them comparatively little where the frontier line of the two Empires is drawn. Sir RUTHERFORD ALCOCK, who has a minute and comprehensive knowledge of his subject, is deeply impressed with the power and the permanent character of the Chinese Empire. Adopting the largest estimate of the population, he justly holds that a community of 400,000,000 of men under a single Government, and with the same language and institutions, contains in itself a sufficient guarantee of vitality. It is his deliberate opinion that Russia is more liable than China to permanent disruption. The Chinese trade with Europe, however advantageous it may be to some of the provinces, only affects for the present the fringe of the Empire. The self-contained and self-satisfied isolation of the Chinese is not unintelligible when the antiquity and unchangeable character of their peculiar civilization are taken into account. There can be little doubt that the majority of the population would gladly dispense with intercourse with foreigners, and the dominant class of officials or educated gentry almost without exception stimulates the national prejudices. On the other hand, the love of industry, of trade, and of money-making which distinguishes the Chinese, has fostered commerce wherever it has been found possible to obtain access to markets. If the difficulty of reaching the interior by way of British Burmah is eventually overcome, it may be possible to establish a direct trade between India and Western China. The maritime commerce with the Eastern coast is already important; and it is capable of indefinite expansion. Sir RUTHERFORD ALCOCK has no remedy to propose for the unsatisfactory conditions of intercourse

with China, except a more general study of the national language and literature. It is unfortunate that the extreme difficulty of the language repels all but the most zealous students. No essential change is proposed in the actual relations of England and China. It was perhaps unnecessary to deprecate projects of conquest or annexation which have never been entertained. It is evident that it would be impossible to govern Chinese provinces, even if they had been conquered.

In Central and Western Asia Sir RUTHERFORD ALCOCK regards as not improbable a great religious insurrection, which might, as he suggests, extend to the Mahometans of India. With any danger of the kind the Indian Government must to the best of its power grapple when the occasion arises. There is happily no Turkish population on the south of the Himalayas; and a war to the north of the great mountain barrier would only concern the Russians. The repeated insurrections in Khokand may probably be prompted by religious motives as well as by a natural antipathy to foreign invaders. No symptom has yet appeared of a general rising extending beyond the province, nor is any suspicion entertained of the fidelity of the Mahometan subjects of Russia. The Caucasus has been effectually subdued, and the Russian Government has always practised tolerance to subjects of a different religion from its own. The various Turkish tribes are too much scattered, and too backward in civilization, to be capable of uniting in a common purpose. All the conditions of warfare have been changed or reversed since GENGHIS and TIMOUR overran with their Asiatic hordes large portions of the civilized world. The only Mahometan fanaticism against which it is at present necessary to provide is that which might urge the possible resistance of the dominant race in Turkey to the dictation of the European Governments, and to the political elevation of the Christians.

The general inference from Sir RUTHERFORD ALCOCK'S instructive dissertation is that it is extremely embarrassing to assume responsibilities for half the human race. Although the Western Powers are mentioned as a matter of form, England alone is interested in Mahometan revivals, in the resumption by China of lost territory, and generally in the affairs of the East. Russia, which has competing interests in many parts of Asia, is not a Western Power. The Chinese demand for opium materially affects the Indian Treasury; and the more or less faithful observance of commercial treaties is of the utmost importance to English trade. The exposition of the enormous population and resources of China tends to produce a feeling of satisfaction in the peaceable termination of recent disputes. It is true that no Chinese army could with any hope of success meet English troops in the field; but the amount of pressure which the Imperial Government would bear must always be uncertain. There is at present no other part of the world in which commercial intercourse with England is imposed by force or by the menace of force. In former times it was a common practice to secure markets by conquest. In China war becomes from time to time imminent, not through any desire to acquire territory, but for the maintenance of rights which have been secured by treaties. The burden naturally devolves on the nation which has the largest trade; but concessions which are obtained by English diplomacy enure to the benefit of all commercial States, and consequently the foreign community in China is remarkably exempt from national jealousies. Sir RUTHERFORD ALCOCK does justice to the knowledge and ability of his successor, Sir THOMAS WADE. Nothing can be done to maintain peace and to promote commerce in China, except by the employment of the most competent public servants, and by affording them steady support. The Chinese are very numerous; but nevertheless the firm language of the English Envoy, and the increase of the squadron in Chinese waters, produced a wholesome effect. It is impossible to manage the whole continent of Asia, or even the Chinese Empire. Difficulties must from time to time be encountered as well as circumstances may allow. In the meantime it is expedient to remember that Asiatic complications may easily become serious and formidable.

THE ELECTIONS IN FRANCE.

NOW that the Assembly is gone, it becomes possible to realize more clearly the extent of the uncertainty which hangs over the political future of France. Until this week the elements out of which any possible combination must be made, and the proportions which they bear to one another, have been ascertained facts. The Chamber has been divided into so many sections, and each section has contained, roughly speaking, so many deputies. It is true that the difficulty of foreseeing in what way these several elements would group themselves together when it came to actual voting deprived this knowledge of much of its value. To have ascertained that a deputy is a Legitimist is something, but if he occasionally votes with the Extreme Radicals we may be no better able to forecast his action upon any given question. Still the determination of the motions of known bodies is a less difficult problem than the determination of the movements of bodies concerning which nothing is known. In the latter case there is nothing to start from; nothing to invite, because nothing to reward, speculation. The elections which will shortly begin will in all probability work a real disclosure of French opinion. That the Government will take no part in them is more than can be expected; but when all allowance has been made for this disturbing influence, there is no reason to doubt that the choice of the electors will be left substantially free. It is not the first time that they have been allowed this liberty; for in 1871 they seem to have voted without reference to anybody's will but their own. But in 1871 there was an overpowering force in action, in the general determination of the French people to make an end of the war. Men were chosen not by reason of their political opinions, but simply by the success with which they passed their examination on this one point. If a candidate was sound on that he was asked no further question. If he was not prepared to condemn the war alike in its inception and in its execution, it mattered little what he might have to say about anything else. This time, however, the electors will vote without any such absorbing pre-occupation. In form perhaps the Constitution of February may be said to be submitted to their judgment; but it remains to be seen whether the Constitution of February has sufficient vitality to make it the real subject of a contest.

The action of the Cabinet has certainly not been favourable to the presentation of the issue in this shape. The Constitution of February is not associated with any one man or set of men, and it is difficult to imagine an election turning on the acceptance or rejection of a document which is differently interpreted by the parties which profess to accept it. A fight between the High Church party and the Low Church party in the Church of England might as well turn on the acceptance or rejection of the Book of Common Prayer. There is as much difference between M. BUFFET'S interpretation of the Constitutional Laws and M. GAMBETTA'S as there is between the senses put on the Prayer-Book by those who talk of "our Catholic Formularies" and those who talk of "our Protestant Liturgy." If M. THIERS had taken a prominent part in the debates of the Assembly after his retirement from office, the Opposition would probably have held, if not a better, at all events a more assured, position before the country. As it is, to ask an elector to vote for M. THIERS, except in the particular constituencies in which he happens to be a candidate, would be either dangerous or unmeaning. If it implied that M. THIERS, in the event of a majority of his followers being returned, would assume the conduct of affairs in the Chambers, and take office under Marshal MACMAHON, it would convey a promise which to all appearance M. THIERS is not prepared to redeem. If it implied that M. THIERS looks forward to Marshal MACMAHON'S resignation in the event of a Liberal majority being returned, and that he is willing to succeed him if he does resign, the party which put forward such a programme would run some risk of being treated as traitors to the existing order of things. If M. THIERS cannot be put forward as the leader of the Opposition to the existing Government, who is there that is in a better position for the purpose? M. GAMBETTA is only the leader of the Left, as distinguished from the Left Centre; and though he is on good terms with the Left Centre, the alliance has been secured by the care with which he has kept himself in the background. The ascendency of the Left Centre in the counsels of the Left is simply the ascendency of a minority which is connected by many ties with the opposite party, and may consequently be expected to go over to them if it is not tempted to remain where it is by the concession of a disproportionate share of influence. This absence of a recognized leader is not peculiar to the Opposition. The Cabinet are in much

the same condition in this respect. They have a nominal chief in M. BUFFET, but there is no reason to suppose that their acceptance of him in this capacity is anything more than a temporary arrangement, only designed to subsist until circumstances show which is the most powerful element in the coalition. A DE BROGLIE Ministry or a DUFAURE Ministry would represent, if not a principle, at least an intelligible and consistent policy. A BUFFET Ministry is nothing but a device for bridging over the interval which must elapse before the Chambers which have to decide between rival policies can come together.

It seems to follow, therefore, that the electors will have to pronounce upon no definite measures and no definite men. If this meant that they were summoned to decide between the claims of rival forms of government, and that a victory of the Government would be identical with a Monarchical victory, while a victory of the Opposition would be identical with a Republican victory, the course of events would be more easily foretold. But no such distinction as this can be fairly drawn. Both the Government and the Opposition assume the Republican name, although some members of the Government only venture to assume it under their breath. If the real authors of the Constitution of February are in Opposition, its reputed author sits in the Cabinet. And if we pass from the name to the thing, and ask the Cabinet what they mean by calling themselves a Republican Government, the answer is that the Ministers are not able to say. The Cabinet is divided between a Liberal and a Conservative section, which can only work together by avoiding all inquiry into the signification of party names. The electors therefore, so far as they are guided by political considerations, will have to make their choice between the Republic as they suppose M. GAMBETTA to understand the term, the Republic as they suppose the Left Centre to understand it, and the Empire; unless the Orleanists may submit a fourth alternative in the shape of the Republic as the Duke of AUMALE is supposed to understand it. If each one of these theories of government had a definite and well-understood programme, or were associated with some well-known leader, the difficulty of making a choice would be a good deal simplified. But only two out of the four enjoy either of these advantages. The Left Centre and the Orleanists share the drawback of having no Parliamentary chief, and it would be a hard matter to put down in black and white what it is that they would do should they command a majority in the new Legislature. The Imperialists have a leader in the youth who, if fortune favours him, will be NAPOLEON IV., and the Left have a leader in M. GAMBETTA; but the necessity of not committing his partisans to open disaffection keeps the first silent, while the second confines himself to praises of the Constitutional Laws which might equally have been pronounced by a member of the Cabinet.

In this state of uncertainty, perhaps the most hopeful prospect of getting a moderately decisive verdict out of the constituencies lies in the probable unpopularity of M. BUFFET. Though the electors may not know very clearly what they want, it is possible that they may have come to more decided conclusions as to what they do not want. They may have doubts as to M. GAMBETTA'S moderation, they may suspect the Orleanists of cherishing Monarchical designs, they may be ignorant as to the composition of a Left Centre Ministry. All these states of mind are compatible with an unhesitating conviction that they do not wish to be governed by M. BUFFET. There have been instances—M. THIERS himself was a very conspicuous one—of a politician having a much stronger position in the country than in Parliament, and M. BUFFET may conceivably be more trusted by the constituencies than by their representatives in the late Assembly. But his desire to unite Conservatives of every shade in defence of a Republic which many of them abhor, against an Opposition which only desires to see the Republic placed under different guardianship, hardly admits of being stated in a form calculated to secure popular support. That the new Legislature may be Republican is probable; that it may be Imperialist is more than possible; that it may be Orleanist is at least possible. But whichever of these forms it takes, it is equally hard to see what claim M. BUFFET will have upon the confidence of the majority.

AMERICA.

IT is not without reason that the people of the United States boast of the unequalled advantages which they enjoy. Not only are they superior in wealth and in diffused intelligence to any other nation, but they have the felicity of absolute security abroad and of leisure to treat domestic politics rather as a pastime than as an anxious occupation. The Government can at its pleasure either dispense with a foreign policy or select its own times and reasons for defining its relations with its neighbours. Open or covert menaces of interference in Cuba have generally some reference to elections, and a standing dispute with Mexico arising from border outrages on the Rio Grande can be suspended or revived as convenience may require. A still larger discretion is exercised in the selection of domestic issues on which the strength of parties may be tried. It lately seemed probable that the main subject of controversy would be the measures by which the SECRETARY of the TREASURY proposes to prepare for a resumption of specie payments; but the PRESIDENT has for the time succeeded in diverting general attention to a topic which is at the same time interesting or amusing to many persons and utterly without practical importance. Before his speech was delivered at St. Louis, nothing seemed less probable than that a religious agitation should occupy general attention. The PRESIDENT appears to have estimated more justly than his critics the capacity of his fellow-citizens for sectarian excitement. The Episcopalian Methodists have been the first to respond to the appeal against Popery. One of their bishops unconsciously showed his appreciation of the PRESIDENT'S motives by calling on a sympathetic flock to pray for the renomination of General GRANT. The Methodist dignitary has since called attention to his own careful abstention from interference in secular politics. He explains that the Methodists were asked, not to nominate General GRANT, but to pray for his nomination; but, as they, in common with the members of other religions or civil bodies, possess the franchise, the distinction between prayers and votes is not readily intelligible. Since the days of ÆSOP'S carter it has been thought better to lift the wheel out of the rut than to trouble HERCULES for aid. If the Methodists are inclined to pray for General Grant, they will probably use their influence in his favour at the Republican Convention. It is possible that other Protestant communities may be equally anxious to express their animosity to Rome. General GRANT would care little for the fate of the Constitutional Amendment which he proposes if the No Popery party were strong enough to control the Republican policy.

The House of Representatives, like Bishop HAVEN and his flock, at once attributed the PRESIDENT'S sudden zeal for religious liberty to personal motives. In reply to his Constitutional Amendment both parties passed with rare unanimity a Resolution that re-election for a third time was contrary to the spirit of the Constitution. If it had been necessary to support by reasons a vote on which nearly the whole House was agreed, a plausible argument against re-election might have been founded on the PRESIDENT'S Message. General GRANT would not, it might have been said, have desired to stimulate sectarian antipathies if he had not hoped to profit by an appeal to popular prejudice. The considerations which determined the vote both of the Democrats and of the Republicans were perhaps of a different character. The majority of the House profess political hostility to the PRESIDENT; and the Republicans have no wish to be hampered in the approaching contest by the claims of a candidate who is supposed to be disqualified. The leader of the Republicans in the House, MR. BLAINE, is himself a candidate for the Presidency, and probably he is not unwilling to exclude a formidable competitor. It might have been thought that General GRANT'S ingenious experiment had wholly failed, if Mr. BLAINE himself had not recognized the expediency of raising a sectarian issue. After the vote against the third term Mr. BLAINE introduced a Resolution in favour of a Constitutional Amendment which is virtually the same as General GRANT'S. It is proposed that the several States shall be prohibited from founding any Established Church or from applying to purposes of religious education any funds raised by taxation. As no American State is likely to think of establishing a Church, and as no sect but the Roman Catholics desires the appropriation of public funds to denominational uses, the Amendment seems wholly unnecessary. The proposer only intends to outbid General

GRANT; but in offering a substitute for the recommendation of the Message, he admits that constitutional legislation for the object contemplated by the PRESIDENT is necessary and just. It is not probable that any serious attempt will be made to tamper with the Constitution. It might perhaps be possible to secure for Mr. BLAINE'S Amendment the necessary plurality of votes in the Senate and the House; but the decision of Congress would be inoperative without the subsequent adhesion of two-thirds of the State Legislatures. The powers of the States have, since the commencement of the Civil War, been made more and more subordinate to Federal supremacy; but they will scarcely be inclined to impose new restrictions on their own freedom of action.

The legislative duties of Congress are seldom onerous, and for the present neither party has anything to gain by the introduction of definite measures. The majority will disapprove any Bill which may be recommended by the Administration, and the Republicans have the power, through their control of the Senate, of defeating any Democratic proposal. As there was no pressing business to occupy the House, the members have gone to examine the preparations for the Philadelphia Exhibition, and perhaps when they return they may be willing to vote the moderate grant which is asked by the managers. Nothing which has yet been done since the beginning of the Session has excited so much interest as the selection to various posts in the service of the House of partisans of the majority. Nothing can be further from the thoughts either of Democrats or Republicans than the application to the staff of the Legislature of the principles of Civil Service Reform. In this department at least the spoils belong to the victor, and two hundred Republican placemen have been summarily dismissed. The Southern Democrats have succeeded in appointing to some of the vacant offices soldiers and civilians who had served the Confederate Government. It is a matter of course that the defeated Republicans should publish angry protests against the preference of rebels to loyal adherents of the Union. On the other side it is argued that the Southern States are fairly entitled to a share of patronage, and it is natural that they should prefer candidates who have been employed in the public service. It may perhaps be invidious to put ex-Confederates too prominently forward. That they should be eligible for office within a few years of the end of the war is a remarkable proof of the moderation and liberality which has on the whole marked the policy of the Federal Legislature towards the South. One result is that a future secession has become impossible.

As there is no real difference between political parties, the Democrats have lately been making exertions to devise some distinctive policy. One of the strangest of their proposals is the reduction of the regular army to ten thousand men. It is much to the credit of the officers and men, and of the War Department, that the actual force of twenty-six thousand men suffices to discharge the duties of the service. The PRESIDENT has for some time past discontinued his military intervention in the political squabbles of the Southern States, and the principal duty of the army is to watch and control the Indian tribes; but it is also necessary to have a reserve for any occasional service. The proposal to reduce the number is probably directed against the PRESIDENT, whose professional interest in the efficiency of the army is certainly not discreditable. Another project of the Democrats is the alteration by a Constitutional Amendment of the Presidential term. Several meetings of the party have approved the plan formerly adopted by the Confederacy of extending the term from four to six years, and of prohibiting re-election. Both changes would tend to remove the President from the struggles of parties, and it was natural that the founders of the Confederacy should so far deviate from their model. The people of the United States are wisely averse to unnecessary constitutional changes; and the latest elections raise a doubt whether the Democrats are in the majority. Almost every motion and every speech during the Session of Congress will have either for its sole or its secondary object a desire to influence the Presidential election. The balance of chances is at present against the nomination of General GRANT by the Republican party. The only competitor hitherto announced is Mr. BLAINE, who would probably be a respectable President. Both parties will abstain to the latest moment from pledging themselves to any nominee. The object of the managers will be to select the candidate who may command the greatest number of votes; and circumstances may at any time render it expedient to reconsider their choice. It will be more embarrassing to devise a platform or summary of political doctrines than to choose a nominee.

THE AGRICULTURAL CHILDREN'S ACT.

THE provisions of the Agricultural Children's Act would have been of the most modest kind, even if they had not been reduced to absolute insignificance by the want of any means to put them in force. In the race between work and school for the possession of a child, school has but a very short start. The legal roll of the words "From and after the commencement of this Act it "shall not be lawful for any employer, or his agent, to "employ any child in the execution of any kind of "agricultural work" loses much of its majesty when it turns out that they only apply to children "under the age "of eight." From eight to ten 250 school attendances are demanded yearly, and from ten to twelve 150. After the age of twelve no further attendance at school is prescribed, and in the case of a quick child, to whom school might be of more use than it commonly is, the obligation is further relaxed by the permission to send him to work as soon as he has reached the Fourth Standard in the Education Code. It is permissible to doubt whether, if this Act had been rigidly enforced, any real good would have come of it. Children would not have been sent into the fields before they were eight years old, but it by no means follows that they would have been sent to school. It has been found that one result of the Factory Acts is to lead parents to argue that, as they will be obliged to send their children to school for part of the day when they are old enough to go to work, it would be a waste of money and trouble to send them there before they are old enough to go to work. The reasoning of farm-labourers would probably have run in the same groove. The 250 attendances stipulated for between eight and ten would have given agricultural children a fair chance of receiving some useful instruction; but the limitation of the necessary attendance for the two following years to 150 might only have led them gently down to the contented ignorance which would have been their lot after twelve.

Speculations as to what might have been the operation of the Act had it been so framed as to be operative are of little importance in face of an almost universal agreement that, for any effect it has had upon the position of agricultural children, it might as well not have been passed. In one or two counties the police have been directed to enforce the Act, but, as a rule, nothing has been done. In March last the HOME SECRETARY invited the observations of the county magistrates on the subject, and a recently published Parliamentary return contains the answers which the invitation has called forth. The general drift of these answers is that, as there is no one appointed to take proceedings under the Act, no proceedings have been taken. There is really no exception to this statement, since even the answers that at first sight seem to conflict with it, prove on examination to express either a belief that the law had better not be enforced, or simply a hope that the means taken to enforce it may be more effectual than they promise to be. It is fair to say that answers of the former character are rare; indeed there is only one case in which the Justices recommend that no proceedings should be taken to put the law in operation, though there are several in which they do not express any desire to see it in operation. Of the second class of answers the most noticeable is the letter from the Chairman of the Surrey Quarter Sessions. In Surrey, as any one who knows the country round London must be aware, the magistrates have freely issued handbills calling attention to the terms of the Act, and warning those who break it that the county constabulary have been instructed to take proceedings in all cases where they observe it to be set at defiance. But the writer of the letter does not conceal his fear that this expedient may fail of its effect. The constabulary have other things to think of besides hunting up children who appear to be less than twelve years old, and ascertaining whether their parents have "obtained "and exhibited to the employer or his agent" a certificate stating the age of the child, and that he has completed the specified tale of school attendance during the previous year.

The Surrey magistrates do not rest their objection to the Act solely on the absence of any provisions for securing obedience to it. They give reasons for thinking that, even if this defect were remedied, the law would still be open

to much criticism. These reasons seem to resolve themselves into the allegation, borne out by some other statements in the correspondence, that the Act works unequally, and that the persons on whom it bears most heavily are not those on whom it is most expedient to bear heavily. Upon the first point there is a pertinent statement by the St. Ives magistrates that the law presses unfairly on the masters of agricultural gangs, who are compelled to obey the Act, while the farmers around them are disobeying the Act with impunity, and employing the very children whom the others dare not employ. The reason of this is, that the gang-masters cannot employ boys without a licence, whereas ordinary farmers need nothing of the kind. To obtain a licence an application to the magistrates is necessary, and this licence of course assumes that the holder of it is conforming to the law. If he is shown to have failed in this respect, his licence is revoked as a matter of course. In Surrey agricultural gangs are not in use, so that this particular anomaly is not met with. But the Surrey magistrates mention another anomaly of a more universal kind. The Act, they say, "interferes with the earnings of industrious children"; but it "leaves unmolested the good for nothing." This is the weak point of all indirect compulsion. Of course if the world went on as it should do, and all children went to work as a matter of course upon reaching a prescribed age, a good half-time system would be all that would be needed. But as a matter of fact there are large numbers of children who do not go to work until after they have passed the age at which, as at present appears, it is practicable to keep them at school, and it is with these that indirect compulsion so signally fails. The Surrey magistrates feel this keenly, because a large part of the county is suburban rather than rural, and as such is virtually withdrawn from the supervision of the county constabulary. With the general conclusion of the Chairman's letter we entirely agree. "Far more good," he says, "will be done "by bringing compulsion to bear upon the many children "who are at once useless to their parents and baneful to "themselves and others than upon the few children who "are lending a hand, however humbly, in the bread-winning "of the family." The objections to indirect compulsion standing alone could not be more succinctly stated. It catches the good, and it lets slip the bad. It says to the boy who is willing to work, You must not be employed without a certificate from your teacher that you have attended school a proper number of times. It says to the boy who does not want to work and prefers to play, We are not concerned with you; you may loaf about the streets, learn constantly all that is evil, and contribute nothing towards your own support—this is not our description, it is the description of the Chairman of the Surrey Quarter Sessions—but nothing will be said to you; you have no employer, consequently the law cannot touch you. There is no Act of Parliament to prevent a man from bringing up his son in ignorance and idleness; the utmost that has yet been arrived at is a law preventing an employer from allowing a child to be brought up in ignorance and industry.

"This ought ye to have done"—so we fancy the motto, if there were a motto, of the Agricultural Children's Act would run—"and not to have left the "other undone." The letter of the Surrey magistrates may be profitably studied by those justices who have lately been urging their colleagues to employ the rural police to enforce the Act. Granting that all is done that can be done, that farmers are frightened out of employing children under conditions forbidden by the Act, and that parents, finding work difficult to get, send their children to school, in default of being able to dispose of them in any more profitable way, what comes of it all? A certain number of children are got to school who would otherwise be at work. But how about the children who are not at work, and yet are not got to school? We do not mean that work is better than schooling for young children; we only say that work is better for them than the education which, if they are not sent to school, they are likely to pick up outside. The Agricultural Children's Act might possibly be a useful supplement to some general measure of educational compulsion, but it cannot possibly become a substitute for such a measure.

JUSTICE IN DISHABILLE.

JUSTICE, it is well known, has her lighter as well as her stern and awful moods; but it is perhaps seldom that she disports herself in so gay and unrestrained a fashion as in the recent prosecution for a "false, malicious, and "defamatory libel" at Guildhall. Whatever may be thought of the case from a judicial point of view, there can be no doubt that it was the crowning dramatic triumph of the season, much beyond either *Macbeth* or *Tottle's*, and it is impossible not to sympathize with the expectant audiences who must have been bitterly disappointed by the abrupt withdrawal of the piece. On the last day of the case, and we suppose in some degree on the other days, not only the court, but the approaches to it, were densely crowded. By the mob outside Mr. Irving was greeted with "enthusiastic cheering," and "even in "the court his appearance in the witness-box was "the signal for applause." Moreover, we are told, the public "frequently manifested their approval of "the course the proceedings were taking by cheers or "applause." The ways of the theatre were further adopted in the complimentary demonstration, similar to a call before the curtain, which the chief performers received as they left the Court. Alderman Sir R. Carden has thanked Mr. Irving for the service he has done to the public, and that gentleman has undoubtedly provided well for our amusement at a dull time of year. It might have been thought from the circumstances of the case that it would scarcely have afforded so much mirth. It opened indeed under the inspiration of tragedy, although it was quickly converted into the broadest farce. Mr. Irving himself fitly sustained his professional solemnity in giving his evidence, but he was rash perhaps in trusting to the support of Mr. Toole in keeping up this tone. In Lamb's biography of Liston a vivid account is given of this actor's passion for tragedy, and his cruel mortification at finding that whatever he said or did was greeted with laughter. Mr. Toole seems to suffer in a similar way, and, though no doubt perfectly serious himself, found it impossible to resist the hilarity of his audience. When, and even before, he said his name was John, everybody was convulsed; and when it was further elicited that he lived at Bayswater, the merriment of the spectators knew no bounds. A generous mind must feel the greatest compassion for a meritorious actor under such painful circumstances. Mr. Toole had evidently come there for the purpose of working on the finer feelings of human nature, and making a passionate vindication of his friend, and he was received with guffaws. Even the kindly magistrate turned the knife in the wound by inadvertently remarking that "nobody ever shed a tear when he saw Mr. Toole "play," though it is known that he has in his time played pathetic parts. Whether a popular *farceur* is naturally an authoritative witness as to the moral effects of tragedy may perhaps be doubted, but Mr. Toole did not get a fair chance. The spirit of the play was wholly changed, and from the moment he opened his mouth it was clear that Justice could keep neither her countenance nor her severity. It would have been impossible to commit any one for trial after so much fun. At a later stage an attempt was made to restore the proceedings, if not to the height of tragedy, at least to the level of sensational melodrama, and Mr. Dion Boucicault took as much of a "header" into the scene as circumstances would permit. He was announced to be struggling wildly with the crowd outside, and a body of police brought him imposingly into court. He was asked whether he thought that Mr. Irving "pandered to the mob," but this was too much even for the Alderman, who stopped the question. After a show of coy reluctance, Mr. Irving's representative withdrew his charge; justice and public opinion were appeased, and the curtain fell amidst loud and general applause.

It is easy to understand that a sensitive and high-minded artist should be pained by such an impertinent and offensive article as that complained of by Mr. Irving, and it is no doubt important that actors should, like other people, be protected against attacks on their personal character; but surely it was hardly worth while to make such a fuss about so small a matter. The remedy of a criminal prosecution is one of a very grave character, and ought not to be resorted to unless there is a corresponding gravity in the offence alleged. In this instance the article when it first appeared probably attracted very little [illegible] and it was so indecorously and absurdly extravag[illegible] one that one of

the defendants did not scruple to profess that its violence was intended to mark it as a joke. If nothing had been said about the matter, it would have been immediately forgotten. No reasonable person can for a moment suppose that such criticism from such a quarter could injure Mr. IRVING'S professional reputation in the faintest degree, or diminish its commercial value by a single farthing. Indeed, as Sir R. CARDEN remarked, it has probably done Mr. IRVING "extensive good," so that in a civil action it would be difficult to prove damage. When the injury was thus so vague and visionary, it could hardly be necessary to invoke the serious processes of criminal justice. Society would soon get into a very unhappy condition, and judicial machinery into a dead-lock, if every trumpery offence of this kind were to be made the subject of a prosecution. Little boys in the street sometimes cry very rude things after respectable old gentlemen; but it would be intolerable and absurd if the magistrates were to be kept hard at work hearing such disputes. Mr. IRVING'S legal adviser said that the case had been raised in the interests of the profession; but it would seem that there was, almost necessarily from the free and easy way in which the proceedings were conducted, some confusion of ideas as to the nature of the offence alleged. The assertion that Mr. IRVING was supported by "hireling journalists" conveyed an insinuation which might perhaps be laid hold of as libellous; but the rest of the article was merely an expression of opinion as to the influence of a particular kind of acting. No doubt the opinion was in the main extremely foolish, and the language altogether outrageous, but, apart from the preposterous violence of the writer's invective, we can see nothing in the view which was taken which anybody had not a right to say if he chose. Whether Mr. IRVING'S representation of MACBETH and HAMLET, and of certain characters in other plays, has a wholesome effect on the public mind is a question of opinion on which some people may think one thing and some another, and which, it seems to us, cannot properly be tried in a criminal court, or indeed in any court. If any personal viciousness had been imputed, or if it had been said that the actor in question was directly responsible for specific offences against morality, that would have been of course another thing. But there are notoriously many persons, and some of them very worthy persons, who hold that all dramatic performances without exception have a pernicious effect, and that the consequences attributed to some of Mr. IRVING'S personations are common to the whole stage, which they would gladly see suppressed; and persons who hold these views, rightly or wrongly, have a perfect right to express them.

We shall not be suspected of any desire to defend the particular article in question, but we are jealous for the freedom of public criticism, and, above all, of criticism in regard to the stage. Any one who considers the great influence which such exhibitions must necessarily have on large classes of susceptible and ignorant people cannot fail to see how important it is that the stage should be closely and sharply watched. When a critic errs from stupidity or bad taste, the errors of his criticism are pretty sure to be pointed out; and if, as in this case, he is wildly and extravagantly wrong, his very violence defeats itself. It is not difficult to explain how it is that actors, even more than men of letters, are peculiarly sensitive and irritable under criticism; but their natural distaste for criticism must not be allowed to interfere with any right of public judgment. As to summoning experts from the theatre to assist a tribunal in determining whether the influence of a play is moral or otherwise, nothing can be more absurd or unnecessary. Mr. TOOLE and Mr. BOUCICAULT have of course a right to form their own opinion of Mr. IRVING'S acting, but so have other people. If an actor is handled unfairly or too severely, he is never without friends or admirers to defend him; and in the course of discussion the truth comes out. We should be sorry to say anything unpleasant about the present case, but it is to be hoped that differences between artists and critics may henceforth be adjusted without reference to the criminal courts. Mr. IRVING is himself above the suspicion of having sought a telling advertisement, but we cannot be so sure of all members of his profession, and the police magistrates are busy enough already.

RATIONAL EXCITEMENT.

THE love of excitement seems to have been commonly regarded as a disturbing force in volition. People are supposed to indulge in it, not from deliberate preference, but simply from the overmastering influence of the exciting pleasure. According to this view, which has been advocated by philosophers from Plato downwards, the force of excitement is the power of a present gratification which, by taking full possession of consciousness, excludes all reflection, comparison of ends, and deliberate preference of one end to another. One familiar illustration of this process is the condition of a morally weak and highly sensitive mind in view of an object of sensuous gratification immediately presented to it. And there is little doubt that this is the mode in which most persons are acted upon by the intenser forms of pleasure. We may see abundant illustrations of this weakness in the everyday life of Englishmen. Now it is the workman, who, finding himself in possession of a little store of accumulating wages, cannot resist the temptation of an immediate indulgence in the noisy delights of alcoholic stimulation. At another time it is the wife of a struggling business man, who is transported by the prospect of decking herself in luxurious apparel, and who at the moment of temptation is wholly unrestrained by considerations of a wise economy. The records of our bankruptcy and criminal courts abundantly testify to the overwhelming power of present excitement over the minds of large numbers of the community.

But this is not the only way in which exciting pleasures exercise a peculiar attraction on the human mind. Many men and women love excitement in quite another way. They make it an object of conscious preference and of deliberate anticipation. If it is not a paradox, one may say that they seek excitement in a quiet manner by coolly setting themselves to attain it and to [illegible] themselves for it. Take, for example, the case of a young woman living in a rather dull way in a quiet country town, whose occasional happiness it is to visit London and to see a little of the gaieties of fashionable society. She looks forward to her yearly treat with a fair amount of composure for several months, and seeks in the most practical way to make all her other arrangements fit in with this supreme engagement. If other prospects open up which would conflict with this one, she carefully reflects on the choice presented to her, and, after full deliberation, determines to attain the more exciting form of enjoyment. All of us probably are aware of the existence of certain forms of pleasurable excitement which in this way attract us at a great distance in time and of which we make a perfectly deliberate selection.

At first sight it might seem as if these two forms of attraction really involved as their conditions precisely the same mental qualities. But if this were so, we should find the people who are most susceptible of the one susceptible of the other in a proportionate degree. Facts, however, do not appear to support this view. Although it is true that very lively and excitable people often unite a high susceptibility to immediate excitement with an eager pursuit of distant excitement, we find many who show the first quality apart from the second, and others who display the latter with but very little of the former. That is to say, there are those who are exceedingly weak in presence of an intense enjoyment within moderate reach, and who yet betray no energy in the pursuit of remote excitements. There are men, for example, who are carried away as with an irresistible urge at the sight of wine, who nevertheless show little or no tendency to go out of their way to indulge themselves in this peculiar gratification; and these are the cases of morbid appetite which it is possible to deal with remedially. On the other hand, there are those who seem very much bent on providing themselves with occasional emotional stimulants, and who yet do not manifest this kind of impotence under the attraction of an immediately present exciting object. For instance, the *bon vivant* who delights in the stimulus of a good dinner, spiced with the presence of jovial companions, may display an irresistible firmness in the pursuit of occasional gratifications of his taste, and yet be perfect master of himself if suddenly tempted to an immediate indulgence.

It is characteristic of this more moderate pursuit of excitement that it should assume the form of a purpose to indulge in the wished-for enjoyment at certain more or less regular intervals. People who are in this condition of mind consciously resolve to seek a periodical excitement. They make their moments of emotional exaltation an orderly element in their existence. It is probable that English people show this peculiar quality less clearly than foreigners. The French and the Germans are quite as fond of excitement as ourselves, probably a good deal more so, but they compass their end in a much more orderly fashion. A woman in Paris or Berlin who is obliged to think a good deal about the pecuniary cost of her amusements is accustomed to arrange her periodical visits to the theatre with the utmost care. The theatre is open every evening, but she is not tempted to rush off on hearing of some new attraction. She looks ahead and skilfully prepares for her coveted delight. She does not live in a daily state of uneasy craving, discontented with her ordinary surroundings. She throws herself heartily into present occupations, sustained with the pleasant visions of the coming holiday. She must have her moments of exalted bliss, but she can very well bring herself to wait for them. We have heard of German women who were so bent on securing this occasional ecstasy in the theatre or the opera-house that they willingly stinted themselves in quality and variety of diet in order to compass their object. Yet they were quite reasonable in respect

to the frequency of their pleasures, and did not by any means neglect all domestic duties for the sake of these amusements.

It is clear that the precise psychological conditions of this orderly pursuit of emotional exaltation must differ materially from those of the disturbing and absorbing passion for excitement already spoken of. It may be presumed that, in whatever way they pursue their object, lovers of excitement resemble one another in a certain high degree of nervous sensibility and emotional susceptibility. The English youth whose desires are instantly kindled into an overmastering passion at the sight of the cup, and the German student who looks forward with a flutter of pleasurable anticipation to his weekly carouse without intermitting his present studies, both display the same fundamental energy of nervous reaction to alcoholic stimulation. So, too, the idle English girl whose mind is thrown into disorder by the intrusion of inflaming images of theatrical spectacle, and the practical Frenchwoman who looks on eagerly to the next play and is yet perfectly content to live in the interval in the ordinary way, show the same kind of imaginative activity. But in each of these illustrations we see a great difference of mental condition. This difference may perhaps be defined as consisting in the presence or absence of a supreme volitional control. The systematic seeker after excitement may love his object very ardently indeed, and in this case he has all the conditions of that overpowering inflammability of feeling which we see in the contrasted examples. But along with this excitability of nervous organization he possesses a strength of will by which he can either hold down, so to speak, the violent emotional impulses or release them according to the purpose of the moment. He does not by any means seek to deprive himself of the luxury of indulging his peculiarly intense susceptibilities, he rather aims perhaps at cultivating them to the fullest degree. Only he makes them the conditions of a rationally pursued enjoyment, the raw material out of which he can fashion by well-conceived plan a high style of felicity.

But is it possible, one may ask, to combine any considerable degree of excitability with a perfectly rational choice of the highest happiness attainable? *Video meliora proboque, deteriora sequor*, is supposed to represent the confession of all very excitable people. But, though the passion for excitement in its unrestrained forms necessarily interferes with a just comparison of the greater and the less in pleasure, it does not follow that, when held in subjection by a strong will, it is a disturbing element in one's calculations. A man or a woman with a turn for exciting amusements may reasonably recognize and make use of the experience that the rapturous enjoyments of an exalted mental condition are incommensurable with the ordinary pleasures of quiet moments. Suppose, for instance, that a man has a singular emotional susceptibility to music of a certain order, by virtue of which the delight of the opera or concert-room is incomparably more intense than any other known form of enjoyment. If at the same time he is a person of strong reason and will, he may wisely resolve to secure as much of this delight as possible. Experience teaches him that too great frequency of indulgence diminishes the zest of enjoyment, and consequently he sets himself to find, in a rough fashion, the number of gratifications which affords in the aggregate the highest sum of pleasure. With respect to a comparison of these exciting forms of enjoyment with other varieties, when they threaten to interfere with one another, it is obvious that because of their immeasurable nature they cannot become the elements of exact calculation. But it should be remembered that the most consistent pleasure-seeker does not always perform an exact calculation of the results of his action. In a good many cases he has to be satisfied with a very rough guess as to the direction of the greatest happiness. And this rude kind of reckoning the lover of excitement is able to perform too. He will first of all argue that his periodic mental intoxication, though very brief, is so unlike any other mode of pleasure as to be preferable to a long duration of the more commonplace satisfactions. He will reason further that the anticipation and review of such supreme delights, extending through the whole intervals of their recurrence, may, by removing the dreary sense of ennui and melancholy which people often experience amid the monotonous surroundings of ordinary life, so far increase the value of the exciting pleasures as to make it the part of wisdom to secure them, even at the sacrifice of some amount of daily comfort. In this way it appears possible to preserve a considerable degree of susceptibility to the more stimulating class of enjoyments, and yet to carry out with a fair amount of consistency a prudential regulation of the various pleasures of life. In other words, a keen relish for excitement, if only restrained by a strong will and directed by a clear judgment, seems to be perfectly compatible with a resolve to seek the greatest amount of happiness attainable.

DIOCLETIAN'S PLACE IN ARCHITECTURAL HISTORY.

WE have assumed more than once, in speaking of Spalato and other places, that the reign of Diocletian, which marks so great an era in the polity of Rome, and thereby in the general history of the world, marks an era equally great in its own way in the development of Roman architecture, and thereby in the general history of art. We have assumed that it was in his palace at Spalato that a change was made which had an effect on all later developments of architecture, and which in truth contained all later developments of architecture within it. This change is that by which, in the peristyle at Spalato, Corinthian columns are made to support arches. To make out our own case it is necessary to prove two things. It must be shown that the change is really of the importance which we attach to it; and it must be shown that it was at Spalato, or at least in some work of Diocletian, that the change was introduced. These two issues are quite distinct. The second is a mere question of fact. We are not aware of any existing building earlier than the palace of Spalato in which columns bearing arches are to be seen, and we think that there is evidence enough to show that the same arrangement was followed in other buildings of Diocletian. This, we think, comes very near to proving that it was to the taste of Diocletian, or of the architect whom he employed, that the change was due. But if any one can show that the same arrangement was followed in any building earlier than the time of Diocletian, it will be a mere correction of fact. The credit of a great step in art must be transferred from Diocletian to somebody else. We shall lose our parallel between the political changes of Diocletian and his architectural changes. But the importance of the architectural change in itself will be exactly the same, even though it be shown that some one else forestalled Diocletian in making it. The character of Diocletian will lose part of its interest; his building at Spalato will lose part of its interest; but the history of the development of the building art will remain exactly the same.

Of the general nature of the palace at Spalato we have already spoken. The parts of the building which have this special artistic importance are those which lie towards the sea; and the great sea-front, the *cryptoporticus* as it is called, is not the least important among them. The chief remaining buildings of the palace are these. The great peristyle is the centre of all; it consists of two rows of columns supporting arches, so exactly like the arcades of a basilica that it is at first difficult to believe that they never supported any roof or any superstructure of any kind, but that they always were mere open colonnades as they are now. The north end was open, and joined on to more massive arcades which run along the lines of street, and of which some parts still remain. The minuter arrangements of the palace must be studied in the great work of Adam. We are pointing out those only which have some bearing on the artistic history. At its south end towards the sea the peristyle is finished by the portico leading to the atrium. This consists of two columns, making of course three openings, of which those on each side are square-headed, while the central one is an arch. That is to say, the entablature with its mouldings is carried over the central space in an arched form. This gives on a vast scale the familiar outline of what is commonly called the Venetian window, a form very common in Gloucestershire, but which we do not remember at Venice. This form is found again in the cryptoporticus, the great sea-front. This seems to have been more perfect when Adam made his drawings than it is now. That is to say, many more mean windows have been cut through, to the ruin of many of the columns and arches. This front consisted of a long wall with two of the four square towers of the palace at each end, the upper part of the building forming the actual cryptoporticus or place of exercise. This had towards the sea a range of open arches, divided by square piers with attached half-columns of a kind of Doric, each with a bit of broken entablature projecting over it. Thus far there is nothing remarkable, nothing but what may easily be paralleled in other Roman buildings. But the range is broken at five points; at each end and in the middle is a composition of the same kind as that at the end of the peristyle—a Venetian window, in short, with the entablature carried in the arched form over the central space. Between these is a smaller break on each side of the centre-piece in which a single arch is made to spring, not immediately from the half-columns, but from the entablature which they support, and which is therefore of course interrupted at these points. From this side of the palace we may go to the opposite end, where is the splendid golden gate, the *Porta Aurea*. Here the actual doorway is, like the other doorways of the palace, square-headed with a joggled lintel. Over it is an arch, ready to receive a tympanum, the arrangement out of which, by various successive stages, our own Norman and later doorways grow. In the actual doorway, however, there is no use of the column, but on each side of it, and above it, are niches which may claim a place as stages in the development of the column and arch. In the lower pair the arch, perfectly plain, rises from square pilasters with capitals. Above the doorway an arcade of seven, the alternate arches being hollowed as niches, rises from small detached columns. The arches, however, do not rise immediately from the broken entablature which runs over them. This arcade has clearly made a great advance in the direction of the so-called palace of Theodoric and of all other buildings with ornamental Romanesque arcades.

With these details in our mind, it is well to go back to the peristyle. The two arcades themselves form only the centre of a large group of buildings. To the west lies the temple, commonly called that of Æsculapius, now the baptistery. This, as a temple, followed the usual form of a small and simple temple with a portico of four columns in front of it. It was the palace chapel of Diocletian, answering to St. George's at Windsor or St. Stephen's at Westminster, or to the renowned Christian Saracen chapel of Palermo. But, as a temple built after the ordinary manner of temples, it supplies no link in our chain. It may however be worth while for any traveller who can find the way to get to the upper story of a small house which blocks up its west end, and so to study the details of the pediment very close indeed. But the building on the other side of the peristyle is of greater importance, both in itself and as perhaps supplying the first stage

of the great development. This is the so-called temple of Jupiter, which we shall venture to speak of as the mausoleum. It is now the cathedral, formerly the metropolitan, church, a use for which it is singularly unfit, being surely one of the smallest of metropolitan churches, and certainly the darkest of churches of any kind. It has been adapted to its present use only by throwing out a choir and a chapel or two, to the great damage of the original plan. The choir, however, has some historic interest from its connexion with that famous Archbishop Mark Antonio de Dominis, who has a place in English as well as in Dalmatian ecclesiastical history. Outside, the octagon was surrounded by a portico of its own shape; inside, there were two orders of columns, the lower Corinthian, the upper Composite. These stand detached, and support broken entablatures, the upper range standing on the cornice of the lower. These columns serve no constructive purpose whatever; the upper range can at most have carried statues. The construction of the real building is purely that of the arch, with round-arched niches in four faces of the octagon, and the whole crowned with a cupola, which is a marvel in brickwork—a series of constructive arches rising one above another in a way which makes one rejoice that they can be seen. We would hardly exchange the sight of such a piece of constructive skill even for a Ravenna mosaic. It is usual to say that the friezes of this mausoleum, consisting largely of animal forms, hunting scenes and the like, are in a degraded style of art; but it should be remembered that they could only have been seen at a great height, and by lamplight. The galleries which now allow us to study them more nearly are, of course, mere excrescences. The columns, with their broken entablatures supporting nothing, are more justly blamed, but it is a blame which they must share with the whole series of Roman classical buildings. Certainly there is no building which can be more truly said to be a Greek mask placed on a Roman body than the mausoleum of Spalato; but perhaps in the very point where the evil reaches its height we may see the beginning of better things.

Now the Roman classical architecture, as we need hardly say yet again, was in truth an imperfect and transitional style, a style in which the constructive system was of one kind and the decorative system of another. A Roman body, a strong solid body of piers and arches, of vaults and cupolas, was clothed, as with a thin garment, with the Greek columns and their entablatures. To reach anything like a really consistent and harmonious style, the problem was to find some means by which the real Roman system of construction might be preserved and made prominent, without casting aside a feature of such exquisite beauty as the Greek column, especially in the stately and sumptuous form into which it had grown in Roman hands. The problem was to bring the arch and the column into union—in other words, to teach the column to support the arch. It strikes us that in the palace at Spalato we may see a series of attempts at so doing, a series of strivings, of experiments, one of which is at last crowned with complete success. Of these experiments some would seem to have been already tried elsewhere; of the successful one we know of no example earlier than Diocletian. Is it not possible that the columns supporting broken entablatures, an arrangement carried to its extreme point in the mausoleum, may have actually suggested the change? The columns had been brought to a state of uselessness so complete that it supplied a hint for making them useful. They stood out free from the wall; they did not serve their old Greek use of supporting a continuous entablature forming the real constructure of the building; they supported nothing, and served no real purpose whatever. The columns were impostors standing boldly out in front; behind them lurked the real construction of the arch, half hiding itself, as if it were ashamed. The greater the incongruity between the constructive and the decorative system, the more easily would the thought suggest itself of bringing the two together. The columns were standing there doing nothing. Why should they not be set to work to support the arches? The arches, the real construction, were hiding themselves behind. Why should they not be brought forward and set upon the columns? It seems to us that in the cryptoporticus, in the *Porta Aurea*, in the portico of the atrium, we see a series of unsuccessful experiments. The arch was set over the column, but it was made to spring from the continuous entablature or from the broken entablature, or, as in the case of the Venetian windows, the entablature itself was made to take the form of an arch. All these attempts were more or less awkward; the last was specially heavy; the cornice running round in the arched form is certainly not satisfactory; but in the peristyle the right thing was hit upon; the arch was made to spring bodily from the capital of the column, and was moulded, not with the full mouldings of the entablature, but with those of the architrave only. The entablature might run above as the finish of the whole building, but it has become a mere finish, a greater cornice. It is the finish of the wall, and nothing else. Alike in the constructive and in the decorative arrangements, the columns support the arches, the arches rest on the columns. There is no mask, no clothing; construction and decoration had again become the same thing, as they had been in the old Grecian, as they were to be in the coming Romanesque and Gothic. The battle had been won. The germ of Pisa and Durham and Westminster had been called into life.

In saying this we do not mean to rule that the peristyle, because it attempts successfully what in other parts of the palace is attempted unsuccessfully, is therefore necessarily the latest part of the palace. In a case of this kind, when an artist is striving after something without exactly knowing what he is striving after, while he has before his eyes a floating idea of something which has never yet appeared in stone or brick, it does not at all follow that he will make all his experiments in an ideal order, or that, when he has hit upon the right thing, he will always know that he has hit upon it. While feeling about in this way, he might produce the perfect arrangement of the peristyle alongside of the imperfect arrangements of the other parts of the building, without knowing that the one was perfect and the other imperfect. In all these matters luck has its share as well as art:—

τέχνη τύχην ἔστερξε καὶ τύχη τέχνην.

The architect of Spalato must have all the glory of the great invention of the peristyle, even though he set less perfect forms alongside of it at the same time, or even afterwards.

The change which was now made is one which we do not hesitate to call the greatest improvement that ever was made at a single stroke in the whole history of architecture. The two principles which had been contending in the earlier Roman architecture were reconciled; a use was found for the column which was consistent with the Roman principle of construction. Still there were further improvements to be made. It had been shown that the column could be used as the support of the arch; but it became a question whether the slender Corinthian column, with its delicate capital, was the form of column best suited for the purpose. Were the proportions which were suited for a column bearing the entablature the best suited for a column bearing the arch? Looking on the arch as a curved entablature, or at least as a curved architrave, it might seem not unreasonable that something should be taken out of the height of the column to balance the greater height thus given to the intercolumniation. A shorter column than the Corinthian would thus seem to be better suited to an arcade, and again there is something crushing in the arch coming directly down upon the slender Corinthian abacus. Both these difficulties might be avoided by the use of columns of another order, and in truth there are no nobler basilican arcades than those which rest on Doric columns in the church of St. Peter in Vinculis. And it was clearly from the Doric type that we got our massive Norman columns with cushioned capitals. But, as a rule, the Roman builders clave to their favourite Corinthian forms, and out of the supposed necessity for interposing something between the capital and the arch came such shifts as the stilts at Ravenna and Parenzo, and the double capitals of the Byzantine style. At last, at Pisa and Lucca, this question was settled by the use of a heavy square abacus, which, while it is still part of the capital, gives enough of protection to the foliage. On the other hand, as the Romanesque style advanced, more massive forms of columns, clustered columns, columns attached to square piers, all came in. As long as the slender Corinthian column was used, the building could not be vaulted, and to this cause we owe the rarity of vaulted buildings for several centuries. The step taken at Spalato was therefore only a first step, which had to be followed by others. Still it was the first step, and nothing could have been done without it. All Romanesque and Gothic architecture was, like another Athênê, in embryo in the brain of Jovius or his architect.

It is wonderful how little this remarkable change has been noticed, even by special writers on the subject or on the place. In the old view in Wheler the columns which support the arches are shown supporting an entablature. Adam describes and draws them without comment. Even Sir Gardner Wilkinson merely speaks of "arches which have the peculiarity of springing immediately from the capitals, and are, I believe, the first instances of this style which was imitated by the Saracens and by the architects of the lower ages." This is true enough, but it is an odd way of putting it. It is hardly an adequate way of describing so great an artistic step. That it was the first instance there can be little doubt; that is to say, we have little doubt that the practice was introduced under Diocletian; but whether for the first time at Spalato or in some of his other buildings, we have no means of judging. The drawings of the great hall of his baths at Rome, before its disfigurement in the sixteenth century, show the same arrangement. And what Jovius did at Rome and at Spalato Herculius dutifully did at Milan. Any one who studies the columns of St. Lorenzo will see that the present rough completion of the design represents their real form. The colonnade with its entablature was interrupted by a wider arched space, exactly as in the cryptoporticus and in the portico at the end of the peristyle.

There can then be little doubt that this great step in the history of art makes its first appearance in the buildings of Diocletian; whether the thought was due to his own genius or to that of some nameless slave or freedman we can never tell. Diocletian may himself have been an artist, like Hadrian, or he may not. In any case he must have his share in the honour. The beginnings of consistent arched architecture are to be seen in buildings which arose at his bidding, the designs of which he must have approved. We take a leap of more than a thousand years, and the spirit of the same genius is upon us still. In Diocletian's day, palace and temple and mausoleum were there; the bell-tower was not, for the bell-tower was needed only for the service of the creed which Diocletian laboured to destroy. But, when the bell-tower arose at the end of the fourteenth century, it arose in a style essentially the same as that of the palace at the beginning of the fourth. So upon stage it rises, in the purest form of the round-arched [illegible] using up again in its lower part columns of Diocletian's [illegible]

seem thoroughly at home in the place to which they were removed after so many ages. Our parallels indeed may leap over ages yet more remote; the hard, stern, but bold and effective, carving of the lion in the lowest stage of the bell-tower seems in thorough harmony with the sphinx which Diocletian brought from the most southern province of his empire to form an ornament of his Dalmatian home. The heathen peristyle, the Christian bell-tower, so far apart in date, are in thorough artistic harmony. Those who reared the later building must have had a thorough feeling and admiration for the earlier. The bell-tower, built in the narrow space between the peristyle and the mausoleum—now become the church, of which the bell-tower was an adjunct—involved the destruction of part of the surrounding portico of what was now the *duomo* of Spalato; but the peristyle itself is untouched. The portico, with its columns and entablatures, relics of a system which had passed away, might be broken through, but the builder of the bell-tower laid no destroying hands on the arcades which were in truth his own model. The two stand side by side, arch within arch, the perspective of the two supplying a series of varied groupings such as Diocletian never dreamed of. The union of the three buildings, peristyle, bell-tower, mausoleum, is the crowning glory of the whole spot. The great persecutor in truth laboured for those whom he most hated. Not only were his buildings put to Christian uses, but the style that came to perfection at his hands supplied the model for a Christian building on which Constantine would have looked with as much wonder as himself. Between the work of the fourth century and that of the fourteenth there is no lack of harmony. Where we do see an incongruous element creeping in is where the great arch of the portico, shown open in Adam's engraving, is blocked to receive a tablet in honour of one who, after having been the last man to wear the crown of Jovius, had sunk to be described as "Franciscus Primus, Austriæ Imperator et Dalmatiæ Rex."

SPELLING.

THE amusement called a "Spelling Bee" has the advantage of being cheap and easily got up, and it may be useful in helping to shake off the common aversion of Englishmen to opening their mouths in public. Almost the only objection is that, unless tolerably big words are used among fairly educated people as tests, there cannot be much risk of failure, and people who find that they can spell big words correctly may be too apt to make familiar use of them. The notion, however, that correct spelling is to be expected from those who have had ordinary opportunities of education is modern, and it would be easy to attach too much importance to the want of it. The Duke of Marlborough's Letters are always quoted as an example of the deficiency of a remarkably able man in knowledge which is now required in every schoolboy. But it must be remembered that even in the polite age of Queen Anne people wrote far less than they do now, and as long as words are used chiefly in conversation it is difficult to say precisely what is right and wrong. There are indeed, and for a long time past have been, certain books of which one would be ashamed to confess ignorance, and which could not be read attentively without learning to spell as many words as would serve the ordinary purposes of life. As an indication of want of knowledge of or interest about such books incorrect spelling might reasonably be thought disgraceful. But if the failure only occurred in polysyllabic words, we should be disposed to view leniently an indication of imperfect study of certain newspapers. We have before us a provincial journal which, in describing a spelling bee, states that "it was discovered that an individual had escaped an interrogatory by changing his seat." It would have been difficult for the writer, who had probably been at the trial himself, to consent to say that "it was found that a person had escaped a question." Long words are like fine clothes. If we have them, why should we not make use of them? We do not know the precise meaning of "bee," but if we conjecture rightly, we shall expect soon to hear that an "orthographical conglomeration" has been held in some provincial town. It is wonderful, if we come to think of it, how much force and charm of language may be gained without ever troubling the long words at all. The beautiful lines beginning, "Drink to me only with thine eyes," have been often quoted to show this. Another instance is the speech of Hamlet "To be or not to be." Or take that text of Jeremiah which denounces one of the kings of Judah, "Oh! earth, earth, earth, hear the word of the Lord," &c. Or the words of the Burial Service, "Man that is born of a woman," &c. Or Pope's "Universal Prayer." Or several stanzas of Gray's Elegy. Or the lines in which Scott describes his countrymen's stubborn fight at Flodden. All these and many more of the best remembered passages in English literature might be searched in vain for words hard enough to set at a spelling bee.

In some remarks on spelling which were written about forty years ago we find the sensible rule laid down that the contemporary usage of persons of cultivation is the authority to which each person who aspires to write correctly must defer. The writer gives some examples in which variety of usage existed at that time, and if he be accepted as sufficient authority, it follows that at the time he wrote "complete" and "compleat" were equally right, or at least neither was wrong. But we fear that, if the latter form were produced at a "spelling bee," shouts of laughter would proclaim that the respondent's chance of the prize was gone. In Ainsworth's Dictionary of 1751 both "complete" and "compleat" are given in the English-Latin part, although it would appear that the latter is preferred; and in the Latin-English part "completus" is rendered "compleat." In the middle of the last century "expence" was usual, and we could not now say that it is exactly wrong, although we should certainly write "expense." The writer of forty years ago gives us another example, "allege" and "allodge," but usage has now determined against the latter form. The dispute between "inquire" and "enquire" is not yet settled, nor could we say that "connection" is wrong, although we should write "connexion." It appears that at the "spelling bee" the word ecstatic was deemed to be wrongly spelt with "x," but this was usual in the last century. If the competitors were taken from the working class, we should not be surprised at the form "steddy" being produced. In the middle and upper class this would not be likely, yet we find this form, and not "steady," in *Pope's Works*, printed in 1766. The same book shows that "sallad" was then usual, and "smoakless." We find also "oeconomy," from which, since it became political, a letter has been retrenched. We also find "chearful" and "devellop." But it is surprising to turn over many pages of this edition of Pope without finding more than very minute differences from the spelling of the present day.

A knowledge of Greek and Latin must save competitors in spelling from many pitfalls. If the ladies who gained distinction were ignorant of these languages, they must have been gifted with retentive memories. Take, for example, such a word as "sympathetic," and it would seem quite possible for a person who knows no Greek to put "j" for "y." And in "metamorphosis" there would be an opening for "f." A mistake would be easy in "internecine" or "parallelogram." It might perhaps be said that it would take longer to learn Greek and Latin than to learn spelling as a mere collection of instances without principles, but the latter would be very hard work. It is difficult enough for anybody to learn English spelling, because of its irregularity. The rule which compels us to write "succeed" and "precede" is merely arbitrary, and even some educated people have to think twice before putting on paper "believe" and "receive." We have now settled to write "surprise," but in the last century this and other compounds of the French "prendre" were written with "z." A place in a spelling class ought not, we think, to be lost by using "z" in any of these words. But a person who knows French would prefer to write these words with "s," just as a person who knows Greek would write "analyse," although we find this word spelt with "z" in the edition of Pope before referred to. The word "schedule," which was lately set, is a trap, at least if it be pronounced, as some people pronounce it, softly. It is usual in correspondence to speak of an "inclosed" letter, but Parliament still passes "Enclosure Acts." Such words as abridgment and irreconcilable are thought by many people to want another "e," and, whatever be the correct rule, it is certainly convenient to drop an unnecessary letter. The old-fashioned pronunciation of "obliged" may have led many into what can hardly be called an error. As for "honourable," and other words of the same class, there will perhaps never be, and there certainly is not, agreement. We should write of the "license" of the press, but Acts of Parliament require publicans to take out "licences." It is perhaps desirable to be strict in spelling, because pronunciation varies, and if spelling followed it there would soon be no standard of correctness in speech. But it is possible to carry accuracy to an extreme. There is a wide difference between spelling "supernumerary" without its penultimate syllable, and spelling postillion with one "l." The former, if not carelessness, must be gross ignorance, like that shown in spelling "quadrilateral" with an "o" in the last syllable, or "commensurate" with "o," instead of "u." Here, again, a small knowledge of Latin would have prevented mistakes which seem to have arisen from an untutored ear listening to a vulgar tongue. A person who said "quadrilatoral" or "commensorate" must have escaped the influence both of school and society. We saw lately a lady's letter, in which "areas" was written for "arrears," and it might be charitably thought that ignorance of the thing made her unfamiliar with its name. In the strictest age of pleading and practice at common law, the principle of *idem sonans* was applied, and we think the same principle ought to prevail to some extent in a "spelling bee," but it is difficult to say how far. If this amusement becomes fashionable, there will no doubt be dictionaries expressly printed for it, with a set of rules, and it certainly would promote more accurate knowledge of our language. When an assembly receives the spelling of "ecstatic" with an "x" with shouts of derisive laughter, it is evident that many people have a good deal to learn. But the spelling of "cynical" with "le" at the end, instead of "al," shows ignorance of the meaning and origin of the word, and that sort of ignorance may fitly excite derision. The lady who had to spell "aurora borealis" could scarcely go wrong, unless she was very ignorant or very careless. When we have once heard and understood this word, it would be difficult to misspell it.

The popularity of these competitions in the United States is one of the many fortunate circumstances of that country. It cannot be too often impressed on American speakers that when they come to write they must add a "g" to the word which they call "fixins," and that they must not spell calculate with an "i." It might be awkward if the manager of a "spelling bee," either in America or here, pronounced words as he hears his friends and neighbours speak, and then applied the standard of some dictionary

to the spelling of them. It appears that a "spelling bee" has lately been "inaugurated" at Gloucester, and it is proper that a big word should be made to do duty on this occasion. This competition was finally decided on the word "Ecclesiastes," and it may be inferred that the person who failed to spell it correctly had never heard it before, and did not know whence it came, or what it meant. Spelling such words as this is a test, not so much of spelling, as of the general education and associations of the competitor—not that that is an objection to them. The same remark might be made on "millennium," with the addition that failure in this word would imply ignorance of Latin, which it is hardly expected that a commercial clerk should know. Some years ago a bet upon the word "reindeer" caused great excitement in the sporting world. It was alleged that the gentleman who induced a friend to bet on the spelling of this word had looked beforehand at a dictionary. But, on reference to several dictionaries, it appeared that both "reindeer" and "raindeer" were recognized. It is stated that at Gloucester failure occurred at such words as, among others, "broccoli." Now, on referring to the first dictionary we have at hand (an English-Latin one of 1845) we find "brocoli." Yet it would appear that a competitor was disqualified for adopting this form. People of rather wider views as to language should, if possible, take the direction of these competitions.

THE BURNING OF THE *WARSPITE*.

AT a meeting on Tuesday the Committee of the Marine Society, after hearing several witnesses with regard to the burning of the *Warspite* training-ship, came to the apparently somewhat hasty conclusion that it was the work of an incendiary, and resolved to offer a reward of 50*l.* for the detection of the criminal or criminals. It may no doubt be worth while to offer a reward for any information which will explain the origin of the disaster, but at the present moment there does not appear to be sufficient evidence to justify the very positive and unqualified opinion which the Committee has expressed in opposition to the views of the Captain and several of the officers of the ship. It has indeed been alleged that two of the ship's boys were seen coming from the cockpit at the moment when the fire was discovered; but even if this be true—and it rests on very doubtful testimony—there is nothing to show that either intentionally or accidentally these boys set fire to the vessel. The chief witness on this point, Cotton, is said not to bear a very good character, and he has stated that he saw the boys in question come through a small hole in the grating of the hatchway, which some of the officers of the ship declare to be physically impossible. It seems, however, that a boy might raise the grating from below. There can be no doubt of course that, if there were two boys in the cockpit at such a time, they had no business there, and must have been up to some mischief or other; but what that was there is nothing to prove. Cotton says he did not know the boys he saw, and could not catch them on account of the smoke, and another sentry gives similar evidence. But it is obviously strange that two boys in succession should be able to get out of the cockpit, without being caught or even identified by one or other of the sentries; and there is also a difficulty in explaining how the grating was put back again. It has been suggested that the boys in this ship were rather of a bad class; but this does not appear to be quite correct. The boys who are received in this institution may, as we gather from the rules, be either destitute boys without friends or support; apprentices of honest disposition, but with an unconquerable aversion or total inability to follow any regular trade; boys of a hardy, daring disposition, being sons of poor widows or worthy labouring persons in distress; or boys who are recommended on the ground that they are "in the path of danger to civil society." There are here all sorts of boys, and though it can hardly be doubted that in such a company there would be at least some leaven of turbulence, the reports of the ship show that the inmates were tolerably well behaved. Captain Wilson, Inspector of Naval Training-ships, lately reported that the *Warspite's* boys always took good places in the Naval Training Service, being so well grounded. It is quite possible that in such a body there may have been a young desperado or two capable of conceiving and executing the atrocious crime suspected by the Committee; but it would have been well if the managers had paused a little before committing themselves to a positive opinion. As it is, there may be some danger that the offer of a reward may bring a further crop of doubtful stories, in order to support a foregone conclusion. Another danger in adopting this theory so decisively at the outset, before the inquiry has been carried beyond its initial steps, is that it may lead to the neglect of possible explanations in other directions. It is true that smoke was first seen coming from the cockpit, but this only shows that there was smoke in the cockpit, and does not prove that the fire originated there. Webber, the officer of the watch, says that when he heard the alarm given he looked about and saw smoke issuing in considerable volumes from the ventilator over the carpenter's shop; and it is quite possible that the fire may have begun in this part of the vessel. At least, it is well known that on land carpenters' shops are the source of much mischief in that way. The fact is that at the present moment the cause of the fire is not known, and we must wait for further and more searching inquiries to clear up the mystery.

The lessons in the management of ships which we are gradually being taught by a series of disasters are terribly expensive, but it is to be hoped at least that such warnings will command attention, and lead to some improvements. In the case of the *Goliath* it is perfectly clear how the accident happened. It was the duty of the boy Loeber to take down certain lamps used for lighting the ship, and carry them to the lamp-room for trimming. He had only been a few days at this work, and apparently did not understand the importance of quite putting out the light before taking the lamp into the lamp-room. The metal of one of the lamps was very hot, and as it burned his fingers he naturally dropped it on the floor, as anybody else would probably have done. The floor of the lamp-room was, the boy said, "all over oil." Norris, the seaman-instructor, also admitted that the floor, from the constant droppings, was oily; "not wet with oil, but the oil had soaked into the wood beyond the power of scrubbing it out." The lighted wick, with the oil from the lamp, fell upon this oily floor, and a blaze was the immediate consequence. It also appeared from the evidence at the inquest that the reason why the lamp was so hot was that the petroleum was not of good quality, and that it had been complained of. Mr. Redwood, a chemist, stated that the flashing point was 144 degrees, and declared that he did not think it would explode under any circumstances. Oils of this inferior kind do not flow readily up the wick; the wick gets clogged and the metal-holder unduly heated. There was only a comparatively small stock of this oil for use in the lamp-room; but there was a tank of petroleum on the upper deck, and nobody knows what in the course of the fire became of it. It may be concluded that the fire in the *Goliath* was caused by an accident due to a boy's carelessness, the bad oil, and the highly inflammable condition of the floor. As soon as the lamp-room caught, the ship seems to have been doomed, and all the elements of an accident were brought together in that room. The seaman-instructor said, in self-defence, that he could not follow the boy about everywhere; but it is obvious that an ignorant and inexperienced lad, who had only had a few days' practice, ought not to have been left in the lamp-room all by himself. That is a post for some grown-up person, who knows what he is about. Again, it is equally clear that oil which unduly heats a lamp so as to burn a boy's fingers ought not to be used; and also that a wooden floor soaked with petroleum is full of danger in a lamp-room. The remedy in the last case is to have the lamp-room floored with sheet-iron or tiles, which should also extend partly up the walls; and this, we are glad to hear, is already done in some of the other training-ships, but the rule should be made absolute. On board the *Warspite* there was no petroleum, paraffin, or other kind of explosive oil, but only a small store of colza oil for the lamps, about twenty or thirty tons of coal in the bunker, and some spare hammocks, blankets, tarred ropes, and three or four pounds of tallow in the adjoining cockpit. As to the suggestion of spontaneous combustion among the coals, it is difficult to see where the heat would come from to ignite the coals in a ship without furnaces; but no doubt the various odds and ends in the cockpit would make a good blaze if once set alight. On this point, however, we are still at a loss for information.

The next question which is raised by the burning of these two ships is how it was that all efforts to stay the flames were, almost from the beginning, perfectly hopeless. The first thing that strikes one is that they were both dry, old, wooden vessels, probably well pitched, and therefore an easy prey to the fire when once it got hold of the timbers. In the case of the *Goliath* the flames were fanned by the wind. In the case of the *Warspite*, when the hatches were down, the firemen from the floating engine could not move about on board on account of the atmosphere, and when some of the hatches were opened, the draft helped the fire. It is conceivable that the ventilating passages and openings which may be desirable for the health of the inmates in these ships add to the difficulties of contending with fire, and that it will be found necessary to consider the two things together. It is evident, however, that in all cases of a ship on fire the chief difficulty is to find standing-ground from which to play on the flames. In the ship herself the men are rapidly driven from one point to another. On the *Goliath* the pumping had almost at once to be given up; on the *Warspite* the lower deck had to be evacuated in less than half an hour, and the main deck, and even the upper deck, immediately afterwards. In short, it is clear that, when a ship is burning, it must be dealt with, not from the inside, but from the outside; and Mr. Coleman, an American civil engineer, has written a letter making some good suggestions on the subject. He proposes that the main pipes should extend longitudinally along the sides of the vessel in each hold, with branch pipes perforated with small holes, extending across the ship upon the ceiling between the beams. The main pipes would start from the pumps in the engine-room, which would be worked by the engineer. This "sprinkling system," as Mr. Coleman calls it—a wide-spread shower of close small rain falling on all sides of the vessel—has, it seems, proved very effectual in warehouses, and there seems to be no difficulty in adapting it to a ship. Another important protection would be an arrangement of electric bells which at a certain degree of heat would not only sound an alarm, but indicate the precise point of danger with a [illegible] which could not otherwise be attained.

It is highly satisfactory to observe that on board both of the *Warspite* and the *Goliath* the discipline of the boys when called upon to go to the pumps, and finally to quit the ship, was perfect. Everything was done promptly, quietly, steadily, and without noise or excitement—just, in fact, as if on parade. Considering the composition of the crews, and the average age of the boys, this is most encouraging testimony to the quality of the materials which

are at our disposal for manning the navy. As the Government has promised another ship in place of the *Colinth*, it can hardly be doubted that one will also be found to replace the *Warspite*. But the whole subject is one which deserves serious consideration, and it may be hoped that training-ships will henceforth be placed on a more liberal and systematic footing, as well as increased in number, for they are rather too overcrowded at present. It is scarcely possible to imagine any way in which public money could be more usefully spent, or more to the satisfaction of the public. Such an institution serves a double purpose; for while, on the one hand, it offers a safety-valve for a miserable and dangerous class of the population, on the other hand it provides both for the commerce and security of the country, by opening up an active maritime career to those best fitted for it, and who otherwise would be apt to run to waste or mischief.

THE BRITISH WORKMAN.

THE dishonest idleness of the ordinary workman who is paid by the day becomes increasingly a matter of complaint. An architectural contemporary has lately opened its columns to a correspondence on the subject, in which both sides of the question are discussed. We have all suffered more or less at some time or other from the dilatoriness of the people who undertake to do "jobs." The London householder quails at the idea of a gasfitter or plumber entering his house almost as much as he would at the idea of going to bed and leaving his hall door open. The workman is not a burglar by profession, and may not carry anything out of the house but his tools and the housemaid's affections, yet he probably manages to rob his employer as effectually as if he had stolen a purse off the study table. He does not do his own work so that it will last, and he makes needless work for others like himself. Working-men will no doubt be indignant at any one who accuses them of being thieves and robbers; nevertheless—if we may assume that their proceedings are correctly described by various correspondents of the *Building News*—they, by their systematic determination to do as little work as possible, take money out of the pockets of their employers very much as the pickpockets do. Most people who live in a large town can scarcely fail to have witnessed scenes similar to that described by Mr. Martin in the *Building News* of December 10, 1875, as daily visible from a window in Mr. Seddon's "observatory" at Queen Anne's Gate, which overlooks the tops of a great many houses in the neighbourhood. Mr. Martin has, it seems, amused himself with watching the workmen, who, though ostensibly engaged in repairing the roofs and the chimneys, sit calmly conversing together or stretched at full length for greater ease in the leader gutters smoking a pipe. They apparently take no interest in anything beyond the movements of the labourer who combines "outpost duty" with that of "commissariat," and brings them the two ever-needful B's, baccy and beer, especially necessary to their complete enjoyment of the fine view before them. In one of his observations Mr. Martin saw a man asleep, "dreaming the happy hours away" on a narrow scaffolding thirty feet from the ground. Forgetting the habits of the race, he rushed in his simplicity to rescue the man from this dangerous position. At the bottom of the scaffolding was the bricklayer's mate, who calmed his anxiety at once by coolly informing him, "Lor' bless you, he's safe enough; he's accustomed to it." To this anecdote Mr. Martin adds an amusing account of the way things go on in country parts, where the foreman can always find some excuse for an excursion to the railway station to inquire for something wanting only in his imagination. He does not leave without having tested the quality of the refreshment-room tap in no imaginary manner. A foreman naturally always requires a labourer with him, even to make inquiries. When to this constant wilful waste of time we add the fact that a bricklayer can, by working with only one hand (no uncommon practice), make a yard-cube of brickwork cost thirty-two shillings, it will not seem so surprising that those who build houses can seldom afford to live in them. A friend of Mr. Martin's one day during working hours found all the men, whom he supposed to be hard at work with hammer and trowel, exerting themselves with much more than their usual energy in the capacity of negro melodists. The unsophisticated country folk looked on, delighted with the blackened faces, the mad capers, and shouts of their cockney cousins. The men had quite forgotten the very unimportant fact that they were paid by the hour to build a house, not to improvise an entertainment for their employer's tenants on the village green. Mr. Martin's experience leads him to affirm that "the working-man at day-work is a deliberate idler when he has the chance," and that the percentage of men anxious to give a fair day's work for a fair day's wages is so small as to be hardly worth taking into account, except to acknowledge the few instances as those exceptions which prove a rule. Mr. Seddon complains that he cannot now, except at an enormous increase in cost, have the designs executed which he made use of some years ago. Contractors tell him that they have now to leave so large a margin to provide for the dishonesty of their workmen that they are obliged to give apparently extravagant estimates. They are forced to pay higher wages, and also to accept much less work in return. It is the public who suffer in the long run. At Sheffield the other day two bricklayers, assisted by two labourers, were timed when at work, and in twenty minutes the four men succeeded in accomplishing the wonderful feat of laying just five bricks. These, of course, were Union men. On the other hand, on a railway work in Wales, where the men were out of sight of Union officials, a gang of bricklayers agreed to do as much as they could, and to discard the rule of never allowing the trowel to leave the right hand. Two men kept placing the bricks with both hands, and the third used the trowel. In this way they earned 12*s.* 6*d.* a day each, and sometimes 15*s.*

The controversy at present raging on the subject of piece-work is one, no doubt, which has important issues at stake. If the masters gain their point, much may be done towards rectifying the injustice of not allowing an expert workman to profit by his superior abilities or exceptional industry. But although co-operation, piece-work, Trade-Unions, and the relations which labour ought to bear to capital, are vital questions, not one of them will solve the difficulties from which we now suffer, whether it be in the colliery, the kitchen, or the Stock Exchange. To take a familiar example; a lady may say that she thinks the solution to her domestic troubles will be found in piece-work, and that she will engage her housemaid according to the number of beds required, and her cook with regard to the number of courses she wished for dinner. The footman might be paid partly in consideration of the number of times in the day he had to open the doors, and the kitchenmaid in accordance with the quantity of plates and saucepans she had to wash. But this will in nowise insure that the housemaid shall turn the mattresses and tuck the bed-clothes at the foot, or that the cook's omelettes shall not be overdone and her soufflés heavy. The footman might oblige a most particular visitor to ring three times, and the kitchenmaid might send the plates to table with grimy finger-marks. The sewing of gloves is paid at so much the dozen pairs, and the consequence is that they rip long before they are worn out. Boots that are made on a similar principle are not celebrated for their endurance. Ladies have for a long time paid for dressmaking by the piece, but they still complain of dishonesty. Many of them assert that milliners charge for more material than they use, and for "trimmings" at a rate which implies simple robbery. After all, it would seem that, in cases like theirs and others, the question to be faced is how they may best select among various inevitable methods of being plundered.

To the accusations against the British workman a "Manager" retorts by insinuating that people who live in glass houses should not throw stones, and that day labourers are not the only people who cheat their employers or ask for more money than their work is worth. The architect is perhaps open to a retort; but the whole subject seems ready to narrow itself to this one point. It is integrity we want, whether in master or servant, and neither the abolition of Trade-Unions, the growth of co-operation, nor the establishment of the rule of piece-work, would supply that without which all contracts, whether by the day or by the dozen, must be unsatisfactory. A spirit of antagonism has arisen between the employer and the employed, and no special arrangements with regard to how the work is to be done, no legislation as to the number of hours of which a working day is to consist, will ever solve our present difficulties. Both parties endeavour to protect themselves from imposition, and in so doing often try to meet fraud with deceit. There is a lust for money on both sides, which neither party seems to know how to spend for his good when he has got it. A carpenter was heard complaining to one of his mates of how the day before, after dinner-time, the master had come into the shop and told the men that the order in hand must be finished at once to be ready to go by a certain train, as his customer could not wait any longer. The men set to with a will, worked very hard to finish the job, but found afterwards that it was merely a ruse to discover how much they could do in a given number of hours. It is unnecessary to say that the next time the master made a similar statement it was received with the same incredulity as the story of the little boy who called "Wolf, wolf" for his own amusement. On the other hand, the spirit of the working-men does not seem to have improved since the recent conciliatory legislation. There have lately been several bad cases of rattening at Sheffield; and a few days ago an outrage, which is suspected to be due to trade jealousy, occurred at Salford. A barrel containing gunpowder was exploded in one of a row of new houses, and did considerable damage. A second barrel of gunpowder was afterwards found which had not gone off in consequence of the failure of the fuse. Machine-made bricks were used in building the house; and this is supposed to have excited the wrath of the brickmakers.

A ROMAN CATHOLIC LAYMAN ON PAPAL INFALLIBILITY.

WE have no clue beyond what is supplied by internal evidence to the authorship of a pamphlet published by Messrs. Rivington on the *Reasons why a Roman Catholic cannot accept the Doctrine of Papal Infallibility*. The writer tells us that he is a layman, and "a convert to the Catholic Church of more than twenty years' standing," and we gather from a note stating that he has frequently been obliged to use American reprints, from not having access to the originals, that he is probably a citizen of the United States or of Canada. As to his grounds for delivering his soul on the Vatican Council, he says that he finds it impossible, as a Catholic, to accept the new doctrines it has propounded; and as he has failed to obtain anything but evasions or refusals to discuss the matter from those whom he has consulted about his difficulties, he feels bound to state publicly his reasons for rejecting it; the

more so, as the very motives which originally induced him to join the Roman Catholic Church prevent his accepting her new doctrine. As he expresses it, "My feeling is that of utter dismay at finding what I have supposed for so many years to be solid rock melting away under my feet, like ice exposed to the burning rays of a July sun." He adds, what indeed has long been notorious, citing the words of "an eminent priest" whom he had consulted, and whom our readers will not have much difficulty in identifying, that "many, many Catholics are under a special trial at this time," and that those who urged on the infallibilist definition have incurred the heavy responsibility of causing those to doubt who never doubted before, and in fact of shaking the very foundations of their faith. But the writer's point of view will perhaps be best understood from the following clear and incisive passage, which is also a fair specimen of his vigorous style:—

Nor can I be accused of exaggeration in thus describing my position. If I have been deceived all these years on the doctrine of the infallibility of the Church, what other doctrine of Christianity can I feel sure about? I have received them all on the same authority; I have derived them all from the same sources. If, then, I have been all the time wrong on one point, why not on others also? I have hitherto believed in the doctrine of the Trinity. Suppose a future pope or council were to declare that the true doctrine of the Godhead was that of the Arian. I venture to affirm that there is not one argument, grounded on the Catholic rule of faith, that could be brought against such a decision that cannot be brought against the doctrine of Papal Infallibility. And, since the latter has been defined, I have no security that the former will not be also; and the same with every other doctrine of Christianity.

It will be said that it would be impossible, in the face of the creeds, catechisms, and history of the Church, to define Unitarianism. I was told precisely the same concerning Papal Infallibility, and yet it has been done. I maintain that Arianism is as well founded in Scripture, in tradition, and, at one time, in wide acceptance in the Church as ever was Papal infallibility; that it has far more authority in antiquity than the latter, and not nearly so much positive evidence against it. If it be urged that to affirm that there is only one person in God would be a manifest contradiction to the known teaching of the Church that there are three divine persons, is it not an equal contradiction to affirm that the infallibility of the Church resides in one person only, when the Church has distinctly taught that it resides in the body of the pastors? Why should not three persons be declared to mean only one person, if the body of the pastors can be declared to mean only one pastor?

In a word, I feel no certainty that any or every doctrine of the Church may not be radically changed by future definitions, and I therefore feel justified in declaring that the effect of the Vatican decrees on Papal infallibility is to raise a doubt as to whether there is any infallible authority in this world, except the word of God.

I had imagined, that in submitting to the Catholic Church, I had exchanged the uncertainty of private opinion for the certainty of a faith complete and unchangeable; and now I am compelled to choose again whether I will accept the new doctrine proposed, or adhere to the old faith which I received in all sincerity years ago; and that not on one point only, but on several of fundamental importance.

This is, of course, precisely the sort of objection which has been urged *ab extra* from all quarters against the Vatican decrees the remarkable point is—and it is mainly on that account that we have noticed the pamphlet here—that what has been poohpoohed by Ultramontane prelates and journalists as a mere ebullition of Protestant ignorance and malice is now emphatically repeated by a convert of many years' standing to the Church of Rome, who is very evidently not an ignoramus, and as evidently has little sympathy with Protestantism. He is well aware of the contemptuous rejoinder made to such criticism as his—that there has been no change at all, and that the infallibilist doctrine is as old as Christianity. He therefore sets himself to prove that, on the contrary, it contradicts the former teaching of the Church, changes the basis of faith, "and is consequently, in the fullest sense of the word, a *new doctrine*." It is, he observes, the first fundamental error of Ultramontanism to confound the Church and the Pope, and he cites a very apposite illustration of this from the leading Ultramontanist organ in America. A writer in *Brownson's Review* (the Transatlantic *Dublin*) says:—"She (the Church) only opposes to them the old truth of which *she* (that is, *the Pope*) is the divinely appointed guardian." On the other hand the author undertakes to show that he had always, "as a Catholic," been taught to believe that he was bound to receive on pain of damnation what the pastors of the Church teach; and that they have taught him, *inter alia*, the four following propositions, which are severally inconsistent with infallibilism—namely, that the Pope is not infallible apart from the Church; that Catholic doctrine is that only which has been believed always, everywhere, and by all; that an opinion tolerated in the Church cannot be turned into a doctrine, and that Papal infallibility is such an opinion; lastly, that the Pope's authority is limited to the executive only, whereas the Vatican decrees invest him with legislative supremacy, and thus convert a constitutional monarchy into a pure despotism. The pamphlet is occupied with detailed evidence on these four points, and although we must confine ourselves here to giving a few illustrations of the elaborate and crushing indictment framed by the author against the compilers of the Vatican decrees, we may observe that all who are interested in the question will find it well worth perusing at length. There is no declamation or superfluous verbiage, no attempt at sensational writing or anti-popery claptrap, but calm and forcible argument, supported by a copious array of carefully chosen extracts from catechisms and other more or less authoritative documents, many of which will probably be new even to those familiar with the controversy. The well-known question and answer from Keenan's *Doctrinal Catechism*, which was surreptitiously altered after the Vatican Council, opens the list, and is a fair specimen of the rest. There is an overwhelming weight of evidence collected here to prove that the new dogma is nowhere to be found in any creeds, catechisms, professions of faith, or authorized instructions of the Roman Catholic Church of any kind, and that it is both explicitly and implicitly denied by a long line of representative theologians of different dates and countries. The author thus sums up this portion of his argument:—

The evidence I have adduced, although it might be almost indefinitely extended, is sufficient to prove to every candid mind the truth of my first proposition; viz., that "I have been taught that, as a Catholic, I am obliged by Jesus Christ Himself to believe what the pastors of the Church teach, under pain of damnation; that the pastors of the Church have taught me, both explicitly and implicitly, in the clearest and most emphatic language that could be employed for the purpose, that the Pope, apart from the Church, is not infallible; that, on the contrary, the Catholic doctrine is, that infallibility properly resides in the body of the pastors, and in no individual." I am, therefore, bound, under pain of damnation, to refuse assent to the doctrine of Papal Infallibility.

No less clear is the evidence supplied both by the teaching and practice of the Church for centuries that General Councils alone have been held to convey her final and authoritative verdict on matters of doctrine. And when infallibilists turn this argument against their opponents by appealing to the authority of the Vatican Synod, the answer is obvious enough:—

To this I reply (leaving aside many weighty objections respecting liberty of discussion and matters of form made against the Vatican Council), that the decision of a council to be of force must be unanimous. Such was not the case with the Vatican Council, as I shall show hereafter. Also, such an argument in the mouth of an infallibilist is dishonest. He believes that if a thousand bishops had been present at the Council, and one only had voted in favour of Papal Infallibility, and the Pope had sanctioned that one vote, the other nine hundred and ninety-nine would have been worthless. Why, then, try to convince me by an argument he does not himself believe in? especially as the conclusion he wishes me to arrive at would, if I accepted it, be fatal to the argument in my case also.

It is a favourite argument against Bible Protestantism, of which Bishop Milner has not forgotten to avail himself, that, if Christ had intended all mankind to learn His religion "*from a book*," He would have distinctly said so, and made the obligation of learning to read it a fundamental principle of His religion. The author observes on this with much force, "It must be equally true that, if Christ had intended all mankind to learn His religion *from the Pope*, He would himself have distinctly said so, and would have laid down as the first and fundamental principle of His religion, the obligation of hearing the Pope." But, in fact, while He bade His disciples "hear the Church," of hearing the Pope He said nothing. And if it is argued that it has only become necessary to believe Papal infallibility since the Vatican Council, and that before that time it could be denied with impunity, the answer is that "this would be putting the cart before the horse," for "doctrines are defined because they are of obligation; they do not become of obligation because they are defined." And accordingly Dr. Newman has laid down the principle that "no doctrine is defined till it is violated"; but infallibilists are constrained to teach that no doctrine is violated till it is defined. It is only the natural sequel of this that while, according to Dr. Newman, the Church has always been careful to contract as far as possible the range of truths which she requires her members to accept, the Italian Jesuit Margotti desiderates a Pope "who, being himself infallible, can *daily* teach, condemn, and define"; and the English Jesuit, Father Caliwey, anticipates in the future "a *daily* provision of manna," in the shape of new Papal definitions.

Among the most interesting extracts in this pamphlet may be reckoned, for special reasons, those from living or very recent writers, some of whom actually took part in the Vatican Council. Thus, for instance, Archbishop Hughes, of New York, says of the transformation of opinions into dogmas:—

"The doctrines of the Catholic Church are FIXED STARS in the firmament of belief, and the transmutation of AN OPINION INTO A DOCTRINE would be the raising of a new light, a species of religious reformation which Protestants have taken INTO THEIR OWN HANDS, and for which Catholics have neither the talent, inclination, NOR AUTHORITY."

There are again some remarkable passages quoted from works of Cardinal Wiseman's on what he calls "the Italian doctrine" of Papal infallibility. And they gain an additional interest when placed in juxtaposition with the very opposite teaching of his successor in the Cardinalate and See of Westminster. We can only find room for one short extract:—

Thus Cardinal Wiseman affirms:	Cardinal Manning maintains, on the contrary—
1st. That "the Catholic Church holds a dogma often proclaimed, that in defining matters of faith *she* is infallible."	1st. That "it is a dogma divinely revealed, that the Roman Pontiff . . . is possessed of that infallibility with which the divine Redeemer willed that His Church should be endowed for defining doctrine regarding faith or morals."
2nd. That "all agree that this infallibility resides in the unanimous suffrage of the Church."	2nd. That "such definitions of the Roman Pontiff are irreformable of themselves, and *not* from the consent of the Church."
3rd. That Papal Infallibility is "the Italian doctrine," "their opinion," and "their peculiar theory."	3rd. That Papal Infallibility is "the tradition received from the beginning of the Christian faith."
4th. That the assertors of this opinion "manifestly" cannot "demand that their peculiar theory be received by others as the defined or acknowledged principle of the Church."	4th. That "we judge it altogether necessary solemnly to assert the prerogative which the only-begotten Son of God vouchsafed to join with the supreme pastoral office."

5th. That "neither think we that they could reasonably charge with misunderstanding their '*Church's doctrines*,' such as would not so receive it."

5th. That "if any one—which may God avert—presume to contradict this our definition, let him be anathema."

I believe one might search the world in vain to find two more contradictory statements referring to the same point than the explicit teachings of the first and second occupants of the See of Westminster, on the doctrine of Papal Infallibility.

The author is throughout peculiarly felicitous in his extracts. The following passage, quoted by him with running comments, from a political article in the *Dublin Review*, and applied to the revolution which Pius IX. is labouring to introduce in the Church over which he presides, strikes us as singularly pertinent; and it serves to illustrate the remark which the author says was made to him by an Italian priest about the English converts of Cardinal Manning's school, that "these gentlemen have greatly simplified matters, since they have reduced the Bible to one text, 'Thou art Peter,' and the creed to one article, 'I believe in the Pope.'" With this citation from the *Dublin Review*, as describing the Ultramontane policy in the Church, we must conclude, recommending our readers to make a fuller acquaintance with the Layman's *Reasons* for themselves:—

"In order to set forth more clearly what we mean, we will make a supposition, which might possibly be thought disrespectful to a living august personage, were it not so grotesquely in opposition to existent facts" (unfortunately it is not so in the case I refer to). "We will suppose that—things otherwise being much as they are—some Prince of Wales were to grow up with intense sympathy for absolute power and intense hatred of constitutions. To do this an utterly prince every justice, we will suppose his conviction to be very deep, that the people's true welfare would be far better promoted by absolutism than by constitutionalism (by Ultramontanism than by Gallicanism). He conceals his principles, however, and in due time ascends the throne. Established there, he takes his measures in silence and secrecy until he thinks himself able to throw off the mask (by filling up every vacancy in the episcopate with tools ready to do his bidding, even violating established rights in order to do so. Archbishop Manning was appointed in defiance of the right of the Archbishop of Fitzjames, who was Cardinal Wiseman's coadjutor *cum jure successionis*.) He then openly appeals to the army for support" (that is the bishops and clergy); "and he has intention of imposing taxes and enacting laws (of matters on faith and morals) on his own authority; and proceeds in regular form to decree a final dissolution of the Houses of Parliament (General Councils). Every one must see how unspeakably absurd it would be to speak of this man as a mere tyrant *in usu exercitio*. He is not exercising tyranny at all; a power which he possesses, but a usurpation; a power which he never had at all. He never was sovereign; he was only one constituent part of that sovereign body which was composed, as we have said, of King, Lords, and Commons, acting together in accordance with the British Constitution. But his violent usurpation therefore has rendered himself a tyrant *in titulo*, and (as all tyrants in title who are members of the body politic must necessarily be) a rebel against the sovereign authority (the Church). In other words, and it is to this that we would draw special attention—he has revolted against the authority set over him by God, and committed that sin of rebellion which successive pontiffs have denounced with such unsparing severity. He is simply a rebel, as any noble or plebeian might be who should attempt to subvert the sovereign authority; and whoever pardons might justly indicted on him for the crime (not of tyranny, of course not, but) of rebellion and treason. . . . But when so important a member of the sovereign body as the monarch—one possessing privileges so peculiarly his own—breaks off by his own crime from further connection with that body, the sovereignty itself becomes for a brief period in abeyance."

SOMETHING LIKE A TRAGEDY.

THE novel with a purpose is sometimes superior to the ordinary novel in one respect—it is shorter. If Mr. Edward Jenkins had been doing ordinary literary work, he would not have tried to bring into "one small picture" what he calls a "somewhat comprehensive view" of certain evils, and he might possibly have produced a representation of life which was not manifestly unreal. His story is like one of those "penny dreadfuls" which show us the nobility of England perpetually committing murders and hiding bodies in dark closets, which nevertheless is not, we believe, a common practice in aristocratic circles. The *Devil's Chain* (Strahan and Co.) is neatly woven of murder, suicide, adultery, seduction, and conflagration, besides drunkenness, which is the near or remote cause of every other evil that afflicts life. A couple, well born, and endowed with beauty, talent, and wealth, quarrel and ultimately separate. The husband, says Mr. Jenkins, in the "penny dreadful" style, "threw himself into the wildest society of the county," and the wife kept a lover and a brandy bottle. Afterwards she had more lovers and more drink, and finally she jumped out of window in St. Martin's Lane, and was smashed on the pavement, as Mr. Jenkins, with disgusting particularity, describes. We really do not see what excuse there is for writing in this fashion. It is not true that profligacy in women is mainly caused by drink, and therefore it cannot be said that it is necessary to describe a licentious life in order to show the danger of taking sips of brandy. "Cry aloud, spare not," is, however, the motto of Mr. Jenkins. This lady has, among others, two lovers; one is a young man, son of a rich distiller, and the other is a man of middle age, well known in fashionable and political life, and at this time Secretary of State. When he calls upon the lady he wears a cloak and a felt hat like a transpontine brigand, and he and the young man happen to call on the lady at the same time, and are in her room when she jumps out of the window. Mr. Jenkins may perhaps see, although we do not, some links of the Devil's chain forming a connexion between the fact that this young man's father was a distiller and the fact that he visited this lady. But for anything that appears, the Secretary of State may have belonged to a Liberal Ministry and have been open to conviction on the Permissive Bill. However, he absconds to avoid exposure, and the young man considerately absconds also to escape questions which might compromise the Minister. The last chapter describes the burning of an emigrant ship through a passenger breaking a bottle of spirits and striking a match to look for the spilled liquor; and, to make the Devil's chain complete, the Secretary with his valet is put on board this ship, and both perish. There is another and even more grotesque combination of alcohol and adultery in the story which a clergyman tells of himself in letters to his wife. Mr. Jenkins has revived the epistolary method of novel-writing which was practised by Richardson and Scott, and he prints letters in italics with words of awful import underscored. "Thirst grew upon me," says the writer, "as every habit grows upon unwatchful souls." He gradually resorted to equivocation and tricks to conceal the growing habit. Prayer soon became an empty form, and principles yielded to desires. Twice he left his wife and returned, and then we find him living and dying in company of a girl whom he has seduced by wholly unexplained means. Another girl, born of respectable parents, young and pretty, has been brought to shame and ruin from being taken ill in the street, and drinking hot brandy-and-water as a supposed restorative. The Devil's chain is completed by the statement that the cause of the girl's illness was that, as she carried a parcel to a customer, she saw on the pavement the body of the woman who had jumped out of the window. If Mr. Jenkins thinks this a probable account of the seduction of a milliner's shopgirl, we do not agree with him; and if it be not probable, we can see no excuse for publishing it. Mr. Jenkins, as we understand, does not set up for a reformer of all social evils, but only of those which he ascribes to drink. But it may be surmised that a milliner's girl would be much more likely to be led away by dress. The supposition that a middle-aged clergyman, who has taken beer by day and toddy at night under the notion that he was thus supported and cheered in his work, could gradually descend by these means into the lowest depths of immorality would be too absurd to deserve attention if it were not for the unpleasant details of the picture. Does this author really mean to represent that every man who drinks beer and whisky is likely to become an adulterer, and every woman a prostitute? If he does not, we think he might adequately discuss the evils of the liquor trade without bringing in other evils which are only remotely connected with it. Many ladies as they approach middle life feel or fancy a need for stimulants which in youth they disliked. It may be admitted that this desire should be carefully controlled, but to represent as likely the consequences which Mr. Jenkins indicates would be a gross outrage at once on decency and probability. Unless some useful result is expected, the history, real or imaginary, of seduction and adultery had better remain unwritten.

It pleases Mr. Jenkins to call a potboy a "myrmidon," as if that were an abusive epithet. He has seen workmen engaged on "rising palaces" at South Kensington supplied with beer at 10 A.M. by the "myrmidon" of an adjacent alehouse, and he would like to drub that rascal's back for "stealing away the wits of labour with his illegal pedlary." Mr. Jenkins appears for the good of the human race to have experimented upon himself by taking a glass of beer in the morning, and he finds the result to be "a temporary flush, a feverish hour, reaction and thirst, a muddle of the brain." But he forgets that bricklayers begin work earlier than he does, and work in a different way, although both construct stories. It is possible that a pint of beer at 10 A.M. may do a bricklayer good, or at least no harm, or that he may have sense to know whether it does him good or harm. Mr. Jenkins ought to know that it is not illegal to sell beer to be drunk off the premises, and when he calls beer "pedlary," he classes it with many useful articles. He objects to giving the dustman a glass of beer, and says, "If you must give a gratuity, give an obolus." It seems strange that he could not say "give a penny," and he does not seem to be aware that it is much more common to give money than to give drink, although both in this and other countries the idea of "drink money" prevails to an extent that must sadly distress Mr. Jenkins. We believe that at the Hospital of St. Cross, near Winchester, the custom prevailed of giving a drink of beer to all comers, so that there was an ancient and religious foundation actually engaged in forging links for the Devil's chain. The inquest on the woman who jumped out of the window lasted until seven o'clock, and, as the coroner was too late for his family dinner, he dined with a journalist at a tavern. They both drank freely of claret and whisky-punch; the coroner went home rather unsteadily, and the journalist, who was "a trained sybarite," by which Mr. Jenkins appears to mean a seasoned toper, took a cup of tea and wrote an article on the miseries of drink, which Mr. Jenkins calls "flabby and flatulent," although the extract which he gives from it is as well written as the rest of his book. There is a letter, printed in italics, from the dead woman to her daughter, in which she describes the process of her own ruin. She was ambitious of political distinction for her husband, and she was a mother. She attempted things which overtaxed her strength; she consulted her physician, and he recommended a little brandy. Thus in her case the Devil's chain was forged. The moral of this story would seem to be that married women should throw away ambition in order that they may not need brandy; for, if once they begin to take it, they will come to—we will not say what.

Mr. Bighorne, the rich distiller, has a son, of whom we have already spoken, and a daughter, beautiful and clever, and, as

the author oddly puts it, "chivalrous." No calamity happens to her personally, although she is greatly distressed about her brother. Mr. Jenkins permits her to exist and flourish in consideration of her saying bitter things to her father about the social effects of his nutty brandy and cream gin. But the other characters are slaughtered as ruthlessly as in the burlesque of *Tom Thumb*. A gigantic and savage ironworker murders his wife and six children, and is hanged. A middle-aged woman jumps out of a window, and is killed. Her daughter, whom she had placed in a clergyman's family for education, is lured away by another clergyman, middle-aged and given to drink, and brought by him to London, where he dies, and she takes to her mother's life. Mr. Jenkins makes us follow this girl to a casino, which he describes with indignant virtue, and there we leave her. Then there is a Methodist tradesman in a country town, who takes gradually to drink, and, although he escapes with life, loses reason. This man's daughter, as we have already heard, was seduced under the influence of a glass of warm brandy-and-water, and she is seen by us for the last time at a dancing-room at the East End. The distiller's son dies of fever, and the Secretary of State perished, as we know, in a fire at sea. Thus almost a clean sweep is made of the board, and the only piece left standing is the beautiful and "chivalrous" young lady, who, it is hinted, may marry a curate who nursed her brother in his last illness. Yet why, it may be asked, should not sin and sorrow still pursue the distiller's family? Even the beautiful and "chivalrous" girl will in time become a middle-aged woman, and will like, perhaps, a drop of brandy, although not that which her father manufactures. Her husband, too, may come to like toddy after the labours of the day, with the same disastrous consequences that have been depicted. Indeed, if we may accept Mr. Jenkins's estimate of causes and effects, England will be rapidly depopulated. According to him, every one who drinks at all drinks to excess, and sacrifices either life or reason. During the last fortnight we have most of us given or received hospitality, and in what we call keeping Christmas we have been doing the Devil's work. In taking a glass or two of wine or a tumbler of grog we have launched ourselves on a career of profligacy which will lead men to the prison, the madhouse, or the grave, and women to places which need not be particularly mentioned. This, at least, is Mr. Jenkins's notion of our prospects.

THE OLD MASTERS AT THE ROYAL ACADEMY.

THIS Seventh Winter Exhibition takes by surprise. It had been feared that the standard of former years could not be maintained—that the Academy would exhaust the resources of the country. We are glad to find that, at least in the present year, these fears prove unfounded. On all sides we hear the opinion expressed that seldom, either in the Academy or in the old British Institution, has there been seen a collection so varied, pleasing, and valuable. The pictures exhibited amount to 285, being sixteen more than last year. The contributors number eighty-two, of whom the principal are the Queen, the Duke of Sutherland, the Duke of Westminster, Earl Radnor, Mr. Cowper, Mr. Leyland, and Mr. Fuller Maitland. The Queen sends no less than twenty-seven pictures, some of which, such as the large panel now ascribed to Melozzo da Forli, and the eminently tasteful and artistic portraits by Gainsborough of Queen Charlotte and the three Princesses, are of rare interest and beauty. The works assembled serve to furnish rather scantily, yet sufficiently, five out of the ten rooms in Burlington House. The hanging is neither chronological nor according to schools. Thus English masters are often found in close neighbourhood to Italian, Spanish, Dutch, and French painters. This arrangement is all but inevitable, and it has at all events the advantage of rendering the galleries decorative and in balance. The collection strikingly illustrates certain facts—the all but exhaustless treasures stored in private houses, also the transfer from hand to hand incident to the fall of some families and the rapid accumulation of wealth in others. Again, never before has it been made more apparent how very high was the merit of our native school of portrait-painting in the latter part of the last century, as evinced by thirty works by Reynolds, six by Romney, and nineteen by Gainsborough. No other nation at that period produced portraits at all comparable to these masterpieces, and it is satisfactory to see how little they suffer under close competition with Vandyck and other historic masters. This exhibition is also distinguished from some of its predecessors by the comparative paucity of forgeries and inferior copies; yet we might have been spared "The Annunciation" (171), by Fra Angelico, and "Christ Bound to the Column" (200), ascribed, according to usual routine, to Morales. It is in vain for the Academy to declare "that it can accept no responsibility as to the authenticity of the pictures." The responsibility of exhibiting false works as true, bad pictures as good, is specially grave for an Academy which, under Royal charter, has the art education of the people committed to its charge. A much more honest course would be for the Academy to adopt the outspoken confession of Dr. Johnson, who, when asked by a lady why he had made a certain entry in his Dictionary, replied, "Ignorance, my dear madam, sheer ignorance." The Academy has certainly a peculiar right to evade responsibility as to ancient art on the ground of ignorance, and it might even adopt as a motto in these annual exhibitions the hackneyed line concerning a "little knowledge," or the well-worn proverb "omne ignotum," &c.

But there are certain unknown authorships—the "Unbekannt" of the Germans, and the "ignoti" of the Italians, which, like moot points in history, lead to interesting discussion. Such is the large and important picture (203) ascribed to Melozzo da Forli (b. 1438, d. 1494), a master of marked individuality, who is distinguished as among the first to reconcile the Italian Renaissance with the direct and literal study of nature. The pictures which can with certainty be identified with this bold pioneer are few; he has occasionally been confounded with his predecessor, and more than equal, Piero della Francesca, with his scholar, Marco Palmezzano, and even with Justus of Ghent, who is known to have worked in Urbino. The standard by which Melozzo can be best judged is the portrait picture of Sixtus IV., with cardinals, librarian, and others, once in the library, and now in the gallery, of the Vatican. Internal evidence somewhat tends to the conjecture that the Vatican picture and that from Windsor may be by the same hand, though Messrs. Crowe and Cavalcaselle deem the execution different; beyond doubt the panel now in the Academy has been greatly over-painted. Both, however, are strictly portrait pictures, and there is much in common between them in the generic style, in the bearing of the figures, and in the stern command and outlook of the heads. The subject of this local and historic scene is less doubtful than its authorship. Federigo II., Duke of Urbino, is seated with a book in his hand; before him stands his little son, Guidobaldo; both are intently listening to the learned discourse of a reader on the opposite side of the picture. Behind the Duke is a group of seated courtiers, who, with a profound gravity suited to the time and place, have the look less of sycophants than of men learned in the nascent arts and sciences. It is said that "Rhetoric" and "Music" in the National Gallery once formed with this picture parts of a consecutive series, but the measurements do not accord. The work now exhibited is composed rather on the basis of geometric proportion than on lines of beauty, and this may be one reason why it should be accredited to Melozzo, a painter who infused into art the rigidity of science, and reduced pictorial composition to the strict laws of vision. Giovanni Santi, the father of Raffaelle, writes:—"Melozzo a me si caro che in prospettiva ha steso tanto il passo." And yet the perspective is here so forced as scarcely to be right; the point of sight has been placed at least a foot below the frame, so that the spectator is *a sotto*, as the Italians would say; consequently the architectural accessories were never intended to be viewed, as now in the Academy, on the level of the eye. But hanging must ever be a compromise; and in this case everybody desires to examine the surface closely. At the private view a kind of council of artists and critics was held before this crucial work, but we can hardly hope for a solution of the difficulties involved. Those who wish to pursue the inquiry further may consult Dennistoun's *Memoirs of the Dukes of Urbino*; the volumes of Kugler and of Messrs. Crowe and Cavalcaselle; also the Catalogue of the National Gallery.

The problematical pictures, of which there are many, have in this as in former years been concentrated in the Fourth Gallery—a room which sceptical people are known to enter as a kind of hospital for *enfants trouvés*. "The Annunciation" (171), here boldly set down to Fra Angelico, in all probability was never even seen by the master; at all events it is now so grossly re-painted that scarcely any part of the original surface remains intact. It is hard to excuse the admission of such a product. Again, "Judith with the Head of Holofernes" (179), though just possibly by Mantegna, would appear, by comparison with the far superior drawing of the same subject in Florence, to be but the feeble and blundering handiwork of a pupil or copyist. As to "A Landscape" (178), assigned to Raffaelle, there is no precedent for such an assumption. With equal or more reason might it be set down to French miniaturists such as Fouquet, or to Teutonic painters such as Joachim de Patiuir. Connoisseurs seem to have unbounded trust in the credulity of the public; else how can it be supposed that this Cisalpine miniature could be affiliated on Raffaelle, without, as far as we know, one scrap of documentary evidence? Again, one would surely assign, not to Giotto, but to the more degenerate school of the "Giottesque," the "triptych, containing in the centre the Virgin and our Lord, and above and on the wings twenty-three small subjects from the life of Christ" (187). The execution is far too lame and blotchy for Giotto. No doubt, half a century ago this work, with perhaps a thousand more of the same quality, would have been set down as a matter of course to Giotto himself. But modern criticism has been in no way of more use than in distinguishing between a great master and his pupils. There are painters, such as Giotto and others, who, had they lived to the age of Methuselah, could not have got through the works assigned to them. The proper nomenclature of this triptych would be "Byzantine Style about the time of Giotto." A very lovely "Portrait of a Lady holding a Vase" (185) falls under like sceptical criticism. All such pictures, whose name is legion, were in a past generation ticketed by common consent "Leonardo da Vinci." Now they are, equally as a matter of course, assigned wholesale to his pupil Luini. This typical, refined, and sensuous head is assuredly not by Leonardo. It has not his severity; it is of a later date; but to pronounce positively that the master is none other than Luini would be rash in the present state of subversive and speculative criticism. Another puzzling picture—most exquisite in decorative colour, especially in the gold background painted over in lovely

design with transparent reds—is "The Virgin and Child," inscribed "Michael Johannis Bono Venetus pinxit." We only know of a Bono of Ferrara. An example of his style is seen in the National Gallery. The artist worked in Sienna, and the picture before us in its leanings to Byzantine types, and in its highly and essentially decorative colour, belongs not so much to Ferrara, or even to Venice, as to the school of Sienna, or to the cognate style of Gentile da Fabriano. The work is anomalous, considering its archaic manner, with the comparatively late date of the fifteenth century. The painting over gold, a beautiful process which we should like to see more practised in the present day, is specially worthy of examination. We do not incline to give much credence to a picture of the "Virgin and Child" (195), ascribed to Gentile da Fabriano; in quality it is greatly inferior to the works of the same essentially spiritual painter in Italy; it can hold no place before the "Annunciation" in the Belle Arti, Florence. Also "The Sacrifice; a Sketch" (199), ascribed to Bonifazio, bears no comparison with his *chefs-d'œuvre* in Venice and Milan. At a glance, too, it is evident that "The Virgin and Child; Rocky Landscape in Distance" (202), ought not to be assigned to Francia, but to Perugino; yet in all probability it belongs to neither master, but only to a scholar. These examples make it evident that our English collections are of a mixed character; that they consist of a medley of works, good, bad, and indifferent. And it is to be regretted that Dr. Waagen, in his "Treasures," was mostly in such an amiable mood as to give, in an easygoing way, sanction to accepted errors. His style of criticism on the "treasures" of his hospitable entertainers usually assumes the form of a panegyric. That the Royal Academy "can accept no responsibility" only makes bad worse.

This Fourth Room, which, as we have seen, goes back in an instructive way to the archæology of the art of painting, contains several other works worthy of study. Here is a "Virgin and Child; inscribed in capital letters—Petrus Alamanus civis Asculanus pinxit" (193). The date is probably the last quarter of the fifteenth century; the style is that of Carlo Crivelli, a master who, with the exception of the Brera, Milan, can nowhere be so truly appraised as in our own National Gallery. This picture is distinguished by that transitional state of technique which allows of basreliefs in the midst of the flat surface belonging properly to a picture. Here the glories round the heads, and the decorative accessories of ornament and costume, are in absolute bodily relief, after the manner of Byzantine art and its derivatives in modern Greece and Russia. We do not account this specimen as among the highest of its kind, yet we cannot but think that Messrs. Crowe and Cavalcaselle much depreciate the master when they pass the judicial sentence:—

> In Carlo Crivelli's school, the only pupil whose name is at all known is Pietro Alemanno, a most affected and imperfect imitator of his master, alike devoid of power as a draughtsman and as a colourist. His figures are remarkable for the slenderness and flatness, as well as for the careful finish, of miniatures; and his style may be described as a mixture of that of Crivelli and Girolamo da Camerino.

The same room also gives prominence to Filippino Lippi (b. 1460, d. 1505), an artist who inherited the wild genius of his reputed father Fra Lippi, with a still further afflatus of diablerie. We pass hastily over two *cassone* panels, "The Battle of Porto Fino, near Genoa" (188), and its companion, "The Triumphal Entry of Roberto Mannelli into Porto Fino" (198). Certain breakdown passages in drawing and execution pronounce these most dramatic compositions to be of the school and not of the master. What is chiefly interesting in the panels is, first, that they are good examples of the Italian practice of painting marriage and other chests; secondly, that these decorative pictures have been allowed to perish just as they best liked. The restorer's touch has not presumed to arrest the ordinary stages of decay in nature. The curious antiquary will rejoice, but the general public always prefer the polished surface of the picture-cleaner. In far more presentable condition is "The Adoration of the Magi" (170), assigned to Filippino Lippi, but possibly from the easel of the Peselli. The scene, thoroughly characteristic of the time and master, would be fitter for the London stage than for the manger at Bethlehem. The Madonna and Child are seated on the marble steps of a supremely architectonic palace, and the assemblage of Magi, with attendants, becomes decorative to the last degree. But here again sceptical criticism protests; touch, the last test with connoisseurs, handling, which is to an artist what handwriting is to the author, reveals the imitator, not the artist.

REVIEWS.

HUNTER'S LIFE OF LORD MAYO.*

THAT a Life of Lord Mayo should be written was a natural consequence of his brief but vigorous administration in India, and his untimely death. And in several respects Mr. Hunter is excellently qualified for this task. He is known both in India and England as a writer who has contrived to make obscure annals and uncongenial topics palatable to many readers. He is master of a flexible, polished, and even eloquent style. His experience as a member of the Bengal Civil Service enables him to thread his way carefully through the inevitable labyrinth of Oriental titles and terms. Ample and trustworthy materials have been placed at his disposal by the colleagues, friends, and relatives of the late Viceroy, of which he has made a good use. The result is that he has produced two volumes precise in statement, faithful in portraiture, and, if controversial, not too much overlaid with details. But, while admitting that Mr. Hunter has done justice to the memory of Lord Mayo, we are by no means disposed to join in the chorus of praise which has greeted the appearance of this biography, or to admit that the volumes are not, in several respects, open to criticism. The *Times*, by the way, in what is otherwise a just and discriminating review of this work, dubs its author "Professor" for two columns and a half. Mr. Hunter is, in his own line, a distinguished member of the Bengal Civil Service, and his literary performances have obtained for him a good deal of notice and several honorary additions from Foreign and British Societies; but we have been unable to discover that he has held any office which justifies the title invented for him by the leading journal. Nor do we think that any member of the Civil Service, whether nominee of the Directors or brilliant Competitioner, would be very anxious to claim a denomination which in these days is often assumed by teachers of acrobatic feats and the art of natation. However, there is happily room in India for the display of talent of every kind, and it may be very right and proper that some men should abandon all hope of distinction in the rough ways of district management, or in the hard work of the secretariat desk, for the more pleasant, and perhaps quite as profitable, paths of literature. Anglo-Indians will hardly repress a smile at the profuseness with which Mr. Hunter distributes laudatory epithets to the colleagues, advisers, and subordinates of Lord Mayo. We say this because he is very careful to inform us that he has imposed on himself "a rule of reticence regarding the personal qualities of living men." After this it is amusing to reckon the number of times in which he has applied the term "eminent" to councillors, secretaries, and diplomatists; and the paragraphs in which he ostentatiously goes out of his way to smother individuals with praise. There is an admirable precept in Arthur Clough's New Decalogue, which ambitious young civilians will do well to remember:—

> Honour thy parents: that is, all
> From whom advancement may befall.

It is a natural incident to such a biography that it should deal with the opinions of men still living, and with measures the effect of which is imperfectly felt. But there are asterisks which conceal nothing, and gaps which it would have been perfectly innocuous to fill in with the name. In dealing with some reforms which are not yet fully tested, it was perhaps impossible to avoid the appearance of controversy; and many of the pages are occupied with extracts from minutes and letters in which the late Viceroy argues out his own views. It is sometimes rather difficult to say where this "eminent" councillor or that tried "friend" ends, and where Mr. Hunter takes up his own parable. Perhaps this was inevitable, but it only shows the difficulty that attends a biographer who is treading, as it were, on the heels of his subject-matter. Even such a practised writer is not always free from little blemishes. The men who compose our cavalry are not usually styled "privates," but "troopers." To translate the term Peshwa (the old head of the Mahrattas) by "over-lord" is to substitute what is for the majority of readers something more mystic and bewildering than the original term. Lord Mayo, with all his geniality and good nature, would have been sorely tried if he had seen himself described as a "clever sportsman with his gun." He was, it is well known, a good rider and a capital shot. We are sorry, too, to find Mr. Hunter not above claptrap when he pictures an Indian "husbandman and his family toiling, bare-backed, in the sun or under the tropical rains." Does the author, who has seen seed-time and harvest, really mean that the Ryot would be better off if he did not divest himself of his *chuddur* or upper garment when he is ploughing or weeding? In relating a well-known anecdote of the late Justice Maule, who sarcastically explained to the prisoner why there was not one law for the poor and another for the rich, Mr. Hunter robs the anecdote of its point by representing the trial as one for wife-beating, instead of bigamy. We think, too, that the author is quite wrong in ascribing the downfall of the Moghul Empire to the abandonment of what he calls a "peripatetic" Government, or Life in Camp, as practised by emperors from Akbar to Aurangzib. The unwieldy Empire of Delhi fell owing to Aurangzib's bigotry, its own corruption and weakness, the raid of Nadir Shah, and the rise of the Mahrattas. But "false centralization" had nothing to do with victories gained over Imperial forces in Northern India, or with Plassey. These, however, are partial blots. A graver objection to Mr. Hunter's work is that, while bringing out the merits of Lord Mayo's administration, he has made it appear that Lord Mayo either abandoned for ever some vital errors into which his predecessors had deviated, or at least that he discovered some new mode of governing the Empire which had escaped their penetration. We do not say that Mr. Hunter puts this view forward in so many words, but this is the impression caused by his flowing narrative, as we shall endeavour to show.

We do not agree with critics who hold that too much or too little has been made of Lord Mayo's early life and education. It was quite right to give us a glimpse of the family circle at Hayes, to show that Mr. Bourke owed much to home influence, nothing to any public school, and very little to Trinity College, Dublin. We see that he was fond of history, that he dabbled

A Life of the Earl of Mayo, Fourth Viceroy of India. By W. W. Hunter, B.A., LL.D., of Her Majesty's Bengal Civil Service. 2 vols. 12 Smith, Elder, & Co. 1875.

in authorship, and that with his prospects, as was natural, he represented in Parliament, first, Kildare and then Coleraine, till driven, like other politicians, to seek an English borough. But we think that more might have been made of the Irish Secretaryship and less of the pedigree of the Bourkes. Had Lord Mayo never been Viceroy, his biography would probably not have been written. But when the story of his life came to be told, a greater space should have been given to the Irish Office. That a violent outcry arose, when Mr. Disraeli selected his Chief Secretary for the post of Viceroy, is partly to be explained by the waning popularity of the Ministry after more than two years of office, and partly by the extravagant price set by English politicians and journalists on Parliamentary eloquence and readiness in debate. These accomplishments, as Macaulay has remarked, in the last century well nigh made a Chancellor of the Exchequer of Sheridan, though he could hardly work a sum in long division; and to this day, many men look on ability to arrest the attention of the House for a couple of hours as a guarantee for every kind of administrative talent. Others are unable to understand the sudden revelation of new powers in a man who would not perhaps be placed high in the second flight of Parliamentary orators. They think either that Lord Mayo had a rare talent for concealing his own merits, or else that India may be governed *parvuld sapientiâ*. Both views would be wrong, and the Premier knew his man. And surely the experience of the past few years might have taught us that ability to engage a fastidious audience or to move the masses by impassioned rhetoric is not necessarily coupled with executive talent, or even with the capacity to understand Englishmen. Some of those orators whom we should gladly walk ten miles to hear would make a poor figure if called on to govern proud and sensitive feudatories, to get loyal work out of the civil and military servants of the Empire, and to carry with them that important, but occasionally captious, section of the community which is made up of merchants, barristers, and men of enterprise and independence. Lord Mayo, curious as it may sound to those who only knew him as Master of the Kildare hounds or as the exponent of Irish grievances and their remedies to an impatient House, was possessed of some of the best qualities of a governing race. The position of Viceroy was just calculated to develop them to the fullest. And so we arrive at the main features of an administration which Mr. Hunter has described in four or five chapters. The time is not yet come when the whole of Lord Mayo's Afghan and Central-Asian policy can be disclosed. But its outline is faithfully given, and Mr. Hunter allows prominence to the truth that Lord Mayo did *not* "reverse" the policy of his predecessor. To use the late Viceroy's own language to one of his confidential subordinates, at a time when the Indian newspapers were commenting on a supposed change, "So far from abandoning it, I have taken it up, and given it a precise limit." The Umballa Durbar, with its splendid pageantry and political consequences, was the corollary to Lord Lawrence's timely move. If anything was "reversed" or "abandoned" there, it was the Whig policy of thirty years before, with its tissue of political errors and its legacy of national disgrace. To send away the Amir of Cabul awed by our display of strength and grateful for our seasonable munificence; to teach him, and other princes at Nepaul, Kashmir, Kelat, and even Burmah, that the British Government only desires to preserve their independence and nationality; to oppose to the advances of Russia neither unseemly bluster nor helpless indifference; to meet intrigue and encroachment by consolidating our power within the Himalayas and the Indus, and not by occupying expensive and unhealthy outposts beyond them; to gain, in short, the confidence of the chiefs and to secure the contentment of the people—these considerations formed the key to Lord Mayo's policy with independent and with tributary States. With this view he took steps to settle a long-standing dispute regarding the boundary of Persia in Seistan and Beluchistan; he sent a friendly embassy to Yarkand; he taught the Loshais on our Eastern frontier that unhealthy jungles and pathless mountains could not stop the advance of a British column; and he insisted that principalities, internally independent, should be governed with common decency. But Mr. Hunter, while describing all this very well, writes with the air of one who has made an astounding discovery, that Lord Mayo was "his own foreign Minister and himself the initiatory member of Council for foreign affairs." This is an illustration of our previous criticism. Lord Mayo simply did what every Governor-General of note had done before him. The Foreign department has always been emphatically the Governor-General's own province. Mr. Webbe under Lord Wellesley, Mr. Dowdeswell under the Marquess of Hastings, Sir F. Currie under Lord Hardinge, Sir H. M. Elliot under Lord Dalhousie, Sir George Edmonstone under Lord Canning, four Foreign Secretaries in succession under Lord Lawrence, may very likely have expressed the sentiments or given effect to the policy of their respective chiefs. But the Governor-General's was the mind to conceive and the spirit to animate; and generally from him, too, would come the stately and sonorous phrases of some great manifesto whereby the Paramount Power informed the English and native community that annexation must follow on unprovoked aggression, or that some unprincipled and unmanageable tyrant had at last filled the cup of misgovernment to the brim.

Next in importance to the Foreign is the Financial department. Mr. Hunter, at some length, with ample statistics, and by the aid of the minutes of Lord Mayo and his Councillors, shows what was done in three years to put the revenue and expenditure on a sound basis. The late Viceroy, alarmed at a deficit, began by insisting on the most accurate returns and the most rigid economy in all departments; he then equalized the salt duties, and removed vexatious checks on the internal traffic in this article; and he proposed some most necessary reductions in the English and native forces, of which little more than one-half were sanctioned by the Home Government. There was every reason why each soldier, trooper, or battery dispensed with by Lord Mayo should have been struck off the estimates. This was not done, and Mr. Hunter, with a naïve and charming simplicity, hastens to assure us that neither Mr. Gladstone nor the Duke of Argyll could perpetrate or connive at a job. Does the author really suppose Cabinets to be above certain "influences," or hold that the exigencies of Indian finance will ever be permitted to outweigh the military privileges of the Horse Guards? Of course reductions were not the only measures taken by Lord Mayo to produce an equilibrium. He resorted to the unprecedented measure of raising the Income-tax, already unpopular, in the middle of the financial year. The expedient, though not wholly indefensible, led to a deal of criticism, opposition, and discontent, and eventually to the repeal of the tax. A far better measure was what is termed the decentralization of the finances. No greater contrast can be imagined than the powers of management formerly vested in the Indian Local Governments and their power to spend money. The sanction of Government used to be necessary, not only for disbursements on new public works, but for petty additions to existing salaries, or for the temporary entertainment of a few spare hands. The effect of this supervision was to discourage honest exertion, to multiply correspondence, and to generate a series of conflicts exquisitely irritating and indefinitely prolonged. Some changes had already been introduced, but Lord Mayo put an end to this state of things by granting yearly to each Governor, Lieutenant-Governor, or Chief Commissioner, a fixed and consolidated grant, and allowing them, with this, to defray the charges of civil administration, inclusive of public works, but exclusive of the army. Under certain limits and provisions, this grant is at the absolute disposal of the local Government, to be shifted and distributed as it may think best. The total of the allotment was about four and a quarter millions. This was a real reform, and it has hitherto been a success, while in favour of Lord Mayo's general financial policy there is much to be said. But Mr. Hunter, while dwelling on previous deficits, does not draw prominent attention to the fact that before the arrival of Lord Lawrence, and in the time of Lord Elgin, it had been determined to spend ten millions on barracks; and that between 1864 and 1869 large additional expenditure had been simply inevitable owing to higher salaries, the purchase of canals, the new India Office, irrigation works, fortifications, and all the other items of Government at a higher level and on a more expensive scale. In fact, the effect of Lord Mayo's financial measures ought to be tested, not by looking at the revenue before, but after, his Viceroyalty. It will be seen that the greater part of these difficulties have arisen from the sheer impossibility of getting all the essentials of a progressive, highly civilized, and expensive government out of a moderate revenue which may roundly stand at fifty millions a year. The Financial Resolutions of Lord Northbrook show that, even in Lord Mayo's time, it became necessary to borrow, for loans to corporate bodies and municipalities, the sum of nearly eleven millions; that in 1874-5 Lord Northbrook had to raise eight and a half millions by loan, for reproductive works, municipal loans, and the expenditure on the famine, of which only two millions were due to the latter cause; and that by the year 1877-8 it is calculated that twenty-two and a half millions must be spent on railways and irrigation works to secure the empire against similar calamities. In fact, Lord Northbrook, only two years ago, was wisely and deliberately framing his budget for a deficit of three millions and a quarter. These figures, which we take from the most authentic sources, lead to the inference that Indian revenue may be expansive, but that its expansion is slow. It has none of the springiness and elasticity which enabled Mr. Gladstone and Mr. Lowe to perform feats that savour of magic. And yet if Indian provinces are to be connected by good roads, and pierced by fertilizing canals; if Indian cities are to enjoy good water and sound drainage; if Indian courts are to be presided over by natives judges raised, by adequate salaries, above the temptation to dishonesty; if the ignorant masses are to be taught the commonest rudiments of education; these and scores of other things must be paid for. It is no great financial feat to cut down salaries to the lowest limit, to make two servants do the work of one, to house the English soldier in unhealthy cantonments, and to let the native population rot in ignorance, or run the risk of dying by disease and starvation. In short, to put the case briefly, is it better to cover a populous province with roads and canals at a cost of some two or three millions beforehand, or to run the chance of having to spend twice that sum by extemporizing a gigantic poor-law at a recondous crisis? It is our objection to Mr. Hunter's financial chapters that he does not give due weight to these considerations, and that Lord Mayo is described as if he had made financial deficits a moral impossibility. He accomplished a great deal in his too brief Viceroyalty. He gave method to the system of accounts, regularity to the submission of the Estimates, and to each Governor of a province a new and wholesome interest in his work. But he did not, and could not, change the conditions under which a poor and a "barbaric" empire has to be dragged up to the platform of civilisation in our day.

Legislation is a subject in which the Governor-General takes less practical interest than any other, though he is of course responsible

for the general tone and scope of all enactments, especially such as are intended to levy taxes, to remove disabilities, or to punish outrages and crimes. Whether it was that Mr. Hunter felt himself unequal to the task of expounding a subject so peculiar as Indian law, or whether he had a fancy to attempt biography on the principle of a Joint-Stock Company "limited," we are not sure; but the whole of the legislative chapter is written by Mr. Fitzjames Stephen. We need hardly say that this part of the book is distinguished by the perspicuity, the point, the vigorous rhetoric, the apt illustration, and the ready application of English principles to Oriental requirements, that mark whatever comes from Mr. Stephen's pen. As an exposition of the varying system on which laws have been, or are now made, for all classes in India, as a text-book for candidates for the Indian Civil Service, it is almost perfect. But it can hardly be called appropriate to Lord Mayo's biography, though we do not wish to underrate this portion of his Viceroyalty, or to forget that Mr. Stephen himself, in little more than two years of office, did an immense deal to simplify, codify, and condense the Indian statutes. We think that he perhaps somewhat inclines to raise ghosts of civilian theories in order to exorcise them, and we are certain that he is wrong in describing the celebrated village communities as a "crude form of Socialism." Whatever may be the merits or demerits of those remarkable institutions, they are decidedly conservative, and even aristocratic in tendency. They are no more a form of "Socialism" than are the rich companies of the City at this day, or the Guilds of the middle ages. But this remark need not spoil the enjoyment of Mr. Stephen's forcible and luminous chapter.

We have no more space to enlarge on the other measures which distinguished the three years of Lord Mayo's rule, or to dwell on his mode of doing business, his healthy love of field sports, his genial hospitality, and what Mr. Disraeli termed "the magnificence of his life." His creation of a department of Agriculture and Commerce; his detailed schemes for irrigation, for the education of the native masses, for the rescue of the degraded English vagrant; his State railways, with the battle of the gauges, and many other matters, will all be found very fairly stated in Mr. Hunter's own words. And nothing that we have said in criticizing the execution of the biography must be taken to imply that we dissent, on the whole, from the author's estimate of Lord Mayo. Indeed, in common with several others, we should be inclined to say quite as much, or even more in his praise than Mr. Hunter. Lord Mayo's power of mastering new subjects and of getting through work was no less remarkable than the influence which he exercised over subordinates and colleagues, and the charm of his manner when he greeted successive batches of proud native chiefs. Then, too, there was a fearlessness about him when denouncing incapacity, practising retrenchments, and introducing reforms destined to severe criticism and opposition, which is invaluable in a Viceroy who, for the whole period of his administration, was serving a Ministry of politics different from his own. His patronage was distinguished by purity of motive and by happiness of selection, and he showed no dread of the proximity of able men, either in conference or debate. The slight sketches of a popular Viceroy drawn in two excellent novels, the *True Reformer* and the *Chronicles of Dustypore*, are but instances of the truth often found in the pages of fiction. What may be Lord Mayo's exact position in the roll of Viceroys, it is probably premature to try and fix; but we are quite certain that it is possible to do adequate justice to his career and character without ascribing to him, as peculiar, merits which he shared with others, and without implying that he undertook tasks to which their strength had proved unequal. Every kind of ability has happily found its appropriate sphere of action in the eventful growth of our Indian Empire for the last hundred years, and those who most cherish Lord Mayo's memory are content to believe that, in the gallery of men who faithfully served the Crown or the Company in one of the most splendid of positions, his figure will not be the least conspicuous, nor will his achievements the soonest fade out of sight.

SWINBURNE'S ERECHTHEUS.*

THOSE who were not deterred by its inordinate length from reading *Bothwell* must have expected to find beauty and strength in Mr. Swinburne's new dramatic poem; and in such expectation it is not likely that they will be disappointed. *Erechtheus* seems to us in some respects the finest work that the poet has produced. It can be more readily mastered than *Bothwell*, extending as it does only to the moderate length of 1,760 lines; and it has the melody and imagery of *Atalanta* combined with a new force. The form in which the tragedy is written compels Mr. Swinburne to be at his best. One of his great faults has been an over-diffuseness, a tendency to run riot in alluring mazes of language, to wanton in a bewildering splendour of words. It has seemed as if his mind were overcharged with images and expressions of which he could not or would not control the confusing exuberance. Like one who, possessing a fair garden, has for very love of the growing flowers and the twining shoots rejected all notion of keeping their abundance, and so suffered things of beauty to be wasted in disorder, he has allowed the freshness and vigour of his thought to spread and lose itself in the multitude of his words. The method of Greek tragedy imposes a restraint which does much to prevent such errors as these, while it leaves ample room for the poet's thought to shape itself in words which can be sweet with melody, or stately and firm as the march of the Athenian host, or again can seem charged with the terror and swiftness of a storm.

The legend that the poet has chosen for his tragedy, in treating which he has here and there departed from its ordinary form to make dramatic improvements, is full, in the classic sense, of dramatic suggestion. The situation upon which the whole depends is the familiar one of a maiden sacrificing herself to the gods below for the well being of the State. The play opens with a speech from Erechtheus, in which he addresses Earth, "mother of life and death and all men's days," and describes the threatening of conquest with which Eumolpus has been permitted by the gods to terrify the city:—

> But none of these, thou knowest, have I
> Chid with my tongue or cursed at heart for grief,
> Knowing how the soul runs reinless on sheer death
> Whose grief or joy takes part against the Gods.
> And what they will is more than our desire,
> And their desire is more than what we will.
> For no man's will and no desire of man's
> Shall stand as doth a God's will.

In a previous part of the speech he has told of the charge laid upon him to put out "the brief light kindled of mine own child's life," and he concludes with a prayer for the protection and strengthening of the city. The Chorus replies to him as the Chorus is wont to do, by insisting upon the misery which he has just described to them. Their comfortless comfort is conveyed with wonderful beauty of verse. In one passage there is a description of Athens:—

> Too well, too well was the great stake worth
> A strife divine for the Gods to judge,
> A crowned God's triumph, a foiled God's grudge,
> Though the loser be strong and the victress wise
> Who played long since for so large a prize,
> The fruitful immortal anointed adored
> Dear city of men without master or lord,
> Fair fortress and fostress of sons born free,
> Who stand in her sight and in thine, O sun,
> Slaves of no man, subjects of none;
> A wonder enthroned on the hills and sea,
> A maiden crowned with a fourfold glory
> That none from the pride of her head may rend,
> Violet and olive-leaf purple and hoary,
> Song-wreath and story the fairest of fame,
> Flowers that the winter can blast not or bend;
> A light upon earth as the sun's own flame,
> A name as his name,
> Athens, a praise without end.

Praxithea enters, and Erechtheus gradually unfolds to her the terrible fate that is hanging over them. After the interchange of several speeches, varied by a *στιχομυθία* in which she displays her readiness to do and suffer all things for her country's sake, he addresses her with—

> O woman, thou hast shamed my heart with thine,
> To show so strong a patience; take then all;
> For all shall break not nor bring down thy soul,

and tells her the plain truth that the under gods require their daughter Chthonia's life as a sacrifice, if the city is to be saved. Chthonia appears, and demands the cause of her mother's grief; upon which follows a tragic appeal from Praxithea to the Chorus for counsel, which they do not give, and a dialogue between Praxithea and her daughter, concluded by a long speech from the Queen, which has a woman's tenderness and a poet's strength. The conception of the two characters, the woman and the girl, "matched equal, heart with heart," each willing to give up all for the good of the city, each striving to save the other suffering, is in the highest degree touching, and the execution is worthy of the idea. The end of Praxithea's speech presents a fine picture of grief mastered by the resolution of patriotism:—

> Come therefore, I will make thee fit for death,
> I that could give thee, dear, no gift at birth
> Save of light life that breathes and bleeds, even I
> Will help thee to this better gift than mine
> And lead thee by this little living hand
> That death shall make so strong, to that great end
> Whence it shall lighten like a God's and strike
> Dead the strong heart of battle that would break
> Athens; but ye, pray for this land, old men,
> That it may bring forth never child on earth
> To love it less, for none may more, than we.

The next chorus contains a description of the rape of Oreithyia by Boreas, in which it may be thought that the writer has given the rein too much to his fancy, but of which the poetry is undeniable. After the chorus a herald from Eumolpus, addressing them as

> Old men, grey borderers on the march of death,
> Tongue-fighters, tough of talk and sinewy speech,

conveys a challenge from his King to the people of Athens. Erechtheus puts a stop to the war of words which is carried on for a time between the Chorus and the Herald, and in a majestic speech gives the Herald his answer to Eumolpus's challenge:—

> Tell him this;
> Though thrice his might were mustered for our scathe
> And thicker set with fence of thorn-edged spears
> Than sands are whirled about the wintering beach
> When storms have swoln the rivers, [illegible] their blasts
> Have breached the broad sea-banks [illegible] sea,
> That waves of inland and the main [illegible] war
> As men that mix and grapple; [illegible] his ranks

* *Erechtheus.* A Tragedy. By Algernon Charles Swinburne. London: Chatto & Windus. 1876.

Were more to number than all wildwood leaves
The wind waves on the hills of all the world,
Yet should the heart not faint, the head not fall,
The breath not fail of Athens.

After the departure of the Herald, and another chorus, there follows an interchange of speeches between Praxithea, the Chorus, and Chthonia, who is going to offer herself as a sacrifice. The long speech of Praxithea which occurs here is, it seems to us, overcharged with repetition in new melodies of what has been said before; but one could forgive far graver faults for the sake of the beautiful lines in which the mother's love finds its last expression before the daughter departs to death. Chthonia's final invocation is perhaps in thought and form the most perfect piece of poetry in the volume; and, at the risk of seeming to make too copious extracts, we here quote it:—

CHTHONIA.

I lift up mine eyes from the skirts of the shadow, [*Str.*
From the border of death to the limits of light,
O streams and rivers of mountain and meadow,
That hallow the last of my sight,
O father that wast of my mother
Cephisus, O thou too his brother
From the bloom of whose banks as a prey
Winds harried my sister away,
O crown on the world's head lying
Too high for its waters to drown,
Take yet this one word of me dying,
O city, O crown.
Though land-wind and sea-wind with mouths that blow slaughter [*Ant.*
Should gird them to battle against thee again,
New-born of the blood of a maiden thy daughter,
The rage of their breath shall be vain.
For their strength shall be quenched and made idle
And the foam of their mouths find a bridle,
And the height of their heads bow down
At the foot of the towers of the town.
Be blest and beloved as I love thee
Of all that shall draw from thee breath;
Be thy life as the sun's is above thee;
I go to my death.

In the chorus which follows her departure there is some savour of the vagueness and redundance of which we have before spoken; and it contains one strange and singularly unhappy expression in the second antistrophe which the poet hardly justifies by the reference to the fragment of Æschylus's *Danaides* given at the end. Speaking of references reminds us of a curious coincidence in the phraseology of three poets. Mr. Swinburne in the latter part of the *Erechtheus* tells of "a wild-haired meteor" which recalls to memory the φλογὸς μέγαν πώγωνα of Æschylus and the "fiery tresses in the sky" of Shakspeare.

The chorus of which we have just spoken is followed, as one would expect, by the arrival of a messenger to tell how Chthonia has died, and how before the priest raised the knife to her throat she spake "with maiden tongue words manlike," and said how gladly she went to the death that should set her country free from the dread of devastation. He goes on to tell how her sisters, whether from the madness of grief or from doubt lest the gods might not require their lives too to save the country, "and bring the oracular doom to perfect end," have slain themselves at the altar-foot, and the city is shaken with fear, "and as dead leaves are men's hearts blown about," with presage that the innocent blood shed may rest as a curse on the land. The Chorus replies that now is the time for strength, though the ship of the State may seem near to foundering:—

For the steersman Time sits hidden astern,
With dark hand plying the rudder of doom,
And the surf-smoke under it flies like fume
As the blast shears off and the oar-blades churn
The foam of our lives that to death return,
Blown back as they break to the gulfing gloom.

Then comes a description, which, full of fire, is perhaps overburdened with metaphor, of the storm of war even now raging between Eumolpus and the Athenian army; and when the Chorus has sung its song a Herald brings news that Athens is safe, the joyous ring of which he is careful to muffle with mysterious hints of new disaster. To Praxithea, who hears his discourse, and charges him to speak quickly that which he has to say, he replies in a phrase remarkable for the fulness of meaning carried in a few words:—

I have no will to weave too fine or far,
O queen, the weft of sweet with bitter speech,
Bright words with darkling; but the brief truth shown
Shall plead my pardon for a lingering tongue,
Loth yet to strike hope through the heart and slay.

His tidings are of the battle-field where he has seen the Athenian army seem to quail before the warriors of Eumolpus; but Eumolpus and the King came together and the battle parted and paused round them. Then Erechtheus struck Eumolpus dead with a spear through his heart, and the ranks of the foe fell back groaning. But the death of Poseidon's son was avenged by "a sheer shaft of lightning writhen" which killed Erechtheus. Thus Praxithea has lost for the city's sake in one day her daughters and her husband. She replies with unshaken fervour of patriotism to the Herald's question "What wilt thou say now of this weal and woe?" "I praise the gods for Athens." She goes on to pray that death may [illegible] her too, and the Chorus wail over the sacrifice that has been accomplished and the evil that they dread [illegible] of blood. Athena, however, appears and brings comfort in the promise of prosperity to Athens; and the tragedy ends with a thanksgiving from the Chorus.

Mr. Swinburne's work is unequal, but that is a less important fact than its proving that he is capable of constant improvement and acquirement of strength. We have spoken of the restrictions which the form of his present poem imposes. If he bears the necessity for restraint in mind, and chooses to turn his attention to an English drama fitted for representation, there appears no reason why he should not produce one of the finest works of that kind that have been seen in modern times.

MAX MÜLLER'S CHIPS FROM A GERMAN WORKSHOP.—VOL. IV.*

THIS volume is, we suppose, to be looked on as a parting gift from its author to the land which he seemed to have made his adopted country, and which had certainly learned to look on him as an adopted son. All who were not in the secret must have been amazed indeed when Professor Müller made his late announcement of his purpose both to give up his chair at Oxford and to leave England altogether. We might have wished that he could have brought himself to stay in England, at all events, till all those Englishmen who professed to know anything about such matters at all had fully taken in what seemed to some to be hard sayings—first, that Professor Müller did not himself invent comparative philology; secondly, that the object of comparative philology is not to show that Greek is derived from Sanskrit. We can assure him, from our opportunities of raking in lower depths than he is likely to know anything about, that both these illusions are still not uncommon. Moreover, to judge from his own words in one of the pieces in this volume, we cannot understand where he will find a better place for his Vedic studies than he has hitherto found at Oxford. However, he has made up his mind to go; so we have nothing to do but to lament his going, and to get what comfort we can out of his own declaration in a former volume, that at least in his native Anhalt he will still be, if we may be allowed to use the words in their very widest sense, on English ground. We are therefore even the more ready to welcome anything which he thinks good to leave with us as a parting gift; and the present volume of "Chips," though part of it consists of ephemeral matter, which we cannot help thinking would have been better left out, also contains many pieces which are thoroughly solid and valuable, and which we are glad indeed to have in a permanent form. Most of the essays are, as the title-page tells us, on the subject for which Professor Müller has done so much, the science of language. For that very reason perhaps, the one that most strikes us is the one which has least to do with the science of language—namely, the Essay on the Migration of Fables which appeared in the *Contemporary Review* for July 1870. This essay is not only extremely valuable in itself, but it is also, so to speak, the kind of thing which it was right on other grounds that Professor Müller should write. He has taught people, and most truly and profitably, that there are a vast mass of tales going about the world which belong to the science of comparative mythology; tales whose likeness in the forms in which we find them in distant ages and countries can be explained only by their having all come from a common source in pre-historic times. He has shown that this class is so large that careless hearers or readers might easily run away with the belief that all likenesses among tales to be found in distant times and places are to be explained in this one way, and in no other. It was therefore fitting that he rather than any other man should show that there is another class of tales which are also found very widely spread among distant times and places, but whose likeness is not to be traced up to any pre-historic source, but is to be accounted for by transmission, perhaps strictly literary transmission within historic times. The first example which Professor Müller deals with is a class of fables which has given rise to the familiar proverb that warns us not to count our chickens before they are hatched, and to the less familiar proverbial saying of an Almaschar dream. This last form of the story, which may be found either in the *Arabian Nights* or in the *Spectator*, seems somehow to have drawn to itself less of Professor Müller's attention than most of the kindred forms. He puts it, indeed, in the shape which it takes in the *Spectator*, in a note at the end of the essay, but he does not fully discuss it, as he discusses some of the others in various languages. The tale is to be found in a crowd of shapes in most of the languages of Europe and Western Asia; but they all come from an Indian source, the Sanskrit collection of fables called the "Pankatantra." In its first form the person who breaks or upsets the pot, pail, or basket, which is to be the source of wealth, is neither Perrette with her milk, nor Almaschar with his crockery, but a Brahmin who has got a pot of rice by begging. Like all his followers, he dreams the day-dream of the wealth and greatness which are to come of the pot of rice, and ends by breaking the pot and scattering the rice all over himself. A critic given to cavilling might say that the later forms are improvements on the earlier, because the grains of rice might, with [illegible] amount of time and labour, be got together again, [illegible] milk and the broken crockery were lost for ever. [illegible] rules that the spreading of this story, and [illegible], is not to be traced back to the days of Aryan [illegible] is simply due to translations of the Indian original made directly or in-

* *Chips from a German Workshop.* By F. Max Müller, M.A. Vol. IV. London: Longmans & Co. 1875.

directly into Persian, Arabic, Greek, Latin, and the languages of modern Europe.

But in the same essay Professor Müller has a stranger tale to tell. "Few," as he says, "would have suspected a father of the Church as an importer of Eastern fables, yet so it is." St. John of Damascus holds a singular position as a Christian high in the favour of a Saracen Caliph, and winning fame as a defender of image-worship against an Iconoclastic Emperor. He is also said to have written a story called "Barlaam and Joasaph," an early specimen of a religious novel. Its genuineness has been doubted; but Professor Müller accepts it as the real work of John, and if it be not his, it must be the work of some other divine deeply versed in Eastern learning. The story became popular; it was translated into many languages; it was taken for a true history, and Barlaam and Joasaph were accepted as saints. Yet Professor Müller shows that the story is really one of the legends of Buddha fitted with a new set of names. For Buddha to become a canonized saint almost goes beyond the tale, true or false, that the famous statue of St. Peter once did duty as a statue of Jupiter.

The other pieces in the volume are Professor Müller's Inaugural Lecture as Professor of Comparative Philology at Oxford, his Rede Lecture at Cambridge—both of them provided with more purely technical appendices—his lecture at Strasburg, which many will remember; his lecture in Westminster Abbey, which more will remember; an Address delivered at the International Congress of Orientalists in London in 1874, and the Life of Colebrooke, reprinted from the *Edinburgh Review*. To these are added a reply to Mr. Darwin, from the *Contemporary Review*, and a paper headed "In Self-Defence," which seems not to have been printed before. This last is an answer to Professor Whitney, of Harvard College. These two pieces, we hold, had much better have been left out. It is very rarely that purely controversial pieces of this kind are worth preserving in a permanent shape. Professor Müller's "Chips," notwithstanding their title, are for the most part really solid stuff, thoroughly worth keeping. But these are mere chips, which, when they had served their immediate purpose, might have been left to the common fate of chips. It is very often the best policy to hold one's peace altogether under such attacks as those which have been made on Professor Muller; sometimes it is well to answer them at the time; but it is very seldom indeed that the answers are worth permanently preserving. Even if new facts and arguments are brought to light in skirmishes of this kind, it is commonly better to keep those facts and arguments to be used at some other time in some other shape. Now how is it in this case? We read Professor Müller's two answers, and we see that both Mr. Darwin, Junior, and Professor Whitney have been speaking of him in a way in which they certainly ought not to have spoken. In Professor Whitney we wonder at this, because he at least has a position of his own with which he might be satisfied without running down a brother scholar. But we hardly get beyond this very general frame of mind. We have before us Professor Muller's defence in full, but the accusations of his enemies we have only in scraps. Perhaps we never saw them before; perhaps we have seen them and forgotten them. In any case we see them only through Professor Müller's eyes. To us it seems that he might very well have left them altogether alone, or at all events might have been satisfied with his answer in the *Contemporary Review*. We are quite certain of one thing, that there is nothing in the matter which can in the least degree damage Professor Müller's position as a scholar. The Strasburg and Westminster lectures were so much talked of at the time that there is not much to be said about them now. But again we might have been spared some personal controversy which follows the lecture; nor does there seem any particular reason for printing a sermon of Dean Stanley's in the middle of the essays of Professor Müller. The Life of Colebrooke is a worthy tribute to a great scholar in Professor Müller's own special line. But there is in it the least possible tinge, which we are sure is quite unintentional, of depreciation of Sir William Jones. It is hardly to the purpose to say, "Ask any librarian, and he will say that at the present day the collected works of Sir W. Jones are hardly ever consulted by Sanskrit scholars, while Colebrooke's essays are even now passing through a second edition." We should not be in the least surprised to learn that Professor Muller, in the course of his own philological studies, has never thought of consulting the works either of Giraldus Cambrensis or of Roger Bacon; and we are quite certain that, if he did, he would not add to his own knowledge by so doing. Yet both Giraldus and Roger have left us philological remarks which, coming from them in their times and under their circumstances, prove more for the inborn philological genius of the men themselves than any discovery which any scholar can make now with labours of earlier scholars to work upon. The *Castalia* is a better means of crossing the Channel than a coracle, but the deviser of the coracle took a greater step in naval architecture than the deviser of the *Castalia*. The works of Sir William Jones may have been made practically quite useless by the progress made since his time. Yet he surely saw many points in the relations of languages which no one had seen before him, and he in fact laid a foundation for others to build on. It was surely he who first put these relations into something like a definite shape, and this is a greater step than any one step that can be taken afterwards.

We turn now to the two lectures which come first in the volume. In the Inaugural Lecture at Oxford Professor Müller has a good deal to say about sinecure fellowships, every word of which is thoroughly to the purpose. Still all that is said, and so truly said, on this subject nowadays can never be read without something of a smile by those who had a part in the controversies of five-and-twenty or thirty years ago. They can remember how they were called old fogies then for saying the very same things which are now put forth as the newest lights by the very same school by whom the cry of old fogeyism was raised then. As in countless other cases, there is nothing so foolish as to be wise before the time. Giraldus was probably thought a fool in his own day on the strength of his forestallings of philology, and now few philologists know that he ever forestalled them. So it is with those who, a generation back, vainly preached those doctrines of reform which are applauded when others preach them now. In this, of course, Professor Müller has no share. He had not, and could not have, any part in the controversies of those times, so that his witness has the more value, as being quite independent. To allow Fellows of Colleges to receive their revenues without the slightest shadow of discharging any duties was, five-and-twenty years ago, thought the newest and most liberal thing, and hard was the lot of those who spoke against the newest and most liberal thing. Those who did so speak stand now where they stood then, but they have seen those who then spoke the other way come round to their own position, of course without acknowledging, most likely without knowing, that they have come round. Professor Muller has not come round, because there was nothing for him to come round to. He gives us the deliberate result of his own observation, for which we are the more thankful. Having said this, and having traced the history of professorships of language in Oxford, showing that the foundation of most of them was owing to some controversial or other practical need of the times when they were founded, he then goes on to point out the advantages which mere Greek and Latin scholarship may gain from a knowledge of comparative philology, and especially from a knowledge of Sanskrit. Here is a truth which seems all the truer from the amusing form in which it is put:—

> As to writing Greek and Latin verse, I do not maintain that a knowledge of Comparative Philology will help us much. It is simply an art that must be acquired by practice, if in these our busy days it is still worth acquiring. A good memory will no doubt enable us to say at a moment's notice whether certain syllables are long or short. But is it not far more interesting to know why certain vowels are long and others short, than to be able to string longs and shorts together in imitation of Greek and Latin hexameters? Now in many cases the reason why certain vowels are long or short, can be supplied by Comparative Philology alone.

The Rede Lecture is devoted to what the Professor calls the "stratification of language." These words have doubtless puzzled many, but the meaning is clear enough when we read the lecture. The subject of that lecture carries us far away out of the ordinary range of the European, or even of the Oriental, scholar, and shows the wide difference between those who master comparative philology for its own sake and those who simply use it as illustrating particular languages and their history. But the difference is simply in the range, not in the method. The man who uses comparative philology simply to illustrate other subjects studies it, so far as he does study it, in exactly the same way as the man who studies it for its own sake; only he stops short at some point defined by the nature of his own studies, while the other carries on the same method, we may say, to infinity, at any rate as far as he can find languages on the earth to apply his method to. In the Oxford Lecture Professor Müller dealt with comparative philology mainly in its reference to other subjects. In the Cambridge Lecture he deals with comparative philology in itself. From this point of view we understand what seems startling when one first reads it, that the Aryan and Semitic tongues after all form but a very small part, and not the most important part, of the study of language. Such a passage as the following is startling to those who study language mainly either to illustrate political history or directly as a matter of literature; but a few moments' thought shows that the hard saying is perfectly true from the point of view from which it is uttered:—

> Language would be language still, nay, would be more truly language, if the idea of a literature, whether oral or written, had never entered men's minds; and however important the effects produced by this artificial domestication of language may be, it is clear that our ideas of what language is in a natural state, and therefore what Sanskrit and Hebrew, too, must have been before they were tamed and fixed by literary cultivation, ought not to be formed from an exclusive study of Aryan and Semitic speech. I maintain that all that we call Aryan and Semitic speech, wonderful as its literary representatives may be, consists of neither more nor less than so many varieties which all owe their origin to only two historical concentrations of wild unbounded speech; nay, however perfect, however powerful, however glorious in the history of the world,—in the eyes of the student of language, Sanskrit, Greek, and Latin, Hebrew, Arabic, and Syriac, are what a student of natural history would not hesitate to call "*monstra*," unnatural, exceptional formations which can never disclose to us the real character of language left to itself to follow out its own laws without let or hindrance.
>
> For that purpose a study of Chinese and the Turanian dialects, a study even of the jargons of the savages of Africa, Polynesia, and Melanesia is far more instructive than the most minute analysis of Sanskrit and Hebrew.

So a little way on we read:—

> Let no one be frightened at the idea of studying a Chinese grammar. Those who can take an interest in the secret springs of the mind, in the elements of pure reason, in the laws of thought, will find a Chinese grammar most instructive, most fascinating.

And so the Professor goes on, showing, in a way which those who know no Chinese at all can still perfectly follow, how from a language in the rudimentary state of Chinese we may learn a great deal which we cannot learn from those languages which, in literary

and historical importance, so far surpass it. This is a purely scientific view of the matter, and it is well that there should be men who study the subject with that purely scientific view, and it is also well that those who study language purely for literary or historical purposes should remember that, beyond their own field, lies a much wider field on which they are not called upon to enter. A man who studies language to illustrate European history need not understand Chinese; he need not even understand Sanskrit; but he cannot get on at all unless he thoroughly knows the relation in which the languages which he does understand stand to Sanskrit, and he is all the better if he understands the relation in which both they and Sanskrit stand to Chinese.

One chief matter of the Rede Lecture is to show that the usual division into *isolating*, *agglutinative*, or, as Professor Müller prefers to call it, *combinatory* and *inflexional*, must not be treated as a hard and fast line, admitting of no transition from one to the other, of no border-land between one and the other. He shows that in the inflexional languages instances of the two earlier stages still go on in the case of compound words, and we think he might have added that this happens more largely in a very late stage of inflexional languages when they have largely thrown off their inflexions:—

> The power of composition, which is retained unimpaired through every stratum, can at any moment place an inflectional on a level with an isolating and a combinatory language. A compound such as the Sanskrit go-duh, cow-milking, differs little, if at all, from the Chinese *niéou-jou*, *vaccae lac*, or in the patois of Canton, *ngau ü*, cow-milk, before it takes the terminations of the nominative, which is, of course, impossible in Chinese.
>
> So again in English *New-town*, in Greek *Nea-polis*, would be simply combinatory compounds. Even *Newton* would still belong to the combinatory stratum; but *Naples* would have to be classed as belonging to the inflectional stage.

In a later part of the lecture Professor Müller deals with the question of an original connexion between the Aryan and Semitic languages, and again between either or both of these and the non-inflexional languages. With these questions he deals in a spirit of the most praiseworthy caution, neither pooh-poohing such attempts nor yet being sanguine about them, but pointing out the way in which such inquiries should be carried on, and pointing out also the small amount of likeness which such a primæval connexion could leave in any of these languages in their present state.

A great part then of this volume is of the most sterling value, and worthy to range with the best things that Professor Müller has ever given us. And Professor Müller keeps his old art of making his subject intelligible and attractive to those who do not know a hundredth part so much about it as he does himself. Minute and controversial points he wisely keeps for notes and appendix. The Oxford, the Cambridge, and the Strasburg Lectures, and the Essay on the Migration of Fables, are real additions to the literature of Professor Muller's subject. But we think that he would do well in another edition to strike out the mere record of forgotten disputes with Mr. Darwin and Professor Whitney.

ANDERIDA.*

IN the year 490, or 491, "Ælle and Cissa beset Andredes-ceaster, and slew all that therein dwelled, nor was there so much as one Briton left." So runs that brief entry in the English Chronicles which Gibbon thought "more dreadful in its simplicity than all the vague and tedious lamentations of the British Jeremiah." Over this stern record has the anonymous author of *Anderida* meditated till he has evolved from it a three-volume novel dealing with the fortunes of the assailants and defenders of the doomed stronghold. His style and composition, however, have hardly attained the laconic energy of the ancient chronicler of South-Saxon prowess, and perhaps may be thought to partake somewhat of that quality of tediousness imputed to Gildas. Even if its story were better constructed than it is, *Anderida* would still be too long, too rambling, and overloaded with details. We frankly confess that we have not mastered the incidents of the attack and defence of the last fortress of the Saxon Shore, as here given, and cannot judge whether they would satisfy a military critic. Their full comprehension would demand an amount of mental exertion which would be almost sufficient to carry us creditably through a "war-game." So we content ourselves with the "general idea" that Ælle and his South-Saxons want to get into Anderida, and that Vortipore, the Count of the Saxon Shore, and Julius Romanus, the Præfect of the city, want to keep them out; and we turn the page when we find Farinmail of Venta concentrating "over three thousand men on the hills south of his camp," or Count Emyr of Calleva trying to effect "his junction with Julius," so that they may interpose "with ten thousand men between Ælle and his camps, his fleet, his supplies"; or Ælle and Cissa drawing up their men "in the usual triangular form," while the spearmen of Calleva advance "in a solid parallelogram, with a front of two hundred men." Truly, the days contemplated in *Punch's* nursery rhymes of the future cannot be far off:—

> Boys and girls, come out to play,
> Kriegspiel is the game to-day;
> Bring your books and bring your brains,
> Boys and girls, and plan campaigns.

We have at least got to a stage at which the young men and maidens who read novels are supposed to be capable of enjoying military technicalities. The engineering part of the business is treated in the same elaborate manner, and we may remark that, though Cissa may never have seen a flying bridge before he came to Britain, and may have taken it for a work of magic, most people nowadays have seen or heard of such a device, and do not need to have it explained at full length. Perhaps the liveliest bit of fighting is the battle which Julius wins mainly by the employment of a primitive species of *mitrailleuse*, and of carts set with spears which are sent rolling down hill into the advancing ranks of the South-Saxons. The author describes with positive gusto the effect of these ingenious engines—how Ælle "tore his grizzled beard to see his splendid fellows stricken down by machinery," and how the spear-set cars "ploughed" his ranks "asunder" and never stayed their course till they "were clogged with mangled bodies"; and he almost waxes bitter over the way in which the general public chose to ignore Julius, his tactics, and his machines as much as possible, and to give the chief praise to the *beau sabreur* Farinmail, who had led a dashing cavalry charge. Count Vortipore, too, is loth to allow the men at the machines their due meed of honour in the triumph. One would almost guess *Anderida* to be the work of a young engineer officer, aggrieved by some slight to the scientific branch of the service:—

> Stout Rhys, whose name had been placed on the list by Julius for dexterous management of one of the machines, was rewarded with a silver bracelet. The Count frowned as he gave it, muttering something about "artificers of victory." He had tolerated their mechanical presence in the field on grounds of public expediency—it was a sacrifice of his feelings on the altar of patriotism—but that they should be seen or heard afterwards usurping the honourable title and the just reward of the warrior, this gave a serious shock to his sense of propriety, and was contrary to reason and justice.

From what we have already said it may be perceived that there is a good deal of misapplied labour and energy in the book. It is no doubt a conscientious piece of work. The author has evidently taken great pains to "get up" his period, and seems to have the wisdom of Guest and Kemble at his fingers' ends. He has gone deep into Old-English law, institutions, and customs, and has striven to set before us a complete picture of the life of our forefathers. We think, however, that, if he had consulted Professor Stubbs, he would hardly have made the tything-men act as village magistrates, or have committed himself to the existence of the "frith-borh" in the days of Ælle the South-Saxon. In the matter of nomenclature he is precise, and we respect him for bestowing on one of his characters the ancient professional appellation of Smith—plain Smith, unperverted by any attempt to make it look more romantic or archaic. But knowledge is not an unmixed blessing. Scott, in his happy ignorance, could make his Saxons consign anything obnoxious to "Zernebock," which at any rate had a satisfactory sound; while our author, in default, as he complains, of authoritative information on the subject of Saxon expletives, is reduced to make Ælle "bother" something or other, an imprecation certainly below the dignity of a king and a future Bretwalda. Ælle, by the way, here appears as a king of some years' standing, although from Henry of Huntingdon it would seem that his kingship only dated from the year of the fall of Anderida. We may also note that the author is not in accordance with legend—we can hardly say history—when he tells us that "bitter sea-spray falls in tears, salt winds wail over the tomb where Vortimer sleeps by the wasting tide." That hero, according to Nennius, did indeed direct that he should be buried on the sea-coast, but his people "mandatum ejus contempserunt, et eum in loco in quo imperaverat illis non sepelierunt." He was buried, according to some versions of Nennius, at Lincoln, or, as Geoffrey of Monmouth says, at London. And how could a writer who has fixed the period of his story to the very day of the month and of the week allow the printer and binder to send *Anderida* forth to the world with a wrong date—"CCCCXLI" instead of CCCCXCI—on every volume?

On the whole, however, the general lines of the picture are true to the period, as understood by modern historians, and the author deserves credit for having seen what varieties of character and picturesque incident might be found at this early stage of English history, without drawing upon mythical or romantic elements. His Saxons are perhaps painted a little too much in rose-colour, but not more so than is permissible in fiction; and he has done well to avail himself of the idea of the division of the Britons into a Roman and a native party. But unfortunately the author, whatever else he knows, does not as yet know how to write a novel. We say as yet, because the book reads like a first essay in fiction, and shows signs of cleverness which lead us to think that the writer may do better hereafter. The plot is badly constructed, hard to understand, and weighted with so many needless details that we forget one set of incidents while trying to grasp another; indeed the writer sometimes forgets them himself, as when he orders Count Vortipore to prison, and some fifty pages later produces him on active service without any explanation. Spirited dialogue will often atone for weakness of construction, but here again our author fails, his dialogue being for the most part singularly heavy and feeble, not in thought, but in expression. Few people, we suspect, will ever read through *Anderida*, and yet there is good material in it, had it been skilfully handled. Thus Count Vortipore and Julius Romanus, who represent respectively the British and the Roman party in Anderida, are neither of them ill-conceived characters. Julius, in particular, unenthusiastic, untouched by Christianity, but strong in the old Roman religion of duty, who to the last does his best to save Anderida, is drawn with vigour,

* *Anderida: or, the Britons and the Saxon, A.D. CCCCXLI.* 3 vols. London: Bickers & Son. 1875.

and is well contrasted with the unstable, self-seeking Vortipore, who aspires to that mysterious-sounding dignity, the Pendragonship, and is ever ready to sacrifice the interests of Anderida and of Britain to his private ambition. Vortipore has been a kind of Don Giovanni in his day, "more or less married to many ladies"; and one of his intrigues has involved the murder—as he believes—of an inconvenient husband. The ins and outs of this affair and its sequel are very wearisome and hard to follow, and yet here again we might pick out passages which show power, although, as they stand, they are smothered under a mass of verbiage and confused incidents. Thus there is not a bad piece of stage effect when Vortipore recognizes his supposed victim in a prophetic monk who announces the doom of Anderida; and the secret interview between the frail wife, supposed to have been long dead, and her daughter by Vortipore—Bronwen, who has never known her mother—has a certain quiet pathos. With all his sins and crimes, Count Vortipore is by no means wholly detestable, which is more than can be said for his legitimate son Iorwerth, a hateful mixture of ruffian, rake, and fop, whose misdeeds bring ruin upon himself and Anderida. One Rhys, whom he has robbed of his wife, and Kynon the leech, a sort of Henbane Dwining, who has suffered from Iorwerth's savage temper, take their revenge by admitting Ælle and the South-Saxons within the city walls—a proceeding which bears considerable resemblance to that of calling the huntsman and hounds into the garden to kill the hare. Iorwerth is meant no doubt to illustrate the effects of the corrupt civilization of Rome superadded to the natural brutality of the barbarian; but artistic taste would demand that his repulsive traits should be touched with a lighter hand, and it would require the skill of a French novelist to guide us through the maze of Vortipore's past sins and Iorwerth's present ones.

When we turn to the more lawful love-making, we see that the author knows far too much to do things as they would have been done in the good old days of historical novels. Then we should have had pretty love passages between Teuton and Celt; Æscwine, the South-Saxon Gesith, would have been at the feet of Bronwen, the Pearl of Anderida, and Ælle's daughter Ostrythe would have sighed for Farinmail, the Star of Venta. Æscwine, regardless of his King's vow to spare no living thing, would have rescued Bronwen from the final massacre; and Ostrythe would have fled with her British admirer to Venta Belgarum, or have fallen lifeless on his corpse. But our author is aware that no Saxon of well-regulated mind could or would look with matrimonial intentions upon a Welshwoman—has not Professor Stubbs assured us that the thing is out of the question? The South-Saxon hero mates with the South-Saxon King's daughter—at least we hope he does, for the author forgets to tell us whether the marriage ever came off—and if Farinmail and Ostrythe do display a somewhat warm interest in each other, not a spark of jealousy is kindled in the placid breast of Æscwine. Farinmail, luckily for himself, is sent back to Venta before Anderida is taken, and drops quietly out of the story. He has broken off with his intended, Bronwen, on the discovery that she is no exactly the *ingénue* she seems, and he has had to leave the "maiden with the broom-flower hair" to her dull Saxon lover; but neither he nor anybody else is much affected thereby. Passionate love, in fact, is not the author's *forte*. When Æscwine leaves his lady a hostage within the walls of Anderida, he betrays hardly more emotion than if he were leaving her at the railway station to come on by the next train, and he directs her how to escape in case of need as calmly as if he was telling her to see her luggage labelled:—

> Then he gained admission to the lady herself, told her that he was going away, and that she would have to rely on herself alone.
>
> "I have done that ere now," said Ostrythe, laughing.
>
> "But these men are cunning and faithless, and I have had hints that evil is meant. Take this." And he gave her a short dagger that he had bought of the cutler, Smith's friend. "It is a handy thing for a lady; you can wear it inside your buskin. If you think you may have occasion to use it, hold it thus, with the blade against the flat of your arm, and the first joint of your thumb in the hollow of the pommel. Keep your eyes quiet and strike straight and sudden at the side of the neck under the jaw; don't strike twice. . . .
>
> "Here are the keys of a little postern, about seventy yards distant from the north-eastern corner of the palace. Smith will show you. It is new moon to-morrow night, and high water then about two hours after sunset. The darkest and quietest time is an hour after midnight, and that would be a good time to swim across. Now I must go. Dear, dearest lady, be careful!"
>
> "Never fear for me," said Ostrythe.
>
> He kissed her hand, looked in her eyes, kissed her lips, and was gone.

We are bound to say that the young woman justifies his composure. As soon as Count Vortipore becomes troublesome in his attentions, she drops over the terrace-wall, unlocks the postern, and swims across the water with her clothes in a bundle on her head. "A cool lass, and a clever one," says Smith; and the praise is certainly not too high.

That the British chiefs would use their Saxon captives as well as they are here made to do strikes us as highly improbable. They are too humane and civilized, and even show an inclination to what Mr. Freeman calls "the fopperies and fripperies of chivalry." To be sure, the days of the Round Table were not far off, but the misty dreamland in which Arthur and his Knights move is wide as the poles apart from the hard, realistic world of the author of *Anderida*. The courtesy and tenderness with which Farinmail treats his prisoners of both sexes may perhaps be set down to natural generosity and innate Celtic gallantry; but we should not expect to find Vortipore or Julius allowing the captive *Gesithas*, or chosen companions of the Saxon King, to be at large on parole and negotiating for their ransom in the gentleman-like and considerate manner of Froissart's Gascon and English knights. Mr. Freeman has taken pains to impress upon us that the practice of our Teutonic forefathers was either to knock the vanquished Welshmen on the head or make slaves of them, and we think it probable that the Welshmen retaliated when they got the chance. However this may be, the courtesy here attributed to the British chiefs makes the subsequent treatment of their city seem scarcely justifiable by the laws of even barbarian morality. Embittered by the loss of his son Cymen, Ælle swears to spare no living thing in Anderida, and his vow is fulfilled, thereby clearing the stage pretty effectually. Rhys bolts himself and Iorwerth into a burning house, and so perishes. Vortipore is cut down in the sight of his daughter Bronwen, whose kindness to the captive Ostrythe ought to have obtained for her an exception from Ælle's vow. Bronwen flings herself from the terrace-wall. Julius dies defending the Roman eagle; and his faithful follower Bael "flung axe and eagle far away into a blazing ruin . . . and fell, the last of the men of Anderida!"

This Bael, "neither Celt nor Teuton," who belongs "to the earliest race existing in these islands," gives us glimpses of a very remote past. He has traditions of the time when there were mighty beasts with horned noses in the land, and "men walked dry-shod from here to Gaul." Hereby is suggested a fresh field for an enterprising novelist, if the present rage for antiquity continues. From the Vikings of Jomsburg we have got to the defenders of Anderida, and we may soon hope to hear Lydia Languish inquiring at the circulating libraries for "Ere Britain Was," or "The Advent of the Aryan." Combats with mammoths and cave-bears would be new and exciting, and the landing of the first Briton in a coracle would be effective either as the starting-point or the conclusion of a pre-historic romance.

NASMITH'S INSTITUTES OF ENGLISH PRIVATE LAW.*

IN this book Mr. Nasmith has undertaken a task the difficulty of which is exceedingly great, yet not out of proportion to its importance. There exists at present nothing like a satisfactory institutional treatise on the law of England; so far are we from having the thing, that the very name of it is probably unfamiliar to a considerable number even of legal readers. The defects of Blackstone's arrangement entailed not only logical confusion, but large substantive omissions. His later editors and adapters have not made any sufficient amendment; indeed, their changes are often rather for the worse, and Blackstone in the original form is at all events a classic. Very little else has been done even in the way of suggestion; we may mention, however, some essays on the Arrangement of the Law, which appeared two or three years ago in the American *Law Review*, as containing much that is both sound and ingenious. A really good general introduction to English law would at the present time be of almost inestimable value. Not only would it relieve students of a great part of the perplexities that now beset them, and help to bring up a generation of English lawyers trained in orderly knowledge instead of confused learning, but it would probably have an immediate influence in raising the average quality of text-books appropriated to special departments, and would to some extent prepare the way for that systematic and authoritative consolidation of the law which, under whatever form or name, must sooner or later become a manifest necessity. The writer who supplies this want will be one of our greatest benefactors to the profession and science of the law; we speak in the future, inasmuch as, in our judgment, Mr. Nasmith has not effectually supplied it. Yet his attempt, though we cannot pronounce it successful, has quite enough of merit and good intentions to make the failure an instructive one.

The most obvious faults that are likely to be committed by a legal writer—and, in fact, are still committed by the great majority of our legal text-books—are such as these:—to take any arrangement that comes to hand first, fill up the subdivisions anyhow, squeezing in refractory topics by main force (of which a good example is Blackstone's feat of treating lunacy under the head of Royal Prerogatives), and vouch to warranty an undigested mass of references, which, being vouched, as often as not make default. Mr. Nasmith, however, has distinctly set his aim on better things; and the errors he has fallen into are rather of an opposite kind. The first of these is too much attention to classification for its own sake, and too much seeking after novelties in that direction. The object of analysing legal conceptions is not to discover new logical divisions, but to make existing divisions intelligible. The great generic heads of the law which have acquired a marked individuality, not only in English, but in all Western jurisprudence—such as Status, Ownership, Contract—must now be kept whole and distinct at any cost, and any system which breaks them up seems to us to stand for practical purposes self-condemned. But Mr. Nasmith has done this to a great extent. His main division into Law of Persons and Law of Things, apparently of his own invention, is not a happy one. It has nothing to do with Blackstone's "Rights of Persons" and "Rights of Things," which, notwithstanding the absurdity of the nomenclature and the many serious faults in detail, do roughly fit some real and important

* *The Institutes of English Private Law, &c.* By David Nasmith, Esq., LL.B. 2 vols. London: Butterworths. 1875.

boundary lines. Mr. Nasmith's Law of Things is the law which governs Ownership and the various dealings with it by alienation or succession. Everything else is brought under the Law of Persons by violently extending the conception of Status. Every distinct legal relation into which a man can enter is called by Mr. Nasmith a *persona*, and said to produce a complex status, "simple status" being status as usually understood. This looks as if Mr. Nasmith had been feeling about for some such general notion as the Germans express by *Rechtsverhältnis*. A moderate acquaintance with the work of Continental civilians, which he seems not to know, or at any rate not to have used, would have saved him here and elsewhere from erratic efforts and imperfect results. The classification he develops from these premisses is naturally cramped and perplexed. One principal subdivision is "Intervention," in which one person is considered as "intervening" in relation to the person or property of another under contract, trust, or licence, or of his own mere motion. This is logically harmless, save that the statement ought to have been worded so as to include in the first two heads "intervention" under colour of a supposed, but not really existing, contract or trust; but we fail to see its convenience. The only use the author himself makes of it is to introduce his account of torts and contract. The trustee and licensee are quietly dropped. After the chapter on Torts there is a great mixing up of various parts of the law of contract and the law of status; and, finally, we are startled by a chapter on Private International Law being dragged in under the head of Aliens. Contracts reappear for a moment in the second volume, under the extraordinary name of *consensual things*. In the details of terminology Mr. Nasmith in like manner deserves credit for the right sort of intentions, but does not often satisfy us in execution. Thus, his definition of Contract is better than most that are to be found in the books, but not so good as it might be. He confines the term *contract* to agreements enforceable by law; and, so far, this is well. The same thing is done in the Indian Contract Act, and it is a real addition to the resources of legal language; but why did Mr. Nasmith stop there, when other manifest improvements might well have been adopted from the same quarter? His use of Roman terms is not fortunate; he arbitrarily confines *obligation* to obligations *ex contractu*, and defines *dominium* in a manner which is neither classical nor useful.

Another mistake which Mr. Nasmith has not escaped is that of assuming that the development and filling in of a classified system requires less thought and pains than the classification itself. The working out of the several parts should be appropriate with reference to the general plan and accurate in all its details. In the first place, an institutional book must not be a series of monographs on special topics; for a collection of such monographs does not become a general exposition by being fitted into the compartments of the most excellent classification. In the next place, an author must nevertheless bear in mind, after he has settled according to the fitness of the general design what details he shall keep and what reject, that in those which he does keep he should be no less clear and scrupulously accurate than if he were writing a monograph. Both these precepts are imperative; at the same time they are difficult to observe, and just allowance must be made for the difficulty; but we are bound to say Mr. Nasmith falls short in both respects. Instead of giving a bold and clear view of the really leading rules and principles, he too often falls into fruitless endeavours to give a digest of everything in an impossibly small space. There is also a great want of proportion in the treatment of different topics; we find room which could be ill spared taken up by needlessly setting out extracts from statutes, and precedents of assurances, and even by rambling discussions. It is absurd for an elementary writer to spend two or three pages in an attack on the equitable doctrine of mortgages, which reads like a weak imitation of a rather eccentric judgment delivered about three years ago by Baron Bramwell. We may remark, by the way, that Mr. Nasmith, notwithstanding the Judicature Acts, for the most part ignores equity jurisprudence neither more nor less than common-law text-writers have been accustomed to do.

Again, the book is by no means free from actual mistakes, and occasionally serious ones. The worst of these is on the subject of Fraud. In the first volume it is quite wrongly classed under the head of "Common Law Illegality" (this error is by no means new); and we read of the contract of a drunken man being "void upon the ground of fraud"; whereas it is no void, but voidable, and that independently of fraud. This alone might perhaps pass as no worse than a loose and old-fashioned use of language. But in the second volume we find to our astonishment that "when, by *actual fraud*, one induces another to sell —perhaps, more correctly, *to do that which in the absence of fraud would be a sale*—the property does not pass." This is a positive and inexcusable misstatement. At least half a dozen important modern decisions show conclusively that the property *does* pass, though, as between the original parties, the vendor may, if he pleases, rescind the contract and resume the property. There are some serious omissions (partly due to the disregard of Equity) in the statement of the rules concerning written agreements and oral evidence; and there are various other things which, though short of positive error, are at least odd. We should not have expected to find at this time of day a champion for the absurd rule of common law that a less sum of money cannot be taken in satisfaction of a greater; or to see the analogy between trusts and bailments insisted upon as a thing newly discovered, in apparent ignorance of its being distinctly pointed out by Blackstone; or to look in vain for any statement of the difference between real implied (tacit) contracts and contracts "implied in law" (quasi-contracts). And Mr. Nasmith is not generally happy in his explanations. He is too much given to the Blackstonian fashion of inventing justifying reasons for a rule when an historical account is the only possible one. In language and antiquities he scarcely excels; his note on *mortuum* and *vivum vadium* is sadly confused, though only with the confusions of former writers (the true key is to be found in Littré's Dictionary, s.v. *Gage*); and his criticism of the "commonly received notion that no manor is of more recent date" than 1290 is strangely misconceived. The common notion errs, if at all, in supposing that the express act of any subject could or did create manors before that time. But there is a more general fault, and of a more practical kind, which runs through all the details of Mr. Nasmith's book. He has simply worked from old notes or editions, and his authorities are constantly out of date. A writer whose undertaking covers so much ground must no doubt rely a good deal on text-books; but at least he might use the latest editions, and keep them noted up, so as not to ignore, for example, leading cases decided five or six years ago by a Court of Appeal. Certainly this is in itself no light work, but it is a work that cannot be neglected. It may well be that in the present state of text-books a general survey of the law is really not within the compass of any one man's power. If all our text-books were as good as, say, Mr. Benjamin's on Sale, the Institutes of English Law which we still await would be comparatively easy to write. As it is, we more than suspect that the increase of a better class of special text-books will, as a matter of fact, precede any serious and successful endeavour to accomplish the labour to which Mr. Nasmith has valiantly, though rashly, set his hand.

Grave as are the shortcomings of this attempt, it is not to be understood that we hold it worthless. It is made in a right spirit, and that is something; nor is the execution always so much below the intention as in the points we have felt bound to criticize. The Real Property Law, for instance, where Mr. Nasmith gives himself more room, seems very fairly done. (We should have said before that the size of the book is altogether much too small for adequate results to be attainable.) And the ocular demonstration offered to the student by a sketch plan of the ideal "Manor of Dale," with its boundaries, wastes, parcels, and other belongings, "so far as the same are capable of delineation," as conveyancers say, is an unpretending but useful contribution to the much neglected art of legal education, and, as such, deserves a word of distinct praise.

TWELVE MONTHS IN SOUTHERN EUROPE.*

THIS is a lively and readable narrative of a young lady's tour, which began in Sicily and ended in Corfu, and between those two points meanders with a pleasant absence of symmetry through various countries of South-Eastern Europe. Mrs. Blake evidently possesses some of the best qualifications of a traveller. To a sufficient interest and activity in sight-seeing she unites a keen sense of fun, an observant eye for character, and a disposition to extract amusement even from the least promising surroundings. It is not always that qualifications for travel are reflected in the pages in which the traveller's experiences are recorded. They are apt to lie provokingly latent. This is principally because, when people come to write about what they have seen, they are nervously afraid of becoming egotistical, eschew personal details as below the dignity of their task, and end by going to handbooks for their inspiration. Not so with our author, whose book testifies to her vivacity and her preference for her own impressions. If we may found a distinction upon the double narrative of the famous *Journey to the Hebrides*, books of travel may be roughly divided into Johnsonian and Boswellian. The interest of the former centres in places; in the latter the personal element predominates. The volume under review belongs to the discursive, chatty, Boswellian class. Its topographical details are enlivened by a running comment on topics of the most varied kind—sermons, cremation, the temporal power, and rationalism. We are treated to anecdotes of cockney travellers, and gossip about Victor Emanuel, the Pope, and the Sultan. We have sketches of the company on board Mediterranean steamers and at German tables-d'hôte, and amusing episodes in connexion with them of which our author may say, in classical language—*quorum pars magna fui*. Mrs. Blake has a great deal to say about inns, their entomological specimens which torment by night, and their bad cookery which disappoints by day. Indeed, if her criticism ever assumes a more emphatic tone, it is in denouncing bad food, noisy children, and fat women who object to fresh air. In freely speaking her mind on these points she is sure of a sympathizing public; and they in no way detract from the good-humour and appreciative spirit in which she writes of foreign lands and foreign ways.

Syracuse, to a traveller courageous enough to [illegible] fleas and "abominable" cookery, is full of varied interest. [illegible] picturesque and striking features Mrs. Blake does full justice, though probably few of her readers will share her taste for inspecting the dry bodies of monks. From the shores of Sicily her wanderings were for the most part over beaten tracks. Of Rome, Naples, Venice, Munich, and Vienna, there is little now left to be said by

* *Twelve Months in Southern Europe.* By Mrs. Blake. London: Chapman & Hall. 1876.

the most enthusiastic traveller. Nevertheless, in each and all of these places our author finds plenty of matter for observation around her. She is disgusted by the cruelty with which the Neapolitans treat their horses, and her English readers will heartily reciprocate her "longing to see the brutes who drove them get a good kick." The environs of Naples are delicious, but the population is the "dirtiest, rudest, and least pleasing" of any town in Italy. At Rome Mrs. Blake went the round of all the world-renowned buildings and institutions, omitting nothing which an intelligent foreigner ought to do, from attending a reception at the Vatican to attending a meet in the Campagna. At the former ceremony the Pope was "gracious and benignant," expressed himself as pleased to hear of the national thanksgiving for the recent recovery of the Prince of Wales, and observed of one of the ladies present, who wore a large gold cross, that it made her look like a lady bishop. At the latter, Prince Humbert was present, mounted on "a weight-carrier well up to eighteen stone," though there does not appear much object in the Prince investing in hunters, as he is never permitted to go over any fence. Riding across the Campagna was one of Mrs. Blake's favourite pastimes. When thirsty from exercise, she and her party would get a draught of milk from the goat-herds or draw up at a little road-side *osteria*, and regale themselves with the wine of the country, which was sometimes excellent. Of the many charming environs of Rome our author was most pleased with Albano, whence she made various excursions on donkey-back. Ancona, which was passed on her route towards the north, is pronounced to be a "vile hole." An inspection of its principal hotel, the smell of which was "pestiferous," induced the visitors to beat a hasty retreat, and continue their journey to Venice. There they established themselves in an apartment on the Giudecca Canal. As the weather was excessively hot, bathing from gondolas was pleasant. It is an irony of fate which has converted the Lido, with its sombre Byronic memories, into a modern bathing establishment and tea-garden. Mrs. Blake recommends the curiosity-shops of Venice, though dear, as also a luncheon of *calamari*, a small cuttle-fish which, fried and eaten with lemon-juice, is exceedingly good. Frogs she considers a "delusion and snare." Everywhere in Italy snails are eaten, at Rome badgers are reckoned a delicacy, and at Nice foxes are exposed for sale in the market. So true is it, as our author observes, that one man's meat is another man's poison.

From Venice Mrs. Blake turned her steps towards the Tyrol, and the delightful country in the neighbourhood of Salzburg. Meran was charming, with the exception of a plague of flies. At Berchtesgaden, after visiting the exquisite Königsee, the foreign visitor is expected to descend a salt-mine—a disappointing operation for those who expect a sparkling grotto, the salt being dirty looking stuff, and the passages dark, damp, and muddy. At a dance at the Ischl Casino our author is struck with the ugliness of the German people, and the extreme liveliness of their polkas. At Vienna she listened to Strauss's band, and compassionates a Viennese bride on having to go "peacocking about the streets" in evening costume in broad daylight, and in an open carriage. Such an ordeal is "worse than a drawing-room" at Buckingham Palace. Between Pesth and Routschouck, a three days' voyage, the scenery of the Danube varies. As far as the junction of the Drave it is tame and uninteresting. Pigs wallowing in the mud at the water's edge are a principal feature of the scene. From Moldova to Orsova the scenery is grand. In one place the Danube rushes through a sort of gorge of rocks, cutting its way through the Carpathian Mountains. Passengers are transferred to a smaller steamer to pass the Iron Gates. This name is given to the rapids from a ridge of low rocks running almost across the river, and closing the upper part of the Danube to the ingress of ships of any large size. At Widdin, the first Turkish town, the Oriental element in the landscape begins to assert itself. Cupolas and minarets stand out against the sky, and crowds of turbaned Mussulmans troop down to the landing place. Mrs. Blake remarks upon the scarcity of human habitations on the banks of the Danube, the towns which seem of importance in the maps consisting in reality of a few mud hovels. Belgrade, one of the most important, consists, we are told, of a few houses little superior to cabins. But as this impression was derived from a passing view of the place from the river, and surrounded by fortifications, we need not wonder that it is not very accurate. Paris itself, outside Mont Valérien, would not look very splendid. Like Lady Mary Wortley Montagu, Mrs. Blake visited a harem in Constantinople, her account of which is perhaps the most interesting part of her book. The mistress of the house was the widow of a pasha of inferior grade. Her daughters, sons, and their wives resided with her. "Harem," as our author is careful to explain, is merely a name denoting the women's apartments, and, if her specimen may be regarded as typical, it differ but slightly from the "family circle" of these islands. Here is her account, somewhat condensed:—

> The mistress of the house was sitting cross-legged on the divan, and motioned me to take a place beside her. She was very plain, with a little wizened brown face, small head, black eyes, and tiny hands and feet. She was very plainly dressed, wearing full cotton trousers with a small pattern on them, a tunic and shirt of the same, and yellow leather slippers. Indeed the ladies were all dressed with the greatest simplicity. They were extremely small, and none of them remarkable for beauty. . . . Two or three unhealthy-looking babies and very ugly children were playing about the room. Coffee was served soon after our arrival. . . . Of course we were given cigarettes, and the ladies all smoked them constantly. . . . After the coffee, the next move of our entertainers was to exhibit some of their possessions to us, and they began by displaying some very pretty stuffs, and a sort of gold brocade used as a covering for the beds. The old lady produced a leathern bag which contained some handsome diamond ornaments, earrings, stars to be worn on the forehead, rings, and pins. Some of the stones were very large, and of the first water. On dinner being announced, we went upstairs to the harem. . . . The table or *sofra* was very low, not more than a foot or a foot and a half from the ground, and we all squatted round it on cushions laid on the floor. Before taking our places water was poured over our hands by a negro-slave girl. . . . Plates, knives, or forks there were none. A large lump of brown bread was laid at each place instead of a plate, with a spoon in front of it. Four dishes of white grapes were the only other things on the table. As soon as we sat down a napkin was handed to us by one of the daughters, and in the centre of the table the negress placed a round bronze dish, containing mutton boiled to rags. Our hostess dipped a piece of bread in the gravy, and we all followed her example. . . . Twelve dishes, each more difficult to swallow than the last, followed. Most of them were very greasy. Everything was cooked with rose-water, and had an indescribably horrid scented flavour into the bargain. We had nothing to drink the whole time; a few grapes were eaten whenever one felt thirsty. . . . We had been requested to wear the brightest dresses that our wardrobes could supply, and to decorate ourselves with as many ornaments as possible, when visiting the harem. The women regard one's doing so as a compliment, and looking at the trinkets amuses them. . . . They were particularly delighted with a pair of crystal earrings on which were ruby and diamond flies, the design being a novelty to them.

The style in which this book is written is fresh and natural, a merit which atones for an occasional slipshod phrase like "over so many," and for colloquialisms such as "turning in" and "turning up." The use of the present participle, too, for a nominative, as "the lady eating with so many Christians was a great compliment," is, to say the least, inelegant. Nor can we endorse all Mrs. Blake's Biblical and ecclesiastical lore. We object to her reference to a tradition that St. Paul "performed mass" at an altar in Syracuse, and still more decidedly to a statement that the "celebrated shipwreck" is tersely described by St. *Mark*. Again, it is a new view of the development of Christianity to attribute it to "subtlety of the school of Gamaliel." This is rather hard on Gamaliel, as well as historically not very exact. But these remarks, as well as some others at p. 183, not in good taste, upon the influence of Rationalism, are *obiter dicta*. A young lady writing in the nineteenth century may be excused a few slips when, as she would phrase it, she "harks back" to the apostolic age.

A CHARMING FELLOW.*

THERE is a great deal of very nice and delicate work in this novel, and if we cannot say that it has attained the highest excellence throughout, we do not wish it to be inferred that we consider it in any sense as a failure. The character of Algernon Ancram Errington, the "charming fellow" of popular opinion, is exceedingly well done; and the change from the comparatively innocent insincerity of the country lad to the deeper criminality of the desperate man is by no means too extreme, though it may be too sudden, and not sufficiently accounted for. If Algernon, or, as he is generally called, Algy, reminds us of Tito in *Romola*, it is not that Mrs. Trollope has been a conscious imitator. The possibilities of human life have their limits, and the character of a conscienceless, pleasure-loving, and pleasant-tempered egotist, who drifts from selfishness to dishonour, and from dishonour to crime, cannot be delineated on an indefinite number of base-lines. Time, country, and social conditions change the furniture and the character, but the elements remain the same; and whether the several impersonations be ancient Greek, mediæval Italian, or modern English, there must needs be a strong family likeness among them all, and a common stock of characteristics. Nor has any author the fee simple of a character. Because Molière created Tartuffe, might not Dickens in his turn create Pecksniff? and must no one venture on the portrait of a swaggering bully for fear of being confronted with Bobadil? History itself repeats its own characters and actors; and human types have their set features which never alter, though the individual expression may. Hence we accept Mrs. Trollope's Algernon as he stands, and are content to regard the traits which he possesses in common with Tito as elemental necessities, things belonging as of course to the portrait, by whomsoever drawn and wheresoever found.

We must wish that Mrs. Trollope had drawn the transitional stages of her hero's character with more distinctness of detail. As it is, the action is too hurried, and there is not enough time allowed for the satisfactory development of his nature as influenced by circumstances. The lines are not clear, and cause and effect are a good deal what the Americans call "mixed." The space is too contracted between Algernon's arrival in London and his marriage with Castalia; the details went filling in: and the marriage itself reads a little unnaturally. A man of such clear-sighted selfishness, and possessed of such wonderful "charm" and beauty, would not have sold himself so cheaply; and to accept the first chance of the kind, and that chance so bad a one, was selling himself far too cheaply for wisdom. Algernon was no fool, and he knew his own value in the marriage market. What handsome man does not? Would he then have married an ugly old woman without fortune, simply on the strength of her connexion with a stupid old nobleman without interest, and who could do nothing better for him than get him the postmastership of a fifth-rate country town like Whitford? To judge by the very meagre society of the place, Whitford could have

* *A Charming Fellow.* By Frances Eleanor Trollope, Author of "Aunt Margaret's Trouble," "Mabel's Progress," &c. 3 vols. London: Chapman & Hall.

had but an unimportant postal service; and one would have expected to find it among the figs and raisins of the small grocer rather than with an establishment of its own, a gentleman for its master, and a salaried clerk to supplement his deficiencies. But indeed Whitford is rather an anomalous place all through. A Doctor of Divinity is its rector, but he is also master of the grammar school; he associates with the surgeon of the place, the attorney and the second master, "young Pawkins of Pudcombe Hall," Lieutenant-Colonel Whistler, and in time the Methodist grocer's pretty daughter. Yet he is not a democrat nor a practical Christian of the levelling kind. He is a Tory, and a believer in class and caste, as belongs to his own ecclesiastical dignity of a minor degree; and he evidently brings these people together, not on principle, but because they represent the whole society of the neighbourhood. In which case we imagine that neither the surgeon nor the attorney could have been a man of the class with whom he would have willingly associated, as neither the one nor the other could have found in Whitford such means of professional living as would have satisfied a fastidious taste. This, however, is only a small matter, a mistake in a question of detail of no great importance to the story, save as it reacts on the appointment of young Errington to the postmastership at such a place as Whitford.

But if the social circumstances of the story are rather mixed and muddled, the principal characters are distinct enough. The vanity and shallowness, the boasting and untruthfulness of Mrs. Errington are admirably portrayed, and give the hereditary reason why her son should be as unprincipled as he is. From such a mother nothing fine or noble could possibly have sprung, and the "Aneramism" cherished by the one must necessarily have its representative in the other. We find the subtle likeness, yet difference, between Mrs. Errington and her son one of the best touches in the book; it is admirably done as art, and is correct as a matter of physiological science; as is also the kind of love which exists between them, true enough in its way and as deep as is possible with such shallow natures. To be sure in the end Algernon does not scruple to swindle his mother, while she strips herself of her property less from maternal devotion than from the "Aneramism" which could not accept the failure of one of her family as a demonstrable fact, and preferred to believe a pleasant lie rather than to act on a disagreeable truth. Though far from being a meritorious person, Mrs. Errington is unquestionably the best drawn character of all who make up the world wherein the "charming fellow" finds his lot cast by an unfriendly fate. Her boasting ostentation, which yet is redeemed from vulgarity; her selfishness and shallowness, which coexist with a certain surface kindness and an undoubted love for her boy; her moral obtuseness, which does not include want of tact; her handsome, well-preserved person, which does not make her angle for lovers or dream of a second husband—all this is touched with the grace and skill and delicacy of which we had the first-fruits in *Aunt Margaret's Trouble*; we see throughout the traces of thought and care, and the conscientious painstaking of a writer who honours her craft, and does not merely seek to get through an allotted task with the least amount of trouble compatible with the largest amount of profit. Algernon would have been as successful a bit of work had he been more developed, and his character allowed to unfold itself by more detailed and circumstantial evidence of growth and change. As it is, we cannot help remarking a certain rawness of colour and sketchiness of outline which have marred to some extent what should have been a very careful piece of character-painting.

Of personages in the second rank of importance Minnie Bodkin is decidedly the most interesting, and Rhoda Maxwell the most life-like, in that this latter is sweet and slightly silly, affectionate and true-hearted, but not absolutely straightforward, nor yet of more tenacious loyalty than the ordinary young girl of pure mind and facile temperament. In the absence of any heroic quality, in her commonplace "femininity" itself, lies her life-likeness; hers being that kind of nature which, united with a peaceful blush-rose sort of beauty, is sure to attract men more than those of greater depth and nobler characteristics. Consequently, we find that Rhoda has three lovers, while Minnie, her superior in brains, and even in heart, has only one, and that one the least interesting and least distinctly drawn personage of the story; Rhoda's three being men of such different types as Algernon, David Powell, and Matthew Diamond. Of these three Algernon is, as we have seen, the embodiment of shallow selfishness; Powell is a Methodist preacher, earnest to fanaticism, enthusiastic to almost apostolic sublimity; while Matthew Diamond, the second master of the Whitford Grammar School, whereof Dr. Bodkin the rector is the first, is one of those grave, stern, square men whose silent reserve only a silly little beauty can subdue, and who, probably by the law of compensation, fall in love (in novels) with the woman who is of all the least suited to them, and the most certain to prove an after disappointment. Very tragic is the unhappy love of poor, withered, lean Castalia for her good-looking young scamp, whose unsatisfactory relations with her might almost be excused, seeing what an utterly uninteresting person she was. A man who gives his wife no valid cause for jealousy, but nevertheless is tormented and harassed by her perpetual misgivings, cannot be expected to retain his lover-like tenderness on the one hand, or his equanimity of temper on the other. So far as manner went, indeed, Algernon—or, as poor Castalia calls him, Aneram—did wonderfully well, and bore with her unpleasant ways with a great deal of surface amiability. He revenged himself, however, ignobly enough; and the episode of the stolen money, the blame of which he so cleverly contrived to fasten on her, more than paid off the score which she had run up by her sea-green complexion, hungry eyes, unappeasable sentiment, and general want of personal attractiveness. When it comes to that direful scene in the meadow, and the rough touch with which he shook her off into the river, he paid off all his debts of malice, revenge, and disappointment more than in full, and the innocent cause of his discomfort is made the victim and the sacrifice, as is the case only too often in real life and history.

Though, as we have said, the various characters of this book are for the most part drawn with precision so far as they go, yet naturally some are mere sketches; *e.g.* Miss Chubb, and Mr. Warlock the hungry curate, who devoured muffins in such an ogreish fashion and glowered at Minnie Bodkin with a love more repellent than attractive. Both of these are somewhat of the nature of excrescences, neither of them having any important bearing on the story, while the one is a nonentity and the other a caricature. We do not like that excessive crowding of the canvas to which so many authors are given. It distracts the attention, and takes from the interest in proportion as it diminishes concentration; but it is thought to enliven a story and to give an air of bustle and movement to a plot. In point of fact it does nothing of the kind. Movement comes from variety of incidents, each of which should form an important part in the whole; mere multiplicity of characters impedes rather than helps forward. This, however, is against the creed of authors who find the delineation of a crowded portrait gallery an easier method of filling their pages than a succession of sharply drawn dramatic scenes. This tendency to make portrait-painting do the work of story-telling is the most striking defect in Mrs. Trollope's writing. It is one which we believe it would be quite in her power to overcome, if she thought the effort worth making. By the by, who is the great musical composer, "Glück"? and has Mrs. Trollope a private grammar which authorizes her to speak of a carpet as "sewn"?

MINOR NOTICES.

THE drawings by Mr. Thackeray * which have just been reproduced in facsimile prove incontestably, not only that he possessed the true artistic inspiration, but that the sketches by which he has hitherto been known give a very inadequate idea of the force and beauty of his style. It is not only that, as might be expected, his pictures are full of point and character, but they are also worked out in a highly effective manner. In the woodcuts or engravings previously published in his name much both of the power and delicacy of the original drawings was lost. The mechanical process of transferring drawings to wood or metal was troublesome to him; and when a practical hand undertook the task the spirit of the design was apt to evaporate. Apart from this, however, Miss Thackeray tells us that the hours which her father spent in drawing brought no fatigue or weariness, but were of endless interest and amusement to him. The volume before us derives its title from the opening story, *The Orphan of Pimlico*, "a Moral Tale of Belgravian Life, by Miss M. T. Wigglesworth, many years Governess in the Nobility's Families, and Authoress of 'Posies of Poesy,' 'Thoughts on the Use of the Globes,' &c." This, however, is only an introduction to the promised novel, which, unfortunately, was never written. The object of the writer is said to be to show that "the rose leaf of luxury is not free from thorns," and to portray, on the one hand, "the consequences of crime," and, on the other, "the beneficial effects of virtue, the manners of the nobility, the best Church principles, and the purest morality." The villain of the story is an ill-regulated young man named Mordant, against whom the authoress says she had often warned the family with whom she lived, not, however, it is explained, because she once overheard him calling her a "twaddling old Catamaran," but on account of his general levity and daring license of language. The young and dashing Earl of Lancelot has discovered after marriage that he ought to have met his wife's cousin, the Lady Arabella, at an earlier date. Mordant, who has designs on the Countess, intercepts a letter from the Earl to Lady Arabella, and makes mischief with it, the result being a duel, in which Mordant shoots the Earl, and is then himself blown into the air by the Earl of Fitzmarlingspike, the Countess's father, who is an old Admiral with a wooden leg. The "humble but pious" governess, the demoniacal Mordant, the inflammable young Earl, the seconds at the duel, and the old Admiral are represented with a graphic power which compensates for the brevity of the narrative. Among the other sketches in the volume perhaps the best are the caricatures of Queen Elizabeth, the Little Assessor of Tubingen, the Notes of a Day or Two, Othello (a group of Carolina negroes, done to the life), Glasgow children at play in the gutter, and an imaginary Scotch audience listening to a lecture by Mr. Thackeray. Several of the initial letter-pieces are marked by delicate beauty as well as character and humour. The group of London omnibus cads is as good as anything by Leech, and there is also a capital picture of Thackeray and Jerrold sitting in a railway carriage, and hearing themselves denounced by a curate to a young lady as infamous characters. A view of Berne shows that Thackeray, as indeed might be inferred from the glimpses of scenery in his novels, had the painter's eye.

* *The Orphan of Pimlico; and other Sketches, Fragments, and Drawings.* By William Makepeace Thackeray. With some Notes by Anne Isabella Thackeray. Smith, Elder, & Co.

The grotesque playing cards equally display the touch of genius in small things. Altogether this volume is a pleasant and interesting addition to our knowledge of the great novelist, and deserves to be cherished accordingly.

Mr. Jowett's translation of *Plato* *, which was reviewed in our columns on its first appearance (*Saturday Review*, April 15, 1871), has now reached a second edition, which has been revised and corrected throughout. The prefaces to the Dialogues have been enlarged; some new subjects of modern philosophy, such as Utility, Communism, and the Kantian and Hegelian philosophies, introduced; and "innumerable alterations" made in the text. In the preface Mr. Jowett makes some interesting and instructive remarks as to the principles on which translations should be done; and in reply to Professor Bain's demand for the reasons of his rejecting the epistles attributed to Plato as spurious, he states them pretty much as follows, "reserving fuller discussion of the question to another work":—Because almost all the epistles purporting to be of the classic age of Greek literature are forgeries, and internal as well as external probability is altogether against the letters said to be Plato's; they are trivial, unmeaning, devoid of delicacy and subtlety, wanting in a single fine expression, full of plagiarisms inappropriately borrowed, and of historical blunders, and the more they are compared, the more they furnish evidence against one another.

We are glad to see a new edition of Sir G. Cornewall Lewis's wise and suggestive *Essay on the Influence of Authority in Matters of Opinion*†, perhaps one of the most characteristic efforts of his cautious and philosophical mind. In these days of rash and hasty dogmatism there is no work more likely to do good than this discriminating examination of the foundations of authoritative opinion; and we may also remark, in passing, that Sir George's treatise on the Methods of Reasoning in Politics would also well deserve republication, especially in a popular form.

White's *Selborne* seems to have lately taken a new lease of popularity. Not long ago we reviewed an edition edited by Mr. Harting (see *Saturday Review*, December 26, 1874); we have now before us another edition‡, a handsome volume, edited by Mr. Frank Buckland, and illustrated by Mr. P. H. Delamotte; and a third is said to be in preparation by Professor Bell, who lives in White's house at Selborne, and possesses some important manuscripts, such as White's correspondence with Linnæus. We gather this last piece of information from the present volume, and it is characteristic of the generous courtesy which naturally prevails among the followers of White that, while Professor Bell throws open his stores of information to Mr. Buckland, the latter takes care to let the world know his friend's own intentions. It is unnecessary to say anything of the perennial charm of White's letters; but, if anything could add to them, it is Mr. Delamotte's admirable views of the scenery of Selborne. Mr. Buckland has judiciously put his notes, which include a memoir, into an appendix; and there is also another appendix by Lord Selborne, whose estate adjoins Selborne, and who has devoted his leisure to some valuable researches in regard to the presence of the Romans in that quarter. The discovery at different periods of a considerable quantity of Roman coins in and around the basin of Woolmer Pond, and an examination of some of the tumuli in the same quarter, has led Lord Selborne to the conclusion that we have here probably the scene of a battle between the Romans and the British which is mentioned by Eumenius in his panegyric on Constantius for his recovery of Britain.

Mr. Worsley, who died in 1866, was known not only as a skilful classical translator, but as a poet of original power, and the new and enlarged edition of his miscellaneous pieces which has just appeared § will no doubt extend the number of his admirers. Mr. Worsley's poetry is always full of healthy spirit; he is tender as well as vigorous, and blends a deep religious spirit with classic grace.

Sir Travers Twiss has prepared a second edition of his work on the rights and duties of nations in time of war‖, bringing it down to the present time, so as to include the abortive deliberations of the Brussels Conference, and the somewhat vapoury discussions at the recent meeting of the International Law Conference at the Hague. He accurately describes the "Three Rules" of the Geneva Conference as "having served their purpose for the settlement of a passing dispute," and being now treated as a dead letter. He also challenges the doctrine which was favoured at the Hague meeting, that the right of capturing an enemy's ships on the high seas, if they are private property, should be denied to a belligerent.

The first edition of Mr. Manning's work on international law¶ appeared in 1839, when the subject attracted comparatively little attention. It has since acquired a deeper interest, and it has therefore been thought worth while to bring out a new edition of the book. Mr. Manning being, as he informs us, a confirmed invalid, has been obliged to content himself with writing a preface, leaving the general revision and annotation of the work to Mr. Sheldon Amos. Mr. Manning is led by his horror of war to advocate the maintenance of the Declaration of Paris, and to think that the recent "benevolent" proposals of Russia and Germany deserve further consideration. The writer forgets that artificial rules by which the people of a country are isolated as independent and indifferent spectators of the action of the executive Government are perhaps more likely to produce than to check war, and at the same time tend to destroy public spirit.

Mr. Parker's *Glossary** of architectural terms has reached a fourth edition; the compiler's name is a sufficient guarantee for its soundness and precision.

Lord Garvagh appears to be a young man of adventurous spirit who enjoys the vicissitudes of rough travel, but has not much faculty of observation. He himself disclaims the idea of *The Pilgrim of Scandinavia* † being meant for a guide-book, and admits that "those who may be in want of information upon travelling or field sports will find these pages of no use at all." In point of fact, they are little more than a record of some rather commonplace personal experiences, told with a boyish candour and simplicity which is at times amusing. Lord Garvagh's literary style is somewhat peculiar, and reminds one of a foreigner trying to write English with a small stock of words and not much ease in the composition of sentences. For instance, here is a complaint of want of hospitality:—"I called upon him (Arni Thorlacius), presented, contrary to my usual custom, two letters of introduction, and he informed me that there happened in this place to be an inn for strangers. The guide, Geir Zöega, went to that same inn, where I would have sent him anyhow, he all the while taking very much to heart, not only the habits of the fishermen and sailors there, but also the behaviour of Arni Thorlacius; may his being the exception to Icelandic wit and courtesy prove the rule." In a rural dean, however, Lord Garvagh was more fortunate in discovering "not only the kind, hospitable, and unassuming Icelander, but the consistent and enlightened Christian," for, "speaking pure English, this holy man invited us to dine with him." We also learn that at another place "I took wine at four different houses, so glad the people were to see a stranger, and then had tea in the house of a well-to-do merchant, which had flowers growing in the window, and a piano going pretty nearly the whole time"; and that, further on, "I sat up very late last night over whisky-and-water, hot, with the merchant." On one occasion, when his guide fell down exhausted, he says, "Never in my life having travelled with a medicine-chest, I did not know what on earth to do with him." And here is a philosophical meditation:—"How I love to hear the intellectual conversation of some sportsmen, and to watch men turning out for sport as the one sole and only business of this life, all in correct horse, dog, and gaiter style! showing that selfishness and very natural contempt for other people's interests, who may not care so much for sport, or may prevent it if coming their way!" All that we learn from this work is that life is very rough and uncomfortable in Iceland, and even in some parts of Norway, away from the beaten track.

A republication of Miss Martineau's *Eastern Life*‡ is fully justified by its intrinsic value, which, as the East moves slowly, has lost nothing by the lapse of time. Many books have been written on the same subject since this one first appeared, nearly thirty years ago; but, as a thorough, discriminating, and, we may say, vivid, picture of Egyptian scenery and manners, it is still one of the best to which any one who wishes to form a general idea of the country can refer.

Miss Violet§, a minor novel by the late Shirley Brooks, which was contributed to *Punch* in the earlier days of his connexion with that periodical, and by which indeed he first made his mark in it, has been reprinted, together with a satirical sketch of matrimonial differences, in the form of dialogues between Mr. and Mrs. Naggleton, which also appeared in *Punch* some years later. Those who laughed over these productions of a genial and witty writer in other days will no doubt be glad to see them again, while they will be new to others.

Mr. Willis Bund has compressed into a simple and convenient form the information needful for understanding the bearing of the Agricultural Holdings Act on the law of compensation for unexhausted improvements.‖

A "City Editor" has put together some interesting chapters on the Rationale of Market Fluctuations.¶ He lays down the following principles—that market fluctuations are never without a cause, that they are invariably of an exaggerated character, and that, as a rule, when anything happens, the market immediately responds to

the event. From this he concludes that investors ought not to be dismayed by a mere fall of stock in itself, but should look to the reason of it, trusting that, if the investment is fairly sound, it will soon recover its position; on the other hand, stocks at a very high figure should be cautiously approached, as a reaction may be feared. As an example of this theory, it is mentioned that an astute speculator who every morning calculated the chances for and against a rise in certain stocks, and, when they seemed to point to a rise, sold out, was generally able to buy back again more cheaply, and *vice versâ*. The writer, while admitting that organized markets, such as the Stock Exchange, are liable to abuse, holds that they have compensating advantages in securing at once the market price of any article. His bias, however, leads him to a doubtful criticism on Leeman's Act, which imposes on a dealer the condition that he must not sell certain shares unless he actually possesses them. "Thus," we are told, "an anticipatory or market opinion of the value of banking shares is not so finely arrived at," because the buyer has to wait till the article is really in the market. It is evident, however, that the last-mentioned condition is the only true test of honest trade.

Professor Kirk* demonstrates in a vigorous and conclusive manner the utter fallacy of the Trade-Union policy of attempting to raise the value of labour by artificial restrictions on production; and it would be well if working-men could be got to listen to his arguments. Professor Kirk shows very clearly that, in the long run, the power of the Unions is limited to that of inflicting losses upon other people at the cost of still greater injury and suffering to themselves; and that capital, though kept unemployed, does not diminish, while suspended industry is an absolute loss.

A "Handy Volume Edition" of Scott's poems†—seven little volumes in a neat case—has been brought out by Messrs. Bradbury and Co. Its type is readable, and it would seem to be especially suitable for a tourist with literary tastes.

French and Spanish Painters‡ is a work of a somewhat mixed character. Some of the illustrations, especially one or two of the etchings, are very good, while others are very bad. If the volume is to be regarded as giving a general idea of the French and Spanish schools of painting, both pictures and letterpress are extremely inadequate; but, taken for what it is, as a collection of pictures, chosen pretty much at random, and accompanied by a slight account of the various artists, it is not without interest.

Though open to some objections on the ground of a certain perhaps not unnatural partisanship, the Count of Paris's History of the American Civil War§ is a book of genuine historical value. We have already noticed the original work as it came out, and of the authorized English translation now before us it is enough to say that it seems to be carefully and intelligently executed.

Sir H. D. Wolff, who believes that the policy of our Government with regard to the Suez Canal points to its complete redemption from the hands of the Company and the purchase of the Viceroy's reversionary interest, has translated a lecture by M. de Lesseps ‖, giving a brief history of his connexion with the undertaking. The narrative is in a jocular and gossiping vein.

Mr. Dickens ¶ having in his writings described or mentioned a great many London streets and houses, Mr. Edgar Pemberton has thought it necessary to compile a catalogue of them—a reverential, but, as far as we can see, useless piece of work.

The series of little handbooks on British Manufacturing Industries**, edited by Mr. Bevan, now includes volumes on the metal, pottery, and textile trades.

Mr. Curley, with a view apparently of encouraging emigration to Nebraska††, has published an account of that region in a handsome form with tinted paper, woodcut illustrations, red leather binding, and gilt edges. The work originally appeared in the United States, and its issue in this glittering form for the English market naturally suggests some reflections as to the section of our countrymen who are appealed to, since it can scarcely be supposed that persons in the dismal circumstances of intending emigrants are likely to invest their scanty savings in such a gorgeous and expensive volume as this. It must be admitted, however, that Mr. Curley writes, in the main, in a very moderate and sensible way, and admits some of the drawbacks of Nebraska while painting its advantages.

There is no doubt a generation growing up which as yet knows not Ingoldsby, and for its benefit a new edition of the famous ballads‡‡ has been provided. It is doubtful how far the *Ingoldsby Legends* have kept their hold on their original admirers, and there are some of them in which the references to events of the day have grown somewhat obscure and out of date. Still they contain a sufficient body of genuine humour to keep up the popularity of the work, though perhaps this might be further promoted by a judicious reduction of the number of pieces.

A "People's Edition" of Professor Porter's life of Dr. Henry Cooke of Belfast*, the original issue of which was reviewed in the *Saturday Review* of January 27, 1872, has just been issued. Dr. Cooke was a man, if not exactly of a very elevated or heroic character, at least of remarkable energy, and his life by his son-in-law is an interesting picture of a stirring period.

The *Pythagorean Triangle*† and *Discrepancies of Freemasonry*‡ are posthumous works by Dr. Oliver, who, it appears, was a well-known Freemason. They are written in the style of mysterious nonsense which is characteristic of the Order.

The seventh volume of the *Camden Miscellany*§ contains two sermons of the "boy bishop" in the reigns of Henry VIII. and Mary; the speech of Sir R. Heath as prosecutor in the case of Dr. Alexander Leighton, who was tried before the Star Chamber in 1630, for his attacks on the bishops, and sentenced to be publicly whipped and to have his ears cut off and his nose slit, and to be branded in the face with S.S. (sower of sedition), and then imprisoned in the Fleet for the rest of his life; notes of Sir G. Croke's judgment in regard to the ship-money, corrected by himself; and reports of the mission of Sir Thomas Roe to Gustavus Adolphus 1629–30.

Messrs. Phillip's Series of Reading-Books‖, from primers upwards, which is edited by the Principal of St. Mark's College, deserves commendation for its practical character and judicious efforts, not only to teach, but to interest and amuse the young. It is assumed in these books that reading and writing are to go on together.

Several Manuals of Elementary Science¶ have been published by the Society for Promoting Christian Knowledge, of the quality of which the authors' names—Mr. F. Le Gros Clark (physiology), Dr. Bernays (chemistry), Professor Newton (chemistry), Rev. J. G. Bonney (geology), Mr. W. H. Christie (astronomy), and Professor Bentley (botany)—are a sufficient guarantee.

Mr. Alfred Hamilton has illustrated the local distribution in England and Wales of heart disease and dropsy and of cancer and pthisis in women in a series of coloured maps**, so that the prevalence of any particular disorder may be taken in at a glance.

THE LION'S BRIDE. By Professor GABRIEL MAX. This celebrated Picture is NOW ON VIEW, at Arthur Tooth's Gallery, 5 Haymarket, opposite Her Majesty's Theatre.

UNIVERSITY COLLEGE, LONDON.—POLITICAL ECONOMY.—Mr. H. S. FOXWELL, M.A., Fellow of St. John's College, Cambridge, will begin a course of TWENTY-FOUR LECTURES on Tuesday, January 18, at 3 P.M.; the subsequent Lectures will be delivered
The subject of the Course will be "The Principles of Political Economy considered Historically and in their Applications to certain Social Problems, especially the Relations between Capital and Labour."
Fee for the Course £2 12s. 6d.
JOHN ROBSON, B.A., *Secretary to the Council*.

UNIVERSITY COLLEGE, LONDON.—The HEAD-MASTERSHIP of the School having become VACANT by the death of Professor KEY, the Council desire that his Successor should, if possible, enter upon the discharge of his duties at the beginning of the next Summer Term (April 25, 1876).
Candidates for the appointment are requested to forward their Applications and Testimonials, not later than Saturday, January 22, to the undersigned from whom information relating to the duties and emoluments of the Head-Mastership may be obtained.
December 20, 1875. JOHN ROBSON, B.A., *Secretary to the Council*.

UNIVERSITY COLLEGE, LONDON, SCHOOL. The LENT TERM, 1876, will begin for New Pupils on Tuesday, January 18, at 9.30 A.M.
The School is close to the Gower Street Station of the Metropolitan Railway, and only a few minutes' walk from the Termini of several other Railways.
Discipline is maintained without corporal punishment or "impositions."
Prospectuses, containing full information respecting the Courses of Instruction given in the School, Fees, and other particulars, may be obtained at the Office of the College.
JOHN ROBSON, B.A., *Secretary to the Council*.

HYDE PARK COLLEGE for LADIES, 115 Gloucester Terrace, Hyde Park.
The COLLEGE will RE-OPEN January 19.
The JUNIOR TERM begins January 19.
The SENIOR TERM January 25.
Prospectuses, containing Names of Professors, Terms, &c., can be had on application to the LADY-RESIDENT.

LADIES' COLLEGE, POLYGON HOUSE, SOUTHAMPTON.
Patrons.
The Right Rev. the Lord Bishop of WINCHESTER.
The Right Hon. Viscount EVERSLEY.
The Right Hon. Lord NORTHBROOK.
President—The Right Hon. W. COWPER-TEMPLE, M.P.
The TERM commences on January 23.
Instruction is given by Professors in Literature, Science, and Art. English and Foreign Governesses reside in the College. The Senior Classes are open to "Occasional" Students who may be desirous of taking up any given subject.
For particulars, application should be made to the Lady Principal (Miss DANIELS), Polygon House, Southampton.
W. C. MACLEAN, M.D., C.B., *Hon. Secretary*.

PROSPECT HOUSE, MALTON.—The Misses HALL, Principals of the above SCHOOL, offer a sound and comprehensive Education for YOUNG LADIES. Their Pupils have passed the Cambridge Local Junior, Senior and Higher Examinations, and a Special Class is formed for Ladies wishing to prepare for the latter. Prospectuses will be forwarded on application. The Term commences January 26.

A HIGH-CLASS EDUCATIONAL HOME, near London.—A LADY of POSITION, who has some Young Relatives at the above Establishment, where there are only Eight Young Ladies received, wishes to recommend It to Parents and Guardians who are seeking a First-class Educational Home for their DAUGHTERS or WARDS. The course of Study comprises a thorough and comprehensive English Education (Arithmetic and Plain Needlework receiving special attention), Modern Languages, the Sciences, and Accomplishments, taught by English, French, and German Resident Governesses (*diplomées*), assisted by eminent London Professors. Highest references to Parents given and required. Terms 60 Guineas.—BETA, Messrs. Westley and Carpenter, 2 Regent Street, London.

CLIFTON COLLEGE SCHOLARSHIPS.—EIGHT or more will be open to COMPETITION at Midsummer, 1876, value from £25 to £50 a year, which may be increased from a special fund to £80 a year in cases of Scholars who require it.—Further particulars may be obtained of the SECRETARY, the College, Clifton, Bristol.

THE HIGH SCHOOL, MARGATE.—The EXAMINATION for the SCHOLARSHIPS at the above School will take place January 17, 1876. The next Term will begin January 18.—Prospectuses on application.

LEAMINGTON COLLEGE.—Classical, Modern, and Junior.—*Head-Master*, The Rev. JOSEPH WOOD, M.A., late Fellow of St. John's College, Oxford. The NEXT TERM begins January 25.—For particulars, apply to the Rev. the VICE-MASTER, College House.

ALDENHAM GRAMMAR SCHOOL (near Watford). Founded A. D. 1597
Under the New Scheme, Nine Exhibitions are founded, of the value of £50 per annum for Three Years, "to be tenable at any University or other place of liberal education, or for the purpose of fitting the holder for some Profession."
Also, Ten Junior and Ten Senior Platt Scholarships are to be established, the first to defray about one-half, the latter nearly the whole, of the expense of maintenance and education in the School.
An Election to Three Junior Scholarships, of the value of £30 per annum for Three Years, will be held at the end of January. The age of Candidates must be between Ten and Fourteen years. Two are to be entirely open, but one restricted to certain Grammar Schools in Herts and the adjoining Counties.
The Terms for Boarders are 60 Guineas per annum, including the School Fees and charge for laundress. Further information will be given on application to the Rev. ALFRED LEEMAN, Head-Master; or to C. R. VINES, Esq., Brewers' Hall, Addle Street, Aldermanbury.

DR. HAYMAN, ex-Head-Master of Rugby, Rector of Aldingham, near Ulverston, sea coast of Lancashire, prepares PUPILS for the Universities, &c.

DOVER COLLEGE.
President—The Right Hon. Earl GRANVILLE, K.G.
Head-Master—The Rev. WM. HILL, M.A., late Scholar of Ch. Coll., Cambridge.
A liberal education by Graduates of the Universities.
Tuition Fees, from Ten to Fifteen Guineas per annum. Board in Masters' Houses, £45 per annum.
The College will RE-OPEN on January 19.
Three Exhibitions of the value of from Ten to Fifteen Guineas per annum, tenable for One or Three years, are offered for open competition.
Apply to the HEAD-MASTER, or the HONORARY SECRETARY,
WOLLASTON KNOCKER, Esq., *Town Clerk*.

GROVE HOUSE SCHOOL, Tottenham.—Boys are prepared for the Universities, for Professions, or for Commercial Life. The premises contain Cricket and Running Ground, Swimming Bath, Fives' Court, Workshops and Laboratory, and there is a Boathouse belonging to the School. The house is constructed for sixty Pupils, and the arrangements are those of a first-grade Public School. The inclusive fee is £120 per annum, and for Juniors £90 per annum. There are Three Entrance Scholarships of £25, tenable for three years. For particulars apply to the Head-Master, A. R. ABBOTT, B.A. The Station for the School is "Seven Sisters."

TOURS, France.—Rev. C. DOWMAN, LL.B., T.C.D. (Ex-Mathematical Honourman) Receives FIVE PUPILS to Prepare for Army, University, and other Examinations. French Gentleman resident in the house. Two Vacancies.—83 Rampe de la Tranchée, Tours.

HARTLEY INSTITUTION, Southampton.—Students of this Institution have gained many appointments in the Indian Services, the Control, &c., and many University distinctions, during the last few years.

WOOLWICH, ARMY, COOPER'S HILL.—MORGAN JENKINS, M.A. (Wrangler), assisted by an able Staff of Graduates in First Class Honours (including a 2nd in 1st class of Nat. Sci. Tripos), prepares RESIDENT and NON-RESIDENT PUPILS for the above. The only Three sent up for Woolwich, one 16th in last Thursday's List; Three out of Four at one Examination for Cooper's Hill, and Three out of Four at another for the Army, have passed.—Address, 50 Cornwall Road, Westbourne Park.

WOOLWICH, LINE, CONTROL, COOPER'S HILL.—Rev. Dr HUGHES (Wrang. Cam.), who has passed 200, has VACANCIES for the next Examinations. Classical, Science, French, German, and Drawing Tutors. He can also receive (quite distinct) younger PUPILS for a more extended course.—Ealing, W.

EDUCATION.—BOSTAL HILL, ABBEY WOOD, Kent.—A limited number of BOYS received, who live on a home footing, entirely with the Head-Master. References to many Noblemen and Gentlemen. High Terms. Ages from Seven to Sixteen.—Address, HEAD-MASTER, as above.

PRIVATE TUITION for the UNIVERSITIES, &c.—A CLERGYMAN (M.A. Oxon.) who has had several Years' successful Experience in the above, assisted by a Resident Cambridge Graduate, besides other efficient Non-resident Masters for Modern Languages, &c., receives Ten PUPILS, and has TWO VACANCIES. Neighbourhood very attractive and healthy, on the Banks of the Thames, about an hour's ride by train from Paddington.—Address, Rev. M.A., care of Mr. F. B. De Carteret Bisson, 70 Berners Street, W.

A SMALL HIGH-CLASS SCHOOL, Preparatory for the Public Schools, &c., is conducted by an OXFORD GRADUATE (High Classical Honours), in a very Healthy District.—Address, BRETON, Great Blakenham, Ipswich.

MR. C. A. WALL, the French and German Master at Brighton College, receives PUPILS. French is always spoken in the Boarding House, and can be thoroughly acquired without interruption to the College work.

TO M.P.'s, &c.—An ENGLISHMAN, late Tutor in a Public School, who has resided the German, French, and Italian Languages on the Continent, desires an appointment as SECRETARY, CORRESPONDENT, &c.—Address, H. B., 7 Hereford Road, Westbourne Grove, W.

HYDROPATHY.—SUDBROOK PARK, Richmond Hill. *Physician*—Dr. EDWARD LANE, M.A., M.D. Edin. For Invalids and those requiring rest and change. Turkish Bath on the premises. Private entrance to Richmond Park.

BRIGHTON.—BEDFORD HOTEL.—Facing Sea and Esplanade. Near the West Pier. Central and quiet. Long established. Suites of Rooms. Spacious Coffee-room for Ladies and Gentlemen. Sea-Water Service in the Hotel.
ROBERT PARK, *Manager*.

PRATTEN'S PERFECTED FLUTES, Cylinder and Cone, commencing at Four Guineas. The Siccama Flute and the Boehm old and new system of fingering.
Particulars of all these instruments upon application to the Manufacturers.
BOOSEY & Co., 295 REGENT STREET, W.

PIANOFORTES and HARMONIUMS, at BOOSEY & CO.'S New and Extensive Warerooms, 295 Regent Street, adjoining the Polytechnic. A large [illegible] by all the great Makers (English and Foreign) for SALE or HIRE, also upon the Three Years' System.

THE ASTRONOMER-ROYAL Reported to the Admiralty (August 13, 1870 on 10 Chronometers entered for annual competition), "M. F. DENT'S is the finest we have ever had on trial."—M. F. DENT, Chronometer, Watch, and Clock Maker to the Queen, 33 COCKSPUR STREET, CHARING CROSS.

BEDSTEADS and BEDDING.—WILLIAM S. BURTON has on show a very large assortment of Iron and Brass Bedsteads, Children's Cots, &c., fixed for inspection. All of best make and of guaranteed quality.

Strong Iron Stumps for Servants	12s. 6d. to 28s. 0d.
Strong Iron French do. do.	18s. 0d. to 35s. 0d.
Superior do. best colours, brass knobs	20s. 0d. to 50s. 0d.
Brass French Bedsteads	70s. 0d. to 110s. 0d.
Do. do. extra strong	147s. 0d. to 315s. 0d.
Hind-Tester Bedsteads, brass fittings	40s. 0d. to 240s. 0d.
Do. do. Foot Rails all brass	110s. 0d. to 400s. 0d.

Children's Cots, Chair Bedsteads, Couches, &c.
Elongated Bedsteads, &c., in every variety.

BEDDING Manufactured on the Premises, and Guaranteed by WILLIAM S. BURTON.
Extreme care is taken, even where the prices are the lowest, to use only such material as will wear satisfactorily. Bedding can be supplied of a common quality, but is not kept in stock.

For Bedsteads.	Width: 3 ft.	4 ft. 6 in.	5 ft.
Best Straw Palliasse	12s. 0d.	16s. 0d.	18s. 0d.
Best French Alva Mattress	18s. 0d.	28s. 0d.	30s. 0d.
Coloured Wool ditto	17s. 6d.	26s. 0d.	29s. 0d.
Best Brown Wool ditto	23s. 0d.	34s. 0d.	37s. 0d.
Good White Wool ditto	31s. 6d.	46s. 0d.	52s. 0d.
Extra Super ditto	50s. 0d.	75s. 0d.	81s. 0d.
Superior Hair ditto	42s. 6d.	63s. 0d.	69s. 0d.
Extra Super	61s. 0d.	92s. 0d.	104s. 0d.
German Spring	50s. 0d.	68s. 0d.	74s. 0d.
Superior ditto, Hair Stuffing	65s. 0d.	87s. 0d.	95s. 0d.
French Mattress for use over Spring	35s. 0d.	51s. 0d.	57s. 0d.
Extra Super ditto	48s. 6d.	72s. 0d.	80s. 0d.
Feather Beds, Pembrey, at 1s. per lb.	21s. 0d.	42s. 0d.	
Ditto, Best Grey Goose, at 2s. 6d. ditto	27s. 6d.	110s. 0d.	120s. 0d.
Ditto, Best White ditto, at 3s. 6d. ditto	38s. 0d.	143s. 0d.	163s. 0d.

Feather Pillows, 3s. 6d. to 14s.; Bolsters, from 6s. to 20s. 6d.; Down Pillows, from 11s. 6d. to 1os.

BLANKETS, Counterpanes, and Sheets in every variety.

WILLIAM S. BURTON, General Furnishing Ironmonger, by appointment, to H.R.H. the Prince of Wales, sends a CATALOGUE, post free, containing upwards of 600 Illustrations of his unrivalled Stock, with List of Prices and Plans of the 30 large Showrooms, 39 Oxford Street, W.; 1, 1A, 2, 3, and 4 Newman Street; 4, 5, and 6 Perry's Place; 1 Newman Yard; Manufactories, 84 Newman Street, and Newman Mews, London.
Cost of delivering Goods to any part of the United Kingdom by Railway is trifling. W. S. BURTON will always undertake delivery at a small fixed rate.

COUNT ANDRASSY'S NOTE.

THE form of Count ANDRASSY'S Note is perhaps less important than the proof which it affords that the three Imperial Courts find it possible to act in concert. The ready acceptance by the French Government of a string of colourless or commonplace proposals indicates a determination to stand for the present aloof from external transactions. It will be more difficult for the English Ministers to form a decision. The origin and consequences of the project will require full consideration. The preliminary concert of the three Governments involves the assumption that they are more immediately interested in the Eastern question than France or Italy, or even than England; yet Germany is but remotely concerned with Turkish affairs, which have for a century past been an object of constant solicitude to English statesmen. If Count ANDRASSY had communicated his Note simultaneously to all the Powers, there would have been a strong presumption in favour of an Austrian project. The concurrence of Russia would not have furnished a sufficient reason for objecting to a plausible scheme; but the Austro-Hungarian CHANCELLOR has avowedly acted as the agent of the three allied Powers; and it is probable that, in executing any measure of intervention, they would consider themselves independent of England and of France. If the Note is vague and indefinite in its terms, there will be additional risk of future complications. As judges sometimes say in construing ambiguous Acts of Parliament, "the Legislature must have meant something." A scheme of administrative reform for a Turkish province may be interpreted as conveying a right to enforce the concessions which are in the first instance courteously recommended. It is impossible without knowledge of diplomatic negotiations and assurances to form a confident judgment of the expediency of accepting Count ANDRASSY'S proposals. The decision of the Government will be founded on ample information; and, until all the documents are published and explained, the country will provisionally acquiesce in the policy which may be adopted.

Impetuous philanthropists already condemn the Note which they have not seen. According to their contention, it is useless and absurd to propose reforms to the Turks, who never keep even their own promises of amendment. It is known that the Austrian project includes no machinery of execution; and it is therefore, according to the critics, immaterial whether it is more or less complete in its details than the SULTAN'S Firman. Irresponsible politicians fail to make sufficient allowance for the embarrassments which beset practical statesmen. Count ANDRASSY could scarcely found a policy on the fanciful or metaphorical proposition that indigenous Bosnian Mussulmans are an invading Turkish horde, occupying the lands which they in fact inherited from their Slavonic ancestors. Count ANDRASSY might not perhaps trouble himself with ethnological distinctions if he was prepared to exterminate or to expel the troublesome Mahometans of Herzegovina and Bosnia; but Austria is not at present disposed to engage in a crusade. A former member of Parliament has lately given variety to the Eastern controversy by an elaborate eulogy on the admirable qualities of the Turks. There are probably in Turkey, as elsewhere, both good and bad specimens of the ruling race; but there can be no doubt that the bad Turks are very bad; and if there were no Turks in Europe their presence would not be desired, nor their absence regretted. The conclusive objection to the philanthropic doctrine of extermination is that it is impracticable. The invading horde is too numerous and too tenacious to be summarily expelled. The annexation of the disturbed province to Austria would perhaps be the best possible solution as far as the interests of the inhabitants are concerned. An Austrian administration would keep Mahometans as well as Christians in order; nor can there be any doubt that the worst-governed province of Austria or Hungary is better managed than the best-governed province of Turkey. In this case also considerations of policy and prudence interfere with the adoption of heroic remedies. The opposition of Montenegro and Servia to the establishment of Austrian sovereignty in Herzegovina might perhaps be disregarded; but a Turkish war, undertaken for a doubtful object, would be highly inconvenient, especially while the part which Russia might take in the quarrel is wholly uncertain. It is well known that both the German and the Hungarian portions of the Empire deprecate any increase of the Slavonic population; and it is doubtful whether any one of the three Powers would assent to the arrangement which is with easy confidence proposed by amateurs. If Austria were willing and able to annex Herzegovina, and if no further consequences would follow the measure, there is no reason why the English Government should dissent from the philanthropic solution.

In default of an Austrian conquest, some machinery might perhaps be contrived by which the administration of the disturbed province might be superintended and controlled; but it is not surprising that Count ANDRASSY has abstained from defining the method of future coercion. Any project of the kind would have injuriously affected the probability of English co-operation. Lord STRATFORD DE REDCLIFFE formerly rendered good service both to his own country and to Turkey by the pressure which he habitually applied to the Porte on behalf of improvements in administration. A formal right and corresponding duty of interference would be more embarrassing; but a power of control vested in a single Ambassador would be comparatively simple and effective. A right of appeal to a Board of five or six representatives of as many States would produce many anomalies. If the Ambassadors could agree among themselves they would require the aid of an Austrian contingent to enforce their decisions. Count ANDRASSY'S project only relates to Herzegovina, and perhaps to a part of Bosnia; and it is so far distinguished from the SULTAN'S Firman, which purports to extend to all parts of the Empire. There is at present nothing to prevent the Ambassadors from remonstrating jointly or severally against abuses which may prevail in any province. If the Note had provided a machinery of execution, they might at the same time protest verbally against maladministration in Bulgaria and interfere by force for the protection of oppressed Christians in Herzegovina. Objections of this kind are perhaps not necessarily conclusive; but Count ANDRASSY must have taken them into consideration. He perhaps thought it prudent to leave open on the face of the document the more important question whether the Powers, if they can agree among themselves, are to impose their will on the Porte. In every detail it was necessary to exercise the most careful circumspection. The three allied Courts must have been prepared with alternative systems of policy to meet the cases of the assent or refusal of the English Government.

The disappointment of the friends of the insurgents is excessive, though it is natural. Looking only to their object,

they made insufficient allowance for the difficulties of establishing any kind of concert. It would perhaps have been impossible that Austria and Russia should agree on a more definite course of proceeding. Something has been gained by the adversaries of the Porte in the formal notice that three great Powers claim a right of interference in its internal administration. One more clause of the Treaty of 1856 has been virtually repealed, for an express consideration of the promises of the Porte to give equal privileges to all the subjects of the Empire was the disclaimer by the European Powers of any right of internal intervention. The experience of twenty years may perhaps justify a change of system; but it is a mistake to suppose that Count ANDRASSY'S Note will not have established a new principle. If Austria, Russia, and Germany can, with or without the concurrence of the Western Powers, insist on reforms in Herzegovina, they may at their convenience use force to obtain compliance with their demands. Any active measure must be preceded by negotiation among themselves; but, as far as the Porte is concerned, the principle of qualified independence is already established. In a later stage of the transaction the precedent of the liberation of Greece will perhaps, with more or less variation, be followed. Fifty years ago much difficulty occurred in determining the limits of the territory which was ultimately declared independent. It would be a far more arduous task to deal differently with Herzegovina, with Bosnia, and with Bulgaria. The Turkish inhabitants of the Morea were compelled to leave the country on payment or promise of compensation for their property. The Mahometan population of the European portion of the Empire, whether of Slavonic or of Turkish race, is warlike and comparatively numerous. To expel an invading horde from countries where it has for four hundred years been at home is a bold undertaking; but Count ANDRASSY'S proposals of reform may possibly be a step towards the attainment of the design at some remote period.

THE PRESS ABROAD.

AS there is not much going on at Paris just now, the bitterness of party spirit during a period of expectation seeks material from remote sources, and the past is ransacked, and buried scandals are unearthed. Among other amusements, a journal has thought it worth while to reproduce some imaginary letters of LOUIS PHILIPPE, which were published more than thirty years ago by the *Gazette de France*. It is supposed to be probable that some part of this very artificial kind of dirt will stick to the Orleanists of the present day, or that at any rate they will fear it may stick, so that in any case there will be the pleasure of alarming them. The history of these letters and of their publication may, however, suggest another train of thought with which the Orleanists have nothing to do. The letters were published in a Legitimist journal in 1841, nearly eleven years after LOUIS PHILIPPE had provoked the wrath of all Legitimists by managing to be made King against his will. He was therefore, in 1841, not only a reigning monarch, but a monarch who had reigned some time, and it might have been thought that he was entitled to such respect as reigning monarchs usually receive. The Legitimist organ was, however, determined to show how far disrespect for a reigning monarch could go. It first published three letters supposed to have been written by LOUIS PHILIPPE during the time of the First Empire; and, finding the interest of its readers awakened, it proceeded a few days later to give three letters purporting to have been written by the KING since his accession to the crown. These letters were adroitly constructed so as to do the KING as much harm as possible. In 1841 the public mind was much excited against England on account of the difficulties to which the Syrian question had given rise; and the first letter accordingly was supposed to have been written by the KING to the English Ambassador at Paris, and to have assured him that the KING was not unmindful of the engagements of his family towards England, and was prepared to surrender Algeria to England as soon as public opinion in France made the step possible. Throughout his reign LOUIS PHILIPPE was accused of truckling to Russia, and there can be no doubt that he lived in constant terror of a coalition against France, of which the CZAR should be the guiding spirit. Poland was therefore selected as the subject of the second letter. That France had a vague wish to assist the Poles during their insurrection, and had to abandon their cause in face of the enormous difficulties which active interference would have evoked, was notorious. For the KING to have written in this sense would have done him no harm. The letter, therefore, made him assume a very different tone. He was made to describe himself as having been the real author of the disasters of Poland, and as entitled to the eternal gratitude of St. Petersburg for the very clever way in which he had baffled, thwarted, and deluded the Poles. Lastly, it was a constant, and in some respects a merited, reproach to LOUIS PHILIPPE throughout his reign that he had wandered very far away from the professions of liberty with which he had started. The third letter accordingly professed to embody the real views which he entertained towards the press. His correspondent was entreated to believe that the KING had never abandoned his attempt to gain a complete mastery over the press, the most dangerous of his enemies. A large section of journalists had already been bought or won over, and the rest would follow. By his adroitness the sting had been taken out of the press, and Berlin, Vienna, and St. Petersburg were invited to recognize his services in a cause which he and they had equally at heart. The Government determined to prosecute the manager of the Legitimist journal for publishing forgeries, and there was a trial which at the time produced much sensation, BERRYER being retained for the defence. It was stated that the letters had been sent over from London by an adventuress named Mme. DE SAINT ELMA, and that they had been sent to the journal by the Marquis of LAROCHE-JACQUELEIN, who said that he had shown them to several persons devoted to LOUIS PHILIPPE, who all recognized the handwriting of the KING. The letters themselves were not forthcoming, which BERRYER boldly explained by saying that Mme. DE SAINT ELMA lived in London, and that under the English law she might be tried and hanged for forging them. The end of the trial was that the manager was acquitted by the jury, and the incident passed into the obscurity from which it has been just extricated by the ingenuity of modern journalism.

We will now turn to a very different example of what is written and published in the foreign press. The illustration is drawn from Belgium, and has to do with current politics. An article was published last week by a Belgian paper which calls itself the *Friend of the People*. A great strike is going on at Charleroi, and the workmen are so excited, and have made such approaches to actual violence, that the Government has thought fit, not only to send troops to the spot, but to forbid the transportation of arms from one part of Belgium to another. In this state of things the *Friend of the People* has given to the world what is said to be a manifesto of the associated workmen. It sets out with stating that the rapacity of employers in reducing wages by twenty per cent. is more than the workmen can bear. They are therefore determined to claim their right to live. But they cannot stand or fall alone. The small shopkeepers must starve or flourish with them. They, equally with the miners, are the victims of great capitalists. They will have to shut up their shops if the workmen have no longer money to spend there. They should therefore make common cause with their customers. They have no interests in unison with those of the *haute bourgeoisie*. They do not profit by the lavish expenditure of those to whom everything is given that is good in the world. They are not *fournisseurs du roi*. Their lot is simply to be sold up by those who are more lucky than themselves. In fact, there is no saying how general will be the ruin unless workmen get such wages as they think proper. The locomotive will rust in the station, the empty waggons will encumber the rails. With a full consciousness of what they are doing, the associated miners have declared war, a fierce implacable war, in which they invite the small shopkeepers to assist them, against the parasites and leeches of the proletariat. Every man who has any wise or humane feeling left is called on to aid in this great undertaking, for the success of which the miners are prepared to undergo the most extreme sacrifice. There need be no illusion as to what they mean. Their motto is "Du "pain ou du plomb"—"Feed us or we will shoot you"—which, it may be observed, has great merits as a motto, being eminently terse, simple, and unmistakable. The miners count on the great army of workers to beat to the earth that monster, the capitalist,

and say that they will wage the contest with equal firmness and coolness, disregarding the provocations of the numerous gendarmes whom the proprietors of the mines have summoned to guard the coal that has been got out of the earth by the sweat of the workman's brow. A sort of quaint concession to human weakness is made at the end of the manifesto by terming the struggle on which the workmen have embarked "pacific and legal," so that even timid consciences need not fear fighting under the device of "Bread or bullets," and men of a great variety of dispositions may unite to prepare "the coming of the "kingdom of work."

The state of things in which it is possible that forged letters purporting to be written by a reigning monarch since his accession should be published, and that an appeal should be made in a newspaper to workmen and shopkeepers to march under the inspiring influence of such a motto as "Bread or bullets," is the state with which the Governments of such countries as France and Belgium have to deal. In France each sovereign in turn is regarded as an adventurer temporarily successful, and the friends of other adventurers think every means fair by which his period of success may be as much shortened as possible. He is like the promoter of a rotten Company whose prospectus has happened to tickle the public, and the promoters of rival Companies run him down in order to start their own Companies. Lyons appears to have had the honour of inventing the brilliant motto to which Belgians are now asked to attach themselves, and Lyons would be as ready as Charleroi to put its motto in practice, but that experience has made it less comfortable than a novice would be in speaking of its contempt for gendarmes. No doubt there are some advantages in the liberty of the press, however extreme. LOUIS PHILIPPE learnt from the history of his imaginary letters the real temper of such distinguished persons as the Marquis of LAROCHEJACQUELEIN, and quiet Belgians are saved from all misapprehension when they know that "Bread or bullets" is the motto of the men on strike. But it must be owned that it is very difficult to govern a country where the liberty of the press takes this extreme form. When in England we speak of the liberty of the press, this is not usually the kind of liberty to which we refer. To publish forged letters purporting to have been written by the reigning monarch would be simply impossible; and it would not only be impossible now, but it would have been equally impossible during the whole period of the existence of the English press in its modern shape. Possibly a parallel to the utterances of the Belgian journal, with its sanguinary manifesto, might be found in English records of former days. But at any rate no such utterance would be tolerated in England now. We have got beyond the stage of society in which people avow that "Bread or bullets" is their motto; or, if we may apprehend that the appearance of such a state of things may be one of the dangers of the future, there are no signs of it at present. There is here a limit imposed partly by law, but much more by public opinion, on the liberty of the press. How this restraining influence acts, and what are its origin and extent, it might be difficult to describe accurately. But every one sees and feels that it does act. In France and Belgium it does not act. Nothing but sheer force keeps down the gravest scandals in France. The liberty of the press is there apt to be abused as much as it can be abused. Possibly, excessive repression aggravates the evil which it strives to cure, and France seems to try in vain one experiment after another for establishing satisfactory relations between the Government and the press. But at any rate it must be owned that it is not fair to judge of foreign societies simply by what we know of English society. They cannot be expected altogether to imitate us, when the circumstances in which they are placed are so different from those with which we are familiar.

THE FRENCH MINISTRY.

THE cohesion of M. BUFFET'S Cabinet is a phenomenon in politics. It was by a miracle that the component parts were brought together in the first instance, and the original miracle has been outdone by the marvel of their keeping together. Since Saturday last the Ministerial pitcher has again made its journey to the well, and, contrary to all reasonable expectation, has again come back unbroken. For a moment the pieces seemed to have finally parted company; but a little firm pressure from Marshal MACMAHON has riveted them apparently as firmly as ever. M. BUFFET'S attitude in the business has been consistent with his whole previous policy. Ever since he took office he has persistently ignored the only principle on which it seemed possible for a Coalition Ministry to be worked. The inability of the Cabinet to put forth a statement of the policy which they wished the electors to support by their votes has all along been recognized. Within the Ministry, as well as beyond it, the Republic is a word of many meanings. The natural inference from this admitted inability to frame a common confession of faith would have been abstinence from any official expression of preference for one confession of faith over another. A prudent regard for their own success, if not for their own comfort, will prevent any but very extreme candidates on either side from declaring themselves hostile to Marshal MACMAHON; and for the rest M. BUFFET might have been content to employ those unostentatious modes of bringing influence to bear upon the electors which a French Minister of the Interior knows so well how to command. M. BUFFET'S idea of managing a Cabinet which only subsists by agreeing to leave almost everything an open question until after the elections was to issue orders to his subordinates to do all in their power to promote the return of Conservative candidates. To promote the return of one candidate means to oppose the return of another, and it unfortunately happened that among those whom the MINISTER of the INTERIOR wished to oppose were some whom the MINISTER of JUSTICE and the MINISTER of FINANCE wished to support. It is a singular instance of the want of familiarity with coalitions and compromises which has so often been a danger in French politics that it should not have occurred to M. BUFFET that, when he and M. DUFAURE agreed to carry on the Government jointly, they would have to leave undone things which they could not agree to do together. M. BUFFET'S theory of a coalition Government may be vulgarly, but accurately, expressed in the formula, "Heads I win; tails you lose." The MINISTER of the INTERIOR is to do anything he likes; the MINISTER of JUSTICE is to do nothing which the MINISTER of the INTERIOR does not like.

The way in which this theory of Ministerial harmony worked in the present instance seems to have been this. M. LÉON SAY has allowed his name to appear on a list of candidates for the Senate in conjunction with the names of M. FERAY and M. BOUCHER, whom M. BUFFET professes to regard as open enemies of Marshal MACMAHON'S Government. There is an obvious inconvenience in the election of a Cabinet Minister being opposed by the subordinates of another Minister, and the only way of getting over this difficulty that seems to have presented itself to M. BUFFET was to drive M. LÉON SAY into resigning. Probably M. BUFFET was served by men of less austere temperament than himself, for there appeared in the *Figaro* of Saturday an article directed against the FINANCE MINISTER so scurrilous in tone and substance that it is impossible to believe that M. BUFFET knew of it beforehand, while at the same time there is every reason to suppose that it would not have been published without the acquiescence of the MINISTER of the INTERIOR in its general drift being first ascertained. According to the *Times'* Correspondent the Ministerial crisis opened with Marshal MACMAHON being discovered by M. BUFFET in the act of reading this very article. His notions of soldierly discipline were perhaps somewhat outraged by the discord thus suddenly revealed to him, and upon hearing from M. BUFFET that, though he knew nothing of the punishment dealt out to M. LÉON SAY, he was thoroughly displeased with his conduct, the MARSHAL'S natural impulse was to send for M. LÉON SAY and give him the choice of taking his name off the senatorial list or resigning his seat in the Cabinet. M. LÉON SAY accepted the latter alternative, and M. DUFAURE and M. WALLON declared themselves prepared to follow his example. This was pushing matters further than at all suited M. BUFFET'S purpose. To have got rid of M. LÉON SAY would have been to weaken the Liberal element in the Cabinet, while the advantages that flow from the presence of such an element would have been retained. But to get rid of M. DUFAURE and M. WALLON into the bargain would have been to turn the Liberal element out of the Cabinet just at the moment when its presence there is especially important as a means of catching Liberal votes. One expedient after another was suggested in order to avert the catastrophe, and the one finally adopted was the issue of a Proclamation to the French people, signed by Marshal MACMAHON, and countersigned by M. BUFFET.

As the object of this Proclamation is to put an end to a Ministerial crisis, and as to all appearance it has had the effect which it was designed to have, it must so far be pronounced a successful move. If we attempt to go any further, and to decide why it should have had this result, it is not so easy to form an opinion about it. It is a very harmless Proclamation, and M. BUFFET'S name is quite in place at the foot of it. But M. DUFAURE'S would have been just as much in place; indeed, if we care to carry on the speculation, there seems no possible reason why it should not equally have been countersigned by M. GAMBETTA. It begins by reminding the French people that they have now obtained what they wished for five years ago—namely, order and peace, and that the senators and deputies whom they are about to elect will have to work with the PRESIDENT of the REPUBLIC in maintaining order and peace. This co-operation will be afforded by giving a sincere support to the Constitutional Laws. France needs repose, and the way to ensure repose is to postpone the revision of her new institutions until there has been time for them to be honestly tried. They can only be honestly tried by a steadfast adherence to a policy which is at once Conservative and truly Liberal; and in order to secure this adherence, the MARSHAL invites all who place the defence of social order, respect for law, and patriotic devotion above their recollections, or aspirations, or party engagements, to rally round his Government. This is precisely the language used by the Republican party both of the Constitution and of the PRESIDENT. No one proposes to revise the one or to displace the other before 1880. M. GAMBETTA would probably be very well satisfied if he could feel assured that the Constitutional Laws would have undergone no violent changes by that time. Five years of uninterrupted working would be the best testimony to character that Republican institutions could possibly receive. Even the announcement that it is necessary not only to disarm those who might disturb the security of sacred rights and legitimate interests in the present, but to discourage those who threaten it in the future by the propagation of anti-social doctrines and revolutionary programmes, need not disturb the Parliamentary adversaries of M. BUFFET. They are equally ready to say the same thing. It is only irreconcilables like M. NAQUET who can now be said to have any connexion with revolutionary programmes. The Republicans whom M. BUFFET really fears are as loud in their denunciations of revolution as he is himself. We do not mean, of course, that there is no real difference between the views of the Minister and the views of the Republican Opposition. Probably there is much which the latter would consider as consistent with strict fidelity to the Constitution which M. BUFFET would set down as revolutionary in the highest degree. But the question at present is not so much what makes the real difference between M. BUFFET'S views and those of the Republican Opposition, as what success M. BUFFET has had in devising a formula which shall convey this difference to the world. Under this aspect the MARSHAL'S Proclamation is singularly unfortunate, because singularly unmeaning. No doubt it says nothing to which M. LÉON SAY and M. DUFAURE cannot heartily assent; but then, on the other hand, it says nothing to which the very persons at whom the Proclamation is aimed cannot assent with equal fervour. If M. BUFFET instructs his subordinates only to oppose those candidates who do not declare their acceptance of the MARSHAL'S Proclamation, his subordinates will have an easy time of it.

There is another side, however, to the Proclamation in which it is less harmless. A Constitutional King might say many things which in any one else's mouth would be truisms, but which in the mouth of the Sovereign would be exceedingly indecorous. It would not be fair to apply to Marshal MACMAHON the strict rules by which the acts of the QUEEN of ENGLAND or the KING of the BELGIANS would be judged. The French tolerate in their rulers a more active participation in public affairs than the subjects of limited monarchies are accustomed to, and Marshal MACMAHON'S position is sufficiently [illegible] common to [illegible] nation. As regards the [illegible] tion [illegible] present time and for the present object the [illegible] Marshal MACMAHON were, like M. THIERS, [illegible] own Prime Minister, and subject, in his own estimation, at all events, to be dismissed by a vote of the Legislature, his appeal to the electors to give him a Parliament after his mind would be open to no criticism. The electors would know that, in voting for this or that candidate, they were really voting for Marshal MACMAHON, or for whatever President a majority hostile to Marshal MACMAHON might think fit to put in his place. But Marshal MACMAHON has been appointed President for a fixed term; he cannot be displaced by any ordinary process until the end of that term; and he is bound, so long as he holds office, to accept such Ministers as the Legislature chooses to impose upon him. The publication of such an appeal as that contained in this Proclamation must either mean that, unless his present Cabinet obtains a majority in the elections, he himself will not remain in office, or that, if the present Cabinet does not obtain a majority in the elections, he intends to keep it in power. At least, if it is not intended to bear either of these senses, it can only be taken as a simple appeal *ad misericordiam*. Of course, the MARSHAL must be understood to say, I will accept any Ministers you choose to give me; but do, as a favour, give me the sort I like best. It seems doubtful whether the MARSHAL'S reputation will be permanently raised, or his position strengthened, by an address of this kind. Both have been sacrificed to keep the Cabinet from going to pieces. In M. BUFFET'S eyes the dignity of the Executive is a subordinate consideration by the side of his own continuance in power. The question he asks himself is, not how the PRESIDENT'S Government is to be carried on, but how to make sure that it shall be carried on by no one except M. BUFFET.

THE LIBERAL PARTY AND ITS ADVISERS.

SIR WILLIAM HARCOURT'S third speech at Oxford was eloquent, sensible, and entirely consistent with his first. Addressing the local Liberal Association, he was compelled to assume that the Liberal party had a purpose as well as a policy; but, as neither he nor his constituents had any special measure to propose, he judiciously confined himself to a disquisition on political strategy and some cognate topics. A still more urgent necessity was the maintenance of discipline; and Sir WILLIAM HARCOURT was anxious to inculcate, by example as well as by precept, the primary duty of implicit obedience to superior orders. If Mr. GLADSTONE were disposed to expatiate on the several distinctive merits of his principal followers, he would not perhaps select Sir W. HARCOURT as the most perfect model of unhesitating docility. Lord HARTINGTON is more fortunate in commanding the services of a lieutenant who awaits in invincible patience the decision of his chief. "You and I," says Sir WILLIAM HARCOURT to the members of the Liberal Association, "are but privates; and "it is not for us to issue general orders." The analogy between parties and armies is obvious and familiar, though, like analogies in general, it is not absolutely complete. Soldiers have no opinions, and as a rule they have not the choice of their general. Sir W. HARCOURT concurred in the appointment of Lord HARTINGTON as leader because he felt confidence in the soundness of his principles. At Oxford he seemed to place himself at the disposal of his superior, according to the Jesuit formula, *perinde ac cadaver*. Orators, however, even when they pursue a metaphor too far, are wont eventually to resume the thread of their more serious argument. It appears that it is not exclusively from regard to discipline that Sir W. HARCOURT adopts Lord HARTINGTON'S policy of expectation. On the contrary, he enthusiastically compares his leader to the famous Roman general whose name is proverbially associated with delay. Lord HARTINGTON exhibits the profound sagacity which earned for QUINTUS FABIUS MAXIMUS the surname of "Cunctator." In the present day the leader of the Opposition is alone capable of restoring the fortunes of his party by waiting. The illustration from ancient history was not the less impressive because Sir W. HARCOURT'S recollections of LIVY are somewhat hazy. It was not FABIUS who, after the halt at Capua, confined HANNIBAL to the southern provinces of Italy, and ultimately compelled him to evacuate the country; but perhaps it may be the fortune of Lord HARTINGTON to drive Mr. DISRAELI from office, and to take his place.

The more serious part of Sir W. HARCOURT'S speech well deserves attention. The Liberal party is not, in fact, agreed on any definite course of policy; and it would be dishonest, if it were practicable, to construct at present a programme or a platform. The word programme is, as Sir W. HARCOURT says, not English, and the word

platform has happily long since emigrated to America. Neither phrase is required to express the principles which unite English parties. If the Liberal party were agreed on the advocacy of household suffrage in counties, on disestablishment, or on the redistribution of landed property, it would agitate for those changes under their respective descriptions. Although political zealots may denounce the epicurean laxity of their more prudent allies, no practice can be more immoral than the invention of Liberal measures for the purpose of advancing the interests of the party. It is indispensable to the sound working of the Constitution that the Government of the time should be watched and checked by a vigilant Opposition; but if both parties happen for the time to be substantially agreed, it is not the duty of the leaders of the minority to devise artificial pretexts of quarrel. Sir W. HARCOURT may be trusted not to omit any opportunity of sarcastic comment on Ministerial failures. He and his friends hope that, after all, the Suez purchase may furnish occasion for profitable attacks on the Government. It was perhaps a pity to waste on a provincial meeting the epigram on a Government which makes an investment first and then sends out a Commission to investigate its value; but, on the whole, a neat fallacy produces the best effect when there is no risk of an answer on the spot. The new Fugitive Slave Circular promises still better sport. The antithesis between the Scylla of bad law and the Charybdis of a worse policy ought, on grounds of rhetorical economy, to have been reserved for the House of Commons.

Mr. THOROLD ROGERS, who takes a more earnest or more melancholy view of affairs, in a letter to the *Daily News*, answered Sir WILLIAM HARCOURT by anticipation. In his opinion the Fabian policy is an appeal to faction. "It "means, if it means anything, that the party of reform is "to be patient till the English nation suffers some serious "loss or indignity." Nor is the belief that the Conservative party will give chances to the Opposition, in Mr. ROGERS's judgment, well founded. The present Government has, as he says, given more or less satisfaction to the tenant-farmers, to the Trade-Unions, and to the sanitary reformers. There is reason to fear that, if the Liberal leaders are not beforehand with Mr. DISRAELI, he will detach other sections of their followers by means of additional concessions. Mr. ROGERS, like other members of the same section of the Liberal party, thinks that the only way of baffling the tactics of an insidious adversary is to outbid him. "In 1868," he says, "the Liberal party "under Mr. GLADSTONE put a question before the country, "and got no doubtful answer. Has Lord HARTINGTON no "question to ask?" Perhaps, before Lord HARTINGTON asks a question, he may think it expedient to ascertain the probable answer. When Mr. GLADSTONE suddenly determined to return to office by destroying the Irish Church, he calculated, as the result proved, with accuracy on the support of the constituency. In 1874 he asked another question, and he received a different answer. Mr. ROGERS foretells that Mr. GLADSTONE's reputation "will be "far greater in time to come than that of any man "who has occupied the station of Prime Minister yet." It was necessary to account for the fall of an unparalleled Minister, and the votary admits, with laudable candour, some superficial imperfections in his hero. Mr. ROGERS "will not go so far as to say, as "he has heard some say, that Mr. GLADSTONE had the "singular faculty of making his merits and demerits "equally odious, but no one can allege that he was a genial "Minister." It is perfectly true that Mr. GLADSTONE never advocated a change of the justice and expediency of which he was not fully convinced; but the proposition would be more accurately stated in the converse form. Mr. GLADSTONE always profoundly believed in the justice and expediency of any measure which he for the moment chose to advocate. His convictions varied incessantly, but he never doubted that he was in the right.

Mr. ROGERS probably stands alone in his belief that the late Ministers became unpopular because they were too much devoted to repose. "The men who bid us wait were "the men whom the English people said they would "have nothing to do with any longer. There was hardly "a member in the late Administration who did not share "general odium." Nearly all political observers have arrived at the opposite conclusion that the Conservative reaction was produced by the incessant restlessness of the late Ministers. When Mr GLADSTONE interposed only the delay of three of his peculiar processes of thought between the House of Lords and its abolition; when Mr. BRIGHT by his first Bill threatened every publican in the kingdom with ruin; when Mr. GOSCHEN proposed to sell off the College estates, even zealous Liberals were perplexed and alarmed, and a general feeling pervaded the country that no interest and no institution was safe. Mr. ROGERS says with truth that the country owes much to the Liberal party for what it did between 1832 and 1872. He apparently forgets that during the forty years of Liberal supremacy there were long intervals of judicious inaction, as when Lord JOHN RUSSELL advised the country to rest and be thankful, and when Lord PALMERSTON earned unbounded popularity by steadily discouraging all proposals of organic innovation. It was because Lord JOHN RUSSELL attempted to revive his popularity by reopening the question of Reform that he was soon afterwards superseded by his more moderate rival. Lord PALMERSTON had certainly not the faculty of making either his merits or his demerits odious. There is no reason why the Liberal party should be in a hurry to return to power, although Sir W. HARCOURT probably underrates the chances of office to others, if not to himself. Sooner or later some great measure of change will be supported by a majority which may possibly not include the moderate section of the Liberal party. Mr. CHAMBERLAIN and Mr. LEATHAM will then rejoice in the discomfiture of their opponents, and perhaps still more warmly in the defection of their uncongenial allies. In the meantime Lord HARTINGTON may be excused for maintaining, and Sir W. HARCOURT for vindicating, a policy which has the merit of sincerity and simplicity.

FOREIGN LOANS.

ALMOST every day sees some meeting of unfortunate bondholders who are called together to condole with each other, or to listen to some scheme for getting them out of the extreme depths of distress. Their private sorrows so far benefit the public as to offer an instructive warning to future investors; and the warning which was begun by the announcement of the suspension of payment on their bonds is completed by the picture of their difficulties when they begin to take steps to retrieve what may be possible of their loss. It is always possible that a Government unable to pay much may pay something. It may be so far an honourable Government that it will wish to pay what it can pay, simply because it does not like altogether to belie its promises. Turkey appears to be in this position. It announces that it can pay and will pay half of what it owes, but can pay no more. As a matter of fact, the January coupons have been met to the extent of one-half of their nominal amount in cash, although it is said that the money was scraped together with the utmost difficulty. It is utterly futile to suppose that Turkey can pay more than half the coupons as they fall due, and it seems very doubtful whether she can continue to pay so much. If the bondholders could invent a new Turkey after their own heart, could place there a wise and economical Government, and have everything carried on by efficient and honest administrators, they might no doubt get more; but this is impossible, and what they can practically look for is the amount which the existing Turkish Government, under very embarrassing circumstances, can collect beyond the expenses necessary for its existence. The several classes of Turkish bondholders have also conflicting claims as between themselves, into which it is not necessary to enter further than to say that investors have now learnt that the assignment of special securities for different loans gives no real advantage, unless the securities are of a kind which have an independent value in themselves and are distinct pieces of property to which the legal tribunals of the [illegible] give an effectual title in case of default. [illegible]wn from the default of Turkey is [illegible] and anxiety of a country to pa[illegible] it can[illegible]ble element in the value of [illegible] but that [illegible]alt is made the most hono[illegible] can only [illegible]an, and that its ability [illegible] is [illegible] very causes which [illegible] to the [illegible]y exceptional cases, [illegible] Egypt may b[illegible]reign Government may be both able and w[illegible]mend its ways, to place itself under [illegible] what is economically best. In such a case the [illegible]holders may gladly submit to a tempo-

rary reduction of interest. They get less, but what they get is secure. But it is by no means certain as yet that the Viceroy will continue to wish for good advice and will continue to take it. If he does, the circumstances under which Egypt is now are so very peculiar that no conclusion can be drawn from it in other instances. Russia, for example, is a country that enjoys a credit which, speaking roughly, may be said to be as good as that of France. But no one knows anything whatever of the financial position of Russia. The financial position of France can be estimated with tolerable accuracy; but of that of Russia no approach to a calculation can be made. The credit of Russia is high simply because the Russian Government has always paid hitherto, and is known to be most honourably sensitive as to its credit. But if Russia is ever unable to pay in full, it can but do its utmost, and the causes which will have produced its embarrassment, whether war or unprofitable extension of enterprise or territory, will not be of a kind that its creditors can hope to see easily remedied or removed.

In a vague and general way, every nation would like to pay its debts, but with some nations the motive operates in a languid and ineffectual manner. A nation with small or embarrassed resources is shown by ingenious speculators how to take advantage of the fatal readiness of English and other European investors to lend their money in utter ignorance of why they lend it. The money is spent or pocketed somehow, and the borrowing nation finds itself unable to meet its engagements. It then considers what course it shall take; and when the desire to pay for the mere sake of honour and credit is not strong, the practical question which it tries to solve is whether it will answer best to make an effort to pay as much as it can pay or not. If it cannot see how it is to exist at all without new foreign capital, it will agree to anything that gives it a hope of existence. The Paraguay bondholders have just been cheered with an offer to allow a bank to be created with fresh English money, which is to do wonders for them, is to take everything the Government has got to give, and to manage Paraguay for the benefit of its creditors. Whether Paraguay is the sort of country that can be properly managed by a bank and a standing army of 400 men is a question open to free and fair discussion. But if an insolvent nation can get on somehow without new foreign capital, it may see no use in struggling to pay something on its debt. It is said that the news of its repudiation was received in Peru with a feeling of satisfaction and relief. How far this feeling may have extended we have no means of saying; but the experience gained from South American Republics warrants the supposition that it would be largely entertained. A country which takes this line has to pocket its pride, and many special classes suffer from a state of contented insolvency. All mercantile operations are carried on under a great disadvantage when the country where they are carried on is indifferent to repudiation, and the country as a whole grows poorer, apart from the fact of no new capital being introduced. But to a large proportion of the inhabitants it seems a wise and proper and clever thing to escape from the extra taxation that would be necessary in order to pay the interest, or a part of the interest, due on a foreign debt. The money seems to be kept at home, instead of being wasted on outsiders. There is also the comfortable supposition that not to pay anything is really the kindest thing for the bondholders themselves. They cannot get anything unless the country is kept quiet, and security produces wealth; and to pay for the army and the administration is regarded as an indirect payment to the bondholders. When this wise course has produced its proper fruits, then the really good time for the bondholders will come, and a cautious offer to pay them a few halfpence in the pound may be looked on with favour.

Besides these two warnings, that honest Governments being unable to alter their ways of going on can only pay what they can pay, and that some nations see advantages in insolvency, investors have lately had a third warning which they may profitably consider. They must have seen that the market is only a very faint and feeble guide to the real value of securities. In one way this must be always true, for the price of the day will always in some measure depend on the amount of money in the market seeking investment. Recently the large accumulations of savings which are always going on in England have been diverted from investment in stocks thought precarious, and have been poured into those channels which find favour with steady and cautious investors. The consequence has been a rise in the price of the better class of securities, which has in many instances forced them to a point above what they can be expected to command in the average of years. If trade revives, and new avenues of enterprising investment are opened, investors must expect to see a fall in the price of those securities which now stand unusually high. But the chief cause of the fluctuations of the market is gambling; and the great instrument of gambling is the propagation of false rumours, which the telegraph supplies in endless abundance. A rumour, slightly true, if put in a wrong form, does as well as a thoroughly false rumour for gambling purposes, and it is quite an exception when a telegram is right at first. It is only the gambling world that is much excited by these rumours and the consequent fluctuations in price, and the world of gamblers is always the same. Living in excitement, it catches up anything that excites it, and it hurries to act without inquiry into the ground of action. The difficulty of checking rumours is now much increased by the international character of Stock Exchange gambling. There seems always to be a chance that something may be known at Paris which is not known in London; and when prices are technically said to come bad from Paris, our market droops in a minute, although in the infinite majority of such cases Paris is not a bit wiser as to what is going on than London is. As the banks lend money freely on stocks with a slight margin, the opportunity of entering this great gambling world is easily obtained. Things also are most comfortably managed there—far more so than on the Turf. There is no crowding with roughs, or standing out in the rain at dismal little country places. Besides, there is, as it were, a race coming off every hour of every day on the Stock Exchange, and nothing on the Turf can compete with this. According to present appearances, there seems every probability that this new and great excitement of modern life will continue to be pursued with increasing alacrity. Investors must therefore more and more discard from their thoughts the price of the day when they attempt to estimate the value of the securities they hold.

THE ERITH STRIKE.

THE result of the Erith strike, as of all similar experiments, will be determined by a comparison of forces rather than by a conflict of reasons. If the men are stronger than the employers, not merely at Erith, but throughout the trade, they will care little for any demonstration that they are economically and morally in the wrong. It is not only among the engineers that the Trade-Unions are active. In the Swansea Valley ten or twelve collieries are now closed, because the masters and the men interpret differently the terms of a recent award. Cases of rattening have once more occurred at Sheffield, which has long maintained its pre-eminence in lawless tyranny. The war which is habitually carried on by combinations of workmen is not waged exclusively against the employers of labour, or against the general community which suffers by increased cost of production. The masters are for the most part struck through that section of the men which is forced into the observance of arbitrary restrictions. Broadhead and his successors at Sheffield have habitually directed their criminal attempts against industrious and comparatively independent members of their own class. It does not appear that the men on strike at Erith were generally dissatisfied with the mode in which the works were conducted; and, whatever may be the precise circumstances under which the strike began, the influence of the Union may be distinctly traced in the refusal of the men to accept the work offered to them. It would be idle to expect that men who are ready to sacrifice the comfort of themselves and their families should consider the heavy loss which their act may perhaps inflict on their employers; but it is possible that they may feel a passing regret for the injury which is suffered by other artisans. In engineers' shops, as in all manufacturing establishments, many separate operations are designed for a common object by men of different trades. Workers in wood are dependent on the miscellaneous activity of workers in iron, and in each kind of industry there are various subdivisions.

A general strike or lock-out of engineers might reduce

to idleness a much larger number of workmen who have no claim on the funds of the Union. The only security against such a misfortune is to be found in the employment of competent substitutes for the workmen on strike. It is to guard against the risk of free competition that the Trade-Unions and their advocates have systematically denounced all laws which might diminish their power of coercion. The Erith engineers have rendered their cordon of pickets so effective as to have hitherto maintained a successful blockade of Messrs. EASTON'S works. Skilled workmen who would gladly have earned good wages on fair conditions have been persuaded or frightened into an abandonment of their purpose of seeking employment. The proportions in which choice and terror have respectively contributed to the result can only be ascertained by conjecture, but it is evident that the process of picketing is wholly superfluous as a contrivance for giving information to applicants. Artisans out of work who approach Messrs. EASTON'S premises must already know both of the vacancies which they seek to fill and of the causes which create a demand for labour. In this case also the victims of trade combination belong to the class which the Unions undertake to regulate and protect. A manufacturer may sometimes suspend production with little loss, or, in exceptional cases, with actual advantage to himself. Workmen who are coerced into a strike, workmen in other trades whose industry is inseparably connected with the suspended industry, and workmen who are by force or fear prevented from supplying the place of the malcontents, all suffer without compensation. The confident assertion that Trade-Unions have on the whole raised the condition of the working classes may possibly be true, and in any case it cannot be disproved. The evils and drawbacks, on the other hand, are enormous and indisputable; but there is little advantage in arguing against the use or abuse of a legal right. The favourite teachers of the working classes have always impressed upon them the duty of looking exclusively to the interests of their own class. That any advantage which may result is obtained at the cost of capitalists and consumers, candid supporters of Trade-Unions would admit.

A calculation of the comparative resources of the employers and the men could only be valuable if it were undertaken with special knowledge of the circumstances of the trade. If there is only a question of prolonged endurance, the masters can afford to wait better than the men. A general lock-out would, according to an authoritative statement, deprive them within two or three weeks of wages equal in amount to the accumulated fund of the Engineers' Association. A partial suspension of labour would of course afford the men a better chance of success. For the masters, as far as they regard their own interests alone, the most pressing question is whether their contracts are likely to be abandoned, or only to be postponed. The active competition of Germany, France, and Belgium is ready to profit by any slackness of work in England. The Employers' Association, which will determine the course to be adopted by the masters, is in possession of all the materials on which a judgment will be formed. There is no doubt that a general lock-out is a cumbrous and invidious operation; but, on the other hand, partial strikes, especially where they are commenced under the orders of a Trade Council, are deliberate acts of hostility, which can only be encountered by vigorous measures. By their obedience to the commands of the Union the men on strike admit that they belong to a great organization, and their fellow-members are jointly responsible for the decision of their chosen rulers. There is too much reason to fear that both the parties to the dispute will suffer permanent loss from the diversion of trade to foreign countries. If the employers, who are alone capable of foreseeing the consequences of the struggle, think it better to resist than to yield, some indication will be afforded of the weight of oppression to which they would otherwise be subject.

Although no appeal to the moral judgment of a class which has an ethical code of its own will produce an immediate result, even Trade-Unions have sometimes shown a desire to enlist public opinion on their side. In the present dispute the engineers are, according to ordinary standards of judgment, utterly in the wrong. The Secretary of the Amalgamated Engineers expresses the inveterate hostility of his Association to piece-work, or, in other words, to free competition among workmen and just dealings between men and employers. Mr. BURNETT says that piece-work is selfish, meaning that it promotes the interest of the ablest workmen. In the same sense independent labour and property are selfish, while the true principle of society is communism. Not that Trade-Unions are consistent even in their efforts to maintain an arbitrary and unnatural equality. The skilled workmen of the organization are only equal among themselves; for it is essential to the attainment of their objects that they should rule the other members of their privileged aristocracy. The workmen who are excluded from Messrs. EASTON'S employment by the system of pickets are not participators in the equality which would be impaired by the adoption of piece-work. The best workmen, as in every other department of human activity, form a minority; and consequently they are outvoted, or perhaps they succumb to the public opinion of the greater number. Their emancipation from a mischievous despotism would be greatly beneficial to themselves, and it would also tend to goodness and cheapness of production. The consequent encouragement of trade would probably secure even to second-rate workmen as large a remuneration as that which they now receive at the expense of consumers and of their more skilful companions. An equal price for large loaves and small loaves, for strong beer and for weak beer, for gold and for silver, would be strictly analogous to the rule that workmen are not to be paid in proportion to the quantity and quality of their work. The equal division of the fund applicable to wages among all who are entitled to share is a formula which bristles with fallacious assumptions. There is no fixed wage-fund, and there is no definite class which is entitled to divide the amount which may at any time be paid. The Unions indeed, by their rules of apprenticeship and by other methods, are constantly struggling to exclude competition; but an unprivileged workman and a consumer, with or without the intervention of an employer, have the fullest right to bargain between themselves. The antagonistic right of Unionist workmen to band themselves together for the promotion of their own supposed interests is the more undeniable because it is impossible to prevent the combination. To the best members of their body, as well as to the whole remainder of the community, the utter failure of their assault on piece-work would be an unmixed advantage.

IRRESPONSIBLE ARMY REFORMERS.

IT is very desirable that, by the speeches of Mr. JOHN HOLMS or otherwise, the working-men of our large towns should be led to inquire and think on the subject of military administration. We have plenty of men of strength and courage, plenty of money, and perfect communications, and yet, if this country should be invaded, we could not concentrate anything like a sufficient army on the threatened point. The working-men who listen to Mr. HOLMS will at any rate be taught to regard invasion as possible, and not to rely upon the navy or upon luck to avert it. There are, says Mr. HOLMS, 7,000,000 of trained soldiers in Europe, and he asks whether, if 100,000 or 200,000 of these trained soldiers should ever attempt to take this country, his hearers would not think it wise to have men as well trained, morally and physically, as their foes. If the working classes can be got to look at the matter in this light, it may be hoped that the middle and upper classes will not allow themselves to be deceived by newspapers which undertake to expose Mr. HOLMS's inaccuracies of detail. The substance of much that he has spoken and written is that one good soldier is worth more than two bad soldiers. In this we of course agree; but when Mr. HOLMS proceeds to infer that if, for every two bad soldiers that the country now has, it had one good soldier, it would have enough, we differ from him. He objects to the Mobilization scheme because it begins at the wrong end. It makes places for officers instead of providing men. But, if he is right, he only shows that a scheme to be sufficient ought to begin at both ends. He makes merry at the notion of placing a Scotch or Irish militia regiment in a corps which has its head-quarters at Dorking; but the authors of the scheme would be well pleased if he would find for them as good materials nearer at hand. It is only reasonable to expect that, in case of invasion, we should use our complete system of railways for rapid concentration of troops on threatened points, and this is what the scheme aims

He is very angry at a preference in some quarters for the old-fashioned Militia, which he ascribes to Toryism, and he wishes to substitute for it some new organization which he would call Reserve. But we will not dispute with him about words. No reasonable person supposes that that degree of training which sufficed for the militia one or two centuries ago would suffice now. On the other hand, it is desired, if possible, to give to a considerable body of men a sufficient training without withdrawing them altogether from their homes and industries. Mr. HOLMS rightly puts the standard of individual efficiency high, but his estimate of necessary numbers is dangerously low. He makes no adequate allowance for the waste of war. Nevertheless he has done good service by fixing the attention of Sheffield and Manchester on the necessity for an efficient National Insurance. How may an invasion by 100,000 or 200,000 disciplined enemies be most promptly met and crushed, remembering the enormous daily loss which we should suffer from a hostile army encamped upon our soil? If Mr. HOLMS looks at the Mobilization scheme from this point of view, he may perhaps see that there is something in it.

Suppose, for a moment, says Mr. HOLMS, that a foreign enemy threatened a descent upon Lancashire, and that all our strength was to be concentrated there without delay. It were to be wished that by his speeches or otherwise the men of Manchester could be made to suppose this, not for a moment, but perpetually. If such a threat were held out you would have, he says, the extraordinary spectacle of a regiment of militia travelling from Perth to Dorking, and from Dorking back again to Lancashire. Unless the enemy would be kind enough to tell us that he did not really mean to invade Sussex but Lancashire, this spectacle, however extraordinary Mr. HOLMS might think it, would be likely to exhibit itself to his perplexed vision. We should have the advantage, as it is commonly considered, of operating on interior lines, and our generals would endeavour to contrive some such extraordinary spectacle as was seen when General JACKSON shifted his army from the Shenandoah Valley to Richmond to oppose the real Federal invasion. If Mr. HOLMS can explain how Lancashire can be supplied with an army sufficient under all circumstances for its defence, the country will be glad to hear from him. He says, only too truly, that the authors of the Mobilization scheme fill up the vacancies among the men by creating a fictitious army of militiamen who have no real existence. And he says further that we have not only too few men, but too many officers. But surely it is an enormous exaggeration to say that "over-officering is one of the greatest dangers that "exist in our military system." This is manifest prejudice, and a man who speaks under its influence falls an easy prey to journalists who defend the War Office in all that it does and leaves undone. Mr. HOLMS on one side is almost as unreasonable as the *Times* on the other. He insists that five army corps are sufficient for all our wants, whereas the Mobilization scheme proposes eight. It does not increase our confidence in his judgment on this point to find that he is supported by Mr. JACOB BRIGHT and Mr. MUNDELLA; and indeed, except Mr. GLADSTONE, he could scarcely find any persons to whose guidance we should be less willing to trust ourselves on this question. If we could be sure that the men of Manchester and Sheffield would, under all circumstances, be satisfied with a pacific policy in their rulers, we might expect that the country, if it did not get much glory, would escape invasion. But sooner or later some popular impulse will bring us suddenly to the verge of war, and perhaps of war which can only be satisfactorily conducted by sending troops abroad. If Mr. HOLMS bases his plan of military organization on assumptions as to foreign policy, he must obtain general acceptance for the latter before he asks us to discuss the former. The *Times*, professing to look at the future as it is likely to be, contends that our army is adequate to meet it. Mr. HOLMS, viewing the future as he thinks it ought to be, insists that our army might be made adequate to meet it without increase, and even with saving, of expense. We believe that both these advisers of the nation are equally wrong, and the best hope is that each may neutralize the influence of the other. Sober people will hesitate to believe that we have too many officers, while remaining entirely convinced that we have too few men.

Although we think that Mr. HOLMS is narrow-minded and imperfectly informed, we heartily wish him success in [illegible]king which the *Times* describes as "a campaign "with the object of exciting public discontent with the "whole of the present military system." Intelligent men, seriously considering the subject, will be apt to see rather more in it than Mr. HOLMS points out. If it be assumed that invasion is possible, it must also be assumed that a large army would be employed in it, and therefore we must have a large army ready to meet it. If Mr. HOLMS has any definite plan at all, it must be that of a small army of well-paid and thoroughly efficient soldiers, which he thinks could cope successfully with larger numbers than their own. We can only say that it would be the height of folly to risk the safety and honour of this country on any such expectation. The Confederate soldiers did wonders by their own valour and their leaders' skill, but they were finally overwhelmed by the vast armies of the North. And if the road to this country were once opened, it would be kept open, and enemies in unlimited numbers would pass along it. We subscribe entirely to Mr. HOLMS's opinion as to the quality of CROMWELL'S troops, but those admirable veterans, if we had them now, would fully understand the value of their own services. The speaker sets his audience against the Ballot, on the ground that it would only be the poor men who could not escape. It would, however, be open to artisans to form clubs for providing substitutes, as was done in the French war. But if in Manchester or Sheffield they prefer conscription, let them say so; and at any rate let them understand that the advantages which the speaker ascribes to the German system are obtained by conscription, and cannot easily be obtained in any other way. By a system of short service and deferred pay of adequate amount, it might be possible in course of years to create a numerous Reserve, and if that Reserve would be certainly forthcoming with proper equipment and organization, and in adequate numbers, whenever it was wanted, the problem of national defence would be solved. But whether this force were called Reserve or Militia would be unimportant. It is odd that Mr. HOLMS should be jealous of a force which Liberals of former times so greatly favoured. He talks of the "country party" in a sense different from that which the words bore two centuries ago. But if there be a "town party," or any other party that can make any rational proposal for creating a defensive army, let us hear what it has to offer. It looks very much as if Mr. HOLMS can make no such proposal. He talks in a vague way about a moderate force of well-selected and well-paid men, forgetting that an immoderate force might be brought against it. He sees, as others do, that if the War Office seriously undertakes to fill up the sketch which it has produced, it must ask for large additional means in money or money's worth, and this he is ready to refuse. But when the question is fully understood in the great towns, he will not carry their sensible, business-like inhabitants along with him. National security is too precious to be risked, and, although vigilant administration and economy may do much, they cannot enable one man to do two men's work.

THE FUGITIVE SLAVE QUESTION.

IT is to be hoped that a little common sense will be applied to the consideration of the question of fugitive slaves. It is agreed on all hands that the Circular on the subject which was issued in the autumn was wholly indefensible; and there can be no doubt that, if the Ministry had not quietly dropped it, they would have placed themselves in a very dangerous position. The feelings of the country were strongly roused on a matter on which it is always very tender, and even the regular supporters of the Government shrank from supporting the obnoxious document. A second Circular has now been prepared, which, if it is not in all respects perfectly satisfactory, at least avoids the blunders of the former one, and deals with the subject in an intelligible and cautious manner. It will be seen, therefore, that the attempts which have been made to renew the suspended agitation on this question rest upon altogether different grounds from those which justified it in its original form. Meetings have lately been held at Birmingham, Worcester, Warrington, and other towns, at which very wild and extravagant speeches have been made, and resolutions passed denouncing the Government for having trampled under foot the traditions and convictions of the British people in regard to slavery, and basely surrendered cherished rights. It is assumed, in short, that hitherto it has

been the custom of England to offer an open refuge at all times and under all circumstances on board her ships to any slaves who chose to avail themselves of it. It is needless to say that, though public opinion in this country is sufficiently unanimous and decided in its abhorrence of slavery, and although slavery has been absolutely abolished under English law, the theory started at these meetings is purely imaginary. Many countries have imitated our example in abolishing slavery at home, and with others we have treaties which tend to check and mitigate the worst abuses of the system. But the principle has never been carried the length of defying the authority of a foreign State in its own waters. The meaning of the famous decision in the case of the negro SOMERSET is simply that, wherever English law prevails, there are no means of enforcing servitude; but it has never been attempted to impose English law forcibly on other nations in this respect. A distinction has always been drawn between the right of the slave to his liberty on English soil, or under the English flag on the high seas, and the obligation to receive or retain him on board an English ship in the territorial waters of another State. What may have been the motive for recently issuing new instructions on this subject has not yet been authentically stated; but nothing can be more unfair than to accuse the Government of any desire to alter the general understanding on this point which has hitherto prevailed. In 1865, when Lord PALMERSTON was in office, the Admiralty drew up a volume of instructions for naval officers, in which was pointed out "the distinction between the export of slaves, which Great Britain is "determined to put down, and the system of domestic "slavery, with which she does not claim to interfere." More recently, in 1871, under Mr. GLADSTONE'S Government, a Circular is said to have been issued in which it was stated that the Foreign Office had "decided that slaves "coming on board British ships of war within the territorial jurisdiction of the country from which they escape "—that is to say, within three miles of the shore—should "be returned to the owners," except in cases where there is a treaty; and this goes a good deal further than the latest Circular, which says nothing about "owners," and does not positively prescribe the return of the fugitive.

The question which has to be determined in this case is not one of sentimental theory, but of practical expediency. We have to consider not only what we should like to do, but what it is that we can do. Whether or not it is the duty of England to declare war against slavery all over the world is a question which may fairly be discussed, but the consequences of assuming such responsibilities ought not to be ignored. It is significant that the speakers at the various meetings which have been held belong exclusively to what may be called the lower section of the Liberal party, and that the leaders as yet hold aloof. The temper in which the agitation is conducted is also indicated by the extravagance and absurdity of the arguments which are used. It is difficult, for example, to imagine a more reasonable and innocent proposition in its way than that, as stated in the revised Circular, "HER MAJESTY'S ships are not intended "for the reception of persons other than their officers and "crews." Yet this harmless truism, when read by Mr. DIXON at Birmingham, was considered a horribly atrocious doctrine, and was received with cries of "Shame." As a matter of fact, the British navy has definite duties to perform, which do not include those of a passenger service. As at present arranged, a ship has room and stores only for her own company; and it can readily be understood that the presence of strangers on board must be very embarrassing, and that it is only as an exceptional favour that they can be even temporarily received. This, at least, is the principle on which our ships of war are at present commissioned and equipped, and if it is thought desirable that England should henceforth offer free passages to all fugitive slaves who choose to accept the invitation, some provision must be made for this in the Navy Estimates. Another point on which the opponents of the Circular have betrayed their ignorance and confusion of mind is in regard to what is called the comity of nations. Mr. DIXON was not prepared to say what the meaning of the phrase was, but he admitted a general prejudice against international law as being usually "a relic of selfishness and barbarism," and declared that, if the "comity of nations," whatever it might be, stood in the way of helping slaves, it must be given up. It does not require much reflection to see that this is indeed—though perhaps Mr. DIXON scarcely saw it himself—the alternative which has to be faced. We need not attempt a scientific definition of the "comity of nations" for Mr. DIXON'S benefit, but it may be said broadly to imply that sort of friendship and good-will which enables people to keep on good terms with each other. British ships of war are allowed to enter the territorial waters of a slave State on a well-understood footing; but, on the other hand, they are expected, as a natural return of courtesy, not to interfere offensively in the domestic affairs of the country. It is quite clear that there must be an end to both amity and comity if this condition is broken. It may or may not be a moral duty on the part of England to place her navy at the use of slaves in all parts of the world, but it is at least certain that communities which possess slaves will not tamely submit to have them taken from them in this way.

One of the resolutions at Birmingham declared that the conscience of the English nation holds the institution of slavery to be a crime; and the same might be said of the institution of polygamy, and of various other institutions which are popular in other countries, though condemned among ourselves. What would be said if British ships in the Bosphorus were thrown open to any discontented women of the harems on shore who wished to elope? It may be said that there are only a comparatively small number of fugitive slaves to be provided for, but in laying down a rule there cannot very well be any restriction as to the numbers to be received. It is also necessary to bear in mind that, though hitherto perhaps slaves have not been particularly anxious to run away in crowds, they might be encouraged to do so by a distinct invitation to take up their quarters in British ships; and besides there is a natural growth of opinion, even in the most uncivilized societies, which tends to excite aspirations towards freedom. On the whole, then, it is evident that if, in the language of the indignation meetings, it is "the determination of the people to maintain "the right of refuge in every British man-of-war," the peaceful acquiescence in this policy of countries in which slavery prevails cannot be expected; and this is a contingency which must not be lost sight of. The agitation against the revised Circular is, as at present conducted, founded on a misconception of what the principle of the law has hitherto been, and practically amounts to a proposal that England should extend her responsibilities in this direction. If this is to be done, it should at least be done with our eyes open to all its consequences. We are all agreed as to the evils of slavery, but it may be doubted whether an aggressive policy in this respect would be ultimately so beneficial as a persuasive one.

RAILWAY RESPONSIBILITIES.

A DECISION has at last been obtained from a Superior Court on the liability of Railway Companies for delay in the conveyance of passengers, and it is satisfactory to find that, in all substantial respects, it confirms the law as laid down in what is now a considerable series of County Court judgments. The case came up to the Common Pleas Division on appeal from a decision of the Judge of the Bloomsbury County Court, and was argued at the last sittings before Mr. Justice BRETT, Mr. Justice DENMAN, and Mr. Justice LINDLEY. The facts of the case were these:—The plaintiff took a ticket from Liverpool to Scarborough by the London and North-Western train which leaves Liverpool at 2 P.M., and is timed to reach Leeds at 5 P.M. The train was a quarter of an hour late at Manchester and twenty-seven minutes late at Leeds. The train for York, with which it ought to correspond, is timed to leave Leeds at 5.20, and had consequently started before the arrival of the train from Liverpool. The plaintiff went on to York by the next train, and arrived there at 7 P.M. If he had waited for the ordinary train to Scarborough he would not have arrived there till 10.30 P.M., whereas, if the train by which he took his ticket had kept time, he would have got to Scarborough by 7.30 P.M. Under these circumstances he ordered a special train from York to Scarborough, and sued the London and North-Western Railway Company for the cost of it. The facts, so far as appears from the judgment read by Mr. Justice BRETT, were not disputed; but on behalf of the Company it was alleged that, under certain conditions set out in the time-table, there was no contract to arrive at any time, or at the times stated in the table, or to make reasonable efforts to arrive at those times. The important clauses in the con-

ditions were these:—"Every attention will be paid to "ensure punctuality as far as it is practicable; but the "Directors give notice that the Company do not undertake "that the trains shall start or arrive at the time specified "in the bills, nor will they be accountable for any "loss, inconvenience, or injury which may arise from "delays or detention. . . . The Company do not "hold themselves responsible for . . . the arrival of "the Company's own trains in time for the nominally "corresponding train of any other Company." Supposing these conditions to be valid, it will be seen that they exactly covered the plaintiff's case. The train by which he travelled had not arrived at Leeds at the time specified in the bills, or in time for the nominally corresponding train of another Company, which was to have taken him on to Scarborough, and by reason of this failure he had incurred the loss of having to pay for a special train. Both contingencies had been contemplated and provided against in the conditions. The plaintiff started on his journey with full notice that the Company did not undertake to carry him to Leeds either by 5 P.M. or in time to go on to Scarborough by the nominally corresponding train leaving Leeds at 5.20, and that, in the event of their not carrying him to Leeds by 5 P.M., or in time for the nominally corresponding train, they would not be responsible for any loss that might accrue to him from their failure.

The judgment of the Court lays down that the contract between the plaintiff and the Company was made up of three elements—the taking of the ticket, the time-table, and the conditions appended to the time-table. The granting and accepting a ticket for the performance of a particular service would of itself constitute a contract by implication, but the reference to the conditions contained in the time-table makes them part of the contract. In the absence of any conditions, the advertising of the times of arrival and departure might amount to an absolute contract that the train will arrive or depart exactly at such time; and the introduction of these conditions so far modifies this contract that the Company is not liable for any loss, inconvenience, or injury which may arise from delays or detention, however long, considered as mere delay and detention. But then the affirmative part of these conditions is equally part of the contract, and therefore, though the Company has guarded itself against responsibility for mere delay or detention, it has expressly contracted to make every reasonable effort to ensure punctuality as far as it is practicable. Even if this clause had been omitted from the conditions, and nothing had been said about ensuring punctuality as far as was practicable, the Court held that there would have been an implied contract that the Company would use reasonable efforts that their trains should both start and arrive at the stated times. As regards the condition about the arrival of the Company's own trains in time for the nominally corresponding trains of any other Company, the Court held it to be valid in the same sense and to the same extent. It negatives an absolute contract that time shall be kept by the Company's trains, but it does not absolve the Company from using reasonable efforts to meet the corresponding trains of other Companies.

The case was now reduced to this. There had been a delay, in fact, resulting in loss to the plaintiff. If this delay was mere delay, the Company had saved itself by the conditions inserted in the time-table. If, on the other hand, it was a delay caused by neglect on the part of the Company's servants to carry out the contract to make every reasonable effort to ensure punctuality, the Company would be liable. The Court held that the mere fact of there being unpunctuality either in the first starting of a train, or in arriving at or starting from any intermediate station, would not necessarily be any evidence of a want of reasonable effort to ensure punctuality. This ruling follows naturally from the recognition of the conditions as availing to qualify the contract, since, if mere delay is to be evidence of a breach of contract, the Company would be practically bound to an absolute contract to start and arrive at the times stated in the bills, which the Court had already determined not to be the case. But any unusual or long delay, though it would not in itself be evidence of breach of contract, would be evidence calling upon the Company to account for the delay. The Company might show that it was owing to a collision, or to stress of weather, or to the breaking of an engine pipe, or to a pressure of passengers which could not be reasonably expected. In all these cases every reasonable effort to ensure punctuality might have been made, and yet the delay might have occurred. In this case there had been an unexplained delay of fifteen minutes in starting from Manchester, and a further unexplained delay between Manchester and Leeds. Evidence had been adduced in the County Court to show that it was negligence on the part of the Company which had caused the delay in leaving Manchester, and that the too late arrival at Leeds had been caused by this delay in leaving Manchester, and the Court declined to interfere with the conclusion formed from that evidence. It only remained, therefore, to consider whether upon the facts the plaintiff was justified in taking a special train. Upon this point the Court adopted the ruling of Baron ALDERSON in "HAMBLIN *v.* the Great Northern Railway "Company"—that if the party bound to perform a contract does not perform it, the other party may do so for him as reasonably and as near as may be, and charge him for the reasonable expense incurred in so doing. Here the London and North-Western Company was bound to use reasonable efforts to carry the plaintiff to Leeds in time to reach Scarborough by 7.30 P.M. As a matter of fact they only carried him to Leeds in time, if he had travelled by the next ordinary train, to reach Scarborough by 10.30 P.M. The plaintiff accordingly performed the contract for the Company by taking a special train from York to Scarborough, which brought him to his destination between 8.30 and 9 P.M. The County Court Judge found that the plaintiff was not reasonably called upon to wait at York for the ordinary train; and that he might reasonably take a special train to Scarborough. There was nothing in this finding inconsistent with the evidence, and the Court consequently held that the County Court Judge was justified in law in holding that the plaintiff might charge the London and North-Western Company with the cost of the special train. The Judges expressly guard themselves against being supposed to say that in every case in which a passenger misses a nominally corresponding train by the default of the Company's servants he is entitled immediately to take a special train for any distance and at any cost. The question whether it is a reasonable thing to do must be left to the judge or jury in each case. All that the Court of Common Pleas has decided is, that when to take a special train is a reasonable thing to do—this being a point to be determined, with a due regard to all the circumstances, by the Court which tries the case—it is a sufficiently natural result of the breach of contract to bring it within the legal rule.

It will be seen that this judgment leaves one loophole through which the Railway Companies may yet seek to extricate themselves from the inconvenient obligation of keeping time so far as they are able. The granting and receiving of a ticket constitutes an implied contract that a Company will use reasonable efforts to ensure that their train shall start and arrive at the times stated in the time-bills, and, says the judgment, "there is nothing in "the conditions to restrict that undertaking." But supposing that there had been something in the conditions to restrict that undertaking, what weight would the Court have attached to it? If the Railway Companies should prefer to exhaust the resources of conveyancing ingenuity before trying the alternative experiment of instructing their servants to do their best to keep time, and not saddling them with an amount of labour which makes it virtually impossible that they should keep time, it is possible that in some future time-table we may read that the Company does not undertake to use reasonable efforts, or any efforts, to ensure punctuality. Whether the Superior Courts will allow Railway Companies to undo with one hand what they have done with the other, and to undertake by the issue of a ticket to perform a service which, by the condition printed on the back of it, they declare that they will not necessarily try to perform, we cannot say. But at all events it is a real gain to the public to have it decided that, unless a Railway Company expressly repudiates the obligation, it is bound to make reasonable efforts to ensure punctuality. If they successfully resort to such express repudiation, the need for Parliamentary interference will be unmistakable, and the limits within which it is to operate will be plainly and strictly marked out.

A MODERN PHASE OF MELANCHOLY.

IT is a common remark that in the present day the statement of the song, "youth is full of pleasure," is falsified by experience. The accusation of melancholy is not only brought against the rising generation by their elders, but young men blessed with cheerful dispositions complain of the boredom frequently inflicted on them by the dull despondency of their contemporary associates. In all ages lovers have languished, harmless lunatics have brooded, and minor poets have rolled their eyes in sickly attempts at fine frenzy. Dissipated idlers have suffered from *ennui* ever since idleness and dissipation were invented. The question whether these classes and others discussed by Burton are on the increase will not now detain us, it being more interesting to consider whether there are any simple or combined causes of melancholy in any great degree peculiar to our day. The earthquakes which are upheaving time-honoured faiths and systems may crush much natural mirth with overmastering awe and perplexity. All such cases are explained as soon as stated. Pity rather than disgust is moved by depression for which an adequate and respectable reason can be assigned. For charity's sake, as well as to gratify an excusable curiosity, attacks of this distemper, which, appearing at first sight inexplicable, provoke us only to impatience and wrath rather than stir commiseration, may be allowed to occupy our attention for a brief space.

Why on earth, then, should men under forty years of age, endowed with health and strength, possessed of moderate means, provided with regular employment yet not overworked, with unblighted affections, innocent of versification and sentiment generally, and, to crown all the conditions of contentment, serenely indifferent to all phases of intellectual speculation—why should such highly-favoured mortals wearily lament that life is not worth living, and show themselves listlessly incapable of enjoyment? It is often averred that precisely such cases abound. If the truth of the statement be disputed, not only is exact demonstration out of the question, but it may be doubted whether even a Parliamentary Commission could collect from witnesses unimpeachable and decisive evidence on the point. Still it will not be amiss to consider how the phenomenon might be accounted for, if it did actually occur. Be it observed that a plausible account will constitute some slight evidence for the reality of the supposed occurrence, and for the correctness of the impressions of those who claim to have observed the phenomenon. A certain class of physicians would put it all down to organic disease of the brain; divines would suggest a conviction of the hollowness of temporal prosperity coupled with a lack of spiritual consolations; while habitual novel-readers would insist on a grim "skeleton in the cupboard," or would maintain that the fancy was not really free. A reference to our list of blessings will immediately expose the irrelevancy of these offhand judgments; therefore, putting them aside, together with the hypothesis of demoniacal possession, let us inquire whether the natural reaction after the excitements of boyhood and early youth be not an adequate cause, and one which can hardly fail to be in operation in these days of everlasting fuss.

Five-and-twenty years ago a boy's appetite for enjoyment was not at all seriously blunted at school, nor was there much fear of his round of holiday amusements being fatiguing. He seldom if ever enjoyed the intoxicating bliss of beholding his name and his achievements set forth in type. Now a change has come over all educational establishments. The work of the term, which has generally superseded the old-fashioned "half," serves as a foil for a round of matches, regattas, reviews, "theatricals," concerts, popular lectures, athletic sports, &c., all duly chronicled in the local journals, and perhaps even in metropolitan papers. Examinations also are more frequent, more solemn, and attract more public attention. Thus an energetic boy who is "good all round" passes from one bout of competition to another with little interval during his school career. If home, as is natural, wishes to hold its own in juvenile favour, it must utilize the multiplied opportunities of amusement, so that the holidays pass in downright dissipation. At the Universities the perpetual emulation goes on in an intensified form, while the newspaper notoriety which is bound to enhance the various passions of young aspirants to distinction is more pronounced than ever. Suddenly all the strain of personal rivalry is removed, the stimulus of frequent distinction is withdrawn, and the hero of an enthusiastic circle of admirers settles down as a commonplace person to a monotonous routine of business. Surely it is not altogether strange that for a time life should appear flat, stale, and unprofitable. The more keen the stress of the probationary period, the stronger is the reaction when the definite struggles of the youth against his fellows are succeeded by the vague, desultory warfare with the great world. It is indeed astonishing that so many men can bear with equanimity the rapid transition from the glory of a University "oar" or "hat," or the more modest dignity of a fresh first-class man, to the insignificance of a briefless barrister or a Government clerk.

The evils of competitive examinations are a common theme; but it is generally overlooked that the robust scholar who escapes all serious suffering from fatigue may, after his last list has come out, peak and pine for lack of the continual incentives of emulative ambition upon which he has come to rely for animation. He may miss the necessity of unremitted study at high pressure, the incubus of the impending struggle, the absorbing interest in his work as a means to an immediate definite end. The mental fever may have left the physical organs uninjured, but has very likely impaired for a time the power of diverting gloom by the hearty resumption of old interests or adoption of new ones. His hopes, fears, and jealousies have been the means by which he lived as truly as were his hoards to Shylock, and their sudden extinction dumps the zest of life. The mere fact of not possessing vigour and elasticity enough to resist the depressing reaction following upon the cessation of youthful struggles and triumphs no more constitutes an unhealthy condition of mind than the bodily exhaustion of an athlete after severe exercise constitutes physical disease. The effects, then, of increased competition of various kinds, aggravated by the increased importance of the different contests in public estimation, may be taken as a *vera causa* of some cases of melancholy. It must further be borne in mind that the malady is communicable, especially to admirers and imitators.

The advance in the number and intensity of boyish amusements has already been noticed, and to this may be directly traced some instances of melancholy amongst such as are too feeble or too lazy to be appreciably affected by their personal efforts in the athletic or intellectual arena. Premature familiarity with the various fashionable methods of killing time makes them the innocent victims of *ennui* on the threshold of manhood, just when their grandfathers were revelling in the substantial delights of release from durance vile, and taking keen ingenuous pleasure in successive revelations of extended experience. They were elated by their newly-acquired importance on accession to manly dignity, in proportion to the rigour of previous suppression. From the little world of school or the seclusion of a quiet home, they usually brought fresh, unwearied capacities of admiration and open-eyed expectancy, the exercise whereof was calculated to mitigate any disgust engendered by the dissipation of sanguine dreams and the wakening to rude realities. It is not surprising that the comparative advantages of the boyhood of to-day should be counterbalanced by certain drawbacks. The hardships of school days are seldom, if ever, a foil to the comforts and pleasures of afterlife. Again, while young Sir Oracles abound, the species of unsophisticated adults is rapidly becoming extinct. Hence the charms of pleasant contrast and perpetual novelty which used to enliven the youth's entry upon man's estate are far less efficacious than they used to be. The circle of his boyish experience is so wide that, on his emancipation from the gentle control of tutors and governors, there is hardly any possibility of stepping beyond it into unimagined regions of excitement. If there is any soundness in these reflections, an increase in melancholy does not necessarily indicate deterioration of the race, it being accounted for by the absence of the invigorating influences which used formerly to attend a critical period of life. Incidents which were fifty years ago anticipated with ecstatic eagerness and constituted powerful agencies in the formation of the character, marking epochs in the unfolding life, are taken by our boys as a matter of course. Nine days' wonders may crop up day after day, "startling novelties" may be introduced by enterprising managers, the discoveries of science may elicit strong expressions of astonishment and awe; but the feelings and emotions excited become gradually less and less intense. Say that we are moved to surprise, admiration, horror, awe, twenty times for each occasion on which our grandfathers were so affected, probably they were shaken out of their normal condition thirty or forty times as much as we are. Assuming this estimate to be approximately correct, we may expect that the effects of such a state of things will be most marked on the termination of the preparatory period of life. The alteration in the treatment of schoolboys and their consequent comparative precocity is partly the cause, partly the effect, of a general modification of habits and character.

It is in no pessimist spirit that we have pointed out one inconvenience resulting from the tendencies of the times, of the existence of which an *à priori* probability has been established; but rather with a view to prevent cynics from making capital out of cases which they have no right to claim as evidence of degeneracy. Granting the prevalence of unsentimental, listless despondency, half discontent, half apathy, doubly irritating to the observer because of the apparent unreasonableness of such a dismal temper, it may be urged on the other hand that the malady is generally of short duration, and leaves no perceptible mischief behind it. If sufferers suspected the origin of their ailment, they would generally contrive by a strong effort to shake it off, so that it is to be hoped our suggestions may be of some practical use. The pessimist may rest assured that his creed never did anybody any good, unless it were by rousing the spirit of contradiction so as to incline one to take a more cheerful view of things than ever. If there were any probability of an indefinite and never-ending increase of melancholy, it would be well, not to utter the cuckoo cry that society is going to the dogs, but to set seriously to the complicated task of making a radical alteration in our ways. But it may be safely concluded that the evil is as transient in the race as it generally is in a healthy individual. The bad effects of publicity will vanish as soon as one comes to look upon the notice of the press as a matter of course, and the events of early life will then again resume their natural dimensions. Even the inevitable nervous tension entailed by assiduous competition will be somewhat relaxed by organized habitude. It is to be hoped, too, that eventually culture will be more generally considered as an end in itself, instead of a means whereby to win prizes and honours. A salutary development of genuine intellectual tastes will proceed *pari passu* with this desirable change. The calm pursuit of favourite studies will provide increasing numbers with steady sources of cheerfulness which shall render them independent of external cir

more bracing even than congenial study is devotion to schemes of practical utility, and it is not too much to hope that improvements in the various systems of training will remove from our youth the reproach of want of public spirit. Notwithstanding occasional symptoms of subacute fever, there is no valid reason for fearing that they will not subside before long, nor for thinking that they indicate any very serious disorder in the present.

THE CATHOLIC UNIVERSITY OF PARIS.

THE formal and solemn opening of the new Catholic University of Paris on Monday last by the Cardinal-Archbishop—it had been actually opened some months before—was no doubt a significant fact. We are not surprised to learn that "there was a jubilant spirit about the ceremony"; for, whether or not the day was, what the *Univers* calls it, "a blessed and glorious one," it certainly signalized a fresh and important step gained in what those concerned call "the freedom of teaching" in France. Cardinal Guibert observed, in his inaugural address, delivered after high mass, that "the emancipation of University teaching would be one of the great benefits of this age, and was the tardy complement of the emancipation of the secondary schools twenty-five years ago." Freedom of teaching, however, is rather an elastic phrase; and when we are told that many were present at the ceremony of Monday last who had fought for it in former days under the banners of Montalembert, Lacordaire, and Lamennais, it is only natural to ask whether, in the mouths of the modern Ultramontanes who find their organ in the *Univers* the phrase means quite the same thing as was understood by the conductors of the *Avenir*. That the latter honestly meant what they said there can be no doubt; they desired to see education liberated from State control, and entire freedom guaranteed to all alike. But those who claim now to be reaping the fruit of their labours would think it no compliment to be credited with the same comprehensive views. A well-known French Jesuit, Father Marquigny, writing the other day in the leading French Jesuit organ, the *Études Religieuses*, explains with admirable candour and clearness how he and his friends understand the term "liberty." "We desire and we demand," he says, "entire liberty of teaching, *entire for the Church which has a divine mission, not entire for all*, whether believers or free-thinkers. Liberty is the guarantee of right, and error and falsehood have no rights." We need hardly say that the good father is in complete harmony with Pius IX., who, in an Encyclical issued in 1864, announced that "education, both public and private, should be under ecclesiastical direction and surveillance." This is, of course, the real aim of modern Ultramontanism, though it knows how to avail itself provisionally of the convenient watchword of liberty. Cardinal Manning, for instance, the other day, in opening the "Academia of the Catholic Religion" in Manchester, declared—if we may trust the report of the *Manchester Guardian*—that the Church had nothing to fear from the multiplication of schools of science, if they were indeed schools of science, and not of perverted intellect. But he proceeded to explain very distinctly that schools of perverted intellect are those over which the Church has not full and absolute control, and that "the word which brought the first intellectual perversion into the world was the word 'why'"—that is, the spirit of inquiry. And this thesis was illustrated by a bold defence of the line taken by "the Church"—that is, the Pope—in dealing with Galileo, which a learned priest of the Cardinal's own diocese demonstrated not many years ago to be alone a sufficient refutation of Ultramontane pretensions. And then he added that the existing darkness would be dispelled by the light of the Vatican Council. Such utterances cannot be kept out of sight in estimating the true significance of the ceremony of Monday last; and it becomes a matter of some interest to inquire what influence French Ultramontanes actually possess in the education of the country, and what sort of use they make of it.

As regards the first point, Cardinal Guibert was perfectly right in speaking of the recent concession of "free" Universities as the complement of former concessions, in matters both of primary and secondary education, during the last twenty-five years, as a glance at the history of that period will easily show. Since the educational law of 1850 the Superior Council of Education has included among its members four archbishops or bishops, while three ecclesiastics are on the Council of the Academy, and two on the departmental Council of Public Instruction. Nor is this all. The prefects notoriously exercise a great authority in all that concerns primary schools, and most of the existing prefects are favourable to Ultramontanism. Moreover, the inspectors both of primary and secondary schools often find themselves in want of the protection of the bishop as well as of the prefect, and therefore take the same line. Theological faculties are practically free from State inspection, so that any doctrine may be taught with impunity, and the *curés* are especially charged to watch over the moral and religious instruction of the communal schools, to which they always have free access. The Ultramontanes therefore have very considerable influence over the State schools, and they have also free schools of their own, both primary and secondary, which are largely helped out of the Budget. A great many members of religious orders are employed in the State schools, while those conducted by the Christian Brothers are supported from the Budget of Worship, as well as from the voluntary agencies at their command. Thus in 1872 the Archbishop of Paris demanded that the annual contribution paid to him by the *Société Générale d'Éducation et d'Enseignement* should be raised to 100,000 francs. A good third, if not almost half, the primary education of the country is said to be in the hands of these Christian Brothers, who are, virtually, if not formally, under the direction of the Jesuits, but whose moral character has unfortunately been proved to be far from unimpeachable. And if we pass from primary to secondary education, that is even more subject to clerical influences. There are at present no fewer than fourteen Jesuit colleges in France, containing about 5,000 pupils, while another 5,000 are studying in fifteen Marist colleges, and fourteen under the management of other religious communities; and there are besides 152 secondary schools under secular priests, containing from sixty to seventy thousand students. This computation is exclusive of ecclesiastical seminaries, with which we are not here immediately concerned. And the final complement of this freedom of teaching, which has long been aimed at, is now at last attained in the permission to open free Universities. Free, it may be added, is virtually synonymous with clerical; for the Ultramontane journals are never tired of denouncing lay education as impious and Satanic.

So much for the actual power over French education enjoyed at present by the Ultramontane party. Their use of it cannot of course be determined with similar precision by statistical returns. But we cannot forget the almost dying lamentation of Montalembert—one of the earliest as well as the most single-minded of the advocates of freedom of education—in his letter to Dr. Döllinger, over "the abyss of idolatry into which the French clergy have fallen." And his language will not surprise any one who calls to mind the rank crop of crude and puerile superstitions, in the shape of pilgrimages, prophecies, miracles, and the like, which have so abundantly infested the religious life and literature of France during the last few years, and have elicited no syllable of warning or reproof from any single ecclesiastical authority, with the solitary exception of the Bishop of Orleans, against whom Rome has pertinaciously barred the way to the Cardinalate and the see of Paris. Indeed this is a very inadequate way of stating the case. All, or nearly all, the most childish and incredible of these pious delusions have been nursed to maturity under the full sanction of clerical and episcopal patronage. Against Lourdes, La Salette, and Paray-le-Monial, even Mgr. Dupanloup would not dare openly to protest. But perhaps one of the most striking illustrations of the "idolatry" of which Montalembert speaks may be found in the *Almanac of the Faithful Friends of Pius IX.*, recently published by the Jesuit Father Huguet, where his Holiness is elaborately represented as the "image and living personification of Christ on earth," so that "love of the Pope corresponds in souls to the love of Christ"—with a good deal more to the same effect, which had better not be quoted; and it is explained that "there are secret affinities between Pius IX. and the Virgin," who is bound to repay his proclamation of her Immaculate Conception by restoring to him his temporal power, and has already given miraculous intimations of her intention to discharge this debt of gratitude. Still more remarkable is a devotional manual by the Abbé d'Ezerville, issued by one of the leading Catholic publishers at Paris, in which the Stations of the Cross—a well-known Roman Catholic devotion in honour of the Passion—is parodied in minute detail, with the substitution throughout of Pius IX. for the Saviour. Teaching of this kind—and we could multiply specimens of it indefinitely—is now almost universal among the Ultramontane clergy, and is fully sanctioned by authority; indeed the French Bishops, with the one exception already named, invariably speak in the same sense, themselves. Thus, for instance, Mgr. Bertraud, Bishop of Tulle, in a sermon preached at Paris and since published, undertakes to show that the Pope is in full, direct, and confidential relations with the First Person of the Holy Trinity, so that he is probably privy to secrets in which Christ does not participate. "Pas d'intermédiaire entre le Père et Pierre. Les secrets de l'infini sont les secrets à eux deux . . . il [the Pope] parle avec l'assurance même de Dieu le Père." M. Veuillot has spoken in still more startling language of the relations of the Pope to the Holy Spirit, and he published in the *Univers* a parody of the Lord's Prayer addressed to him. And at least one French prelate, the Bishop of Nevers, has publicly recommended M. Veuillot's writings for the theological study of his clergy. It is hardly wonderful that the *Temps* should characterize the French episcopate and clergy as holding no place whatever in the literature or science—not even in the theological science—of their country. Of this fact plentiful evidence may be found by any who require it in the chapter on the intellectual decadence of Ultramontanism in the Abbé Michaud's recent work on the *Present State of the Church in France*. Yet these, it must be remembered, are the persons who will absolutely dominate the education of these free Catholic Universities. Several Bishops took part in the inaugural ceremony of Monday last, and in every case the Bishops will have the entire control of the teaching, discipline, and professoriate of these institutions. On the whole, it certainly requires a somewhat robust faith to accept the concluding declaration of the Archbishop of Paris, that the institution he has just founded will provide an education "at once sound, scientific, and virtuous." The great mediæval Universities were indeed founded under Papal and episcopal sanction; but they generally contrived before long to acquire an independent position and authority of their own. And, moreover, mediæval pontiffs and prelates were not as Pius IX. and Cardinal Guibert.

GREGARIOUS AMUSEMENTS.

SIR GEORGE LEWIS'S complaint that life would be tolerable but for its amusements has undoubtedly received much additional force from the development of public exhibitions on a large scale. To cultivate the patronage of the mob has apparently become the great object of modern entertainers, and with the result which might naturally be expected. In spite of the dismal warning of the Crystal Palace, which can hardly with all its struggles pay for its putty, and is reduced to sue for the sixpences of the multitude, and the scarcely less melancholy fate of the Alexandra Palace, there has lately turned up yet another enterprise, which, it is to be feared, may be equally destined to promote public discomfort and possibly the unhappiness of its own shareholders. It may perhaps be worth while to notice some of the conditions which make these multiform and unwieldy shows a hopeless mistake. The history of the unfortunate speculation at Sydenham is indeed of the most depressing kind. The huge, absurdly constructed building, stuck up, like a sort of Aunt Sally, on the edge of a hill, for the sport of wind and rain, eats its head off in the expenses of incessant and ineffectual repairs; and, after all its lofty pretensions, archiepiscopal quasi-consecration, and Royal patronage, the Palace has to stoop to something very near competition with the cheap theatres and penny gaffs. A lucky accident a few years ago relieved it from part of its ruinous expenditure on the maintenance of a brittle and rickety fabric; and if the shareholders could only make up their minds to pull down some more of it, they might perhaps once again hope for a dividend. The reduction of prices upon which the Company has decided may possibly be an advantage to the classes who will now have an opportunity of visiting the Palace; but it can hardly fail to have sooner or later a lowering influence on the character of the enterprise. If you appeal to the sixpenny people you must cater for the sixpenny people, who are no doubt a most worthy and deserving class, but who, when they go out for a day's holiday, usually look for something else than those refined artistic delights which the Crystal Palace was originally established to supply. We should be sorry to say anything in disparagement of hard-working folk who have perhaps the best right of all to relaxation and amusement, and if they get this at the Crystal Palace or any similar establishment it will be a good thing. But, on the other hand, there is no use in shutting our eyes to glaring facts, and pretending that all classes of society have an equal taste for the higher kind of amusements, and it may be taken as a natural law that any commercial speculation will devote itself especially to the class to whom it looks for a revenue. The mere accumulation of a dense, bustling, noisy throng of people, bent on the pleasures of the drinking-bars and the exhilaration of squeezing and jostling together, is necessarily destructive of that quiet and placid state of mind which is indispensable for appreciating good music or any other kind of delicate art. At the Alexandra Palace the music has for a constant accompaniment the tramping and buzzing of an uneasy crowd, which is enough to worry any lover of music into a fever; and now that the special days at the Crystal Palace are abolished, much the same thing may be expected there.

The obvious mistake which is committed by places of amusement of this kind is that they mix up together the different tastes of different classes. Mr. Gladstone has unfortunately given countenance to the principle that the best course for purveyors of all kinds is to dive down into the depths of the population. It is probable, judging from the experience of the Licensed Victuallers, that this is true enough if the object is only to make large profits. Greater fortunes may nowadays be secured, and in a shorter time, by selling beer or gin than by supplying the finest and purest wines; but still gin is gin, and wine is wine. And it is much the same with the products or exercises of art. It may be a good thing that pictures or music should be brought within reach of the masses, but it is idle, and contrary to the evidence of every one's eyes and ears, to expect that this will be an encouragement to the highest kinds of art. We shall no doubt be accused of an unamiable assumption of superiority or ungenerous exclusiveness when we say that it is impossible—at least in the present state of society—to provide satisfactorily at the same time for the wants of educated and of uneducated people in the way of amusement. The latter cannot do without the physical stimulant which is supplied by boisterous association and strong effects, and these are necessarily jarring to more cultivated temperaments. What we may come to in time we do not pretend to say, but for the present grades of taste and manners unquestionably exist, and we ask only that they should be taken into account as a matter of fact. The career of the Crystal Palace has been from the first a process of continuous degradation. It is pleaded that it has some useful classes attached to it, and that its music is of a good kind. We may admit this, especially as regards the music; but the classes are only an accidental feature, independent of the main project, and there is no guarantee that the music will be kept up to the standard, or that it will be possible in a mixed mob to enjoy it as before.

Another weak point of these large, too many-sided places of amusement is the absurd variety of attractions which they affect to offer. They profess, as it were, to have taken everybody's measure, and to be ready for customers of every class and every taste. The Sydenham and Muswell Hill Palaces, for instance, undertake to cater at the same time for high and low. They offer you a glass of beer and cold pork-pie, or a delicate French dinner with Marcobrunner and Château Margaux; comic songs and rop are to be had for choice along with Beethoven and Shaks the scientific student of natural history is supposed to be at in the midst of a gaping crowd, and to take delight in a brass band and Bath buns. The Aquarium in Westminster, which is ab to be opened under distinguished patronage, makes a gr parade of its high-class character. It has a list of what are called Fellows, like a regular scientific society; but of course, anybody can be a Fellow on terms which are cheap enough, and the science is a mere sham. The exhibition is styled an Aquarium, and will of course have tanks; but it is evident that the managers intend to rely chiefly on the attractions of a music-hall or promenade with refreshments. It offers an opportunity for gambling in a picture lottery ("first prize 1,000*l.*"), with the use of a spacious lounge ornamented with paintings, sculpture, shrubbery, and drinking-bars; billiard-tables, smoking, writing, and reading rooms; dramatic performances, flower-shows, a rink, and possibly by and by a bicycle circus and a nice dry skittle-ground. For the present the Company has been disappointed in getting a dancing-licence, but it may perhaps be hereafter more fortunate in completing the casino character of the establishment. In the meantime there can be no question what will be the character of the place, and of the people who will frequent it. It is announced that there is a division-bell at the Aquarium in direct communication with that in the House of Commons, for the convenience of members of Parliament who are expected to come in a rush to consort with the shop-girls and haberdashers' young men who of course will chiefly haunt these bowers of bliss. It cannot be denied that the House of Commons nowadays contains some curious types, and the *Daily News*, which advertises this attraction in a prominent article, no doubt knows the tastes of the school of politicians whom it represents. Mr. Arthur Sullivan is to have the direction of the music, and he is known as an accomplished composer and leader; but the conditions under which he will have to practise his art will almost inevitably tend to drag it downwards. The associations of the place, the noise and bustle of a mixed promenading audience, the competition of the rink and liquor bars, and all the rest of it, will be against him. It is easy to think what even the admirable Popular Concerts at St. James's Hall would sink into under similar circumstances. Another obvious objection to such a conglomeration of different entertainments is that it is scarcely possible for one management to keep them all going. The energy and capacity of the directors are exhausted in the variety of their duties. They have to look after an aquarium, a theatre, a restaurant, concerts, flower-shows, dog-shows, and all sorts of miscellaneous entertainments. Why any one should wish to waste a day in going to see a play several miles out of town, when he can see a much better one at a more convenient hour and near at hand, is a mystery we have never been able to fathom; but it is clear that the attempt to carry on a great variety of entertainments all at once, like a juggler's balls in the air, is very likely to come to grief. There are some people perhaps who enjoy this mixture of everything, but any one who cares for the refinements of pleasure must regard them as a barbarous nuisance of the most fatiguing and depressing kind.

SALONA.

THE strictly classical student will perhaps be offended if any one, on reading the name at the head of this ticle, should ask him where the place that bears it is, and how it is to be pronounced. Salona, he will answer, is in Dalmatia, and how can there be more than one way of sounding the *omega* in the second syllable? And so far he will be right. The Salona of which we speak is in Dalmatia, and, as its most usual Greek forms are Σαλῶνα and Σαλῶναι, there can be no doubt as to the rights of that particular *omega*. But those who have gone a little deeper into the geography of south-eastern Europe will know that, in speaking of Salona, we have lighted on a case of "two Wusseaters." Besides the Dalmatian Salona, there is another within the Greek kingdom, which has taken the place of the Lokrian Amphissa. As we write the names of the two, we make no difference between them, and we fear that most Englishmen will make as little difference in sounding the two names as in writing them. Yet, as Boughton in Northamptonshire and Boughton in Kent are, by those who have local knowledge, sounded in two different ways, so it is with the Lokrian and the Dalmatian Salona. Σαλῶνα and Σαλώνα differ to the eye; and, among those to whom Greek is a living tongue, they differ to the ear also. But it is not with the Lokrian Sálona, but with the Dalmatian Salóna, that we are here concerned. We need not disturb the feelings of the late Bishop Monk, whose one notion of accentual reading was that those who follow it must "make some strange false quantities." The classical purist may make the *omega* in the Dalmatian Salóna as long as he pleases. Only, if he pronounces the Lokrian Sálona in the same fashion, he will wound the ears of those to whom the notion of (so-called) quantitative reading is that those who follow it must make some strange false accents.

Salona is one of the cities of the earth which have most utterly perished. There is perhaps no city of which the name survives which has left so little trace of what it was in the time of its greatness. For it is not like those cities whose very name and memory have perished, which are wholly ruined — which have no modern re

sentatives have some wholly different names. Salona is still an existing name, marked at least on the local map; but instead of the head of Dalmatia, one of the great cities of the Roman Empire, a city which was said to have reached half the size and population of the New Rome itself, we find only a few scattered houses, which hardly deserve the name of a village. By the side of modern Salona, modern Aquileia might seem to deserve the name, which it still delights to keep, of *Città Aquileia*. Ecclesiastical Aquileia at least is not wholly dead as long as the patriarchal basilica still stands, if only to discharge the functions of a village church. But at Salona the traveller hardly notices whether there be any church in use or not. Of modern objects the one which is most likely to catch his eye is the building which at least proclaims, in the name of "Caffè Diocleziano," that Salona in her fall has not forgotten her greatest son and, according to some accounts, her second founder. Salona has utterly perished, and Spalato has practically taken its place. By a strange piece of good luck, the citizen and sovereign of Salona who came back to spend his last days in the neighbourhood of his birthplace had reared at no great distance for her the house which, when Salona fell, stood ready to receive her inhabitants to take her place as a new city.

There is a marked difference between the position of the older and that of the newer city. Spalato stands indeed on a bay, but a bay which, in that region of channels and islands, may pass for the open sea. Salona lay at the innermost point of a deep gulf which bears her own name, the gulf which forms one side of the peninsula on which Spalato stands, and which is shielded from the main sea by the island of Bua. It is curious to compare the real geography with the way in which the land and sea are laid down in the Peutinger Table, where Bua seems nearer to the coast of Italy than it is to Salona. Sir Gardner Wilkinson appositely quotes the lines of Lucan:—

> Qua maris Hadriaci longas fert unda Salonas,
> Et tepidum in molles Zephyros excurrit Iader.

Longæ certainly well expresses the way in which the city must have spread itself along the mouth of the river, and the northern side of the bay. For Salona, like most of the older cities, was not like one of our square *chesters* which rose up at once out of some military necessity. The Dalmatian capital had grown up bit by bit, and its walls formed a circuit almost as irregular as that of Rome herself. The site was a striking one. As we set forth from the comparatively flourishing daughter to visit the fallen mother, the road from Spalato leads us over a slight hill, from the descent of which we look on the bay with its background of mountains, a view which brings before us two strongly contrasted sites of human habitation. In advance of the mountain range stands the stronghold of Clissa, so famous in later wars; while, on the bosom of the bay, a group of small islands are covered by a small village, which seems to float on the water, and which well deserves its name of *Piccola Venezia*. Between the two lay Salona, on a slight elevation gently sloping down to the water; here, as so often on the Dalmatian coast, it needs somewhat of an effort to believe that the water is the sea. To the right of the road, we see the ruins of the aqueduct which brought water to the house of Diocletian. Ancient fragments of one kind or another begin to line the road; an ancient bridge presently leads us across the main stream of the Giadro, Lucan's Iader, which we might rather have looked for at Zara. We mark to the right the marshy ground divided by the many channels of the river; we are, perhaps without knowing it, within the circuit of the city; we pass by a square castle with turreted corners, in which a mediæval archbishop tried to reproduce the wonder of his own city, and we at last find ourselves close by one of the gates of Salona, ready to begin our examination of the fallen city in due order.

The city distinctly consists of two parts. A large suburb has at some time or another been taken in within the walls of the city. This is plain, because there is part of a cross wall with a gate still remaining, which must have divided the space contained within the outer walls into two. This wall runs in a direction which, without professing to be mathematically correct, we may call north and south. That is, it runs from the hills down towards the bay or the river. Now, which was the elder part of the two? that to the east or that to the west? In other words, which represents the pre-Roman city, and which represents its enlargement in Roman times? By putting the question in this shape, we do not mean to imply that any part of the existing walls is of earlier than Roman date. The Roman city would arise on the site of the earlier settlement, and, as it grew and as its circuit was found too narrow, it would itself be further enlarged. The cross wall with the gate in it must of course have been at some time external; it marks the extent of the city at the time when it was built; but in which way has the enlargement taken place? It has commonly been thought that the eastern, the most inland division, was the elder, and that the city was extended to the west. And it certainly at first sight looks in favour of this view that, in the extreme north-west corner, an amphitheatre has clearly been worked into the wall exactly in the same way in which the Amphitheatrum Castrense at Rome is worked into the wall of Aurelian. How so acute an observer as Sir Gardner Wilkinson could have doubted about this building being an amphitheatre, still more how his doubts ended in his positively deciding that it was not, seems really wonderful. It has all the unmistakable features of an amphitheatre, and we can only suppose that a good deal has been brought to light since Sir Gardner Wilkinson's visit, and that what is seen [illegible] clearly to be seen then. As amphitheatres were commonly without the walls, this certainly looks as if the eastern part were the old city, and as if those who enlarged it to the west had utilized the amphitheatre in drawing out their new line of fortification, exactly as Aurelian in the like case did with amphitheatre, aqueducts, anything that came conveniently in his way. But, on the other hand, Professor Glavinich, whom we have already referred to when speaking of Spalato, and whose keener observation has come usefully in the wake of the praiseworthy researches of Dr. Carrara, has pointed out that the gate has two towers on its eastern side, showing that that side was external, and that therefore the western part must be the older and the eastern the addition. This is a very strong argument, which it is perhaps impossible to get over, though the position of the amphitheatre certainly looks strongly the other way. The fact that in the northern wall of the eastern part there are inscriptions commemorating the building or repair of the wall in the time of the Antonines may also be thought to tell in favour of the later date of this part of the city. But this argument by itself would not be conclusive, because the wall might very well have been rebuilt in their day and the city enlarged to the west in a still later time. But the most probable view is that the original city stood west of the gate pointed out by Professor Glavinich, and that it has been extended both ways. It seems impossible to believe that the amphitheatre can have been originally built in the position in which it now stands.

Within and without the circuit of the walls there is much to be seen, thanks to the excavations which have been made at various times, especially under the care of Dr. Carrara. Near the north-western corner of the eastern division of the city, a Christian basilica and baptistery have been brought to light. They stand near the wall; is it fanciful to think that at Salona, as well as at Rome, it was not thought prudent in the earliest days of the establishment of Christianity to build churches in the more central and prominent parts of the city? The Salona basilica keeps, as it were, under the shadow of the wall of the extended city, exactly as the Lateran does at Rome. Outside the city to the north, towards the hills, is a Christian burying-place, answering at Salona to St. Agnes and the other Christian burying-places beyond the walls of Rome. Here are tombs of various forms and sizes, an earlier *Chorepiscopus* among them, and there are what certainly look very like small basilican churches, or rather sepulchral chapels, with their apses turning several different ways. A store of architectural fragments are strewed around; but the real wealth of Salona, both sepulchral and architectural, is not to be looked for in Salona itself, but in the museum at Spalato. There are those superb tombs, heathen and Christian, and those splendid capitals from some basilica greater than that which has yet been traced out. There are stores of inscriptions, Latin and Greek, which would make the place where they are preserved a place of no small interest, even if that place were not Spalato. One sarcophagus of heathen date still stays in its place, a little way beyond the city, because, being hewn in the limestone rock, it could not be taken away. This is that which is described by Sir Gardner Wilkinson, which has some of the exploits of Herakles carved on its one face, and which has been so oddly changed in modern times into the altar of the canonized Pope St. Caius, who passes, like the Emperor under whom he suffered, for a native of Salona. Below this chapel, which stands on the hill-side, are the remains of a wall which certainly has an early look, and which is marked in Dr. Carrara's map as "muro ciclopico," but which Professor Glavinich looks on as being rather nothing more ancient than a Roman sea-wall. It must not be forgotten that, in the days of its greatness, Salona was one of the chief ports of the Hadriatic, the greatest on its own side of it. After shifting to and fro from one port to another, that position has come back, if not to Salona itself, yet to its modern representative. If we distinguish the Hadriatic from the Gulf of Trieste, Spalato is undoubtedly its chief port; but the smallness of Spalato, as compared with the greatness of ancient Salona, is a speaking comment on the difference between the place in Europe held by the Illyrian lands now and the place which they held in the days of the Roman peace.

Salona then was one of the chief cities of the Roman world, placed on one of the most central sites in the Roman world, the chief port of one of the great divisions of the Empire, and one of the main highways between its eastern and western halves. Such could be the position of a Dalmatian city when Dalmatia had a civilized mainland to the back of it. Salona therefore kept up its position as long as the Empire still kept any strength on its Illyrian frontier. It played its part in both the civil wars. Cæsar himself enlarges on the strength of the city—"oppidum et loci natura, et colle munitum." In after times it was a special object of the regard of its own great citizen, who took up his abode so near to its neighbourhood. According to Constantine Porphyrogenitus, Salona was pretty well rebuilt by Diocletian. Its importance went on in the time of transition, and its bishopric became a place of retirement for deposed Emperors. Like the rest of the neighbouring lands, it passed under the dominion, first of Odoacer and then of Theodoric, and it was the first place which was won back to the Empire in the wars of Justinian. Lost again and won back again, it appears throughout those wars as the chief point of embarcation for the Imperial armies on their voyages to Italy. This was the last century of its greatness; in the next century the modern history of Illyria begins. The Slaves were moving, and the Avars were moving with them. Salona fell into the hands of these last barbarians; it was ruined and pillaged, and sank to the state in which it has remained till our own time. Salon-

from the seventh century has ceased to rank among the cities of the earth, but the house which had been raised by its greatest citizen stood ready hard by to supply a shelter to some at least of its homeless inhabitants. Things were wholly turned about on the bay of Salona and on the neighbouring peninsula. Down to the days of Heraclius Salona had been a great city, with the vastest house that ever man reared standing useless in its neighbourhood. From his day onwards the house grew into a city, and the city became a petty village, where, of all the places along that historic coast, the traveller finds least to disturb him in the pious contemplation of ruins.

AT SEA IN WINTER.

WE can fancy that nothing is more agreeable than life on the sea in the long days and in summer weather for those whose tastes lie in that direction. There may be ships that are floating purgatories or coffins, but, as a rule, an intelligent mariner may choose his craft; for seamen who know their work are becoming yearly more difficult to find. Under favourable circumstances, a sailor has the pleasures of yachting with good wages, abundance of substantial fare, and an unfailing appetite to enjoy it. He may skim the cream of popular travel all the world over, visiting a succession of foreign seaports, and may cram into a happy day or two of "liberty" the excitement which a gentleman tourist finds during whole weeks of roughing it on a wearisome land journey. His slumbers may be broken, it is true, by troublesome watches; but no profession is without its drawbacks, and his, after all, is only a question of adapting the habits to abnormal hours. And in summer the amphibious population that get their living along our coasts have at least as jolly a time of it as thoroughgoing mariners. The coastguardsmen sun themselves lazily in the balmy air on the cliffs, laying stray sauntcrers under contribution for shillings in return for staring into vacancy through their many-jointed telescopes; or they man the Government galley for a little gentle exercise when disposed to exchange the land for the water. The fishing-boats running merrily out to sea with the sun glancing on their ruddy canvas give one the idea of so many pleasing idyls of marine existence. The long low steamers, as they go gliding by, leaving comet-like tails of vanishing vapour behind them, suggest open portholes with free currents of fresh air, and an entire absence of disturbing qualms. In the distance are graceful and stately ships under their clouds of bulging sail; while the foreground of the picture is filled up with varieties of busy life in the shape of venerable Tritons passing their lobster-pots under inspection, women and children filling their baskets full of mussels, or grubbing for sand-eels to serve for bait, shrimpers and prawners immersed to the waists, and paddling voluptuously in the tepid water. Under the influence of sights like these many an indifferent sailor, with an habitual abhorrence of the ocean, may have felt that the people who get their living out of it are by no means so much to be pitied as he had supposed.

Probably, however, he would reconsider his summer impressions and revert to his original notions were he to go back to his coast resort for a visit in January: for there can be no doubt that those who have their homes on the rolling deep, and have been steeped and seasoned in brine from their boyhood, must often have terribly hard times of it in winter. You get up in the morning to find your window panes covered with frost, and a bitter east wind howling lugubriously along the esplanade. It is almost a shock to see shrimps on the breakfast-table; you shiver involuntarily at the thought of the sufferings of the miserable man who went out dredging for them. Looking out from the balcony, you see the brown sea setting shorewards in a strong current, tumbling over in white crested billows, and the breaking spray flying in clouds over the pier, to fall in showers on the shipping under its shelter. Nothing that can help it is likely, as you think, to put out to-day, and in your selfishness you heave an unconscious sigh at the prospect of no fresh fish for dinner. There was no need to be anxious on that score. By and by, when you look again, you see signs of bustle in the harbour; masts are swaying as if boats were being cast loose, and there is a general shaking of canvas that flutters out from the yards. Soon a vessel takes the lead of the rest; she is seen gliding into view, hull and all, and, threading the labyrinth of bobbing buoys, steers straight for the opening between the pier-heads. As she draws clear of the shelter of the cliffs, and the wind fills the top of the mainsail, her speed visibly accelerates. As yet, however, her motion is steady, for there is nothing but a ripple on the water in the harbour. Another moment or two and there comes a sudden change. She is caught in the jaws of the harbour mouth, and has met the rush of the incoming tide. As she oscillates up and down like a rocking-horse, having apparently lost way altogether, it would seem as if she must infallibly come to grief. But she is cleverly handled by men who knew what they had to expect, and the risk is only apparent. She gets her way again, shoots past the pier-head beacon, and is braving the full force of the elements. Now her little stump of a bowsprit seems pointing straight in the direction of the sun; the next moment it is plunging towards the depths. The sails, bellying out like balloons, look as if they would roll her clean over; but her bottom is broad and her sides are round, and she rights again with marvellous buoyancy. She begins to make headway mysteriously, as she beats out to windward in short stretches, while the spray pitches up in volumes round the cutwater, and falls back in deluges on her heaving bows. But by this time your attention is divided, for others of the fishing fleet are following fast in her wake. Speedily they draw out in a lengthening line, all bearing towards the same point of the compass, and, as it becomes clear that every one is bound for sea, it strikes you that you may as well go down to the harbour and assist at the start. What you chiefly remark when you get there is the absence of any general excitement. The men in the boats are busy enough, but none of their better-halves or sweethearts have come down for tender partings, as is the invariable practice in works of fiction, and, indeed, in the Northern herring ports in the season. The crews are too hard at work to feel chilly as yet; they are all warmly got up for bitter weather, in close-clinging jerseys, fishing-boots, fur caps or sou'westers, and there is a cheerful smoke going up from the bit of iron chimney that sticks up in the deck amidships. But it will be very different when they are out at sea, handling those stiff red sheets of canvas, or those impracticable nets and coils of cordage that are hanging in festoons over the sides. You cannot conceive what they want with the heaps of ice which are lying carelessly piled on the quay. Surely the temperature is low enough to keep everything fresh and sweet, without any necessity for artificial precautions. From your own experience in the shelter of the cliffs, in the warmest of clothes under the thickest of Ulsters, you can imagine how the wind will feel towards sundown to men who have been out in it for hours, exposed to its biting fury. Besides, as likely as not, before they get back again they will have had to bear up against other varieties of weather than a clear atmosphere or a cold wind. The fitful gleams of the sun have been bringing out in lurid lustre the sullen blue of the great banks of cloud to windward. To all appearance, they are heavily charged with snow or hail, and it is no joke running for home in a blinding snow-storm, even to men who have been familiar with the waters from infancy. The heavy drift of the feathering flakes envelops everything, falling like a thick white veil between the fishing-boats and the lighthouses or lightships. It is a case of groping your way between shore and shoals, listening for the noise of the breakers to guide you, while the men on the look-out find it hard to hold up their heads against the stinging drift that beats into their faces. To be sure, when they do get back, they come home, it is to be hoped, to comfortable fire-sides, to say nothing of hospitable public-houses and hearty good fellowship. But it must be admitted that their domestic and social joys have been somewhat dearly purchased, and many a landsman who has to struggle hard for a living might well hesitate to change places with them.

Still these fishermen have something to be thankful for, according to a landsman's ideas, in being at least as much on shore as at sea. They have time to stretch their legs on the solid earth, to dry their clothes, and to set their blood in circulation before returning to a fresh ordeal of hardships. Those who ship for seagoing cruises have a far more constant strain imposed on them by the severity of the winter, to say nothing of the aggravation which they may expect of their everyday perils. They may be in a collier coasting craft, working under either steam or sail. As they lie at their moorings in the port of lading, it is a question whether to start at once and chance it, or to wait yet a little longer in the hope of better weather, for the storm signal has been displayed for days over the harbour. But time is valuable to the owners, and even the men before the mast begin to lose patience, and when in doubt are usually inclined to bless the barometer and stand out to sea. It is anxious work, however, groping one's way along a dangerous coast, through the fogs that have been gathering in the lull between the past and the coming storm; and a short-handed crew in a clumsy tub or a deep-laden screw have to suffer much from long night-watches. Then, when the storm-warnings are tardily justified by the event, and the vessel is beyond the reach of shelter, they have to toil unceasingly to keep themselves and their cargo above the tumbling waters. Very likely they may have to go to the pumps, as they have done not unfrequently on former voyages, and work unceasingly for dear life to get rid of the water which has been pouring in over the low freeboard, and soaking everywhere through the yawning seams. They may think themselves fortunate if they save their lives and their ship by the skin of their teeth, instead of foundering and leaving no trace behind, or being shivered to splinters on a lee-shore. It is worse still on board a North Sea or Baltic vessel. The navigation in those narrow and treacherous seas is intricate at the best: in those inhospitable latitudes the fogs gather in extraordinary density; and tempests such as those which descend occasionally in sudden destruction upon subalpine lakes, sweep down from the frozen wastes of Lapland or Scandinavia. Add to all this a top-heavy vessel labouring painfully in the trough of the ocean, with a promiscuous deck cargo broken loose from its lashings, and you have a scene which may well be supposed to be the climax of the horrors of a winter night. Yet worst of all, we should conceive, is such a winter voyage as that round "the Horn" in wild weather. Storms setting full in her teeth may buffet about the biggest ship, like the fishing-boats we have seen beating out of English harbours, only with tenfold violence. The seas have been washing over the decks, flooding the forecastle and the seamen's quarters, till the galley fires are extinguished, and not a man has a dry stitch of clothing. But if their clothes are damp they are not dripping; for the vessel is close on antarctic latitudes, among snow-drift and icebergs; the winds are blowing off either frozen seas or the icy mountains of Terra del Fuego; the thermometer is down to zero or below it; and

everything that should be flexible is frozen as stiff as iron, from the mainsail to the jersey and trousers of the cabin-boy. Yet, as the wind shifts about, or rises or falls, they have always to be reefing or loosing canvas, and clinging among icicles to slippery shrouds, with hands that have long been unconscious of sensation. That, under such conditions of life at sea, there should be so few accidents as there are is marvellous, although doubtless there are many that we never hear of. But we may be sure that the colds, coughs, and chest affections for which landsmen think it necessary to nurse themselves are common enough. If the recollection of former hardships is the greatest sweetener of a more peaceable existence, few men have more cause to indulge in the pleasures of memory than the ancient mariner who is laid up in port with a pension.

THEATRICAL FENIANISM.

THERE is an amusing audacity—one might perhaps say impudence—in the appeal which Mr. Dion Boucicault has just addressed to the Premier with regard to the Fenian prisoners. The author of *London Assurance* has always had a reputation for feats of this kind; but he has now surpassed himself. He wishes it to be understood that his production of the play called *The Shaughraun* has not been a mere professional speculation on his part, though it has, he says, paid very well, but a great political experiment. Many persons who witnessed the performance of this piece probably came away without observing that it was anything but a drama of the ordinary sensational kind, depending rather on clap-trap sentiment and startling incidents than on more substantial attractions; but the author now comes forward to disclose an unsuspected purpose in the play. Artemus Ward, it may be remembered, conducted his show on the principle of making it "a grate Moral Entertainment," and Mr. Boucicault also takes an elevated view of his line of business. *The Shaughraun*, he tells us, is founded on an episode of the Fenian insurrection of 1866. "A young Irish gentleman has been tried, convicted, and transported to the penal colonies, for complicity with the rebellion." We are afraid the transportation is an anachronism, but that is a small matter in such a case. The young man escapes to America, and then ventures to visit his home in Ireland. He is re-arrested, but again escapes, and is "eventually restored to freedom by a general pardon, granted (under poetical license) during your"—that is, Mr. Disraeli's—"Ministry." It will be seen that there is a very simple story, and the author himself vouches for the fact, which we should not think it necessary to dispute, that the piece is destitute of literary pretensions, has no "poetic clothing," "no wit to divert attention." Yet, if we may believe Mr. Boucicault, this piece, for which the author has done so little, has been one of the most successful ever known. Night after night, we are told, the spectators "rose to their feet, and [illegible] walls of the national theatre," when the fugitive convict escaped from his prison, and again when he was pardoned. And this, it is argued, was due, not to the "cunning of the dramatist, nor the great merit of the actors," but to the natural sympathy of the audience with "one who is endeavouring to elude the penalty of a great offence." And Mr. Boucicault assures the Premier that it was with the intention of bringing out this expression of sympathy with Fenian prisoners that he composed the play. He therefore calls upon the "whole world to witness this spectacle—the Government of England, with a full and noble reliance on the loyalty of the English people, authorizing and approving the representation of this play, thus inviting daily a jury of two thousand citizens to hear and pronounce their feelings on a great political question." This question has been put night after night to people of all classes, "from the Prince and Princess of Wales to the humblest mechanic," and "there has been no dissentient voice upon it, no, not one!" This conclusively proves, in Mr. Boucicault's opinion, that the English people are full of tenderness and pity for the Fenians, and willing to forgive and forget their offences.

Whether the audiences really did rise and cheer in the way described may perhaps be regarded as an open question, but, in any case, the applause is capable of a very simple explanation. People go to the theatre to be amused, and the fun of *The Shaughraun* lay in the tricks by which a fugitive prisoner baffled his pursuers. The scene no doubt was laid in Ireland, and the oppressor was nominally supposed to be the English Government, but nobody thought of identifying the wild improbabilities of the stage with contemporary events, and a happy ending appeared to be the natural finish of such a piece of extravagance. Mr. Boucicault says that he put his question to the public in "plain language," but it may be doubted whether anybody would ever have discovered it if he himself had not been good enough to come forward and reveal the secret. In saying that he has delayed calling attention to the subject "until the last moment," he perhaps forgot that he had left himself another fortnight for the final run of the play before withdrawing it; but, apart from this, it might have been expected that, if he was really so anxious to ascertain the drift of public opinion, he would have taken the earliest, and not the latest, moment for frankly disclosing his design, and giving fair warning to his audiences of the construction that would be placed on their applause. It would of course be absurd to discuss seriously whether this play actually produced the result which the author attributes to it; and even if this were admitted, it might be remarked that it was due to a purely fanciful representation of Fenianism, in which its crimes and atrocities were ignored, and pity excited for a poor fellow who was being hunted down rather by private enemies for their own ends than by the Government. The good people of the piece were all more or less Fenians; the villains were of course on the other side; and the question put to the audience had to do rather with human nature than politics. The evidence which has been given with regard to Fenianism before the courts of law, and on which public opinion has already passed its verdict, presents a very different picture from that offered in a comic play. If rebellions were in reality as harmless and innocent as on the stage, and everybody could afterwards go home quietly to supper and bed, without being any the worse for it, the community could perhaps afford to take a good-humoured view of such proceedings. It should be remembered, however, that the prisoners for whom Mr. Boucicault is now pleading are not mere light-headed vapourers, but soldiers who broke their oaths, which in itself is a serious crime. Let Mr. Boucicault put the plain truth about any case of this kind on the stage, and perhaps he would have little reason to congratulate himself on its reception. As it is, he probably showed a sound discretion in not openly avowing at the outset the intention with which he now says he composed *The Shaughraun*. It is obvious that, if this plan of bringing political questions on the stage were to come into fashion, there would naturally be rival versions of the case to be tried. Indeed we observe that this has in some degree happened even in the present instance. As soon as *The Shaughraun* is withdrawn *Peep o' Day* is to take its place on the same boards. This is an Irish play very similar in character to Mr. Boucicault's, and of older date, which is now revived apparently as a protest against the spirit of the latter. At least we find *Peep o' Day* significantly described in the advertisements as "founded on an episode of the Irish Rebellion of 1798, but depending for its success, not on its treasonable propensities, but on its literary merits, and on the sympathy excited for a victim falsely accused of political conspiracy." This piece does not perhaps go very directly to the question whether Fenians ought to be punished, but if it were usual to take the opinion of the public in this manner, we might expect to have another play which would invite sympathy for the peaceable and loyal classes. Trial by jury, as far as it is illustrated by such pieces as *The Shaughraun*, is obviously a trial in which the jury is allowed to hear only the speeches on one side. It is very easy to get a verdict when you are at liberty to invent your evidence, and can pass off anything you like. It can readily be imagined that a good many verdicts might be got in this way for the "unfortunate nobleman" now languishing in Dartmoor, or even perhaps for the late Mr. Wainwright.

Mr. Boucicault, in concocting his little plot for entrapping the English public into what he afterwards intended to represent as an expression of sympathy with Fenianism, seems to have taken very good care not to make his intention too apparent; but there can be no doubt that the attempt to do so, however mild and disguised, was a gross impertinence to the public. This is only another instance of the necessity of keeping the stage under some kind of censorship. If Mr. Boucicault had carried out his plan in a bold and open way, inviting the audience to vote for or against Fenians by a show of hands, we may be sure that it would not have promoted the good order and harmony of theatrical entertainments; and indeed it may be assumed that he had to tone down his piece in order to avoid any question with the Censor, who has authority to suppress any attempt to use the stage for the direct purposes of political agitation. If this controlling force did not exist to make dramatists cautious, it is easily conceivable what mischief might be done. There cannot be a greater mistake than to say that this is a question of freedom of opinion; it is simply a question of public order. The theatres would undoubtedly be turned into bear-gardens if they were to be given over to political strife. It is part of the good fortune of this country that it has always enjoyed the advantage of more rational methods of carrying on discussions of this kind. It is possible that Mr. Boucicault may have unintentionally done a service to the public by exposing the mischievous absurdity of what he pretends to have done.

WORKING-WOMEN'S CLUBS.

NOWHERE do the extremes of society meet on exactly the same footing as they do across the counter of a great shop. Strange and interesting are the contrasts which there present themselves. On one side, the outer, may be seen a countess, perhaps even a duchess. On the opposite side the inner, is another lady. The countess may be old, fat, and badly dressed; the shopwoman with a perfectly made gown, a graceful figure, possibly a beautiful face. The one may be ill-mannered and cross, the other is generally polite, and often attractive. The buyer is unscrupulous about giving trouble. The seller is obliged to appear unwearying in her efforts to please. In some well-managed establishments, although the mere social difference between the two is immense, the shop-girl is almost as well educated, as well cared for, as well doctored, and as carefully watched, as the other. She is properly fed, has plenty of books to read, a well-lighted sitting-room, and a wholesome place in which to sleep. But there are in

London a large number of smaller shops where this is not the case, where no arrangements can be made by which the young women can be housed, and where they are obliged to go to and from their work each day. The shop-girl is selected from almost every class of society. She is chosen partly for her good looks, partly for her engaging address, partly for her neatness and intelligence. Her moral character in many places is not thought of much importance, certainly not the first thing to be considered in engaging her services. Her private life is not supposed to signify much to her employer, provided she comes to her work in good time and fulfils the ends for which she is hired. Her duties are summed up in one great duty. Her value is appraised according to the number of people she can induce to buy. And the fine ladies to whom she sells are brought oftentimes into close personal contact with people on whom under other circumstances they would look down as from an unapproachable eminence. The pretty little milliner, with the bright hair and the dove-coloured eyes, who shows off the Rubens hat to such perfection, cannot out of her salary afford pleasant airy lodgings or many home comforts. She has even to consider the penny she may spend on the evening newspaper. Often, after her hard day's work is over, she has to take off the fine clothes belonging to her employers, put on her own shabby ones, and like Cinderella return tired and worn to a home in which neither peace nor pleasure is to be found. All day there has been no sitting down behind the counter, no intermission of calls upon her attention, no repose however fatigued she may have felt. When evening comes she goes out alone into the gas-lighted street and may be supposed to seek her home. But there are many steps between the shop and home. The pretty work-girl need not go alone. The accredited and respectable young man may be in waiting to take charge of her, himself set free from similar employment. Too often, however, it is some one superior to the girl in social position, who has no idea of marrying her; but she prefers the refinement which she does not find in her own rank, and is glad, after her day of monotonous toil, to be taken to some place of amusement where pleasure and, above all, excitement can be found. As the shops close gentlemen may be seen sauntering about the doors, and there is no lack of places in all large towns where comparative rest, and pleasant, if unwholesome, entertainments are always to be found.

Great as may be the contrast between the shop-girl's private life and that of her customers, it is not greater than that between the small close room which she calls home and the gay scenes of the well-lighted music-hall. Perhaps she lives in a dingy suburb with her parents. Her father is a hard-working clerk; her mother wearing out her life in trying to keep things together and get her children out into the world. She is so busy that she is obliged to let the girl cook her own supper, or be content with it cold. The fire has gone out, one of the children is ill, another has had a scolding and is sulking in the corner. One of the boys comes in tired and cross; things have gone wrong with him all day, and he vents his temper by refusing to wipe his boots and kicking the footstool across the room. Another brother, older and now his own master, hastily snatches anything he can find for supper and sets off with a companion to some place of amusement or to spend a quiet evening and have a smoke with a friend. The girl wishes she had a pleasant book to read, some peaceful place in which to sit, something to dispel the feeling of utter exhaustion which has taken possession of her. She resolves that the next day she will not refuse an offer to go to the theatre if she is invited, because she feels less ready for her work in the morning when her evenings are worried and dull. Her parents have no means, even if they had the inclination, to make home happy to her. She probably pays her share of household expenses, or, if she is still in her apprenticeship, is looked on as an encumbrance, and when she leaves, they are satisfied if they think she has obtained food and houseroom elsewhere. But in many cases she does not live or lodge at home. She rents a garret in some obscure street in order to be near her work, and hither she has few inducements to go except to sleep. The temptations to keep away from it are well nigh irresistible. Her room is a weary way up four or five pairs of stairs. It has no furniture but what is absolutely needful. Its so-called comforts are probably shared with another lodger. Nothing in the room is pretty, no chair comfortable, even the looking-glass is ill-conditioned and deceptive. Tubbing in such a place is impossible. Water is difficult to procure, and the soap often forgotten. Fire is a rarity, light is expensive, and she often goes to bed by the rays of the street lamp. Her opportunities of improving her mind by reading, of writing an occasional letter, of cultivating her religious aspirations, if she has any, are simply none. She goes there to throw herself wearily on her bed, and rises before daylight to hurry back to her place of employment. On wet Sundays all she can do is to lie in bed and watch the raindrops on the windows, or perhaps, if she has lost all sense of the teaching of her childhood, to remake an old bonnet in hopes of more favourable weather the following week. Such too often is the round of her life.

It seems to be the opinion of a considerable number of people who have the interests of the working classes at heart that the establishment of Working-women's Clubs would be a desirable step. They think that the cheap theatres, the dancing saloons, the music-halls, the public-houses, offer temptations too attractive to be resisted by young women who, having worked hard all day, have only a poor lodging, or a crowded, noisy, and ill-kept home in which to spend their evenings. They argue that a girl would be better employed in reading a story-book or playing a game of bagatelle in an airy, well-lighted room, where she could have a cup of tea at cost price, than in going about with young men of questionable character to entertainments of a debasing description where she learns to drink gin. The advocates of clubs for working women do not offer anything to induce those who have already a home to leave its comforts and its duties. They simply wish to enter into competition with the places in which they see female modesty corrupted, and a craving for unwholesome stimulant for mind and body encouraged. We may lament as we will the changes that are taking place in the constitution of society, and deplore that women are thrown unprotected into the temptations of great towns. The fact unfortunately remains that women will soon be obliged to enter the labour market on much the same footing as their brothers, and the question is how to help them to resist the allurements to vice which must assail those cut off from the restraints and protection of family life. The fatigue and hurry of a long day in a crowded shop, the exhaustion from mechanical work, the giddiness caused by many hours of monotonous mental exertion—all these often produce a craving for excitement rather than a desire for repose. It is sad, but it is the result of what we call "going ahead," and as we cannot order the waves of competition back, it might be well to try and throw safety belts to the weary swimmers.

If it is found that these clubs for working-women are really likely to be useful, no doubt kind people will be found ready to take the matter in hand. The advocates of this movement ought to avail themselves of the experience of those who have had to do with the Working-men's Institutions. Many mistakes have been made in these matters, and much has been learnt within the last few years. It would be well if the flavour of charity could be kept away. This is the more difficult in the present instance as women cannot help to build premises or keep them in repair when built. A club of men has now been carried on with singular success for several years whose members have never received one penny towards its support. They have bought their premises, built themselves a lecture hall, given concerts which pay, and have a fair library. They reserve an evening in the week for a dancing class, to which they invite their female friends and relations. They have saved money and talk of starting a building society. They are very proud that, although they have several times been offered money, they have never accepted any gifts except a few books and one or two prints to hang in their parlour. They manage their affairs by a committee of their members, and have never been in debt, for they were contented with very meagre accommodation until they could prudently afford better. All the building and carpenter work has been done by members who have given their time gratis, and they hope soon to replace their present hall by a handsome building. Any competent person willing to give a lecture is received, provided he will allow a free discussion on the subject afterwards, and it is often amusing, however much we may disagree with their opinions, to hear the shrewd and original remarks made by these self-educated and independent working-men.

What seems to us much more needed by working-women than either clubs or reading-rooms are respectable lodgings in central situations at reasonable rents. These might be combined with a coffee-room. There is no intelligible reason why such a scheme, properly managed, should not be quite safe, and pay a reasonable percentage on the money which might have to be borrowed for the purpose. At present parents who live in the country, and who would like their girls to learn a trade, are often obliged to relinquish the idea because they cannot find respectable lodgings at a price which they can afford to pay. Cannot the Peabody trustees move in the matter?

THE OLD MASTERS AT THE ROYAL ACADEMY.

II.

THE Italian school of painting, as we have before said, is again illustrated by works which show the all but exhaustless art riches of this country. Our imports of such works are constant, our exports are almost nil. The National Gallery, under the direction of Sir Charles Eastlake, insisted on the principle that the 10,000*l.* a year allowed by Parliament should be laid out in purchases on the Continent rather than at home, the object being thus to add to the constantly accumulating treasures of the nation. Since the European wars of the French Revolution and Empire there have never been such opportunities of acquiring Italian pictures as there are now. The breaking up and secularization of monasteries have forced the monks to sell their vestments and art properties. In the earlier period of spoliation, agents and experts were sent out to collect the spoils, not as robbers, but honestly at a fair money value. And England will now lose a rare occasion if, in future annual Exhibitions of these "Old Masters," she is not able to show a large share of the booty.

We resume our review of the Italian schools with a remarkable work from the Barker Collection, Luca Signorelli, "The Mother and Wife of Coriolanus pleading with him to spare Rome" (194). This picture, like its companion in the National Gallery, "The Triumph of Chastity," is a fresco transferred from wall to canvas in 1844; the process, as may be easily imagined, is perilous, and Messrs. Crowe and Cavalcaselle pronounce the two pictures to have been injured. Yet so skilfully has the operation been accomplished, and so carefully have subsequent and needful reparations been effected, that, in spite of much repainting and loading on of colour in impasto, the masterpiece here

stands out with remarkable force in the drawing, and with that *éclat* and light-giving power which are the boast of fresco. Only let the spectator look round the room and he will at once see that neither tempera nor oil approaches the luminosity of this wall picture. It shines as light out of darkness; an effect much to be valued in wintry days when half the pictures are all but invisible. In recent years, when the art of fresco was sought to be revived in England, it used to be truly said that in the churches and convents of Italy, when night came on, the last objects seen were the fresco paintings on the walls; they shone out of darkness just as in these same sanctuaries the voice of the organ breaks the silence of coming night. But it must be admitted that the colours or chromatic notes of this picture ring with a sort of metallic sound, as bells falling out of tune. Signorelli, the precursor of Michael Angelo, was not the most dulcet of colorists, and his figures, crowded pell-mell together, are often so assailant as to seem at daggers drawn. Yet they have a grand presence; his men are of a race of heroes, and his women are clothed in beauty and in dignity. The remarkable picture before us is well accredited; it was painted, with others of the same series, about the year 1509, in the palace of Pandolfo Petrucci at Siena; two of the series remain in the Picture Gallery of that city; a third was acquired for our National Gallery on the sale of the Barker Collection in 1874, at the comparatively moderate price of 840*l*. That wildly eccentric painter, Sandro Botticelli, is represented by a couple of rather weak and mannered examples, both bearing as their title "The Virgin, Child, and St. John" (190–197). The artist had a grand way of exalting deformity and deifying ugliness. Another unruly genius, Fra Filippo Lippi, expresses himself with a tenderness quite unusual in "The Virgin and Child" (196). In this, as in the adjacent pictures by Botticelli, the transparent veil cast over the Madonna's head is very charmingly painted. These soft touches tell all the more in masters who are habitually hard.

Raffaelle shows his first, or Peruginesque manner, just at the point of its transition into the Florentine, in a couple of Predella pictures; a class of works which, being small and placed in semi-detachment with large altar-pieces, admitted of ready removal. England has gathered into her private galleries a number of these miniature panoramas, which, as a rule, represent collateral incidents bearing on the subject of the large composition rising above these "predellas" or "gradini." "Christ in the Garden of Gethsemane" (180), lent by Lady Burdett-Coutts—a companion predella picture with "Christ Bearing the Cross," of Leigh Court, seen among "the Old Masters" a few years since—appertained to the large altar-piece executed for certain nuns in Perugia, who requested of the artist as a favour that the nudity of the infant Christ might be clothed by a little drapery. This large and representative composition, formerly well known in the Royal Palace at Naples, has recently been exhibited for sale in our National Gallery at the exorbitant price, considering its corrupt condition, of 40,000*l*. At half that sum it certainly ought to be secured for the nation. And such as is the state of the principal work, so is the degenerate constitution of this, its small accessory. The prescribed arrangement of "Christ in the Garden of Gethsemane" is almost too well known to need description. Raffaelle did little more than receive as an inheritance the long accepted theme. But the point to which we wish to draw attention is the strange and anomalous fact that the drawing even of such essential members as hands and feet is to the last degree clumsy, if not absolutely false. The history of the work, in brief, is this—that Raffaelle, during his visit to Florence, returned to Perugia in 1504 or 1505, and there painted, at the age of twenty-two, the big picture formerly in Naples, with the part predella now before us. We hold it to be simply impossible that, with his own hand, he could have been guilty of at least the worst parts of this predella; and this judgment will be verified by comparison with "Il Sposalizio" of the same period in Milan. The excuse for Raffaelle may be that, even in those early days, he took his ease through the aid of assistants; and doubtless in the school of Perugino, in which he himself had served so recently as a pupil, not a few students were ready to paint these predellas. All this we throw out as a suggestion, especially as a really critical Life of Raffaelle remains to be written. Passavant accepted nearly the whole story wholesale. Superior in quality, and more truly Raffaellesque in spirit and in manipulation, is "St. John the Baptist Preaching in the Wilderness" (181), a predella fragment from Bowood, formerly part of that most lovely picture of the Madonna and Child, enthroned with Saints on either side, at Blenheim. The date is as early as 1505; therefore it belongs to the time when young Raffaelle, vacillating between Perugia and Florence, had not touched upon Rome, the rock upon which, according to some, he eventually split. We think it would be scarcely possible to extol too highly the purity, the beauty, and the tentative timidity of this almost pre-Raffaellite work. It belongs to the subjective manner of Perugino, and we are sorry to detect in the legs and the attitude of the feet, placed feebly and shakingly on the ground, an indecision in drawing which is identified with the well-intentioned, but incompetent, Pinturicchio. One point of interest in the work is the internal evidence it gives of a master conscientiously feeling his way step by step, and encountering unexpected difficulties which he could not hope to conquer save by persistent striving, little by little.

There are a dozen or two Italian pictures which visitors will look over with a glance, such as "Paul the Hermit" (129), by Bassano. The following, however, claim a little more than cursory attention. "Venus Disarming Cupid" (131), by Correggio, we have heard questioned, but it has a right to take its place, though not in the first rank, with a multitude of analogous compositions, among which stands foremost "Mercury Instructing Cupid in the Presence of Venus," for many years known to every one in our National Gallery. We think it would be an excess of prudery to take exception to such refined exhibitions of the nude. And though it can scarcely be affirmed, to adapt the words of Burke, that the art of Correggio "ennobled whatever it touched," yet it may be pleaded with more show of truth that, under its spell, "vice itself lost half its evil by losing all its grossness." More to the purpose are the words of Dr. Burckhardt, which read as a verdict on the picture before us, lying as it does on the doubtful line which divides a master from his pupils. After paying a tribute to Correggio as the subtle painter of "the finest movements of nervous life," a life "interpenetrating the figures from within outwards," Dr. Burckhardt adds, "no master did more harm to his pupils"; he deprived them of simplicity of line and dignity of character. We are sorry to have to mention with incredulity "A Religious Ceremony of Investiture" (134), here ascribed, according to the wholesale system of mis-nomenclature prevalent in England, to Perino del Vaga, the pupil of Raffaelle. It cannot possibly belong to the school of Raffaelle; as a conjecture, we should put it down to a scholar of Andrea del Sarto, possibly to Pontormo; but, in fact, the work will not repay discussion. Another most evident mistake is to assign what is perhaps the finest portrait of the year, that of "Contessina Mattei" (135), to Andrea del Sarto. We should at first sight have accredited the work to the great portrait school of Holland, but we observe that Messrs. Crowe and Cavalcaselle say that the head is "reminiscent of Allori, or still better of Carlo Dolci." No head can be more true in modelling, or more expressive in its lines; it is so life-like that it seems to speak, yet the lips are motionless. As a sign of the present times, and a proof of the change which has come over public opinion, we may point to a couple of works, fortunately in a well nigh obsolete style, "Christ Healing the Blind Man" (107), by Ludovico Carracci, and "Christ Raising the Widow's Son" (109), by Agostino Carracci. The utmost we can say in their favour is that, being among the best of their kind, they are not quite so inane as analogous religious compositions by Sir Benjamin West. Yet, incredible as it may now seem, Ludovico Carracci was the idol of Sir Joshua Reynolds; an apology is almost needed for the following quotation from "The Discourses":—

> Ludovico Carracci appears to me to approach the nearest to perfection. His unaffected breadth of light and shadow, the simplicity of colouring, which, holding its proper rank, does not draw aside the least part of the attention from the subject, and the solemn effect of that twilight which seems diffused over his pictures, appear to me to correspond with grave and dignified subjects better than the more artificial brilliancy of sunshine which enlightens the pictures of Titian.

We should be only too happy if Titian and his contemporaries in Venice had thrown a little more of the "brilliancy of sunshine" into this wintry exhibition. "Europa, signed 'Titianus p.'" (123), lent by the Earl of Darnley, is a late work, though of course not quite so far on into decadence as his last picture, the "Pietà," now in the Academy of Venice, left unfinished when Titian died of the plague in his ninety-ninth year. We venture on this chronology, notwithstanding that in the last edition of Kugler we find the easy-going assertion that "no chronological arrangement of Titian's works is for the present possible, except such as is afforded by internal evidence." What really may be "possible" to diligent searchers into documents we shall learn when we see the promised, though long-delayed, Life of Titian, by Messrs. Crowe and Cavalcaselle. In the picture before us, the "internal evidence" points to a condition of mind and of vision similar to that of Turner in his latter days; the forms want firmness, the colours coherence and sequence; in short, forms, colours, and composition have grown garrulous, as in the closing scene of the "Seven Ages." And yet the ruling passion for colour remains strong in death. We have heard doubts thrown on "The Portrait of Ariosto, signed 'Titianus'" (125); some call in question the subject, others the painter. The only light which the catalogue throws on the matter is that Ariosto was "the celebrated Italian poet"! When will Academicians learn that something more is required of a catalogue than historic data which have only a place in village schools? It will be well to compare this portrait with that of the poet in the National Gallery. The latter has a credible pedigree. Titian painted his friend Ariosto more than once; the face is well known—it is that of a true though somewhat self-indulgent poet. The pictures by Tintoret (127—133) and by Veronese (130) are of minor import; and Schiavone, an imitator of Titian, does little more than repeat by rote a hackneyed subject identified in design with Michael Angelo, "The Flagellation of Christ Bound to the Column" (114). Another replica of the same theme is a small picture, not very high in quality, bearing for its modest title "The Finished Sketch, or the Copy of a Finished Sketch for the Flagellation of Christ, by Sebastiano del Piombo, in the Church of S. Pietro in Montorio, Rome" (183), lent by Mr. Leighton, R.A. Close by hangs another contribution from Mr. Leighton, "Jupiter and Semele" (189), by Schiavone. The rhythm of colour has never been surpassed, even by Veronese. The picture must have been acquired solely for its colour, and it is interesting to mark that the works here contributed by Mr. Leighton show a leaning towards the Venetian school, to which his own art has of late tended.

No faint praise would do justice to a couple of pictures ap-

signed to Giorgione, the follow-pupil of Titian in the school of Giovanni Bellini. But we venture to give warning against a numerous class of productions thrown on the market under the indiscriminate and hap-hazard names of Giorgione, Titian, Palma, Pordenone, Bordone, Bonifazio, and others. An example in point is the panoramic scene, "Cæsar Enthroned receiving the Head of Pompey" (138). The picture, in its large sweeping touch and sketchy scenic treatment, is later than Giorgione. Yet we have seldom witnessed a more triumphant chorus of blues, reds, greens, and golden whites. We are happy, in conclusion, to say that but little doubt has been expressed as to "The Adoration of the Shepherds" (201), lent by Mr. Wentworth Beaumont. Some authorities, it is true, assign the composition, though we think falsely, to Titian; and others, with more reason, see leanings towards Palma, and trace the teaching of Bellini. These surmises only confirm the statement just made, that nomenclatures are, at this transitional point in Venice, speculative. However, we are glad to find that those most subversive of critics, Messrs. Crowe and Cavalcaselle, assign without question this impressive scene to Giorgione. The whole panel is imbued with the devoutest feeling—quiet, yet intense. The Madonna and Shepherds are kneeling before the Child, who is not here, as in the "Notte" of Correggio, the source of light. For the eye is led outwards to one of the grandest of landscapes—trees, lakes, mountains, as in the painter's own country of Castelfranco. All is in deep repose, as at the hour when day dawns, and the soft gleam of colour in the distant sky heralds as the voice at the Nativity, "Peace on earth."

CLYTIE AT THE OLYMPIC THEATRE.

THE author of *Clytie* allows that the "suggestion that its plot is a *réchauffé* of a certain *cause célibre*" calls for explanation, which he attempts to give. The similarity between the two stories is, he says, "purely technical," whatever that may mean. He thought that "the use of the statutory declaration, and the abuse of the privileges of cross-examination," offered a dramatic combination peculiarly fitted for stage purposes, and this is matter of opinion. If he expected to construct a successful play out of his novel he must be disappointed; for either he was mistaken as to the fitness of his materials, or he has not used them skilfully. Notwithstanding the example of the *Merchant of Venice*, which he quotes, we do not think that the proceedings of law and police courts are generally well adapted for dramatic purposes. Indeed he might almost as well refer to Mr. Gilbert's *Trial by Jury* in support of his opinion as to Shakspeare's "sublime comedy." Both are equally unlike any proceedings in real courts, whereas the manager of the Olympic Theatre has done his utmost to give us a police-court as it is. The dress and manner of Mr. Cuffling, the prisoner's solicitor, are a clever exaggeration of familiar features; but he has to work an entire act or "part" by himself, whereas even Shylock is greatly helped by Portia and Antonio. The drama, in five "parts," was apparently constructed for the sake of this particular "part"; and it is a pity that so much trouble should have been taken for so poor an object. But if the author depended upon this kind of attraction in his play, he might have heightened it by the simple expedients which he uses in his novel. There might have been several subdivisions of this "part," entitled "the thumb-screw," "the rack," and "the wheel," and the heroine, by skilful use of the dresser's art, might have been made to look more wasted and woe-begone after each application of judicial torture. If a thing is worth doing at all, it is worth doing well, but we are decidedly of opinion that this thing is not worth doing at all. It is unnecessary, and would be disagreeable, to inquire how far any resemblance exists between the novel and play of *Clytie* and "the revelations reported by the press" on the occasion referred to by this author. It may be allowed that neither novels nor plays are likely in general to succeed unless they are derived directly or indirectly from observation of actual life and manners. But in the process of derivation there may be many varieties of skill and taste, and this author has shown as little as possible of either. If, he says, instead of using the mere scaffolding, he had worked up the materials of the case already mentioned, he would have been justified by many "illustrious examples," and he instances *Put Yourself in His Place* and *Man and Wife*. These examples are in one sense "illustrious," for a more dismal failure than that of the play founded on the first of these novels was never seen, nor did the second make any satisfactory impression on the stage. The best protection against what this author calls seeking inspiration from episodes of real life is that the result has been almost uniformly discouraging. He tells us that he has aimed at the production of an interesting story, and has striven to teach a worthy lesson; but if the tale be dull, the moral, however excellent, will be wasted. It may of course be our own fault if, after passing a dreary evening at the Olympic Theatre, we do not feel any better in the morning. If Mr. Hatton should attempt another play, let him be content to do one thing at a time. If he will amuse us, we can get our instruction somewhere else. The only lesson that we can discover in this drama is that, though a girl be chaste as ice and pure as snow, she shall not escape calumny if she runs away from home at eighteen years of age and comes alone to London; and it scarcely needed five "parts" of a play to teach us that.

The orations of Tom Mayfield to the bust of Clytie which Mary Weller is supposed to resemble are necessarily retrenched in the play, which thus loses the most grotesque feature of the novel. The story of the daughter of Oceanus and Tethys is rather inappropriately connected with the girl of Durham, since it suggests that she between her two lovers behaved not much better than Apollo among the nymphs. Clytie of ancient fable was changed into a flower, but kept her love, and became the type of constancy.

> The heart that has truly loved never forgets,
> But still will love on to the close;
> As the sunflower turns to her god when he sets
> The same look that she turned when he rose.

It is no reproach to Mr. Hatton that he has written nothing on this subject so pretty as Moore's lines, nor can we complain because Miss Henrietta Hodson, who in other respects sustains the part of Mary Waller competently, is not in the least like the bust of Clytie. This lady has been the heroine of two or three dramatized novels in which a girl violates conventionalities, so that she may be thought to have a special turn for this class of character; yet even with her help the play makes but a slight impression. As Mr. Mayfield's rhapsodies are omitted, nothing is gained by calling the girl Clytie except an uncommon name. We see her receiving Ransford in an arbour, and carried in Ransford's arms, and laid on a bed in Ransford's chambers; and after some years she marries Lord St. Barnard, who, for dramatic convenience, has been amalgamated with Tom Mayfield; and then come the scenes which, as the author mildly puts it, may call to mind "a passing remembrance" of a social scandal, but only with the effect of exciting "charitable feelings." The only charity suitable to the occasion would be that which covers sin; but if these scenes were struck out of the play there would be no substance left in it. The statutory declaration has been made, and Mr. Hatton has so managed his heroine's life and conversation that the greater part of it is true. Then comes the scene in court, on which the play principally depends. Some people may like this kind of thing, although we do not, but the remainder of the play is too feeble to excite any feeling whatever. There is a melodramatic duel at Longreach, and "Home and Happiness" at Durham. Some faint attempts are made at comic servants, but they fail to lighten this dreary play. The amusement, such as it is, begins and ends with the cross-examination of Lady St. Barnard. The actors, other than Mr. Odell, who plays Cuffling, have no opportunity of gaining praise or blame. In short, this play is at once unpleasant and weak. It is true that the most objectionable scenes of the novel are omitted, but the author must have known that the play could only become popular as a revival of the social scandal to which he affects to believe that he only distantly refers. He quotes the words "saying she would ne'er consent, consented," without perceiving their application to himself.

It is odd that the novel contains a sort of justification for doing that which we are assured has not been done in the play. We are told that when the case had been opened at Bow Street police-court an "editorial note" upon it suggested that it was with such materials as these that the successful novelist must deal—"love, revenge, human passion in their highest and most daring flights." This editorial authority could not imagine why the novelist should sit down and draw drafts upon his own imagination when the doors of Bow Street were open to him daily. The writer who had the power to mould the realities of life to his purpose, and deal manfully and fearlessly with history as it was recorded in the newspapers, could not fail to secure a following, and might snap his fingers at the snarls of critics. It can hardly be doubted that when Mr. Hatton ascribed these sentiments to an imaginary editor he was answering anticipated attacks on his own practice. He had entered at doors which he found open in Southwark as well as Bow Street. He had assumed to mould the realities of life, and had dealt fearlessly with contemporary history. Supposing that he thus described his own proceedings in 1874, he gives a widely different account of them two years afterwards. We are now told that any similarity between the plot of *Clytie* and a certain *cause célèbre* is purely technical. He has used the mere scaffolding, and has not worked up the material of the case; and it is not true that the story of *Clytie* is that of the "social scandal." No doubt the author should know best, and his readers and critics must have been mistaken.

It is scarcely worth while to discuss the possibility of his story. "Her whole life," says the author, "was influenced by an accident, a mistake, a misunderstanding, a calumny." Her grandfather used harsh and hasty words after discovering her intercourse with Ransford, and she left him, and went to London. She walked out of his house at five o'clock on a summer morning with no clothes but what she stood in, and took the train to York and London. A beautiful girl, dressed in manifestly provincial style, might well attract notice and excite suspicion. She stays at an hotel until she is told that her room is wanted, and then with difficulty, and after narrowly escaping from the worst company, finds a respectable lodging, and tries to procure an engagement on the stage. She is invited to luncheon by the manager, meets Ransford at his table, is taken ill, goes away in Ransford's carriage, and is driven to his chambers. Then we learn that she is granddaughter to the old Lord St. Barnard, who dies, and she becomes wife to his successor, who is some sort of cousin to her. Thus she has become a grand lady, and a fit mark for Ransford's slanderous accusations. But her true [illegible] very odd, and it only wants a few [illegible]

appear criminal. Then come the sensational proceedings at the police-court, the flight of Lady St. Barnard, the "squaring" of Ransford, who is to confess, receive 10,000*l.*, and quit the country, and the shooting of Ransford at Longroach by his old rival Mayfield, who has brought back from California a robust frame and a talent for shooting and for writing poetry. He kills Ransford, and everything arranges itself satisfactorily. It will be seen from this brief outline of the story that many features of it have been entirely omitted from the play, and the result is that the scene at the police-court becomes more prominent in the play than it was in the novel. In fact, the play seems as if it had been constructed for the purpose of bringing in this scene. We like the novel little, and the play less, and it is not probable that this experiment in dramatizing the realities of life will be so successful as to encourage imitation.

REVIEWS.

BICKNELL'S HÁFIZ.*

WE may safely assert that most educated people would profess admiration for Háfiz, "the Anacreon of Persia," but we may with equal confidence assert that the majority of them would know absolutely nothing about him. Now, as Háfiz is a typical and eminently national poet, and as his poetry, ideas, and style have had as great an influence over the literature and thought of Persia and India as the Koran itself has had over that of Arabia, or, we might almost say, as the Authorized Version of the Bible over that of England, this ignorance is by no means becoming to a nation that rules India and claims supremacy in the East. At last England, following, as usual in such matters, a long way in the wake of Germany, has done something towards attaching an intelligible meaning to the hitherto well-known but cabalistic name of Háfiz. In a magnificently printed work, furnished with exquisite chromo-lithographic and woodcut illustrations, Messrs. Trübner have issued metrical translations of a select number of the odes of this poet. The work has the invaluable quality of accuracy, and, although it shows some faults of construction, we are the less inclined to criticize these severely as the translator has done a real service to literature by this first attempt at rendering the works of his author in popular English, and as he unfortunately died before his version was in print; so that many of the shortcomings may reasonably be attributed to the absence of revision by the original writer.

The poems of Háfiz are chiefly short odes, every alternate line in each having the same rhyme; they do not recount any incident or tell any consecutive story, but consist of a number of poetical conceits strung together without any apparent intimate mutual relation. The theme is almost invariably love, wine, and the beauties of nature, and the casual reader might at first sight set them down as desultory and disconnected. When once, however, the key has been found, the individual parts will be seen to form a harmonious and connected whole, through which there runs a vein of subtle and elevated thought. In Persian each poem is called *nazm*, "a string of pearls," the rhyme rather than the sense being regarded as the thread on which they are arranged.

To understand them we must know something of the life and mental habits of the author. Háfiz belonged to the sect of religious philosophers called Súfis; their system is a compromise between the Pantheistic creed of India and the severe Deism of the Koran, and their tenets are the metaphysical doctrines of the early Aryan races engrafted on the dogmas of Islam. Briefly stated, they are as follows:—God is an omnipotent eternal being, who in the remote past was "a hidden treasure that desired to be known." This desire took the form of a creative spirit, from which proceeded the entire visible and invisible universe. The ultimate creation, or rather, result of this emanation, was man, who therefore is a scintillation from the Deity, and as, to use the words of the greatest of Súfi philosophers, Maulavi Rúmí—

> Matter, though it fleeteth fast,
> Returneth to its source at last—

man's highest aim is return to, or rather reabsorption in, the Godhead from whence he sprang. This is his constant hope and endeavour, and all earthly love and affection are only expressions of this longing and yearning after the divine goal. Life is thus depicted as a journey in an eternal cycle; the earthly life is a descent; but when the spiritual life commences the ascent is begun; and as man advances in divine knowledge and aspirations he draws nearer and nearer to the divinity towards which he tends. As earthly affections and longings are thus interpreted, so by this system all forms of religion become indifferent, inasmuch as they are expressions of one and the same idea, as Omar al Kheiyam, another celebrated poet, observes:—

> Kaabeh or Josshouse, 'tis His house of prayer;
> E'en jangling bells invite us to His shrine;
> Mosque or cathedral, He is present there,
> Crescent or cross, 'tis ever Allah's sign.

The professors of this sect assume a certain austerity of life, wear a distinctive dress, and reside in *takyas* or monastic colleges. To one of these orders Háfiz attached himself; but his free-living and free-thinking, as well as his undisguised fondness for the bottle, were fatal to his reputation for sanctity. In return for the bad name he himself acquired, he is unsparing in expressing his contempt for the hypocrisy and arrogant pretensions of his fellow-dervishes. His great talents as a poet, however, procured him many and influential friends among the princes of Persia and the neighbouring countries. The word *Háfiz* signifies "one who knows the Koran by heart," and was assumed by him as a *takhallus* or *nom de plume*, his real name being Mohammed Shems-uddín.

The foregoing facts will enable us to appreciate the exact tone and tenor of his poems. Intellectually an ardent seeker after the unknown good, all the products of his genius are tinged with the speculative and contemplative philosophy of his order; physically an ardent lover of beauty in every form, and of decidedly Epicurean tastes, there can be no doubt that most of his thoughts were inspired by the actual contemplation or enjoyment of the pleasures which he describes. A Súfi who really apostrophizes no other than the transcendental object of his affection, and who drinks no wine but that of inspiration, is a very dull dog; Háfiz, as he himself says, soon found it convenient to cast off the trammels of asceticism, and yielded like a true fatalist to the force of the eternal decree that had destined him to be a *bon-vivant*:—

> Nought knew I, when I dwelt apart, of wine and minstrel's bliss;
> My friendship for the Magian youths cast me to that and this.
>
> The water of our ruby wine laves well my cowl to-day;
> Our portion from eternity we cannot cast away.

In one respect the book is rather unsatisfactory; the translator has aimed at reproducing the original literally and exactly. This we think a mistake; for, if it is intended for the general reader, he would doubtless prefer a more familiar and more English form of verse; if it is intended for the scholar, he, having the Persian before him, does not want it. The method adopted, too, fails to give an idea of the exquisite melody and sweetness of the original, while in a paraphrase this might have been at least indicated, if not actually attained. Perhaps the most suitable form of verse that could be chosen for rendering such compositions would be the sonnet; indeed, the "Rhymes" of Petrarch are not unlike the effusions of the Eastern muse, and an Italian *savant* has written a work pointing out the parallel that exists between that writer and Omar ibn el Faridh, a celebrated mystical Arabic poet. The poems translated are a selection only from the works of Háfiz, but the choice has been well made, and they give an excellent idea of the poet's style.

From such a work it is difficult to make extracts, but we may quote one or two pieces illustrative of the principles we have stated above. The following ode, for example, happily combines the expression of Háfiz's unsatisfied spiritual longings with that of his appreciation of the more tangible pleasures of love and wine:—

> O breeze of morn! where is the place which guards my friend from stark?
> Where the abode of that sly moon who lovers robs of life?
>
> The night is dark, the Happy Vale in front of me I trace,*
> Where is the fire of Sinai, where is the meeting-place?
>
> Here jointly are the wine-filled cup, the rose, the minstrel; yet
> While we lack love, no bliss is here; where can the Loved be met?
>
> Of the Shaikh's cell my heart has tired, and of the convent bare;
> Where is my friend, the Christian child, the vintner's man ion where?
>
> Háfiz, afar o'er the glades of earth
> The autumn blast is borne,
> Grieve not, but musing ask thyself,
> Where has the rose no thorn.

Of the strong sentiments of aversion which he felt for the pious frauds of the Súfi dervishes the following affords a good example. It must be premised that it is a favourite trick with Eastern jugglers to pretend to cause an egg to vanish from the head of a bystander, but really to leave it there, and, when the victim puts on his cap, the performer hits him over the head and breaks the egg, to the great amusement of the audience:—

> The Súfi has spread out his net, and lifted is his box's lid;
> He builds his structure of deceit, to cope with juggling Heaven unbid.
>
> The sport of the revolving sky breaks in his cap an egg or two,
> For daring to play juggler's tricks on one who all their secrets knew.
>
> * * * * * * *
>
> Come heart and let us flee to God, to seek protection from the wrong
> Committed by that class of men who have short sleeves and fingers long.
>
> Shun Artifice; for he who tries affection's game with fraud in view
> Finds shut upon his own heart's face Love's gate, which opens to the True.
>
> When comes to-morrow, and the eye shall rest upon Truth's portico;
> What shame shall the disciple feel if all his practice has been show!
>
> O partridge, bird of graceful gait, say, whither would'st thou shape thy way?
> Be not so bold, for well we know how the religious cat can pray.
>
> Háfiz, condemn no reveller,
> For God, before the world was made,
> Exempted me from seeking here
> Hypocrisy, and rigour's aid.

The last verse but one refers to a well-known Persian fable of a partridge who ventured to approach a cat which it saw piously telling its beads, and was of course torn to pieces. All these little allusions, as well as the more subtle references to Súfistic doctrines and Muslim legends, are explained by the translator in concise but clear and accurate notes. The late Mr. Bicknell, not content with studying his author in his closet and illustrating him from the knowledge which as a scholar and a traveller was already

* *Háfiz of Shiraz: Selections from his Poems.* Translated from the Persian by Herman Bicknell. London: Trübner & Co. 1875.

* Aiman (happiness) is the valley in which God appeared to Moses.

available to him, undertook a journey to Persia, and resided for some time in the midst of the very scenes of Háfiz's life with the express purpose of making himself more intimately acquainted with his works. How valuable the results of such a mode of dealing with the subject are, the reader may see for himself in the admirable chromo-lithographs which the volume contains. If he would know the kind of scene that was present to Háfiz's mind when he described so enthusiastically the pleasures of a drinking bout in a fair garden, to the accompaniment of music and minstrelsy, there is Mr. Herbert's beautiful frontispiece, where such a scene is depicted to the life. Another picture from the hand of the same artist shows us a bird's-eye view of the neighbourhood of the Hafizíyeh at Shiráz, with the stream of Ruknabad and the flowery fields of Musallá, which Háfiz declared could not be rivalled by the Muslim Paradise itself:—

Sákí present the wine unspent: in Jannah thou shalt never gaze
On Ruknabádah's water-marge, or on Musallá's bloomy ways.

The latter part of the volume contains a number of shorter and fragmentary pieces, which are less metaphysical and erotic in character, and possess greater interest, inasmuch as they are many of them records of historical events or of domestic incidents in the poet's life. Here is one which preserves the memory of one of those ghastly crimes which Eastern history too often presents—the blinding of an aged father, Shah Mansúr, by his rebellious and ambitious son:—

Let not thy heart the world's vain goods pursue,
For no one yet has found her promise true.
No stingless honey in her mart we buy,
No thornless dates her garden will supply.
If lamp she lights, as soon as it grows bright
The wind extinguisheth the spreading light.
Who careless doth his heart on her bestow,
Behold, he cherisheth a deadly foe!
The warlike King, who made the earth his prey,
His sabre dripping from the bloody fray,
Who with one onset put a host to rout
Or broke the centre with a single shout,
Who chiefs unjustly into prison threw,
Beheading heroes when no crime they knew,
Who made the lioness untimely bear
In deserts, when his name had sounded there,
Who made Shiráz, Tebríz, Irak obey,
Succumbed at last on his appointed day:
For one who his world-scanning eye made bright
With stabbing awl destroyed that piercing sight.

In Persian a son is called *núr i chashm*, "light of the eye," hence the allusion in the last couplet. What a picture such a poem presents of the tyrannical career and dreadful end of an unscrupulous conqueror!

The next laments the death of a favourite child of the poet:—

The days of sweet spring have come; the damask and wild roses now
With tulips from earth arise; oh, why in the dust then art thou?
My tears I will shed in streams, as pour from the spring clouds in rain;
These tears on thy dust shall fall, until thou art risen again.

The poems of Háfiz are a mine of rich gems of thought, and even in their foreign setting have a peculiar lustre of their own. After the great mass of poetry of the present age, which seems to run only in one or two conventional channels, these Persian lyrics come to us with a freshness and originality which, if it does not make them popular, will at least ensure appreciative readers. The present edition is a splendid and worthy monument to a great poet whom English scholars have too long neglected.

MANN AND MANNERS AT THE COURT OF FLORENCE.*

THE two good-sized volumes which Dr. Doran has introduced to the world under a punning title—in this case a very justifiable piece of levity—are composed of selections from the correspondence of the British Minister at Florence, ranging over forty-five years of the last century. They are not calculated to add anything of importance to serious history, nor are they put forward with any such pretension; and if we are to judge by our own experience, we cannot recommend a reader in search of general instruction and entertainment to set about reading them straight through. They contain, however, a good many curious and odd things, and will no doubt be found amusing by those who have leisure to trifle with them in spare moments.

There is, perhaps, one real service they can do, in correcting current notions. It was the fashion of the last generation to disparage the eighteenth century and all its works, and now, by the periodic reaction which appears in social and critical judgments as well as in other things, they have come into high favour again; and in particular it is an accepted article of belief that the art of letter-writing flourished and culminated in that century, and by reason of cheap postage, rapid travelling, and other adverse combinations of the fates, is now irrecoverably lost. If the letters of a few celebrated letter-writers are taken as the standard, this may be in some measure true; but the inference from supreme excellence in the few to a proportionate average excellence in those who came next to them is in this case unwarranted; and this book furnishes a striking warning. These letters are Horace Mann's half of a correspondence with Horace Walpole, whose own part of it is already known. When we look back on these two volumes of what is, after all, for the most part, barren gossip, and reflect whence, by whom, and to whom they were written; and when we proceed to imagine how much more we should expect in the present century from an Englishman resident at Florence, with every advantage of culture, rank, and position, and with peculiar opportunities and even duties of knowing men and things, writing, not under official constraint, but at his own pleasure to a friend among the foremost in the world of art and letters at home; and when we compare the requirements of this century with the accepted performance of the last, we protest we cannot see that there is any great degeneration to be regretted. Briefly, we should now think rather poorly of any Englishman of competent faculties and education who should spend the best years of his life in such a place and find nothing better to write in matter or manner than this interminable flood of pettinesses. One slight trait which we have marked is not insignificant for illustration of the times and the society. From one end to the other of these two volumes of Florentine letters we have not discovered one single reference or allusion to Dante. Neither is the writing particularly good in point of style; it is straightforward and not laborious, but has no great positive merit. As for the spelling, one already knew pretty well that even late in the last century persons of quality spelt much as the humour took them; but Dr. Doran's literal transcription has here shown up some oddities of orthography which certainly were unexpected.

It is not easy to give any continuous account of the actual contents of the book, for one may well shrink from the task of unravelling any consecutive threads from such a miscellaneous bundle of broken topics; and in such cases a reviewer is sorely tempted to deal with a book by a shorter, but perhaps not altogether a fair, process, and simply pick out all the plums. We shall aim, however, at keeping within the bounds of moderation in this way. First, then, we have a pretty constantly running stream of allusions to external politics, in which the chief centres of interest are, roughly speaking, the Seven Years' War in the earliest part, and the wars of England with Spain, France, and the American colonies in the later. Of the Tuscan troops who were sent as a contingent to the Imperial army in 1758 Mann speaks with great contempt:—

You can't think what a military air everything has had here for the fortnight past, nor will believe the feats that these troops promise to do; there is not a Cadet or an Ensign who will not take the King of Prussia and carry him, dead or alive, to the Empress Queen. I don't joke. One has heard of twenty of their schemes;—to dress themselves in the Prussian uniform to get access to him, for that purpose. The common men, I believe, will not make so much ceremony of it, but will go over to him in their own cloaths in great numbers.

Had the *Anti-Jacobin* writers known this passage, they might have been tempted to add one of these heroes to their reconciled Austrian and Prussian grenadier in the *Rovers*. At almost every important juncture of a foreign war conflicting rumours were rife in Florence, and not seldom elaborate false news. During the siege of Gibraltar the Spanish Ambassador made solemn weekly reports of its triumphant progress. At an earlier time the Regent of Florence invented the curious expedient of celebrating victories while they still needed confirmation by setting French horns to play in a kind of semi-official manner in a courtyard. For the most part Mann was only a spectator of foreign affairs; the Grand Duchy remained, as such, at peace with England, and apparently with all the world, though contributing, as we have seen, its quota of Imperial troops. We hear, indeed, of the trade of Leghorn merchants being vexed by French privateers, and of occasional visits from the English fleet, whose active protection, however, was never called for, and whose presence caused more trouble than it saved—at all events to the English Minister. He is loud in his complaints of the sea captains he had to entertain, whom, with one exception, he found intolerably boorish; and once it was all he could do to keep a pig-headed Admiral (here and elsewhere we merely represent Mann's judgment of persons) from interfering with a high hand to save and befriend the Duchy against its will. There was one time when Mann and the Florentines suddenly found themselves close to a singular interlude of absolutely mediæval politics; there was a lively quarrel between the Emperor and the Pope for the overlordship of a small fief called Monte di Santa Maria, whose immediate lords had waxed contumacious and set their hands against every man's in an outbreak of petty warfare which very soon degenerated into brigandage. Mann, we may observe, appears always to speak of the Emperor with perfect correctness; notwithstanding which, Dr. Doran writes "Emperor of Germany" in his brief editorial additions with somewhat provoking frequency. During the time covered by these letters the chair of St. Peter was thrice vacant, and we get the humours of Conclaves more or less reflected in the current anecdotes of Florence. Mann records the Cardinal's exhibition of the mode of balloting in Conclave to Leopold, King of the Romans, on which the editor aptly notes:—

This elicited Walpole's justifiable sarcasm: "I delight in the mock election of a Pope, made to amuse Cæsar! How the Capitol must blush at such a Cæsar and such an entertainment!"

By far the most important part of Mann's strictly political functions was watching the movements of the Pretender and his son throughout the considerable space of time during which Rome was the focus of Jacobite movements and intrigues. It is curious to see the turmoil of the Forty-five reflected in the agitation of the

* "*Mann*" *and Manners at the Court of Florence*, 1740—1786. Founded on the Letters of Horace Mann to Horace Walpole. By Dr. Doran, F.S.A. 2 vols. London: Richard Bentley & Son. 1876.

little Anglo-Tuscan community. The first thing, of course, on the news of Charles Edward's landing, was to hold a dinner of English merchants at Leghorn, with fourteen patriotic toasts (the list is set out) and a loyal address. The Jacobite partisans on the Continent seem on the whole to have been unrivalled at that time as coiners of paper victories; even after Culloden there were French and Italian gazettes with circumstantial accounts of prodigious Jacobite successes. After this Mann won a pretty notable diplomatic triumph by prevailing on the Papal Government, against the influence of the French Ambassador, not to acknowledge Charles Edward as King of England on the death of the Old Pretender. Of the Young Pretender we hear often enough afterwards, something too often indeed; it is a truly pitiful picture of a wasted and worthless life drained out to its utter dregs.

Various travellers from England, of various condition and distinction, pass across the scene, and form, as it were, another thread in the mixture. A considerable part of Mann's employment was to entertain them, and on the whole he liked it ill enough; he generally says they were silent, or stupid, or offensive; one is led to suspect, however, by other indications, that what he really disliked about it was the expense. He often complains of his salary being not only insufficient at best, but in a chronic state of arrear, and some of his devices to make interest in high quarters for his salary's sake are quaintly barefaced. He seriously discussed with Walpole whether the Duke of Newcastle was likely to be moved by a certain fine coffee-pot, an old present to Mann from Walpole himself. Nevertheless, when he had the chance of entertaining English royalty Mann cast aside his grievances, and entertained in grand style. Celebrated English folk of doubtful reputation are not without representative figures among the Florentine birds of passage; there is a glimpse, but only a glimpse, of Wilkes; and near the end the Duchess of Kingston runs nimbly to and fro. Dr. Doran makes a grave mistake about this lady in one of his own explanations. He says that after her trial for bigamy "she withdrew to the Continent before any penalty (which included burning in the hand) could be pronounced." We know not where Dr. Doran can have found this; the fact is, as anybody may see in the State Trials, that she claimed, and successfully claimed, the statutory privilege of a peer convicted of clergyable felony—namely, to be discharged without any penalty at all. Another little editorial slip is that two different passages at an interval of some thirty pages are both noted as being the first where Mann spells *women* correctly (he generally wrote *wo'men*). But in general Dr. Doran has edited these letters, we will not say as well as they deserve, which might be an ambiguous compliment, but with commendable diligence and discretion; we could wish, indeed, that he had cut them shorter, even if he had reduced the two volumes to one.

We may be allowed to end by selecting a few jottings from the miscellaneous chronicle of social topics. Early in the book we find a curious canonical question, where a man was ordained who had indeed been baptized, but, as it turned out, with *rose*-water; it was referred to the Pope, but the decision is not mentioned. In 1745 black-bordered letter-paper is an innovation; it is the fashion in Florence, but Mann holds out against it, only writing to Walpole, for curiosity, on one sheet, and begging another to keep for himself. There is a few years later a notice of a new English fashion of very different importance, called Methodism; Mann could not get a definition of it from any of the English residents. The English literature of the day does not appear, save in very casual allusions; our Minister was much puzzled by *Tristram Shandy*, the first volumes of which amused him, but afterwards he gave it up as nonsense. This answer of a fine lady has merit in its way:—

> The Princesse is gone to the Petraja. I must tell you a most delicate expression she made use of. I asked if she would be at the Procession of Corpus Domini.—"Non, monsieur, mais je vous assure que je suis fatiguée de l'idée que j'avais d'y aller."

At a later date there occurs this report from London:—

> Mrs. Pitt has delighted me with a description of a Fête she gave at her house in town, where for want of room she contrived certain Pearches, as she called them, for part of her guests, not indeed to sit upon but to lean against for repose.

Let not those who in our day persist in asking more people to their houses than the houses will hold imagine that they are doing anything new; for so did Mrs. Pitt before them just a century ago; and if they must needs follow Mrs. Pitt's example, they might as well follow it altogether and revive her invention of "pearches" for the multitude of standing guests.

BURTON'S ULTIMA THULE.*

HARDLY any part of the world seems to have had more attractions for travellers than Iceland. It lies comparatively near to civilized Europe, yet hardly belongs to it, having no connexion with anything that passes on the mainland. It is inhabited by a cultivated—one might say, a highly cultivated—people, who nevertheless live in a state of semi-barbarism. Its natural phenomena, if not all that mediæval imagination painted them, are certainly very strange and impressive. It is less wonderful, then, that the tourist literature of the island should have reached its present bulk, when it would make a respectable library by itself, than that so few of these many books should be really interesting reading. Some four or five have their scientific value; some, and among them several of the most recent, are worthless for all purposes; but hardly any except Henderson's travels, written more than fifty years ago, is nearly as entertaining as the merits of the subject might have led one to expect. This spell of dulness seems to have been thrown over Captain Burton also. He sets before us two large and handsome octavo volumes, full of information about Iceland of every kind—topographical, geological, zoological, meteorological, historical, economical, political, and we know not what besides—together with the minute diaries of his own journeyings up and down the country. Much of the information is valuable, and the narrative is written with vigour; yet the book as a whole is heavy and dreary. Having read nearly every word of it—a piece of conscientiousness at which we are ourselves surprised—we may express a doubt whether any one else will have patience to do the same. People who have themselves been in Iceland may be interested to know what the traveller thought of some particular view, or how the parson fed him at such a church, or how many hours he took in traversing a given desert; but the rest of the world, which desires only to receive some strong impressions of Icelandic scenery or curious details of Icelandic life, will find these minute records of travel (and especially the endless topographical and geological notes) insufferably tedious. Oddly enough, Captain Burton does not give a vivid general impression, or indeed any general impression, of the island. We are lost in the multiplicity of details. We cannot see the wood for the trees. How far all the information which he has been at such pains to collect is trustworthy could not be decided without a laborious process of comparison and verification. Much of it is thrown together in a hasty and negligent way, the notes, which seem in most or many cases to have been supplied to him by some one else, frequently correcting or contradicting the text. On the whole, one is disposed to give credit to whatever he states from personal observation, for he is evidently a keen and unwearied active observer, whose eyes are always roving over everything round him, and whose pencil and note-book are never out of his hand. And we should be still more trustful did not his way of assuming universal knowledge excite our suspicions. A sensible man ought to be above the silliness of affecting to speak on half a dozen sciences and half a dozen more branches of learning as if he were master of them all; and when we find a writer doing so, still more when we find that he is sadly at fault in one or two departments where we can judge of his attainments for ourselves, we look much more doubtfully than before at his dicta upon topics where any kind of special knowledge or special training is needed. When we have detected more mistakes in his botany than can possibly be set down to the printer's account, and some odd-looking deliverances in his geological notes, we become suspicious, perhaps unduly suspicious, of his zoology; when we discover him blundering in his classical scholarship, we care no more for his attempts at comparative philology. An eager desire to set right all his predecessors who have been apt to exaggerate the marvels of Iceland and the dangers of travelling there makes him frequently seem captious, and disposes him to depreciate the island and its people in a rather childish way. Some writers have spoken of the ascent of Hecla as an exploit; Captain Burton therefore pronounces Hecla "a humbug." Others have extolled the simple virtues of the natives; he accuses them of habitual drunkenness. Some again have talked of the abundance of game; he professes to have found few ptarmigan or wild duck—both of which, if one is to trust other reports, are tolerably abundant—and disparages the golden plover, though, as any one knows who has shot them on our own south-western coasts, they are excellent eating. Nevertheless, after making these allowances, he is certainly an excellent observer of what comes under his own eyes and is within the range of his own knowledge. Upon such a topic as the Icelandic horses, or the dress of the natives, or their personal appearance, or their domestic habits, he writes well; for he has not only noticed everything that there was to notice, but has evidently committed his impressions to paper at the moment, and spent no little trouble in working them up afterwards.

The style of the book suffers, not only from a disagreeable air of dogmatism, but from the constant straining after effect. It is surprising to find so practised a writer with so little power of easy and flowing description. There is a jottiness, so to speak, and a jerkiness about the progress of his narrative or disquisition which reminds one of the way in which he describes himself as traversing an Icelandic bog, leaping from one stone or grass tuft to another, over pools and quags, into which he occasionally gets soused. There is also much slovenly English, both in construction and in the use of vulgarisms, such as the American "loaned" for "lent," and that odious piece of schoolgirl slang, "photo" for "photograph." However, through the style as well as the substance there gleams out a sort of idiosyncrasy which often gives the reader amusement. We have rarely met with a traveller more willing, in fact more apparently anxious, to describe himself as well as what he sees—his smartness, his resource in difficulties, his vanity, his aggressiveness, his fondness for seeing far into a millstone, his power of adapting himself to circumstances. It suggests some curious reflections on human nature when one finds a man well past middle life, who has certainly seen a great deal of the world and has yet boyishness enough to enjoy revenging himself by a sneer or a sarcasm in his book on people in Iceland who have somehow or other offended him—a sarcasm which is of course quite pointless for the ordinary reader, and can serve no

* *Ultima Thule; or, a Summer in Iceland.* By Richard F. Burton. London and Edinburgh: W. P. Nimmo. 1875.

purpose but to wound the self-love of the victim, if he happens to see it, and gratify the self-love of the writer himself. Many people would give this snappishness a harsher name; but, from various indications in the book, we are inclined to think Captain Burton a better fellow than he would have us believe. He has evidently, like most people who unite a touch of pedantry to their vanity, little or no sense of humour—the gift which a traveller, more than any one thing else, needs to carry with him. But we feel sure that his bark is worse than his bite, and that he is by no means ill-natured at bottom. Though he seems to have set himself down to write with the purpose of depreciating both the island and the people, he ends by finding plenty of good to say about the latter; and is occasionally roused to striking bits of description by the grand scenery of the north-western coasts and the skirts of the Vatna Jökull.

To give an account of the contents of a book which endeavours to exhaust Iceland in pretty nearly every department would be no short or easy task. It begins with disquisitions on the name and early history of the island; then come chapters on physical geography, anthropology, education and professions, zoology, and so forth; then an account of the author's voyage out, a description of Reykjavík, the capital of the island, and its environs, and finally a minute narrative of his various expeditions into the interior and round the coast. Of these, the first part, the notes on history and literature, are much the worst. They are compiled from books which the author has often misunderstood; they betray a sad ignorance of Scandinavian history, and a complete incapacity for appreciating old Scandinavian literature. Indeed the first chapter, on the name Thule, could not have been written by any one with even a moderate amount of historical sense and historical training. Captain Burton is at immense pains to show that some of the ancient Greek and Latin writers meant Iceland when they talked about Thule, and he fancies he has proved this when he has shown that some of the things they say of their Thule happen to suit Iceland, whereas they would suit any country lying very far to the North. Because some one, for instance, says that in Thule the sun does not set in summer, he must therefore, insists our author, have intended Iceland, where this is true (which it hardly is, by the way), although it is easy to see that people who found the day lengthening as they went north would conclude that, if they got far enough, there would be no night at all, just as Marco Polo tells us of a country so far north that its inhabitants see the Pole star to the south of them. Nothing can be clearer to any one who looks through the authorities than that Thule was a perfectly vague or general name, applied to any or every land lying out to the north or west in the unknown ocean. When we do get it used with some approach to definiteness, as by Tacitus in the Life of Agricola, who may well have been repeating what those who sailed in Agricola's fleet told him, it means a comparatively near region, probably Shetland or the Fair Isle, possibly the Lewis or Foula. There is not the slightest reason to fancy that any ancient Roman writer had ever heard even of the existence of Iceland, the first faint reference to which, if it be a reference, is to be found in Adamnan; and even more absurd is Captain Burton's attempt to prove, following Pontanus, that it was known to the Germans in the beginning of the ninth century, some sixty years before its discovery by Naddoor. The passages in a letter of Pope Gregory IV., and a charter of Lewis, son of Charlemagne, to which he refers, are obviously later interpolations; and any critical Northern scholar would have seen this, as Mr. Jón A. Hjaltalin shows by his note to Captain Burton's text that he sees it. Among lesser historical blunders we may notice his ascription of the Irish names in Iceland to the few hermits originally established there; whereas it is due to the great immigration of Irish Norsemen, led among others by Aud the Deeply Rich (of whom he does not seem to have heard), and the connexion with Ireland which was thereafter occasionally kept up. A reference to Dr. Dasent's translation of the Niálssaga might have saved him from another mistake (vol. ii. p. 197), where he talks in a jaunty way of Flosi's "escaping the bloodstone"; whereas Flosi's leap across one of the chasms at Thingvellir is a comparatively late tradition, and in any case it was not "the bloodstone" that he had to fear.

When he gets out of the past into the present, Captain Burton improves very much. His descriptive parts contain plenty of really useful information; and the diary of his travels, though far too minute, wearying us with names and distances, and endless comparisons of everything he sees with Brazil, or the Hauran, or the mouth of the river Congo, or the Illyrian coast, or Central India, is done so thoroughly as to be serviceable to future explorers, and perhaps even of some value to men of science. Here and there, too, the book is interspersed with sketches of life which have—as, for instance, that of the farm at Reykjahlid (vol. ii. p. 287)—considerable force, and most force when they are least complimentary. In his mountaineering our author was certainly unlucky. He attacked Herthubreid, one of the highest and most interesting summits, but had to abandon it when no great distance from the top, and he never got more than a distant view of the great Vatna Jökull. No one, however, who perceives from his account what are the difficulties of getting over ground in Iceland will be surprised at these failures. There are no roads, and instead of them the soil is alternately quagmire, iron-hard lava, and sandy or stone-strewn desert. All the food (which it is hard enough to procure) has to be carried on the backs of ponies, for whom it is frequently impossible to find pasture. The rivers are rapid, cold, and often unfordable. The natives, according to our author, or at least those of them who are available as guides, are sluggish and wilful, showing little energy in any occupation except horse-dealing. And, finally, the weather is not merely capricious, but has a strong preference for rain and sleet even in the two or three months of summer. These discomforts affect a traveller's view of men and things; and Captain Burton seems to think that, on the whole, he made a bad investment of his time and strength in going to Iceland. However this may be, we can only wish that he had been content to describe it more briefly. The book would have accomplished more had it attempted less; as it is, the substantial value which parts of it possess is likely to be ignored by those whom the ponderousness of the whole repels. If a second edition is ever called for, and the author wishes its merits—for it has merits—to be properly recognized by the general reader, we should advise him to cut out about one-third of it, including all the history, and nearly all the wearisome disquisitions on the sulphur deposits, and resolutely to condense the narrative of his own journeys. The book may then have a success which we fear can hardly be predicted for it in its present form.

THE RIVER DEE.*

IF, as may doubtless be shown by precedents, a Dean can find time from the concerns of his fabric and his Chapter to give to local topography, assuredly Dean Howson has had the stimulus of a rare temptation. One of the pleasantest paths of topography is to trace the course of a river, and few rivers have so fascinating a course or so varied a history as Deva's "wizard stream." Therefore it was but natural that one who had already contributed with credit and success to more than one geographical and topographical undertaking should avail himself of the opportunity of furnishing letterpress for Mr. Rimmer's drawings, which, if we mistake not, were the subjects of wood engravings in the *Art Journal*. The only drawback to such a combination is that such letterpress is apt to be too sketchy and cursory, and that there is often a tendency to sacrifice detailed description to the exigencies of the pictures; whilst occasionally, as in the case of the bridge at Llansaintffraid, in c. viii., a drawing appears of which there is not the slightest account given in the text. With the Dean's plan, indeed, of tracing the river from source to mouth, from the north-eastern slopes of the Merioneth hill-country to the sands of Dee, the opening of the estuary, and Hilbree Island—especially as in two architectural chapters contributed by Mr. Rimmer the reverse route is taken—there is no fault to be found; but it is with a sense of wrong that we find the topographer hurrying over the very places where he might so well have lingered, and fallen into even a gossiping vein. Justice is certainly done to Bala Lake, with its legendary, poetic, and scientific associations, among which—not to speak of the early home of Arthur—we have the phenomenon of the freshets brought on the Mere "even in a dry summer, and when the Dee is just sparkling in a scanty stream over pebbles"—

> As the south-west [wind] blowing Bala Lake
> Fills all the sacred Dee—

and the general results of the engineering survey made of the lake in 1866 with a view to the water supply of the great towns of Cheshire and Lancashire. These, it is calculated, might be fed with the waters from the Merioneth hills by building a breakwater at the lake's narrow outlet, damming up a few mountain passes, so as in dry summers to store up the water still further in artificial lakes, and impounding the tributary Tryweryn, which enters the Dee just below the lake, and has a very extensive drainage-area. Notice is also duly taken of the ancient fancy that the Dee passed through the lake without mixing with its waters, in proof whereof Drayton and others have noted that the salmon, so characteristic of the river, is not taken in the lake, and that the "white fish," the "gwyniaid" peculiar to the lake, are not found in the river. The Dean endorses Pennant's opinion that it does not suit the habits of the salmon to come up further from the sea than this point, whilst the gwyniaid itself is essentially a lake fish.

A little more might have been said of Bala town and its pretensions to have been once a Roman summer station on the road betwixt Uriconium and Segontium; but it is as we track the river past Corwen that we first feel a sense of deficiency. It is true that the author invites us to tarry here; but it is only to give, with very little local reference, the story of Owen Glyndwr; and we have to regret the omission of any mention of so remarkable a fortified post as Caer Drewyn on the left bank of the Dee, and of Owain's Seat on the other, immediately above the town, just as, five pages before, Llanderfel is dismissed with a bare mention. Perhaps this may be attributed to a desire to make a longer halt at Valle Crucis Abbey, where, to a careful review of the architecture of that ruin, Dean Howson adds a few facts showing how in their latter days the Cistercians had deflected from the severity and simplicity which their white cassocks were intended to indicate. Following the proposed order of this survey of the Dee, rather than its author's execution of his plan, we may remark that, in treating of Llangollen Bridge, "one of the seven wonders of Wales and three beauties of North Wales," the Dean, while careful to mention its builder, Bishop Trevor of St. Asaph, at one time the ally of Henry Bolinbroke, at another of Glendower, and its situation

* *The River Dee: its Aspect and* By J. S. Howson, D.D., Dean of Chester. With 93 Illustrations on Rimmer. London: Virtue & Co. 1875.

over a rocky stream which in floods justifies the "black" derivation of its name, does not seem to be aware that the original bridge has had to be widened some nine feet, and that consequently the western side of it only simulates the ancient structure of four irregularly pointed arches. We share his satisfaction that tubular bridges are later inventions than Telford and Robertson's aqueduct (Pont-Cysylltan) and viaducts, which undoubtedly give a not inharmonious effect to the scenery of the Llangollen vale; and it is a happy thought which leads him to compare these grand engineering works of the eighteenth century with those of ten centuries earlier, Offa's Dyke and Watt's Dyke. The Dee can claim an interest in these old-world boundaries or barriers both in the south-eastern portion of its course, and also beyond Flint, at the north-west. The mention, a little further on, of the Dee at Overton, unavoidably introduces the coracles which belong to it almost as much as its pretty churchyard; but it would have been only fair to the Britons when suggesting that some have supposed them to have got their hide-bound canoe's name from the Latin "corium," to have added that the Latins got from the Britons their name for the basket, which they learned to make in Britain. The Welsh "basgawd" is the Latin "bascauda." From Overton to Bangor Monachorum is an easy transition, and this brings in associations of Church history in which Dean Howson is naturally at home, though it is a pity that he allowed the name of "Maes-German" instead of "Maes-Garmon" to stand in p. 55 as the synonym of the Field of St. Germanus, and as the scene of the Allelujah Victory on the banks of the Alyn.

When, a little below Farndon Bridge, the Dee becomes a Cheshire river, a special interest attaches to it as connected with the footsteps of the Roman conquerors, who came this way on the campaigns which ended with the reduction of Anglesey and with an occupation of this part of England extending over four hundred years. Before, however, we approach Eaton and Chester, where the Dee exchanges its early passionate character for broad and calm reaches of river, we are introduced to two places confronting each other on opposite sides of the stream ten miles apart, Wrexham and Malpas. Of the latter, on the Cheshire side, this volume gives us a little legendary lore, if not much that can be called history. The parish has an upper and a lower rectory, and the two moieties trace back, according to local fable, to a King's detention at the village tavern, where (and no marvel, as it was on the Welsh border) he fell in with the curate. Who can blame the latter for descanting so opportunely on the disparity between his absentee rector and himself in point of work and pay, or the King for redressing the balance? Hence, we are told, the Cheshire proverb of "Higgiety-Piggiety; Malpas shot," the latter part of which is a little vague, though the former is consistent with the interpretation given by Bohn, Hazlitt, and *Notes and Queries* (Ser. 1, vol. xi.) that Higgledy-Piggledy is *i.q.* "one among another," "tantum quantum," or "dividing equally." It may be hoped that the fortunate curate was not called upon to rival the state of the Upper Rectory, if all its occupants found it incumbent on their dignity to drive to church as did one of them, Bishop Heber's father, in a carriage and four, though the distance was not many yards. *Apropos* of proverbs connected with the Dee, it is a pity that Dean Howson has not noticed a Chester form of the proverb about shutting the door when the steed is stolen—"when your daughter is stolen, shut Peppergate." He does, by the way, record two proverbs about Bala. "As firm as Bala bell," said of things firmly set, still calls for interpretation; and the other local adage, "Bala has gone, and Bala will go," represents as yet an only half-fulfilled prophecy based on the action of the floods of the lake. None of the Cheshire proverbs given by Ray seem to appertain to the Dee-side.

As interesting as anything connected with this famous river is the military occupation of it by the Romans with a fixed camp, which gave its name to Chester. Here from the days of Agricola and the Emperor Claudius until the recall of all the legions to resist the barbarians in the fifth century, the Twentieth Legion with its auxiliaries and accretions had as definite a station as the Second had at Caerleon-on-Usk. And, to quote an apt parallel of Dean Howson's, "Just as our 22nd Regiment has in Chester Cathedral a proud relic in the old flags which were at the taking of Quebec, so does the city still preserve visible and durable memorials of this Twentieth Legion." Detachments of it have left their traces at Holt, opposite Farndon on the Dee, and at Caergwrle on the Alyn; and tradition points with much probability to a strong infusion of Christians among the legionary soldiers quartered at "Castra." A church dedicated to St. Peter and Paul, who had been recently martyred when this legion came, is said to have stood on the site of the present cathedral. A church to St. Peter alone still stands not far from the point of intersection of the four Roman ways, near the Pentice, which Pennant supposes to have been built on the site of the Roman Prætorium, and the High Cross, which was demolished by Cromwell, though its remnants are set up in the grounds of Netherleigh, on the Dee, near Eaton. Incidentally this book testifies to several vestiges of the Roman occupation; for instance, the [illegible], for which Chester has a fame peculiarly its own, are conjectured by Stukeley in his "Itinerary" to have had their origin in the hint given by the Roman portico (see p. 96). The mines again, on the Flintshire shore of the estuary, were worked by the Romans with remarkable energy and success. Of the more visible and distinct memorials of Roman Chester the account given is disappointing. We are told of some destroyed arches, marking, till a century ago, one of the entrances to the city, and of the discovery, in removing an old hotel in Bridge Street, of Roman ground floors, fragments of tesselated pavement, and a hypocaust. Roofing tiles, with paving and flue tiles, represent the same date, and one of the paving tiles is especially curious, inasmuch as "across the clearly-impressed mark of the Twentieth Legion, and at right angles with the inscription, are the indentations of the nails of a Roman soldier's *caliga*, which must have stood upon the tile while it was yet wet." Alongside of the woodcut representing this are two Roman altars, which carry us in thought to the Museum, and suggest the wish that the Dean had borrowed a leaf out of an excellent lecture by Mr. Thomas Hughes, F.S.A., one of the secretaries of the Chester Archæological Society, and explained the connexion of these at least with Roman Chester. One of them was dug up some fourteen years ago in clearing away rubbish and earth below the level of Pepper Alley or Goddestall Lane, a passage running into Eastgate Street, and leading formerly to the church of St. Oswald. The inscription on it imports that "Ælius Claudian, the Optio (or sub-centurion) here redeems his vow to the holy Genius presiding over his century"; the other, which seems to have belonged to the Bridge Street "find" in 1861, bears an axe, knife, and other implements of sacrifice on its sculptured sides, and in front the inscription "DEAE MINERVA (E) FELI (VS) FORTVNATVS MAG. V. (S)," MAG probably standing for "magister," and the addition of an s for "solvit" making the whole intelligible. To us a still more curious altar is that which, with two others, is among the treasures of the Chester Museum, and was dug up at the "Saracen's Head" behind the Old Town Hall. The fragmentary inscription on it seemingly purports that the person who erected it was the Greek physician of the Governor of the Roman station, and that his pious offering is to the gods of his own craft. The letters of the inscription are Greek, and include, writes Mr. Hughes, "a pure" (but certainly not an elegant) "hexameter." Another altar, four feet high, was found in 1821, the inscription on which shows, as do others in this country and on the Continent, that it was a votive altar, "Nymphis et Fontibus." It is on the east of the Roman camp, "where are all the best wells the city can boast." Those who may chance to fall in with this interesting lecture of Mr. Hughes will find in it an able survey of the Roman remains in Chester, well fitted to supply the gaps in Dean Howson's account of the Romans on the Dee. Whether the theory broached by the author, of several intramural interments, and even an intramural cemetery of Roman date, be as tenable as it seems likely, we are not in a position to determine. It is fair to the Dean of Chester to say that he does not omit to mention that the famous walls of Chester follow, save at the southern extremity, the line marked out by the Romans.

Perhaps the most satisfactory chapter in the book before us is that which discourses on Chester's two cathedrals, the Abbey of St. Werburgh and St. Oswald, and the early Norman minster of St. John. The Dean gives very graphically the historical associations of each, *e.g.* the legends in which Bradshaw and Higden connect Eadgar the Peaceful and Harold with the precincts of the one, and the joint hand which Anselm and Hugh Lupus had in founding the other. He omits, while speaking of the gigantic round Norman piers of the nave of St. John's, to say aught of the curious fresco lately discovered on one of them; but he is naturally full of the discovery of fresh fragments of St. Werburgh's shrine amidst the materials of a wall built across the west end of the north side of the nave in Chester Cathedral. He notes also, besides the immense size of the south transept, used since the Reformation as the place of worship for St. Oswald's parish, the singular conical roof of the end of the south aisle of the choir, which is now restored to the form it bore in Edward I.'s day, and which is unique in England, though examples of it in Normandy indicate the early and intimate communication between the Abbey of St. Werburgh and the Abbey of Bec. A Handbook of the Cathedral, edited by Dean Howson, would be invaluable to readers desirous of studying its careful revival, if it did but expand the information contained in this chapter. Of Chester in the Civil Wars there are other and far fuller accounts, even in small compass, than the sketch in the seventh chapter, the two points chiefly memorable in it being the remark that the walls were then the same as now, and as in the Edwardian period, but that the gates towards the Dee (now gone) were protected by towers, of which the Water Tower at the north-west angle of the city is a reminiscence; and a description of the Rows, which had then more shops on the outer edge of the footways, whilst those within shelter of the Rows were on the side furthest from the street, and were not glazed, but protected at night by shutters, which in the day were hooked up above people's heads. In his last chapter Dean Howson shows that a pretty close parallel to these Rows might be made by combining the features of the chief streets in the Swiss towns of Thun and Berne. His mention of the staples in the Water Tower, to which ships were formerly moored, reminds us of the recovery from the sea, within a century and a half, of a large embanked tract, commencing from old Dee Bridge and the entrance to the city at the old Ship Gate. The chief fault we have to find with the account of this part of the Dee and of the estuary which succeeds it is, that, perhaps for want of space, the author postpones to a concluding chapter notices of such places as Holywell and Basingwerk, and of such tracts as the singularly-shaped peninsula of Wirrall on the opposite side. When in his last chapter he has to discharge the debt thus incurred, it is little to be marvelled that the word of promise is meagrely and barely kept. With the two chapters (x. and xi.) contributed by Mr. Rimmer we should have been

better pleased had he attempted less, and done more thoroughly what was really worth doing. Thus, in condemning the crude castellated architecture of the modern Hawarden Castle he wastes space which he might far better have expended on the grand old castle and its sylvan surroundings. Again, the omission of an *excursus* in 141–3 on architectural styles apropos of Bryn-y-pys would have left room for a less scanty account of Chirk Castle. Had the drawings and letterpress about such modern places as Heron Bridge, Plas-madoc, and Palé Hall been omitted, Mr. Rimmer might have found space for a fitting notice of Rhiwlas, Rhaggat, and Rûg, three places of curious interest, of which the Jacobean chapel near the last named may stand for an example. What Mr. Rimmer has done thoroughly is the account in pp. 136–8 of the new mansion (or palace) at Eaton.

If we part with this book rather in the spirit of Oliver Twist, "asking for more," it is because we cannot doubt Dean Howson's ability to do better things by the Dee. His last chapter gives some promise of it in his glances at Hilbree Island, Hoylake, Neston, and the estuary in general. His introductory chapter shows that he has not neglected the poetry of rivers, English or foreign. His own prose about the Dee is fluent and readable, and the engravings and getting up of the book deserve liberal praise.

ANNALS OF ENGLAND.*

IT is doubtless by an error of the printer that more than one advertisement of this book would give the unwary reader the impression that it is the work of Professor Stubbs. All that Professor Stubbs is responsible for is a cautiously worded recommendatory note. The author still veils himself under initials. We do not much like the system of recommendatory notes and recommendatory prefaces; but we are bound to say that Mr. Stubbs's note exactly expresses what others besides himself have found in the book. Mr. Stubbs declares himself "able to testify to its general accuracy and great usefulness." He adds:—"I still believe it to be the most valuable compendium of our history that we possess, and I know that its use as a handbook in lecture has been well proved both by my predecessor Mr. Goldwin Smith and myself." Many years ago the book in its original form was recommended by the Examiners in Law and Modern History; and we can quite see how thoroughly useful it must be for a Professor, an Examiner, or a *bonâ fide* student refreshing his memory before an examination. It is no less useful for any reader or writer of history who wishes to turn to a date or a point of detail at a moment's notice. The book exactly suits the purposes of all these classes of people. Its good points make it exactly available for them, while its defects do them no harm. If we wish to be reminded of the exact date, the exact circumstances, the exact actors, in any event in English history, to call them to mind at a short notice without having to hunt through many books, there is no better way of refreshing the memory than by turning to the *Annals of England*. The facts and dates are almost always accurately given, and there are many references to the original writers. The book, too, is well provided with summaries and genealogies and notices of the original materials. The whole is very carefully and intelligently put together, and it would be hard to find so much matter of a particular kind so well packed together in the same space. For the purposes, then, of a professor or teacher of any kind, of an examiner, of a student in the highest stage of his studies—of any one, in short, who wishes, not to learn things for the first time, but to refresh his memory with what he has already learned, to see the whole put forth in a clear and systematic shape—for all these the book is the very thing that they want. For all these purposes it amply merits Mr. Stubbs's recommendation. He who is reading or teaching or writing about any of the periods which are embraced in the book—that is to say, the whole history of England down to the coming in of the Hanoverian family—will do well to keep the book beside him for the purposes of which we have just spoken. And in the present edition, which takes the form of a single octavo instead of three little volumes, it is still more practically useful. The examiner, when he finds himself run dry in the task of devising new questions for each candidate or batch of candidates, has only to open the *Annals*, and he is sure to light upon something of which he has not thought, and which just suits his purpose. So with the teacher, so with the advanced student. A book of this kind is always suggesting points which might otherwise not have been noticed; it is always calling to mind points which have been noticed but which have been forgotten; and, perhaps still more than either, it hinders points from being forgotten. Being something more than a chronological table and something less than an actual narrative, it exactly suits this particular purpose, and this is evidently the purpose which Mr. Stubbs has in his eye in his recommendatory note. Never were words better chosen for their purpose than those which the Professor uses in his recommendation. "He is able to testify"—so is every one who has used the book—"to its general accuracy and great usefulness." He believes it to be "the most valuable compendium of our history that we possess." This is exactly what the book is. It is a compendium of history, not a history. It is useful for those persons and for those purposes for which a compendium of history is useful. "Its use as a handbook in lectures has been well proved"; so has its use as a handbook for other purposes. Mr. Stubbs, in short, gives the book exactly the recommendation which it deserves, neither more nor less. If he had said less, he would not have done justice to the real value of the book. If he had said more, he might have misled people into using the book for purposes for which it is not suited.

The truth is that the *Annals of England* will be useful only for those who can use it in the kind of way of which we have spoken. Teachers, examiners, learners who are not in the first stage of their learning, all these need to have their memories refreshed. They do not need to learn things for the first time. All of them may be supposed to be able to exercise some degree of judgment on what they read. For them, therefore, the book is useful, because they can use it as a compendium of history. But if any one were led to use it, not as a compendium of history, but as history itself, the book would be found to be by no means suited for that purpose; and, if its reader got on with it at all, he would probably be led into many mistakes. The mere form of the book makes it unfit for this use. It is not a book to be read through, but a book to be referred to on occasion. It would not at all suit the purpose of a reader who knew nothing, or very little, of the subject before he began to read it. It is not a narrative, but a summary relieved by occasional illustrations and discussions of difficult and disputed points. Both of these are useful for the advanced student who can use his own judgment. Neither would be good for the reader who is not yet in a position to use his judgment. In the mere statements of fact there is very little in the book to correct or to object to; in the "views," as Mr. Stubbs seems to hint, there is a good deal. The writer showed from the beginning a certain tendency to crotchetiness and, in the years which have passed since his first edition came out, he has made good use of new lights in mere matters of fact; he has hardly made such good use of them in matters of opinion. Some of his summaries indeed, taken by themselves, would be positively mischievous; only in the chronological part of the book he himself often supplies the antidote. Indeed, in some parts he allows his prejudices even to colour the chronological part. He has a strange prejudice against Edward the First, which we should think must have cost Mr. Stubbs an effort when he wrote the recommendatory note. Most certainly the Professor might decline to pledge himself to the annalist's views on this head. The annalist talks of "Edward's iniquitous enterprise against Wales;" and when we come to the year 1282 the "iniquitous enterprise" of Earl David against Hawarden Castle is told in very delicate terms indeed. So, directly after, we read how the Scots "superseded Balliol," and then follows:—

> Edward advanced against them, mercilessly ravaged their country from one end to the other, and formally annexed it to his dominions; he also captured and executed Wallace, who almost alone kept the field.

Here the chronology corrects the summary. By the chronology the reader will find out, what he would hardly guess from the summary, that the events of ten years are crowded together in this very short narrative. And it is some comfort that, when we do come to the year 1305, we do not hear anything about Wallace being "betrayed." In other parts the annalist shows a tendency to various fantastic notions. He has evidently a longing to believe that Richard the Second escaped, and a still stronger inclination to believe in Perkin Warbeck. These are fair subjects for discussion, and the only classes of people by whom the book can be safely used can judge of them for themselves; but they are rather too prominently put forward if the book were meant for beginners. The writer has a fancy for Richard the Third, who certainly has been painted blacker than he need be; that is to say, a man who is guilty of one great crime has been charged with several imaginary crimes, and his real merits in other ways have been left out of sight. But the annalist shows a manifest wish to make out, if he could, that Richard did not make away with either of his nephews; and it is rather amusing when, after talking in other places of the hereditary right of the House of York, talking of Duke Richard as "the legitimate King," and so forth, he is obliged to fall back on the ancient doctrine of election in order to defend the succession of Richard the Third. The characters of the Kings generally show but little depth or discernment, while they often show a certain striving after paradox. In the portraits of the Angevins the writer would have done better if he had more closely studied the great Prefaces of the scholar who recommends him. But we thank him for pointing out that John was not a mere fool and coward, though he hardly seems aware of the great importance in a constitutional point of view of the fact that he was not so. And though we do not find the old fable about John usurping the crown to the prejudice of a supposed lawful heir, yet again the writer does not bring out the importance of the fact that John reigned by as good a title as any king before or after him. It is of the utmost moment to bear in mind that the Great Charter was wrung neither from an usurper nor from a fool, but from a king whose right to his crown was undoubted, and who, if he had had any moral principle or any steadiness of purpose, might have been far from a contemptible [illegible] Henry the Second is unduly run down from the ecc[illegible] point of view. On the other hand, some fantas[illegible] book of chivalry pleads for his successor, the Poitevin Count to whom England may be thankful for letting her see so little of him. Henry the Eighth is certainly not drawn after Mr. Froude; but he is, as far as his personal character is concerned, drawn rather too much in a daub the other way. It is wonderful how few people seem able to grasp the peculiar character of Henry's govern-

---

ment—the tyranny which is from one side the worst and from another the best, the tyranny which keeps to the letter of the law. When we get to the seventeenth century, there is a kind of subdued Royalist tone, and an exaggerated amount of space is given to ecclesiastical matters. Through all these things the teacher or the experienced student can pick his way without danger; he can cull what is useful and leave out the rest. A beginner cannot do so; and if the book were put into the hands of a beginner, it would most likely give him quite false notions on many important points.

CAROLS.*

IF a carol is a song for four voices, as a carillon is a chime for four bells, it seems right enough that there should be four different ways in which carols may be studied. Some people take only the comic side, just as some people collect or repeat only comic epitaphs. Others, again, think only of carols as poetry. But to antiquaries they are doubly interesting, revealing as they do ancient popular modes of thought and worship, and conveying to our ears, in the melodies to which they are sung, echoes of the music of the most remote ages. The musical student and the antiquary have long, however, been kept out of their inheritance in carols by the collectors of jokes and ballads, and now a fifth competitor begins to assert his claim. Mr. Chope steps in and demands carols for use in churches at Christmas and Epiphany; and as there are enough and to spare for all, there is no reason why his wish should remain unsatisfied. The number of carols of all kinds in existence is enormous. Everybody has his own version of every favourite, and such a piece as the "Cherry Tree" is not only known in half a dozen languages, but in English alone there are possibly some twenty versions in print. Moreover it is not always easy to say what is and what is not a carol. The "four-part song" explanation only accounts for the word, but by no means limits its present extension. A "Carrol of Huntynge" occurs in the *Boke of St. Alban's*. It will not do now to propose a new name, though it might be worth while to distinguish "Christmas Carols" from carols in which there is no distinct reference to Christmas. Richard James, the nephew of a famous Bodley Librarian, offers us one name which will do for Easter carols, if anybody likes it:—

> As erst I have at Easter done
> Thy *Threnothriambeuticon*.

But if "carol" has not so learned a sound and is somewhat vague, it will do for our present purpose very well. Any attempt to make it mean less than it does now would probably be futile, while it would certainly be impossible to make it mean more.

That carols should so often partake of a macaronic character is not surprising. Mr. Baring-Gould, in an introductory essay to Mr. Chope's collection, shows that they were in the first instance invented to bring the old Latin hymns of the Church within the reach of the uncultivated mind. The hymns themselves had been invented for the same purpose. And as a number of the technical terms, so to speak, of ritual had been familiarized to the popular ear, the early carols contain many scraps of Latin and words of doubtful import, and point in many cases to superstitious and even heathen observances which previously had obtained no place in the literature of Christianity. Our country children continue the dances which were once to be seen in the churches, and sing carols, like that of the "Three Ships," of some versions of which the very meaning has long perished. Mr. Baring-Gould suggests that the "Milly boxes," which in the West Riding the children carry round as they sing their carols, are so called by corruption from "My Lady's boxes," but a simpler explanation may be found, and one which illustrates this connexion between the modern carol and the ancient hymn. Mr. Baring-Gould is, no doubt, well acquainted with the "Cradle Song" of the Blessed Virgin, "Canticum Benedictæ Matris ad Filium in Præsepe jacentem," which begins,

> "Dormi, Fili, dormi," Mater
> Cantat Unigenito;

and ends with a kind of chorus, very suitable for a carol,

> Millies Tibi Rudes canimus,
> Mille, mille, millies!

With this refrain in our ears it is not easy to believe that the Yorkshire carol singers' boxes had any other reference. The Christmas song "Bring us home good ale" is the successor of "Bonum vinum cum sapore," itself a profane rendering of a Latin hymn; and the "Dormi, Fili," finds its English parallel in "This endris nyght," of which versions may be found in many books. The last verse will serve as a specimen (*Percy Society*, lxxiii.):—

> Now, swet son, syn it is so, that all thyng is at thi wyll,
> I pray the graunte me a bone, yf it be both ryght and skyll.
> That chyld or man that wyl or kan
> Be mery upon my day [this gud day, *Edinb. MS.*]
> To blyse hem bryng, and I shal syng
> Lullay, by by, lullay.

Of cradle-songs, indeed, as of drinking-songs, there would seem to be no end among Christmas Carols.

Much more puzzling and mysterious are the songs which seem to us now in many cases simply absurd. Sometimes they do not appear to have any reference whatever to Christmas. The famous ballad of the "Old Woman and her Pig," as well as the very similar "House that Jack Built," is said on good authority to have a Jewish origin. We have seen very similar pieces in service books of the Portuguese Hebrews possibly as old as the twelfth century. A long and interesting treatise might be written on these Passover songs and their allegorical meaning. They are not, however, carols. But their parallel is to be found in the Christian rhymes commencing for the most part with the line "One is one," of which the Latin original is very curious, and has a strange, if a true, history. It was communicated to *Notes and Queries* in 1868 (4 § II. 557) by the late very competent Roman Catholic scholar Mr. Husenbeth:—

> Dic mihi quid sit unus?
> Unus est verus Deus, qui regnat in cœlis.
> Dic mihi quid sint duo?
> Duæ tabulæ Moysis.
> Unus est verus Deus, qui regnat in cœlis.
> Dic mihi quid sint tres?
> Tres Patriarchæ.
> Duæ tabulæ Moysis.
> Unus est verus Deus, qui regnat in cœlis.

And so on to the Eleven Thousand Virgins, and finally the Twelve Apostles. Somewhat similar is an English poem communicated by Mr. Hazlitt to the same volume (p. 390), which begins:—

> When watch strikes one then thinke yᵉ in one band
> Of Love as brethern we are bound to live:
> And when two sounds, it makes me trembling stand,
> Come blest, goe curst, yᵉ doom wᶜʰ god shall give.

This is printed together with a Latin version from a manuscript written about 1630. Very like it is the well-known "Vienna Watchman's Song," and there are many variations of different degrees of interest and beauty. More strictly of the nature of a Christmas Carol is "O Thou Man," of which Mr. Sandys (p. 106) gives an old, and Mr. Chope (No. 76) a new version.

Of legendary carols, too, a large number, some of great beauty, might be quoted. They are chiefly, like the "Withy Tree," founded on stories from the apocryphal Gospels. Others, like the "Cherry Tree," are to be found illustrated in old pictures and engravings, among which we need only mention works of such different artists as Leonardo, Van der Werff, and Martin Schöngauer. The last in a fine engraving makes a date tree to bow down as the Mother and Child pass by on their flight into Egypt. When the Empress Eugénie visited Egypt some years ago, it is said that this date, which had flourished ever since, according to the Eastern traditions, was presented to her. In another carol the three Wise Men are identified with the three sons of Noah. Another embalms the names of the Shepherds, Sophron and Philetina, Elpison and Christella, Nephelus and Dorothea, names which differ widely from those in French woodcuts of the sixteenth century. In some Herod's eldest son is slain among the Holy Innocents. "Aunt Mary's Tree" is identified as the holly in an English carol, of which the late Mr. Hawker made a beautiful modern version; and in a very ancient poem, the "Carnal and the Crane," the legend of the husbandman who saved by a diplomatic answer the Holy Family on their journey is told in quaint verse:—

> If any one should come this way,
> And enquire for me alone,
> Tell thou that Jesus passed by
> As thou thy seed did sow.
> After that there came King Herod,
> With his train so furiously,
> Enquiring of the husbandman
> Whether Jesus passed by.
> Why the truth it must be spoke,
> And the truth it must be known,
> For Jesus passed by this way
> When my seed was sown.

There have been many modern collections of carols published. As long ago as 1833 the late Mr. Sandys issued his book, and it still remains one of the best, though not one of the largest. Carols are scattered through the volumes of the Percy Society, and many may be found—some, in truth, scarcely worth the printing—in the four series of *Notes and Queries*. Mr. Sylvester's volume is of very moderate value, though it has just been re-issued without a date, having originally come out in 1860. Mr. Chope's may be considered the first which contains only carols for church singing, though Mr. Sedding published one with harmonies for four voices some fifteen years ago. Of Mr. Chope's we have not left ourselves room to speak very fully. It is not easy nowadays to decide what may and what may not be used for church singing. Mr. Sandys tells of a Welsh poet, David Jones, of Rhuddlan, in Flintshire, who for fifty-three years annually sang a carol of his own composition in the church at that place. We are not told whether a new carol was written every Christmas, or whether any of the poems were real additions to the stock of the modern collector. Mr. Jones's hymn, or hymns, do not occur in Mr. Chope's book, and he will perhaps thank us for pointing him to a source which may prove practically inexhaustible. No doubt the one-armed post-clerk of Road, of whom mention was lately made in our columns, has also enriched the language with carols. Mr. Chope has done well for those who may use his book in printing words and music together; and certainly most of his hymns, either for words or music, and often for both, are well adapted for the church services. We may pick out for special notice Mr. Dix's "Like silver lamps in a distant shrine," with a melody by Mr. Lissant; and as successful adaptations of old airs, those for Mr. Baring-Gould's "Listen Gentles," and Mrs. Hemans's "O lovely voices of the sky." Mr. Chope has anti-

* *Carols for Use in Church during Christmas and Epiphany.* By R. R. Chope. Metzler & Co. Novello, Ewer, & Co.

cipated criticism by passing a running comment on most of the carols in his index, but it might have been better perhaps to have avoided such eulogy as he bestows on several. Thus as to the first, he says, "This work would not have reached its present state of poetic beauty and doctrinal accuracy of expression without the valuable help of my esteemed friend, Dr. Irons"; and it must be allowed that he possesses in an eminent degree the power of stringing together eulogistic adjectives. Of No. 29 we read, "Certainly this is the king of carols—grand, flowing, melodious; full of life, but majestic and dignified withal"; and we may perhaps, without depreciating the excellence of the work, hesitate to subscribe to this note, appended to No. 104:—"If any inquire what the clergy of this generation have done for the sacred service of song in the Church of Christ, they may form a fair estimate of their successful labours from the compositions in this work."

GILES'S CHINESE SKETCHES.*

THE past generation of writers on China doubtless formed exaggerated ideas on some matters relating to the subject on which they wrote. They would have been more than mortal had they not done so. Their area of vision, compared even with that vouchsafed to us now, was very limited, and their practical acquaintance with the people and customs of the land which they set themselves to describe was almost entirely confined to that which could be acquired at the five Treaty ports. Some were missionaries, and others were much influenced in forming their opinions on Chinese manners and customs by missionaries, many of whom—as, for example, Morrison and Medhurst—had by unremitting and disinterested labours acquired for themselves the right to be considered authorities on those subjects. To these men questions which we are now accustomed to see discussed in every newspaper were new and difficult problems which they were called upon to face. Brought into contact with a race of highly educated religionists whom, from their point of view, they were bound to look upon as idolaters; being witnesses to the growth of the newly acquired taste for opium-smoking among the natives, and sympathizing with the struggles of the authorities against the importation of the drug; finding polygamy rife, truth disregarded, and justice too often a marketable commodity, what wonder that they took an unfavourable view of the position, that they looked on the beliefs of Confucianists and Buddhists as debasing superstitions; that they regarded the opium pipe as the invariable forerunner of misery, disease, and death, and considered the moral condition of the people to be beyond measure degraded.

In holding these extreme opinions they were doubtless perfectly sincere, and the evidence on which they based them was such as appeared at the time fully to justify them. Wider experience, however, has called for some qualification in the conclusions at which they arrived, and since other, and by no means always so searching, investigations have shown that their views on some points were exaggerated, it has become the fashion of the young China school of the present day to set at naught their counsels, to deny their facts, and to ridicule their conclusions. Of this school the author of *Chinese Sketches* is an exponent, and it is in this fact, as he implies in his preface, and even more plainly indicates in his concluding chapter, that the main interest of his book consists. We shall therefore, after premising that there is a great deal in the narrative parts of Mr. Giles's work which is both instructive and amusing, pass on briefly to refer to some of the controversial chapters, the first of which is one on opium-smoking. Into this vexed question the author plunges without hesitation, and states it as his opinion that, "comparing the use of opium as a stimulant with that of alcoholic liquors in the West, we are bound to admit that the comparison is very much to the disadvantage of the latter. Where opium kills its hundreds, gin counts its victims by thousands." Unfortunately, however, he omits to give us the data on which he has founded this comparison, and we are therefore quite unable to follow him into this part of his case. But one thing is quite certain, and that is that the rulers of China, who may be presumed to be better able to judge of the results of opium-smoking upon the people than any foreigner can possibly be, have considered the effects of opium to be of so pernicious a character that they have from time to time vehemently protested against its importation; witness the correspondence connected with the outbreak of the war in 1842, and the discussions preliminary to the conclusion of Lord Elgin's Treaty in 1858, and again the remonstrances offered on the point to Sir Rutherford Alcock by Prince Kung in 1869, at a time when the abolition of the trade would have entailed a serious loss of revenue. But we will leave the author to combat his own views. At p. 115 he says:—"There is a certain point up to which a smoker may go with impunity, and beyond which he becomes a lost man in so far as he is unable to give up the practice. Chinamen ask if an opium-smoker has the *yin* or not; meaning thereby, has he gradually increased his doses of opium until he has established a *craving* for the drug, or is he still a free man to give it up without endangering his health?" The fact of this question being, as the author implies, a common one, is sufficient to show that the instances where smokers have acquired the *yin* are common also. According to the author, at p. 114, "The Chinese. . . . fly from intoxicating, quarrelsome samshoo (native spirit) to the more congenial opium-pipe, which soothes the weary brain, induces sleep, and invigorates the tired body." These are the effects which Mr. Giles evidently wishes us to believe follow from opium-smoking; but he allows his true but unconscious conviction to appear a page or two further on when he says, "If your servant smokes opium, dismiss him with as little compunction as you would a drunken coachman; for he can no longer be trusted. His wages being probably insufficient to supply him with his pipe and leave a balance for family expenses, he will be driven to squeeze more than usual, and probably to steal." Having made this admission, however, he again turns to the contemplation of his ideal opium-smoker, and, at some sacrifice to consistency, he immediately goes on to say, "But to get rid of a writer or a clerk merely because he is a smoker, however moderate, would be much the same as dismissing an employé for the heinous offence of drinking two glasses of beer and a glass of sherry at his dinner-time. An opium-smoker may be a man of exemplary habits, never even fuddled, still less stupified." Opium in moderate doses is no doubt an invigorating stimulant for the time being, and the author illustrates this by reference to Formosan chair-coolies, who, under the influence of the pipe, are able to perform long journeys with ease and rapidity. But even this has its dark side. These men, says the author, "die early, of course"; and upon this he adds this reflection, "but we have trades in civilized England in which a man thirty-six years of age is pointed out as a patriarch.' Granting this to be true, he appears entirely to forget that in the one case a man meets death in the pursuit of his legitimate calling, and that in the other he falls a victim to a voluntary indulgence in a pernicious habit.

Torture is another subject on which the author of *Chinese Sketches* feels himself called upon to contradict the usually accepted ideas as to the inhumanity of Chinese mandarins and gaolers. "Under the present dynasty," he affirms, "the use of torture is comparatively rare, and mutilation of the person quite unknown." Here, again, Mr. Giles is silent as to the sources from which he has gathered the evidence necessary to enable him to arrive at this conclusion. And this is the more to be regretted since it is almost impossible that the information can have been gathered by personal experience. Justice is not administered in China with open doors, as among ourselves, and therefore a foreigner can only be present at a trial either in an official capacity or by invitation. Such opportunities must be extremely rare, and when they occur the disposition to torture, should any exist, would doubtless be suppressed or sparingly yielded to. The only time when British officials were able to inspect Chinese prisons and courts of justice at pleasure was when we occupied Canton, and Mr. Wingrove Cook, the *Times'* Correspondent, thus describes what he saw in a prison in that city:—

> So soon as the double doors could be opened several of us went into the place. The thick stench could only be endured for a moment, but the spectacle was not one to look long at. A corpse lay at the bottom of the den, the breasts, the only fleshy parts, gnawed and eaten away by rats. Around it and upon it was a festering mass of humanity still alive. The mandarin gaoler, who seemed to wonder what all the excitement was about, was compelled to have the poor creatures drawn forth, and no man who saw that sight will ever forget it. They were skeletons, not men. You could only believe that there was blood in their bodies by seeing it clotted upon their undressed wounds. . . . They had been beaten into this state, perhaps long ago, by the heavy bamboo, and had been thrown into this den to rot.

This and similar scenes induced the Allied Commission to forbid the use of torture in the city yamuns during the occupation; but in spite of this order it was constantly reported by the English police that on the occasion of their unexpected visits to the native courts of justice they had found culprits undergoing torture, a common form of which was suspension by the thumbs and great toes. Another never to be forgotten instance of the cruelties of which the Chinese are capable is furnished by the lingering suffering inflicted on the allied prisoners who were treacherously captured before Peking in 1860, and whose mutilated limbs bore testimony to the severity of the tortures practised upon them. In support of the position he takes up Mr. Giles quotes two extracts from "a native work of much repute," entitled *Advice to Government Officials*, in which mandarins are recommended to be forbearing in the use of torture; but Mr. Wingrove Cook also tells us that over the portals of the prison door referred to above were carved in golden letters such fine sentiments as "The misery of to-day may be the happiness of to-morrow"; "Confess your crimes, and thank the magistrate who purges you of them"; and, "May we share in the mercy of the Emperor." We should add that on the subject of the relative degrees of torture the author appears to be at one with King Nebuchadnezzar, for he draws a distinction between torture, by which he would seem to define such punishments as flogging with the heavy bamboo, "under the infliction of which sufferers not uncommonly died," and imprisonment in such dungeons as that above described, in the same way that the Babylonian King believed that he was about to intensify the torture of the three disobedient Jews by providing for them the means of an instantaneous instead of a less speedy death. The fact on this subject we believe to be that instruments of torture exist in every yamun, and it entirely depends on the disposition of each mandarin whether they are used or not.

There is one trait in the Chinese character which is probably more severely dealt with by the author than it has been by any previous writer. The Chinese, he tells us in italics, are a nation of liars, and he goes on to say, "They lie by instinct. . . . They seem to prefer lying to speaking the truth, even where there is no

* *Chinese Sketches.* By Herbert A. Giles. London: Trübner & Co. 1876.

stake at issue." These are sweeping statements, which admit of some qualification even in the interests of Mr. Giles's own arguments, since he holds that "theft is not one whit more common in China than it is in England." But we must refer those who wish to know how he reconciles the two divergent statements that the Chinese are untruthful and honest to the pages of *Chinese Sketches*.

In a passage in the concluding chapter we think that we can discern the secret motive which has led the author to adopt the untenable views which he has set forth in the present volume. "Irritation," he says, "against traducers of China and her morality may have occasionally tinged our views with a somewhat rosy hue, but we have all along felt the danger of this bias, and have endeavoured to guard against it." We have no doubt that his endeavours were honest, but they have not been successful, and we feel convinced that in obedience to the same generosity which has induced him to stand forth as the champion of a people whom he believes to have been maligned, he will be the first to acknowledge his errors as soon as wider experiences and deeper investigations shall have made plain to him the fallacy of some of the opinions which he at present holds.

HONOURS DIVIDED.*

THE first thing which strikes us in this book is the inartistic method of narration. The story is told much after the manner of a showman at a fair:—"This, ladies and gentlemen, is the famous Duke of Wellington, and the figure next him is Napoleon Bonaparte." In *Honours Divided* we are introduced to the various personages in succession in the same bald categorical fashion. "Ambrose Northbrooke was a strict, highly honourable, somewhat austere man." "Norah Lane, a ward of Mrs. Northbrooke, was a slight, very pretty, girl." "Albina Northbrooke was tall, with fair, clear complexion, grey, quick, and rather restless eyes," &c., &c. "Mr. Albert Northbrooke, although his cousinship was rather remote, bore a certain resemblance to the great engineer. He was bald, with a fringe of sandy-coloured hair, surrounding the base of his head, and had a pair of bushy red whiskers." "The Rev. Sir John Vine was a very pleasant, good-looking gentleman, with dark, straight, rather long, hair, a massive forehead, large brown eyes, a little worn by age, a shaven face, a full, soft, sensual mouth." "Sir Marcus Borodaile was a tall, athletic man of thirty, with fair hair, moustache, and whiskers, and blue eyes, their brightness a little dimmed by late hours and dissipation, who spoke in a loud, not unpleasant, voice, and seemed generally to be a noisy, headlong, inconsiderate gentleman"; and, again, we are told that "Marcus was a kind-hearted, indiscreetly generous, man, with the courage of a lion, very headlong, very reckless, not a little obstinate, and a hard hitter when he was offended, his vocabulary of abuse being strong and copious. He was also very noisy." "Lewis was nearly six feet high, with broad shoulders and a deep chest. He had a keen, clever, eager face, a broad forehead, light, plentiful brown hair. His grey eyes were full of vivacity and thought." This kind of thing carried through three volumes leaves on the reader the impression of literary poverty beyond measure wearisome. An occasional jet of high falutin', or a stray shriek after the manner of the spasmodic school, would be a welcome break in the dead level of such prosaic prose as this; but we look in vain for one touch of warmth, one ray of genius, or outburst of eloquence. As the book begins so does it finish, with no interspaces of brightness by the way, making, on the whole, one of the dreariest bits of reading we have met with for some time.

We know that a critic is supposed to be a man of a cast-iron constitution and supernatural powers of attention. A literary soporific which sends every one else to sleep in mid-passage is assumed to find him as wide awake and as full of intellectual vigour at the last page as he was at the first. It is a pleasing superstition, chiefly good to amuse the public and to increase the natural self-delusion of authors; but, in truth, critics are very much like other men, and their brains yield to soporific influences quite as readily as those of ordinary readers. Hence, if we make any mistakes in dealing with the drowsy puppets which compose the gallery of personages in this book, we must plead as our excuse the weakness of the flesh, which overcame us more than once as we waded through its pages, and wondered why and for what ultimate purpose Mr. Morley Farrow wrote *Honours Divided*.

The "honours divided" which give the title to this book—chosen because Mr. Northbrooke was a whist-player—are the various legacies left by him—the gentleman to whom we are introduced as a "strict, highly honourable, and somewhat austere man." And here we may note the remarkable frankness with which Sir Marcus Borodaile, the young man with the loud voice and the courage of a lion, speculates on his chances. He meets the Reverend Sir John Vine—whom Mr. Northbrooke has chosen to be his executor and trustee, for all that the one is a strictly honourable gentleman and a shrewd man of business, while the other is a priest of Baal, sensual, untruthful, and insincere—and immediately on asking after his uncle's health he adds, "I suppose he will at any rate leave me *something*." This was scarcely the kind of thing to be expected from a man both kind-hearted and indiscreetly generous, and who is not presented to us as either mercenary or self-seeking. The young man's leonine courage, too, we may as well mention by way of parenthesis, is nowhere so strikingly displayed as in his assault on the attorney's clerk who serves him with a writ for a wine bill of three hundred and fifty pounds. By the way, would this blundering baronet have called the lawyer a "Stygian scoundrel"? It is not a common metaphor, and Sir Marcus Borodaile was not, we should imagine, scholar enough to coin classic allusions of his own proper motion. When Mr. Northbrooke dies—which he does, we are bound to say, with no unnecessary fuss, rather in a meek and businesslike manner that can be scarcely too highly commended as a pattern to go by—one of the provisions of his will is the assignment of his ward Norah Lane to the guardianship of the brown-eyed priest of Baal—an unmarried man, and already desperately smitten with his pretty charge. Indeed, both he and Sir Marcus have each made her an offer—the latter evidently done in a very rapid manner, though it is out of the picture, and we only learn it by implication; but Norah is in love with Lewis Harding, and will have nothing to do with either of her titled adorers. Her assignment, therefore, to the Reverend Sir John is excessively annoying, and vexes both her and Lewis greatly. It is an arrangement due to an unfriendly action of Albina, who is in love with Lewis on her own account, and who thinks that to throw Norah into Sir John's hands may end by throwing Lewis into her own. And indeed her plot succeeds for a time, but only for a time, *Honours Divided* being a book of the good old stamp where virtue gets more reward than its own, and vice is duly pilloried as it deserves to be.

As to the legacies, Sir Marcus gets the interest only of ten thousand pounds, but to his sister Mrs. Erskine, and to his cousin Albina, are left sums of forty thousand, to be invested on their behalf, with a loose pocketful each of twenty thousand. Albina employs her modicum as a loan to Lewis Harding, for the perfecting an invention which is to make his fortune and enable him to marry Norah; and Lewis Harding accepts the loan, believing the money to be another person's. But of course, wishing to keep the matter secret, she tells it to her friends, and when Sir John Vine gets hold of the story he passes it on to Norah. Hence doubts, misunderstanding, unwise reticence, needless despair; hence, by a mistake, Lewis breaks his engagement with Norah, and Norah accepts his renunciation with patience; wherefore he believes she is entangled with Sir John and is naturally disgusted. Thus the ground is prepared, and when he knows all about Albina, and her loan and her love, one sees that there is "but one way in which he could pay his immense debt to Albina Northbrooke," and that was by asking her to be his wife. By which it would seem that Mr. Lewis Harding, whatever might be his merits as an inventor, had not the amount of reason, common sense, or dignity generally considered necessary for a man's comfortable passage through the shoals and quicksands of life; and that when Norah summons courage to go and see Albina face to face, and in the course of his interview says, in italics, "*You have bought him!*" she is not far from the truth, despicable as that truth is to the two immediately concerned. But Albina loves Lewis truly, if she has won him less than honestly; and even when she find. out that he is the illegitimate son of the Reverend Sir John Vine—"false Sir John," as the author calls this brown-eyed priest of Baal—she is not moved from her position, but burns the letter and diary which contain the secret, and says, "I am willing to be Lewis Harding's wife notwithstanding this!" "Then she burst into tears," continues the author, "and Margaret clasped her." The end of this love robbery, however, is that Albina confesses all her craft and wickedness to Lewis Harding, releases him from his promise, and makes the best amends she can:—

"Lewis," she said, breaking the silence which followed, and speaking slowly, "I have something else to tell you—something to confess. Oh, what will you say to me when you hear it?"

She paused.

"You will say, I am sure, that I am very wicked—in my illness I felt I had been so. But it was all owing to me," she went on, "that Norah went to reside with Sir John Vine after my uncle's death. I deceived my uncle—— "

She stopped again. Lewis looked at her in a bewildered way.

"My uncle would have appointed Norah's uncle guardian with Sir John, had I not falsely told him that Mr. Lane objected to the duties and responsibilities attaching to the office of guardian. Upon hearing this, he left matters in the hands of Sir John Vine and his solicitor. I knew Sir John was in love with Norah, and thought if Norah was once under his roof, Sir John might succeed in making her his wife! I tried to separate her from you, Lewis. And now, what can you say to me? Are you very angry? Do you reproach me very bitterly for having caused you and Norah so much unhappiness?"

Of course he could not reproach her, knowing so well the motives by which she had been influenced.

"I did this wicked thing because I loved you, Lewis. Let that plead for me if it can."

"You cannot think that I would reproach you," cried Lewis.

"No. Well, the mischief has been repaired now, has it not, Lewis? And all the mistakes are over; you are free—I must think of life without you, Lewis. It will be a little hard at first, but I shall become reconciled to it before long. I am not the first by a good many to meet with such a disappointment. And we shall be friends, shall we not? Now good-bye!"

In a moment her calmness left her, tears overflowed her eyes, passionately she threw her arms round Lewis Harding's neck and drew his face down and kissed it again and yet again and yet again. "'Tis the last time—the last time!" she cried through her terrible sobs. "Now go, Lewis—go to Norah!"

Among the minor characters is Mrs. Erskine, Sir Marcus Borodaile's sister, who, as we have seen, had for her portion forty thousand pounds, with twenty thousand in a loose sum, beside other

* *Honours Divided.* By Morley Farrow, Author of "After Baxtow's Death." 3 vols. London: Hurst & Blackett. 1876.

advantages should she give birth to a child. This Mrs. Erskine, passionately loving her cold and disagreeable husband, has a certain flavour of Queen Mary with Philip which must strike every reader. The likeness does not help to render the circumstances of the episode more pleasant or enlivening. "Theodore Erskine she loved passionately," says Mr. Morley Farrow, when explaining that "Katherine's chief cause of unhappiness, apart from her natural melancholy, was her husband." "He on the other hand, was cold, careless, and indifferent." Perhaps that is not to be wondered at, seeing that Katherine often went into hysterics, and as often scolded her beloved spouse severely, was "always restless and suspicious," that "care had drawn long, deep lines in her heavy-browed face," and that "she spoke in a harsh voice like a man." Against such drawbacks as these even the feminine facts recorded, that she played the harp as well as the organ very beautifully, worked worsted-work chairs, and hung her own drawings over the walls of every room in the house, could scarcely be expected to count for much. So that really Theodore, with his cold eyes and indiscriminate flirtations, might be somewhat excused. Sir Marcus, his brother-in-law, having a hard fist and long arms, does something towards keeping him in order; just as Margaret Luxton, a young woman of saintly character, mediocre birth, and somehow mixed up with fowls and the early morning, keeps Sir Marcus in order by another kind of influence. In the end all comes right. Sir John Vine dies just as Norah is going to agree to marry him; Sir Marcus marries Margaret, and is made a respectable man at last; Albina gives up Lewis, and Lewis and Norah come together again; and finally Albina marries one Dr. Selby, who had proposed once before and been rejected. So after all this chopping and changing the curtain falls on the right assortment of suits, and the dull rubber of *Honours Divided* comes happily to an end. Judging by this book we should say that the two articles most wanting in Mr. Morley Farrow's establishment are salt and fire.

THE AMATEUR HOUSE CARPENTER.*

THE irrepressible amateur crops up nowadays in all directions. It is not long since we pointed out the necessity of applying to his case the literary slang of the day and fixing his "place" in art. Whether he has any place which can be fixed, or whether his course is so erratic that it is impossible to fix it, may be questions worthy of discussion. Viewing him as a pioneer, recognizing in his work the result of mental growth, expecting from his voluntary labours results different both in degree and direction from those which attend the ordinary work of the ordinary workman, we approach a book like this with strong expectations. It is true that carpenter work does not offer any very likely field for fresh discovery. The great principles of dovetailing, the use of the strut, and other simple contrivances, were found out long ago and can hardly now be improved upon. Still it is to the amateur carpenter, especially if he is gifted with ability and has the advantage of higher education and mathematical learning, that we should be disposed to look for improvements. He may study abstract principles. He may apply geometrical laws. He can try experiments without spoiling his employers' tools, wasting time for which he is paid, or consuming materials which do not belong to him. If from his researches any benefit should accrue to practical carpentry the place of the amateur is found at once. This may be called the higher ideal of the amateur carpenter. And there is a lower ideal. It is represented by a beneficent being, a Robin Goodfellow among country cousins, who, armed with a hammer, a screwdriver, a saw, and a gluepot, can almost put Humpty Dumpty on the wall again, or restore their lost tails to the flock of Bo-peep. His visits are never too long. There is always something still to be done when he leaves. But while he remains the decrepid furniture returns from hospital piece by piece, and assumes its accustomed place once more. The footstools regain their footing, the tables stand again on all fours. The easy chair has acquired a new set of castors, and holes in the carpet are to be a thing of the past. The windows are hung by both their pulleys, and flax lines, warranted to run for years, are substituted for the old ropes. The doors have ceased to groan, and remain closed without banging. With wonderful combinations of wood and indiarubber draughts are stopped, collisions prevented, and noises abolished. The long array of dustpans, shovels, brushes, and brooms which have been invalided to the garret follow once more their former occupations. But it is in the nursery that our ideal amateur is seen at his best. The handles pulled off the drawers by mischievous children are replaced with a contrivance calculated to defy the ravages of little hands. Mary's bird-cage, long dilapidated, receives a new bottom and a few fresh wires, and pocket-money stored up for a new one may be otherwise applied, without fear that the cat will eat the canary. The wheels are put on Johnny's cart, and a roof on his ark. A facsimile supplies the missing piece of his puzzle, and the arch, the crowning object of his building efforts, long, alas, consumed, is replaced at the summit of his wooden temples. Treasure boxes whose hinges have failed the lock are repaired, the rocking-horse resumes his prancings, and the pictures, no longer nailed to the wall, are duly provided with Oxford frames and protected with glass.

Such an ideal may be overdrawn. As a matter of fact, no one amateur has ever fulfilled it. Neither by leading the way to new feats in carpentry, nor yet by making himself generally useful, and occasionally ornamental, does Mr. Davidson even attempt to reach it. He is content with a phase of amateur's work for which we can feel but little sympathy. If the amateur has a mission, which after all may be doubted, it is certainly not to be able to work nearly as well as a professional artisan. At best he is only interfering with the honest employment of men who live by their earnings. We have seen amateurs reseat a church, build a pigstye, stain a window, bind a book; but in all these cases, had the amateurs not done the work, it would have been left undone. Mr. Davidson makes no such distinctions. He aims at carpentering nearly as well as a real carpenter. Such small jobs as we have spoken of as appropriate to the calling of our ideal amateur are ignored by him. He tells us, indeed, how to put up shelves, but he tells us little else of much use in the household. When we want a wardrobe, a table, a chair, a bookcase, such as he instructs us how to make, we may send for the village carpenter, who will make them sooner, better, and probably, in the long run, considerably cheaper. The best amateur work of this class is only almost as good as professional work. Such coarse furniture can be bought ready made at a lower cost. There is little or no art in such things, and if an amateur does not make his work ornamental, it is difficult to understand the reason of his being. The only piece of carving introduced by Mr. Davidson would be very hard to do, and would not look pretty when done, besides being objectionable for another reason. It is to be seen in a woodcut, on p. 162, where it decorates a child's cot, "the design being one," we read, "carried out by the writer in his own home, and which served its purpose well for the first ten years of the life of one of his dearest treasures." The treasure in question must have been a remarkably good child, or long before the first ten years of its life had elapsed that piece of carving must have tempted it to climb among the forbidden curves, and risk, in spite of the text selected and provided by Mr. Davidson, a bad tumble and perhaps a broken bone. Nothing of the kind seems to have occurred. Mr. Davidson peacefully alternates work and morals, and, having told us how a bradawl may be used to indent the pattern, and inculcated the striking of rapid blows "with a small mallet, turning the tool about in various ways," goes on in the following hopeful strain:—

> The beautiful sentence from the Psalms, "For He shall give His angel charge concerning thee," will not, we are sure, be omitted by the amateur. The work may be increased; but whether the worker be father, brother, or friend, it is a labour of love; and is there not the hope that when the loved occupant of the little bed traces over the letters with its rosy fingers, and asks what they mean, the first ideas of the merciful protection which, whether awake or asleep, ever hovers over it, may be aroused? Who knows whether in sickness they may not give comfort during hours of wakefulness and suffering? for our children think and feel deeply, more deeply, perhaps, than we ever give them credit for; thoughts and feelings may thus be awakened, the influence of which who can tell.

But it would not be fair to Mr. Davidson if, in finding fault with his view of the subject, we did not notice how far he has fulfilled his own object in writing the book. He has written it, he tells us, for "gentlemen who feel pleasure in active occupation," and who at the same time think "that to learn anything improperly is to waste time and trouble." It by no means follows that there are not things which it is equally waste of time and trouble to learn well; and if any reader of Mr. Davidson's book endeavours to make out the meaning of the reference in the preface to the inexpressible blessing of the guidance of the lamented Prince Consort," he will probably find that he has wasted time and trouble.

The best praise, then, that we can give this book is that it very nearly comes up to what might have been written by a real carpentor. Our own ideal of amateur work would surpass this standard. It does not happen to every one to meet, like Mr. Gladstone, with carpenters who can talk of "the intellectual resources of the craftsman," or who can measure so accurately as Mr. Moore the "constant communication" which must be kept up between the brain and the hand, and must be "not merely passive in character, but active, concentrated, and almost unintermittent." But an ordinary carpenter might very well have made the very ordinary designs in this book, and might have avoided recommending such an ancient device for chamfering as that here represented. If we are to learn real carpenter work, we had better learn from a real carpenter, unless an amateur can add to his instructions such refinements of taste as may enable the student to make things beautiful which, if given to an ordinary workman, would be made ugly. The picture of the T-square also is misleading. No doubt, as Mr. Davidson says, a T-square should be used "on the left hand side of the drawing-board." But a contingency may require the use of the other side of the square, and if Mr. Davidson's drawing is followed in constructing it, the two sides of the long piece are not parallel. The result of using this pattern will be that the person who uses it, besides frequent inconvenience, will find his eye, which he should tend as a musician tends his ear, will be put wrong, and in cases where he has to depend on it will fail him. There are some good hints on ventilation, a subject well within the province of the amateur, whom we recommend Mr. Davidson's principles. It is hopeless to attempt to convince a real carpenter of the advantages of veneering. He looks on scientific niceties of adjustment as superstitions, and the amateur has it often in his power to do much good if he will study the subject intelligently. The following is a particularly good suggestion; in rooms having central ornaments in the ceiling Mr. Davidson would carry away the bad air from the top of the

* *The Amateur House Carpenter.* By Ellis A. Davidson. London: Chapman & Hall. 1875.

room by piercing the interstices between the plaster scrolls and leaves with

numerous holes leading into the space between the ceiling and the floor of the room above; a brick or two should then be taken out from the external wall; but the wall will, of course, be more than one brick thick, and therefore through the rest of the thickness holes are to be bored with a good-sized brick-auger. Small iron gratings are then to be placed instead of the removed bricks; these, made in very handsome ornamental forms, may be purchased.

We hail with peculiar pleasure any suggestion which offers to utilize the hideous boss on every ceiling; no ornament has hitherto been found less useful, less beautiful, or more inevitable. For the rest, the book contains full directions for making a writing-desk, a hen-house, a pavilion, a swing, and other useful objects, and there is a chapter on geometrical drawing which may help to stimulate a taste for higher mathematical study.

GERMAN LITERATURE.

THE name of Dr. Reinhold Pauli* will always be held in honour in England, the country to whose annals he has so exclusively and perseveringly devoted himself. If his reputation will rest rather on his contributions to her earlier than her modern history, the cause is to be sought in no decay of power, or inaptitude for dealing with contemporary affairs, but in the deficiency, modestly admitted and deplored by himself, of those authentic materials from which, according to the modern apprehension of his mission, it is the historian's business to elucidate fact. Hardly any private archives for the ten-year period comprised in Dr. Pauli's volume are as yet available, and he evidently feels distrustful of the uncorroborated evidence of public documents, newspapers, and memoirs. His zeal in the investigation of all accessible sources of information is beyond praise. His use of so recent a work as Lord Ellenborough's Correspondence, for instance, is such as to prove that he has not merely consulted, but thoroughly mastered it, and that his grasp of the circumstances of the Governor-General's administration is as sure and firm as that of any professed expert in Indian affairs. The majority of the transactions between 1841 and 1851, the period comprised in this volume, are of course of a less dramatic character, and require the talent of the politician rather than that of the artistic narrator. Dr. Pauli's sagacity and candour are equally exemplary, and we cannot more fitly describe the character of his mind than by remarking that he appears to be the man of all men to depict the actual hero of his volume—Sir Robert Peel. The wording of his title-page indicates his correct apprehension of the character of the decade as a period of industrial development and financial reform. Of this epoch Peel is undoubtedly the central figure; the leading Free-traders, with all their ability, appearing but as subordinate, though indispensable, agents in the movement impersonated in him. Peel is a hero entirely after Dr. Pauli's heart. If he should have been treated even too favourably, the cause is chiefly the partial character of the private sources of information on which the author has had to rely. He has been enabled to consult the MS. correspondence of Bunsen, a diplomatist whose admiration for Peel was rather grounded on the English statesman's German sympathies than on his services to England, and on a collection of Cobden's letters entrusted to him by Mrs. Salis Schwabe. The latter, we trust, will some day be published. No modern English statesman, we believe, will gain more from the publication of his correspondence than Cobden. Tories and Whigs certainly do not fare so well at Dr. Pauli's hands as Peelites and Free-traders, but this is merely to say that he has thoroughly identified himself with the ruling tendencies of the period he describes. At the same time he is no mere disciple of the Manchester school, but treats the reaction shown in the writings of Kingsley and Maurice with perfect equity. One of the best chapters in his volume is that on Sir Robert Peel's Irish policy. O'Connell's character is thoroughly well understood by him. On the whole, Dr. Pauli's success in dealing with a familiar period of history is such as to increase our confidence in him as a guide to the knowledge of that remote past with which his name is chiefly associated.

Carl Peter† has condensed his forty years' labour upon Roman history into an abridged work, which nevertheless occupies three very substantial volumes. It might with advantage have been even longer, the Regal period, with every allowance for its legendary character, being treated too briefly, and the Imperial period compressed in a fashion only intelligible on the hypothesis that a knowledge of it counts for little at German University examinations. In other respects the book is exceedingly good; dry, but sober, and displaying the solid and accurate acquaintance with the subject for which the author is distinguished.

There are few more melancholy subjects in history than the extinction of Hellenic civilization; and the succeeding Byzantine period, though not without its pleasing and commendable features, perpetually excites regret by its empty resemblance to its predecessor. It is the sepulchre of an old society, but not at the same time, as some such sepulchres have proved themselves, the cradle of a new one. Professor Hertzberg's‡ history of this deplorable catastrophe and subsequent stagnation is nevertheless a most delightful book. Its charm can only be ascribed to the thoroughness with which he has entered into his subject, and the pleasure with which he dwells on the scanty relics of better times, even in days when "Hellene" had become a term of opprobrium. His history is essentially one of the people—of its alternations of prosperity or adversity, of the revolutions, political or religious, which modified the national character or affected the purity of Hellenic blood. It is therefore rather a social than a pragmatic history; battles, changes of dynasty, and similar events being only treated in their influence on the moral or material condition of the people. His narrative may be described as turning upon two great catastrophes—the suppression of the University of Athens by Justinian, which gave a final blow to the intellectual supremacy of Greece, and the terrible pestilence of A.D. 747, which not only swept away the largest portion of the Hellenic population, and thinned it still further by attracting the survivors to replenish the depopulated metropolis, but materially affected the ethnological character of the remnant by facilitating the Slavonian occupation of the Peloponnesus, since which event the Greeks can only be regarded as a people of mixed blood. It is needless to remark that Professor Hertzberg is largely indebted to Mr. Finlay's labours. His work is throughout distinguished by great equity of judgment, and a lively appreciation of everything with a bearing upon culture. Among the most valuable passages in his history may be mentioned his descriptions of the forlorn condition of the Hellenic world at the accession of Augustus, of the remarkable material and intellectual revival in the second century, of the mistaken policy which, in tempting the Goths away from the frontiers of the Eastern Empire, opened the way to barbarians of a far lower grade, and of the superiority of the Byzantine financial system to the Roman. The first volume comes down to the capture of Constantinople by the Latins in 1204.

St. Boniface, the Apostle of Germany†, was undoubtedly a great man, and the more interesting to us as he was also a great Englishman. Herr Werner, his latest biographer, must nevertheless be deemed to prefer an excessive claim for him in asserting that but for Boniface the entire course of European history would have been altered. The double work of Boniface, the conversion of the Germans and the subjugation of the German Church to the See of Rome, must in the nature of things have been equally accomplished if he had never existed. He is not to be numbered with those who have diverted, or even directed, the currents of their times, but with those whom these currents have borne to the front. Herr Werner's work is nevertheless an excellent one, a painstaking, impartial, thoroughly appreciative investigation of the obscure but momentous history of a man who in our times would have been a serious obstacle in the path of freedom and culture, but who, living when he did, has fairly won the respect and honour equally accorded him by Catholics and Protestants on the recent celebration of the anniversary of his death.

Dr. Heppe's History of Quietism in the Church of Rome‡ treats an extremely interesting subject in somewhat too polemical a fashion. The writer cannot be taxed with a want of sympathy for the personages—the Madame Guyons, Molinos, and Petruccis—whose opinions and personal vicissitudes he essays to trace; but the main motive of his work is too evidently not so much appreciation of Mysticism in itself as the disposition to assail the Roman Church in a vulnerable point. Dr. Heppe demonstrates what is indeed notorious, that the Catholic Mystics were approved at one period and condemned at another, and that the condemnation synchronized very curiously with the appearance of Louis XIV. as an arbiter in the matter. To Protestants the explanation is sufficiently obvious, but we presume that Dr. Heppe's argument is designed for the conviction of Catholics, and we do not see that he has shown, or can show, that the original decisions of the Pope and the Inquisition were so formulated as to be duly impressed with the note of infallibility. He attributes, probably with much justice, the persecution of the Quietists to the intrigues of the Jesuits, and his just indignation at the latter sometimes betrays him into language unbecoming the sobriety of an ecclesiastical historian.

Dr. Dreydorff, the biographer of Pascal§, subjects the *Pensées* to an analysis with the view of pointing out their frequent inconsistencies, and the evidence of Pascal having shifted his point of view at various periods, and attempted the refutation now of one, now of another, class of sceptics. Dr. Dreydorff thinks that the innate scepticism from which Pascal's utter disparagement of human reason was but the recoil was for a time overcome by Pascal's belief in the Jansenist miracle of the Holy Thorn, but that his subsequent perception of the inefficacy even of this prodigy to convince others essentially modified his opinions and his method of argument in his latter days.

The Rambachs * were a family of German divines, whose literary and theological activity, comprising the authorship of theological, devotional, and hymnological works, extends over nearly a hundred and fifty years, from an early period in the eighteenth century. Their family record is not devoid of interest, although by no means eventful.

Dr. Riehm's essay on Messianic Prophecy † construes the theme in its largest sense as the anticipation of a period of world-wide felicity and righteousness, not merely of a Jewish kingdom. His point of view is moderately orthodox.

The second volume of Paul von Lilienfeld's ‡ "Thoughts on the Social Science of the Future" follows out the analogy between the social and the physical organism expounded in the first. The tendency of scientific inquiry of every description is no doubt in the direction indicated by the author, but it may be questioned whether his conclusions are not at present somewhat premature. Many of his parallels are rather ingenious than sound, and his argument rests to a considerable degree upon data as yet controverted or imperfectly understood.

A tract on the responsibilities of the wealthier and better educated classes towards their inferiors, by A. Meitzen §, is practical and distinguished by an excellent spirit.

Julius Frauenstädt, the old expositor of Schopenhauer's philosophy ‖, comes forward with a new series of letters upon it, designed, on the one hand, to indicate the changes effected in his point of view by twenty years' discussion; on the other, to protest against what he regards as the plagiarisms and misconception of Hartmann and other continuers of Schopenhauer's work. Frauenstädt's tone is more independent than formerly, and he subjects his master to a free criticism on several points, such as the apparent dualism of his distinction between the will and the intellect, and his endeavour to preserve moral responsibility while denying the freedom of the will. He also virtually abandons Schopenhauer's pessimism, while severely criticizing Hartmann's recent attempt to derive practically optimistic conclusions from pessimistic premisses. One of the most interesting parts of his book is his defence of Schopenhauer's metaphysical theory of the universe, and his teleology, against the material and mechanical explanations of modern physical science.

Hartmann has given occupation to another antagonist, Dr. H. Schwarz ¶, who disputes his view of primitive Christianity as an ascetic religion, and contends that its spirit is fairly represented by the liberal Protestantism which Hartmann regards as a corruption. In the second part of his essay Dr. Schwarz criticizes Hartmann's principal work, without adequately acknowledging the extent to which its uncompromising pessimism has been modified in his later writings.

The purpose of Fritz Schultze's "Kant and Darwin" ** is to direct attention to the degree in which the theory of evolution has been anticipated by Kant, and to convince naturalists that they may still learn much from him. The book consists principally of extracts from Kant's writings, which certainly go far to justify the claims preferred on his behalf.

E. von Hartmann's essay on "Truth and Error in Darwinism" †† treats the Darwinian theory from a philosophical point of view, and expresses the objections which naturally arise in minds conversant with moral science to a merely mechanistic materialism. To Hartmann the development of existence on Darwinian principles alone seems too much a matter of haphazard; fully admitting the modification of species by descent, no other explanation being even conceivable in our present state of knowledge, he requires foresight and a plan, and finds them in the instinctive impulse towards objective manifestation to which, with Schopenhauer, he attributes the existence of the universe. He is very decided on the insufficiency of the struggle for existence alone to account for the immense variety of life on the earth, but seems to forget that the other two factors on which he lays principal stress, variability and heredity, are as forcibly insisted on by Darwin as by himself. It is probable, indeed, that Mr. Darwin would regard Von Hartmann's speculations as lying beyond the range of the subjects discussed in his own treatise, and as raising questions beyond the province of natural science; they are, however, perfectly legitimate if regarded as a criticism of certain recent applications of the Darwinian theory, as, for instance, in Strauss's latest work.

Dr. Julius Sachs's History of Botany in Germany up to 1860 * is clear and interesting, necessarily going at times considerably beyond the limits of the country with which it is nominally concerned. The author distinguishes four periods in the history of systematic botany and morphology, which form the subject of his first book. The second book is occupied with the history of research into the anatomy, and the third with that into the physiology, of plants. The volume is one of a series of similar histories published by the Munich Academy at the expense of the King of Bavaria.

We must be content with mentioning that Dr. Julius Ley's † theory of Hebrew metre is new, and that his labours have been thought worthy of publication at the partial expense of the German Ministry of Public Instruction. Their merit can only be appreciated by profound Hebrew scholars.

Friedrich Diez's appendix to his standard "Grammar of the Romance Languages" ‡ is a comparative etymological vocabulary, indicating the modifications undergone by the most familiar Latin words.

Dr. F. Brockhaus's interesting and condensed account of the Junius letters §, and review of the evidence bearing on the question of the authorship, is, from the necessity of the case, mainly based on the labours of English writers on the subject. It is nevertheless interesting to observe the treatment of English politics by a foreigner. Professor Brockhaus's view appears to us just and impartial; he believes Junius to have been mainly actuated by patriotic motives, while not overlooking the occasional indications in his letters of private vindictiveness and malevolence. He is a decided advocate of the Franciscan theory; which has, indeed, so vast a preponderance of external testimony that it can hardly fail to establish itself where, as in Germany, it has not to struggle against old traditions or obstinate prepossessions.

An essay on Pope, by Dr. A. Deetz, is in many respects an excellent performance, containing much sound and discriminating criticism, and a spirited vindication of the poet against the German critics, by whom he has been so frequently misunderstood. It is to be regretted that Dr. Deetz's translations are not always of a character to justify his warm appreciation of his author in the eyes of readers unacquainted with English. The peculiar terseness of Pope's couplets presents, it must be owned, formidable difficulties to the translator into a copious but verbose tongue. The preservation of this form is nevertheless so essential that, if it be really impracticable, the task had better be given up. Even where it is retained, Dr. Deetz's renderings are frequently infelicitous. "Glück, Zufall wird von dir nur so benannt," for instance, is but a feeble version of "All chance, direction which thou can'st not see." The translations in this volume comprise versions of the *Essay on Man*, the *Rape of the Lock*, the *Epistle to a Lady*, and *Abelard and Heloisa*.‖

It is unnecessary to do more than announce the completion of A. Schmidt's excellent lexicon to Shakspeare ¶, with the observation that the second part bears out the promise of the first. The undertaking should not have been left to a foreigner. Now, however, that it is accomplished, our best course will be to reprint it.

Dr. H. Schuchardt's essay on the ritornels and tercets of Italian popular poetry ** contains a treasury of critical research on the subject, together with numerous specimens of these simple, yet exquisite, snatches of song, with which Mr. Symonds and Mr. Davies have partially familiarized the English public.

"Von ihr und mir," †† by E. Hoefer, is a specimen of the manner in which German novelists really excel; a pretty little story of the affections, artistic in construction, and distinguished by a choice elegance of style. "Chiaroscuro," ‡‡ by L. Salomon, is the fanciful collective title of a trio of novelettes, readable enough, but hardly above mediocrity in any respect.

Rudolf Gottschall's historical romance §§ is a very entertaining one, full of generals, priests, nuns, actresses, and all kinds of picturesque figures; the incidents are striking and well contrived, and the action throughout bustling and lively. The subject is the conquest of Silesia by Frederick the Great, and the writer's sympathies, it need hardly be stated, are wholly Prussian.

ADVERTISEMENTS.

CRYSTAL PALACE.—NOTICE to ARTISTS.—The results of the Exhibition and Sales of this Season have been so gratifying that the Directors will again offer MEDALS for the BEST PICTURES and DRAWINGS EXHIBITED for 1876-7. Receiving days February 21st and 22nd, at St. George's Hall, Langham Place.—For conditions apply to Mr. C. W. WASS, Picture Gallery, Crystal Palace.

THE SOCIETY of PAINTERS in WATER COLOURS.—The FOURTEENTH WINTER EXHIBITION of SKETCHES and STUDIES is OPEN, 5 Pall Mall East. Ten till Five. Admission 1s.
ALFRED D. FRIPP, *Secretary.*

DORÉ'S GREAT PICTURE of "CHRIST LEAVING the PRÆTORIUM," with "Dream of Pilate's Wife," "The Night of the Crucifixion," "La Vigne," "Soldiers of the Cross," "Christian Martyrs," "Gaming Table," &c.—DORÉ GALLERY, 35 New Bond Street. Ten to Six. Admission 1s.

ELIJAH WALTON.—WINTER EXHIBITION now OPEN.—A Large Collection of Fine Water-Colour Drawings on VIEW and for SALE, Burlington Gallery, 191 Piccadilly. Ten till Dusk.—Admission, including Catalogue, 1s.

KING'S COLLEGE, LONDON.—Dr. PASSAWER will deliver, during Lent Term, a Course of LECTURES on RUSSIAN LANGUAGE and LITERATURE.—For particulars apply to the Secretary, J. W. CUNNINGHAM, Esq.

UNIVERSITY COLLEGE, LONDON. — POLITICAL ECONOMY.—Mr. H. S. FOXWELL, M.A., Fellow of St. John's College, Cambridge, will begin a course of TWENTY-FOUR LECTURES on Tuesday, January 18, at 5 P.M.; the subsequent Lectures will be delivered at the same hour on following Thursdays and Tuesdays. The subject of the Course will be "The Principles of Political Economy considered Historically and in their Applications to certain Social Problems, especially the Relations between Capital and Labour."
Fee for the Course £1 12s. 6d.
JOHN ROBSON, B.A., *Secretary to the Council.*

UNIVERSITY COLLEGE, LONDON, SCHOOL. The LENT TERM, 1876, will begin for New Pupils on Tuesday, January 18, at 9.30 A.M.
The School is close to the Gower Street Station of the Metropolitan Railway, and only a few minutes' walk from the Termini of several other Railways.
Discipline is maintained without corporal punishment or "impositions."
Prospectuses, containing full information respecting the Courses of Instruction given in the School, Fees, and other particulars, may be obtained at the Office of the College.
JOHN ROBSON, B.A., *Secretary to the Council.*

LADIES' COLLEGE, POLYGON HOUSE, SOUTHAMPTON.
Patrons.
The Right Rev. the Lord Bishop of WINCHESTER.
The Right Hon. Viscount EVERSLEY.
The Right Hon. Lord NORTHBROOK.
President. The Right Hon. W. COWPER-TEMPLE, M.P.
The TERM . . . 3 January 22.
Instruction is given by Professors in Literature, Science, and Art. English and Foreign Governesses reside in the College. The Senior Classes are open to "Occasional" Students who may be desirous of taking up any given subject.
For particulars, application should be made to the Lady Principal (Miss DANIELS), Polygon House, Southampton.
W. C. MACLEAN, M.D., C.B., *Hon. Secretary.*

TRUST for carrying on the NORTH LONDON COLLEGIATE and CAMDEN SCHOOLS for GIRLS.—The CAMDEN SCHOOL for GIRLS will RE-OPEN on Tuesday January 18, 1876. The NORTH LONDON COLLEGIATE SCHOOL for GIRLS will RE-OPEN on Thursday, January 20, 1876.

CHELSEA HIGH SCHOOL for GIRLS.—A BOARDING-HOUSE for PUPILS from a distance attending this School of the GIRLS' PUBLIC DAY SCHOOL COMPANY, has been opened at 7 Durham Place, Chelsea, close to the School, under the Superintendence of Miss C. SMITH, to whom applications for terms and other particulars should be addressed.

PROSPECT HOUSE, MALTON.—The Misses HALL, Principals of the above SCHOOL, offer a sound and comprehensive Education for YOUNG LADIES. Their Pupils have passed the Cambridge Local Junior, Senior, and Higher Examinations, and a special Class is formed for Ladies wishing to prepare for the latter. Prospectuses will be forwarded on application. The Term commences January 28.

ENGLISH LANGUAGE and LITERATURE, ELOCUTION, &c.—The Rev. ALEX. J. D. D'ORSEY, B.D., will resume his LECTURES, CLASSES, and LESSONS to GENTLEMEN on January 17th; for LADIES, on 18th, at 13 Princes Square, W.

CLIFTON COLLEGE SCHOLARSHIPS.—EIGHT or more will be open to COMPETITION at Midsummer, 1876, value from £25 to £50 a year, which may be [illegible] used from a specified [illegible] of Scholars who require it.—Further particulars may be obtained [illegible] FORFEAR, the College, Clifton, Bristol.

LEAMINGTON COLLEGE.—Classical, Modern, and Junior.—*Head Master*, The Rev. JOSEPH WOOD, M.A., late Fellow of St. John's College, Oxford. The NEXT TERM begins January 25.—For particulars, apply to the Rev. the VICE-MASTER, College House.

ALDENHAM GRAMMAR SCHOOL (near Watford). Founded A.D. 1597.
Under the New Scheme, Nine Exhibitions [illegible] be founded, of the value of £50 per annum for Three Years, "to be tenable at any University or other place of Liberal education, or for the purpose of fitting the holder for some Profession."
Also Ten Junior and Ten Senior Platt Scholarships are to be established, one first to defray the whole expense of maintenance and education in the School.
An Election to Three Junior Scholarships, of the value of £30 per annum for Three Years, will be held at the end of January. The age of Candidates must be between Ten and Fourteen years. Two are to be entirely open, but one restricted to certain Grammar Schools in Herts and the adjoining Counties.
The Terms for Boarders are 60 Guineas per annum, including the School Fees and charge for laundress. Further information will be given on application to the Rev. ALFRED LELMAN, Head-Master, or to C. R. VINES, Esq., Brewers' Hall, Addle Street, Aldermanbury.

DR. HAYMAN, ex-Head-Master of Rugby, Rector of Aldingham, near Ulverston, on the coast of Lancashire, prepares PUPILS for the Universities, &c.

WOOLWICH, LINE, CONTROL, COOPER'S HILL.—Rev. Dr. HUGHES (Wrang. Cantab.), who has passed 300, has VACANCIES for the next Examinations. Classical, Science, French, German, and Drawing Tutors. He can also receive (quite distinct) younger PUPILS for a more extended course.—Ealing, W.

ARMY.—T. H. WATKINS, Sen. Opt., assisted by Eight Graduates, 1st and 2nd Honours, has passed Two for Sand[illegible] College, All for Malta, One for Line (July), 15th, and the 16th, 34th, 41st on List at late Line Examination.—Address, 80 Kensington Park Road, W.

MATRICULATION at OXFORD.—An OXFORD TUTOR, of long and successful Experience, who receives a Few PUPILS into his House to prepare for Matriculation, has at present a VACANCY. Address, M.A., care of May's Advertising Offices, 169 Piccadilly.

DR. WOLTERS, Four years resident in London, recommends his Educational Establishment to such English Parents who desire for their SONS EDUCATION in GERMANY.—For particulars, and references to Parents of Young Gentlemen at present with the Advertiser, apply direct to Dr. WOLTERS, Langestrasse 35, Dresden.

EDUCATION for YOUNG GENTLEMEN in CANNSTATT, near Stuttgart.—Professor HIRSCH, established more than Twenty years, has a few VACANCIES. Diet English as much as possible. Recommended by more than 100 Pupils, and by Rev. W. Blackley, Waltham Rectory, Hants; Rev. Dr. Charteris, Professor, Edinburgh; Rev. R. D. Buchanan, Glasgow; and N. Trübner, Esq., Publisher, Ludgate Hill. Prospectuses to be had from the latter.

FOLKESTONE.—Mr. W. J. JEAFFRESON, M.A. (Scholar) Oxon, assisted by a Cambridge Honours-Man and a competent staff of Teachers, prepares for the Universities and for all Competitive Examinations. Pupils successful at the last Nine Examinations of the Line.

EDUCATION.—BOSTAL HILL, ABBEY WOOD, Kent.—A limited number of BOYS received, who live on a home footing, entirely with the Head-Master. References to many Noblemen and Gentlemen. High Terms. Ages from Seven to Sixteen.—Address HEAD-MASTER, as above.

PRIVATE TUITION for the UNIVERSITIES, &c.—A CLERGYMAN (M.A. Oxon) who has had several Years' successful Experience in the above, assisted by a Resident Cambridge Graduate, besides other efficient Non-resident Masters for Modern Languages, &c., receives Ten PUPILS, and has TWO VACANCIES. Neighbourhood very attractive and healthy, on the Banks of the Thames, about an hour's ride by train from Paddington.—Address, Rev. —, M.A., care of Mr. F. S. De Carteret Bisson, 76 Berners Street, W.

MR. C. A. WALL, the French and German Master at Brighton College, receives PUPILS. French is always spoken in the Boarding House, and can be thoroughly acquired without interruption to the College work.

A SMALL HIGH-CLASS SCHOOL, Preparatory for the Public Schools, &c., is conducted by an OXFORD GRADUATE (High Classical Honours), in a very Healthy District.—Address, RECTOR, Great Blakenham, Ipswich.

HIGH MATHEMATICS.—EVENING INSTRUCTION in this subject by a CAMBRIDGE GRADUATE and WRANGLER, experienced in Tuition.—Address, E. R., 11 Norfolk Road, St. John's Wood, N.W.

TO MILITIA OFFICERS and CANDIDATES for COMPETITIVE EXAMINATIONS.—Captain CHAWNER (late 77th Regiment) will have THREE VACANCIES after the [illegible] Easter Examinations. Terms on application, and references.—The Manor House, Newton Valence, Alton, Hants.

LAW EXAMINATIONS.—A BARRISTER, LL.B., London, holder of Two Scholarships and the Inns of Court Scholarship, receives PUPILS to prepare for the Law Examinations and the University of London Law Degrees.—Address, B. L., Mr. B. Morris, 42 Ludgate Hill.

ENGLAND AND THE AUSTRIAN NOTE.

THE Government has permitted it to be known that it has agreed to support the general terms of the Austrian Note, but that it reserves full liberty to pass such judgment as it may think proper on the steps which may hereafter be suggested to make the Note operative. It is hard to see what other answer could have been prudently given. To have refused altogether adherence to the proposal of Austria would have been equivalent to saying that the Turks ought, in the opinion of England, to be left to put down the insurrection if they can, and that either no remedial measures are necessary to quiet the revolted provinces, or that, if any measures of the kind are necessary, Turkey may be trusted to devise and carry out all that is required. No English Cabinet could at the present day honestly say that the revolted provinces have not grievances which should be redressed, or that Turkey can be implicitly trusted to redress them. The importance of the acceptance of Count ANDRASSY'S Note lay in the acknowledgment it involved that some kind of interference in the internal affairs of Turkey was unavoidable. The Cabinet has practically registered its conviction that one period in the history of the relations of Europe and Turkey is now closed. Twenty years ago, at the close of the Crimean war, Turkey, on the one hand, undertook to make certain internal reforms, and, on the other hand, Europe undertook not to interfere in Turkish affairs. Europe now virtually informs Turkey that this engagement must be considered at an end, because Turkey has not fulfilled her part of it. Turkey has not been hurried. Plenty of time has been given to the Ottoman Government, and during this time it has done nothing in the way of internal reform. It has had ample opportunities. It has enjoyed perfect peace; it has been assisted by the lavish inpouring of European capital. But it has wasted its opportunities as completely as it has wasted the money of its creditors. It chiefly owed to England the time of grace it has enjoyed, and the means it possessed of using this time profitably; and it was therefore naturally considered by the other European Powers especially important that England should recognize that the time of grace was over. Europe is now, with the more or less qualified assent of England, remitted to the position with regard to Turkey which it assumed before the Crimean war, and it occupies this position with the new experience that the plan of leaving Turkey alone has been tried and has been found impracticable.

This in itself makes the acceptance of the Austrian Note by England an important event; but there are other consequences flowing from the acceptance of the Note which are sufficient to dispel the notion that the presentation of it to the Ottoman Government is an unmeaning piece of diplomatic formality. Not only does the presentation of the Note, however general may be its terms, imply that interference in Turkey is recognized by Europe as expedient and justifiable, but it also implies that the insurrection in Herzegovina is an occasion for interference. Further, it is Austria that has prepared the Note and taken the initiative, and in accepting the Note as an Austrian Note, the other European Powers imply that Austria has properly assumed this position because the insurrection more nearly affects Austria than any other Power, is a source of greater danger to her, and raises a number of subsidiary questions in which she is specially interested. She, too, is close at hand, and can do what is to be done speedily and effectually. Then, again, if interference is necessary, it must be supposed to be of a kind equal to the necessity. As the existence of grievances from which the revolted provinces suffer is the occasion of the interference, and as Turkey is not to be trusted spontaneously to remove these grievances, the interference must assume a shape which will give a reasonable probability of these grievances being redressed, either directly by those who interfere, or by Turkey acting as their agent and under their supervision. The revolt, too, is going on, and one main object of interference is to introduce peace and put an end to the troubled state of things which Austria finds so inconvenient to herself. The insurgents must be induced to lay down their arms, and it is obvious that the temptation offered to them to do this must be sufficient. Either a new order of things must be proposed, and its establishment adequately guaranteed, of a kind to convince them that the causes of their complaints will be effectually and permanently removed, or the provinces must be occupied by a friendly force which would put an end to the contest by not allowing the Turks to fight any more. All these things are involved in the acceptance and presentation of the Note, and the Turks will understand perfectly well what is really meant. They will feel that it is formally announced to them that Europe considers the period of non-interference to be at an end, that an occasion of interference has arisen, that Austria is authorized to act as the principal agent in this interference, and that the character of the interference contemplated is either the establishment of an entirely new order of things in the revolted provinces, or else the occupation of those provinces by Austria.

To have got so far as this seems to be no small a thing for Austria to have accomplished; and to have tried to do more would have been to raise doubts and possible quarrels beforehand which would have made the agreement of the European Powers impossible. To have it recognized that effective interference, conducted mainly by Austria, was necessary, seemed naturally to Count ANDRASSY to be the first and far the most important step. Nor was it possible to state precisely what form the intervention should take until it should be known what course Turkey would adopt when informed that intervention was intended. The Ottoman Government may decline to do anything, may refuse to discuss any proposals, and may prefer to let the intervening Powers do what they please, in the hope of seeing them quarrel among themselves. In that case the occupation of the revolted provinces by Austria may be regarded as inevitable. But Turkey may take the other course, and may be willing to assent to the minimum required of her. The European Powers will then have to discuss among themselves what is the minimum they require; and for the discussion of this point, if it arises, the English Cabinet has very properly kept itself free. It will see what Austria, in concert with Germany and Russia, proposes, and will criticize the suggestions made to it. But the minimum required must, from the very circumstances of the intervention, fulfil certain conditions. It must offer a reasonable prospect of removing the danger to which Austria is exposed; it must satisfy the insurgents, or at least must seem as if it ought to satisfy them; and it must not be so temporary as to be delusive. What particular proposal will best satisfy these conditions, will be least odious to Turkey, least burdensome to Austria, and least likely to lead to future complications, it is equally difficult

and unnecessary to anticipate. It is for Austria to propose and for England to criticize. But it must not be supposed that the criticism of England can go beyond a certain point. There is happily no prospect of Austria proposing more than she thinks absolutely necessary. It is not at all in her interest, or in harmony with her policy, to stir up big questions just now, to break up suddenly the whole framework of Turkish Government, and excite the passions and fan the hopes of semi-barbarous Slavs. The minimum which Austria will consider to be required will be that which is considered the minimum by a Power specially anxious not to ask anything dangerously large. England will therefore bring to the criticism of the proposals of Austria the knowledge that the framers of those proposals have had very strong inducements to make them as moderate as possible. Directly details are approached, very considerable differences of opinion may easily arise, and here discussion may be really useful; but the limit within which the proposals can vary in their essential character may be seen beforehand to be not very wide.

THE *EDINBURGH REVIEW* ON THE SUEZ CANAL PURCHASE.

THE writer of an able article in the January number of the *Edinburgh Review* raises doubts of the expediency of the Suez Canal purchase which deserve serious consideration. The question whether Parliament ought to have been summoned immediately after the conclusion of the bargain is of secondary, though considerable, importance. Constitutional forms ought to be observed; but in this case the supposed irregularity was rather of form than of substance. The transaction was in its nature irrevocable, and the Ministers must be prepared to defend their policy in February as fully as if the discussion had occurred in December. It is possible that diplomatic communications in progress may have rendered an immediate communication to Parliament inexpedient. As the Ministers must explain and defend their conduct in all its circumstances, it is scarcely worth while to anticipate the debate on the minor point of constitutional propriety. The first impression that a great political measure had been adopted was largely modified by Lord DERBY'S language; and the purchase naturally became less popular when it was reduced to the dimensions of a financial contract. The Government cannot properly invest public money in any commercial undertaking; and it would not have been a prudent speculation for a private capitalist to pay 4,000,000*l.* to an embarrassed debtor on an unsecured promise of interest for nineteen years at 5 per cent. The KHEDIVE himself had offered French bankers double the rate for the term during which the dividends on his shares were suspended. There will be no difference of opinion as to the inexpediency of claiming a priority over private creditors if the KHEDIVE should in any year be unable to meet his engagements. The acceptance of doubtful security can only be justified by some advantage which must have been supposed to attend the acquisition of the shares. The Reviewer doubts both the present capacity of the Canal to earn a dividend for shareholders, and the probability of a considerable increase. The reversion of even an increased dividend at the end of nineteen years would not be an equivalent for the sacrifice of the large sum which has been paid for the shares. It must be presumed that the Government was acquainted with the financial condition of the Company, though the purchase may have been made exclusively on political grounds. Full details had been submitted to the Commission on Tonnage Dues which lately sat at Constantinople.

The contention that it would have been better to buy debentures than shares is perhaps erroneous; and it must be remembered that the only securities which could be purchased at the moment were the shares which the KHEDIVE was anxious to sell. Although the nominal capital is much less than the actual cost of the Canal, the earnings, after paying working expenses and interest, are sufficient to provide a dividend of 4 per cent. If the necessity of raising additional capital for improvements were not taken into consideration, the prospects of the shareholders would be highly favourable, as they have a principal share in the probable increase of profits. After payment of interest and of 4 per cent. dividend, 30 per cent. of the surplus is appropriated to the KHEDIVE, to the Founders, and to the Directors; and 70 per cent. to the shareholders. Investors have long known that a railway or any similar undertaking offers the greatest advantage to purchasers when growing profits coincide with a large proportion of fixed charges. As soon as a margin is attained, any additional percentage of profit on the whole capital is multiplied for the benefit of the shareholder in the inverse proportion of the ordinary shares to the total outlay. As the traffic of the Canal increases, the KHEDIVE himself, who has hitherto been a helpless victim in the hands of M. DE LESSEPS, may perhaps receive some small return for the enormous sums which he has furnished for the undertaking. As the *Edinburgh* Reviewer correctly states, "the KHEDIVE has in fact contributed to the Canal far more than all the sums subscribed "or borrowed by the shareholders in Europe"; and the opportunity of borrowing 4,000,000*l.* on easy terms is the only remuneration which he has hitherto received. The diversion of traffic from the land routes diminishes his revenue; and he derives no benefit from the temporary increase of tolls which was conceded by the Commissioners. If his dynasty exists a century hence, and if in the meantime no additional sacrifices are imposed upon the Egyptian Government by the Company, the KHEDIVE'S remote successors will perhaps succeed to the reversion of a valuable property. In the meantime the shareholders who have received the benefit of his great sacrifices might perhaps with propriety modify their tone of injured innocence.

Lord DERBY has already indicated in his speeches and in diplomatic conversation the line of apology which he will adopt. It was in his judgment inexpedient that French shareholders should become almost the sole proprietors of the Canal, as they already held a large part of the stock. The returns of the shareholders, divided according to nationality, are for some reason deceptive, inasmuch as no English proprietors appear on the list, although it is known that a certain amount of the capital is held in England. It has probably been found convenient to draw the dividends through agents in Paris, who perhaps appear in the official list as shareholders. It is not improbable that the English holdings, including the shares now belonging to the Government, may exceed one-half of the capital. Whatever may be the proportion, it will be impossible to regard the Company henceforth as a French association. The controversy on tonnage abundantly illustrated the inconvenience arising from the zeal of the French Government in promoting the objects of the Company. During a correspondence which extended over two years, every successive French Minister earnestly defended the interests of the Company against shipowners and freighters, while every other maritime State in Europe, with the exception of Russia, contested M. DE LESSEPS'S right to augment his charges. The relations between France and England, which are on all other questions friendly and cordial, in the course of the discussion occasionally deviated into asperity. If the dispute had arisen in the days of the Empire, or at a time when the two Governments were divided on issues of general policy, it is highly probable that grave difficulties would have occurred. At one time M. DE LESSEPS made speeches to the members of the French colony at Port Said which seemed to threaten an appeal to force. As it was impossible that he could affect to levy war on his own account, it was naturally conjectured that he hoped for assistance from the French Government. The Porte thought the occasion so critical that the KHEDIVE, in obedience to its directions, at once marched a force to the Canal. M. DE LESSEPS has undoubtedly displayed extraordinary vigour in the accomplishment of his enterprise; and not his smallest feat is the extraction from the KHEDIVE of the greater part of the cost of the Canal. It is nevertheless embarrassing to deal with the President of a Joint-Stock Company who assumes some of the airs of an independent Power. M. DE LESSEPS'S letters are called despatches, and they are sometimes addressed in sufficiently peremptory terms to Foreign Ministers. The English Government will from this time be fully entitled to claim, in common with the French Government, a voice in any diplomatic transactions which may affect the interests of the Canal. The support given by French Ministers to M. DE LESSEPS was given in the assumed interest of French capitalists, and not in virtue of any technical right of interference.

Mr. DISRAELI may perhaps take a higher tone than his colleague at the Foreign Office; but his defence will be substantially the same. In one sense the bargain was exclusively financial; but Lord DERBY will readily admit that it would not have been the business of the English Government to undertake, for the sake of investment, even a much more hopeful speculation than the purchase of shares in the Suez Canal. The measure is only defensible on political grounds, and the apology may probably be adequate, though it must be in some respects indefinite. A substantial pecuniary interest in the undertaking may have been a condition of increased influence, although Lord DERBY would have preferred that the KHEDIVE should retain possession of his shares. It is perhaps not expedient to follow the Reviewer into the difficult question of the state of the Canal in time of war. It is undoubtedly true that a share in the capital of the undertaking could neither increase nor diminish sovereign rights; but it might materially affect the moral aspect of proceedings which might be rendered necessary for political or military reasons. It is clear, notwithstanding the arguments or assertions of the Reviewer, that in a war with any maritime Power the Canal cannot remain open, except to neutral commerce and to the ships of the belligerent who may be the stronger at sea. Even if, in the untoward contingency of a war with France, the English fleet were not to impede the transit of the Canal, it must attempt to control the navigation of the Red Sea, which is a continuation of the passage. It is impossible in a much smaller space to examine the arguments of the *Edinburgh Review* in detail. The article will be an invaluable brief for the Opposition in Parliament.

PENDING ELECTIONS.

AS from time to time seats in the House of Commons become vacant, and as there are two great political parties, there must be contests fought, or politics would become so hopelessly dull that no one would pay any attention to them. Elections in these days are necessarily tame affairs, but still they are not quite so tame but that something as to the feelings of constituencies and the influences to which elections are subjected may be gathered from them. Burnley is one of the seats that happen just now to be vacant, and the usual preparations for a contest are going on. Here it is the Liberals who are defending the seat, and in these depressing times they are naturally anxious not to lose any advantage. They have set themselves to work with earnestness, promptitude, and decision. They have struck the great blow; they have scored the capital point. They have got that which in an electioneering sense is better than gold, or rubies, or virtue. They have secured a local brewer as their candidate. They are very much to be congratulated. In the first place, they are saved a world of trouble, they need not weary themselves with thinking of anything remote or difficult. Such questions as the Slave Circular, the Canal-shares purchase, army reform, optional legislation, do not arise for them. If they or their candidates like to think or speak of such questions, there can be no harm. It may be amusing, but it will be superfluous. A local brewer need not argue; he exists. It is beer that marks him, and not merits or demerits. In the next place, the Burnley Liberals must hope that they are showing that better things may be in store for their party generally, and that the unhappy divorce between beer and Liberalism, which Lord ABERDARE started, is at length coming to an end. If local brewers would really smile on Liberalism, if the publicans would really forget and forgive, and, in technical language, drink fair with both parties, Lord HARTINGTON might feel comfortable. The fear is lest the news from Burnley should be too good to be true generally, too happy an accident, a mere caprice of Fortune. There is also the anxious question whether the publicans at Burnley will rally round their brewer. No doubt publicans will do almost anything for a brewer; but there is one thing which they will not do for any man living, and that is, regard any question whatever from any other point of view than that of beer. It seems audacious to suppose that publicans could question whether a brewer was right in his judgment as to what the true interests of beer require. But then the publicans are a very determined set of men, as the report of the proceedings of their Defence League sufficiently shows.

They, too, like army reformers and directors of education, have mapped out England into districts; and each district is under a thorough and effective organization. Scotland and London are falling into the great scheme, and beer may soon expect to have its army everywhere. The authorities of the League, we observe, speak very handsomely of the magistrates, whom they find to be a very nice, sensible set of gentlemen, who know what beer means, and how much and how frequently it is wanted. They like the magistrates so much that they would even wish to extend their jurisdiction. They think that grocers who sell beer and wine, and workmen's clubs, should be licensed by the magistrates. It would do them good, and take the conceit out of them if such silly institutions as workmen's clubs were opened or shut at the discretion of men whom the publicans can thoroughly trust. The worst is that at some places the magistracy has got thoroughly wrong. The state of things, for example, at Birmingham is especially lamentable. There, as the League was informed at its recent meeting, there have lately been appointed five Inspectors for the express and sole purpose of visiting public-houses. In old days when, as the President significantly remarked, the Town Council was differently constituted, such an enormity would have been impossible. The moral which publicans are entreated to draw is to neglect no engine of doing themselves justice. They must look after all the Councils and Boards in their respective towns, and see that they are properly represented on them. The method is in its broad outlines simple enough. With the non-elected magistrates the publicans think they have every reason to be content. The election of Town Councillors they propose to control; and they will thus get rid of what may be termed the Birmingham taint in the social system of the country. It is the resoluteness with which they set themselves to achieve this great purpose of their lives that inspires a natural anxiety as to whether a local brewer can do so much for the Liberals as at first sight he might be thought certain to do. He may seem to the publicans to be going wrong in some way that they can scarcely define. He is getting too much of a Birmingham air about him. From belonging to the political party in which Mr. BRIGHT is a leader, a brewer might get, by an easy and fatal descent, to approving of the doings of a tyrannical pharisaical Town Council which actually appoints Inspectors to see that publicans obey the law. To say the truth, we are not at all sure that the publicans can, consistently with those fundamental principles by which their League must abide, support heartily and unreservedly a local brewer coming forward on the Liberal side. It is not a pleasant thing for them to think that they should send a man to Parliament who will very probably come under influences of a very dangerous kind, who will sit more or less near to Mr. BRIGHT, who will hear excessive drinking spoken of openly by his associates as something lamentable, and who may even chance in convivial moments to frequent the company of those who will venture to say that the Town Council of Birmingham was quite right to appoint Inspectors. Thus his moral sense would be gradually enfeebled; he would no longer have a firm and clear idea of right and wrong, and it would be in vain that he had been born and bred a brewer.

In Dorsetshire a contest is going on within the bosom of the Conservative party, and, as all sections of the Conservative party are sound about beer, the publicans have nothing to do with the struggle. At first the landlords had a fight among themselves as to whether the biggest landlord who would be a candidate had a right to the seat; and it was ultimately ruled that he had, and that Mr. HAMBRO must give way to Mr. DIGBY. But this did not allay all the elements of strife. The tenant-farmers started a candidate of their own, so that now the contest is between the landlords and the tenants on whom they can count on the one hand, and the tenants on whom the landlords cannot count on the other. It is almost certain that the very existence of such a struggle is due to the Ballot. The landlords have endeavoured to suspend or mitigate the action of the Ballot Act by calling on their tenants to sign a circular stating how they intend to vote. But it is not known how far the appeal has been successful, and it is still less certain how far the actual voting under the Ballot may correspond with such promises as the tenants may think fit to give. It must never be forgotten that when the Ballot Bill was under discussion in Parliament, its advocates stated it to be one of its advantages that it would enable people to make promises and break them;

and it is, we understand, the general experience of electioneering agents that the Bill has been in this respect a remarkable success, and that it is almost impossible to forecast from promises of support how an election will go. The questions at issue between the landlords and the tenants are not in any way directly political, but it is not to be denied that the differences of opinion which the contest has revealed are of considerable importance. Mr. FOWLER, the candidate of the tenants, has enunciated opinions with which the landlords cannot be expected to sympathize. He thinks that landlords ought to build better cottages, that better education ought to be given generally, that one-half of the foot and mouth disease of the country is due to the Government not following Mr. READ'S advice, that local taxation might be reduced to one-quarter of its present amount, and that all game should belong to the tenant. It would be hard to bring together a series of propositions which, from the point of view of the landlord, would seem more heretical and objectionable. Nor is it at all clear that all tenants would sympathize with Mr. READ. To advocate better cottages and better education for labourers would seem to many of them to be treading on dangerous ground; and the habits and associations in which they have been reared will prevent many of them from thinking that there is any harm in the landlord claiming the right of shooting on his own land such game as does no serious injury to crops. The leading Liberals of the country do not favour Mr. FOWLER; for they, like their neighbours, are landlords, and, as a Conservative must be elected, sympathize with a Conservative landlord much more than with a Conservative tenant. They are anxious, too, that the arrangement by which they have a share in the representation of the county should continue, and they fear that at the next election they themselves may suffer if they now seem backward in carrying out their part of the undertaking. It is therefore very probable that Mr. FOWLER may fail. But whether he fails or succeeds, the mere fact of such a contest having taken place must produce consequences of great importance. It will have revealed to country society that there are two ways of thinking in conflict within its bosom. The landlords, not only in Dorsetshire but elsewhere, well know that they have a new force to deal with. That the struggle should be social, not political, only adds to its importance. The Dorsetshire contest is one form of the general assertion of their claims by classes hitherto content to assert little or nothing, under the influence of a new political machinery by which claims are created by the facility of asserting them. It is thus a symptom of a future in the possibilities of which not only Dorsetshire landlords, but Englishmen generally, are very largely interested.

THE FRENCH SENATE.

THE facts about the election of delegates who are in their turn to elect the French Senate seem sufficiently ascertained. Except in the great towns, the so-called Conservatives have secured a large majority in the Electoral College; and of these so-called Conservatives a large majority are set down as Bonapartists. We shall know to-morrow week how the delegates exercise the powers conferred on them. In a contest in which a Senate, not a single officer, has to be elected, the results of the second stage cannot be inferred with absolute certainty from the results of the first stage. Even Bonapartists are open to sympathies and dislikes which have little connexion with party, and it may be found that not every candidate for whom an Imperialist delegate votes is himself an Imperialist. Further than this, allowance must be made for the unexpected hatred of the Empire which from time to time shows itself in an Orleanist, and for the unexpected hatred of Marshal MACMAHON'S Government which from time to time shows itself in a Legitimist. Neither of these sentiments is likely perhaps to have much effect on the voting of Sunday week, but either or both may have some effect. Here and there, at all events, there may be some unexpected combination between delegates who are classed under the general head of Conservatives and those who go under the general head of Republicans. An occasional Orleanist may be found allying himself with moderate Republicans against the Bonapartists; an occasional Legitimist may be found allying himself with the Radicals against a declared supporter of M. BUFFET.

These are the deductions which must be allowed for in estimating the action of the delegates. There are others which must be allowed for in estimating the truth of the description that has been given of them. The most important of these is indicated in a letter from "A French "Correspondent," which was published in the *Times* more than a fortnight ago. The Senate is to be elected by constituencies amounting in all to 43,562 persons. Of these, 36,217 are delegates elected one by each commune, and in by far the greater number of instances the commune has chosen its mayor; a result which was almost a certainty before the election. The mayors were, for the most part, appointed by the Duke of BROGLIE, and it is now an old story how the DUKE was reduced to choose Bonapartists to fill the places vacated by Republicans because there was literally no one else on whom he could lay his hand. It is for retaining these mayors in office that M. BUFFET has been so much blamed, and the excuse which we suggested on his behalf at the time of his becoming Minister of the Interior may still be urged, though unfortunately with much less confidence than before. M. BUFFET found that he was everywhere represented by men who were regarded as partisans of the Empire. But he may fairly have argued that this partisanship admitted of an almost endless variety of degrees, and that much of it was not easily distinguishable from devotion to the powers that be, provided that the powers that be are willing to dispense employment and pay. To have sent comparatively pliable Imperialists about their business would have been to convert them into ardent Imperialists. They would have had nothing to gain by keeping M. BUFFET in power; they would have had everything to gain by putting M. ROUHER in his place. By retaining them in the service of the Republic, M. BUFFET removed the motive which more than anything else would have made them in reality what they already were in name. They now know that, whatever Marshal MACMAHON'S rule may mean for others, it does not in its present form mean anything unpleasant for them. Of course this knowledge is not sufficient to make them zealous Republicans. On the contrary, the discussions to which their retention in office has from time to time given rise must have thoroughly enlightened them as to the extent to which Republican institutions are compatible with their personal interests. So long as the Republic is worked in the spirit in which it has been worked by M. BUFFET they are safe, but it is quite on the cards that a Republic worked by a Left Centre Ministry, or even by a Ministry of both Centres of which the Duke of AUDIFFRET PASQUIER was the head, would make short work with a good many of them. Under these circumstances men of the class to which the mayors of rural communes mostly belong will be likely to cherish an ineffective wish for the return of the Empire because it would give them permanent security, and an effective wish for the continuance of M. BUFFET in office because it would give them present security. It is not safe, therefore, to assume that these nominal Imperialists will all vote for Imperialist candidates. They will vote in many cases for candidates who are as much Imperialists as anything else, but their real desire will be to pick out the candidates who are most disposed to keep things as they are. To this extent, therefore, the election of delegates is a victory for M. BUFFET. It creates a majority in the Electoral College whose main object will be to keep him in power. There was never an election so completely in the hands of placemen. Probably more than half the delegates who have to elect the Senate look to the MINISTER of the INTERIOR as to a present saviour. If he is overthrown they do not know what the future may have in store for them. So long as he remains at the head of affairs they are sure not merely of bread—of that a Frenchman in their class is usually sure anyhow—but of a convenient addition to their income, of consideration among their equals, and of deference from their inferiors. These are amply sufficient inducements to make a rural mayor vote straight; his only difficulty will be that, in the depth of his political ignorance, he may not always know how to give his vote the meaning which he wishes it to bear.

It does not follow, however, that M. BUFFET'S victory will be as fruitful as it is conspicuous. Even if we assume that the mayors vote exactly as he wishes, and that no unforeseen combinations or schisms among the higher class of delegates avail to weaken the majority which the

Minister has secured in the lower class, the Senate can hardly be all that the sanguine fancy of M. BUFFET's subordinates is inclined to paint it. It is true it will not be the Radical body which some English writers have lately imagined it would be. They based their calculations on the supposition that the elected Senators would be a simple reproduction of the Life Senators, whereas, so far as probabilities go, they promise to be of a wholly different type. But though the Senate will have a large Conservative element in it—using the term Conservative in that peculiar sense in which M. BUFFET uses it, as implying a badly-concealed dislike to existing institutions—it is not likely to contain a preponderating Conservative element. Most of the Life Senators belong to the Republican party; and when to them are added the contingent of elected Senators contributed by the great towns, there will probably be, if not a Republican majority, at least a Republican minority strong enough to defeat a party so little homogeneous as the Conservatives who support M. BUFFET. In fact, the composition of the new Senate promises to be curiously like the composition of the late Assembly. Parties will be sufficiently balanced to make it impossible for any one of them to have its own way. Deadlocks will be the natural issue of every debate; and as deadlocks in a Second Chamber have not the same practical inconvenience that they have in a single Chamber, there will not be the same inducement to invent a means of escape from them. The chances that the Senate would exercise any important influence on the conduct of affairs have always been small, and the neutralization of forces which will apparently be its most marked characteristic will be likely to make these small chances smaller.

But the most important consideration in estimating the value of M. BUFFET's success in the election of delegates relates to the extent to which the election of delegates is an indication of what the election of deputies will be like. The same shrewd observer who foretold so accurately in the *Times* how the election of delegates by the rural communes would go is of opinion that on this head very little can be inferred from the results of Sunday's voting. The conditions under which the elections of deputies will be conducted are obviously exceedingly different from those which have governed the election of delegates. An election in which every commune selects its representative is an election in which the principle of *scrutin d'arrondissement* is seen reduced *ad absurdum*. Village ignorance, village subservience, and village prejudice are exhibited without the least particle of alloy. The villagers were accustomed to be represented by their mayor in the transaction of village business; and as they had to choose one of themselves to represent them in the election of Senators, they naturally took the mayor again. The substitution of *scrutin d'arrondissement* for *scrutin de liste* may tend to influence the election of deputies in the same direction; but the difference in the extent to which the influence will operate is immeasurable. The mere fact that in the latter case the representative has to sit at Versailles for more than half the year, whereas in the former he has only to go to the neighbouring town for a couple of days, is enough to vitiate all inferences from one result to the other. The villager naturally chooses the man he knows best, and who is most concerned in village business, to represent him as a delegate who is to be absent for two days; while, when choosing a man to represent him as a deputy who must be absent six months, local convenience points exactly the opposite way. Again, an election in which 36,000 representatives are returned each by a single constituency can afford no guide to an election in which a few hundred representatives will be returned by these same 36,000 constituencies arranged in groups. Whatever difference there may be found to exist between the results of *scrutin d'arrondissement* and *scrutin de liste*, a very much greater difference will in all probability be discovered between the results of *scrutin d'arrondissement* and *scrutin de commune*. The indifference with which the elections of delegates have been received by all France outside the Ministry of the Interior is a pretty fair sign of the estimate in which their action on the course of events is held by the nation. Frenchmen have a remarkable gift of seeming careless about the affairs which most concern them; but even they will hardly show the same contempt for the process which is to create the Chamber of Deputies as they have shown for the process which is to create the Senate.

PARLIAMENT AND THE PUBLIC ACCOUNTS.

THERE are probably few persons unconnected with Parliament or with office who understand the machinery by which the House of Commons controls the national expenditure. Those who feel a laudable curiosity on the subject may derive much special information from an article in the current number of the *Quarterly Review*. If it were desirable and lawful to pry into the secrets of anonymous publication, it would probably not be difficult to discover the author. He is evidently a member of Parliament who has taken a warm interest in his present subject; he is possibly one of the Committee of Public Accounts; and his personal acquaintances can scarcely fail to be aware of the special irritation with which he regards an irregularity which occurred fifteen years ago. At that time Sir C. BARRY, the celebrated architect of the Houses of Parliament, was found to have expended more than 20,000*l.* on repairs and decorations without any official authority but his own. If he had applied to the Board of Works he might probably, without violation of propriety, have done the same work at the same expense. It was undoubtedly an error to have dispensed with superior sanction; but the persistency with which the conscientious economist of the *Quarterly* recurs again and again to the misadventure is an amusing illustration of the valuable quality of technical or professional earnestness. Teachers and lecturers on special topics are divided into two classes. The more popular section combine with practised literary aptitude the knack of mastering for an occasion the details of an unfamiliar subject; but more trustworthy information is obtained from instructors, like the *Quarterly* Reviewer, who are evidently communicating a part of their own ample store of practical knowledge. It would be unreasonable to complain of the absence of the rare faculty of imagination or sympathy which enables the professor to place himself apart from his subject, or to realize to himself the position of the student. Members of Parliament who already know something of the machinery of public accounts will best appreciate an explanation of mysteries which may have puzzled their early experience.

Strict regularity in the control and audit of expenditure perhaps assumes almost exaggerated importance in the estimation of those who have had much to do with finance. A lax system of keeping accounts is found in practice to facilitate peculation and waste; but no man and no State was ever made richer by the most elaborate system of double entry. The primitive operation of disbursing on every occasion the smallest possible sums from a hoard of coin might serve all the purposes of administrative frugality. ELIZABETH and FREDERICK the GREAT needed no House of Commons to strengthen their instinctive aversion to parting with money; but the complicated transactions of a modern State would furnish numerous opportunities of waste and possibilities of malversation if the strictest responsibility were not enforced on those who receive and spend the public revenue. The Reviewer disposes summarily of the popular belief that any immediate saving results from the formal discussion of the Estimates in the House. It appears that, in ten years ending with 1875, the votes were only reduced by about thirty thousand pounds on the whole; and these petty reductions were for the most part voluntary on the part of the Government. Even the legend of JOSEPH HUME's parsimonious exploits collapses on investigation, like almost all other historical legends. It seems that the typical economist in his later years often complacently reminded his friends that he had caused a reduction of the army and a saving of a million in 1823. The army and the military estimates were in fact increased in that year; and a reduction in 1822 was announced by the Government on the first night of the Session. A Parliament which owes its long possession of supreme power to the wise moderation with which it has confined itself to its proper functions cannot seriously disturb the calculations of the Executive Government. The House of Commons virtually appoints the Chancellor of the Exchequer, and it must either trust him or supersede him. It is impossible to overrule the decision of the departments on the cost of the various branches of the public service. Mr. COBDEN and some of his followers have at different times proposed to put the nation on an allowance, by requiring the Government to keep the expenditure within a limit to be arbitrarily fixed by the House of Commons. A ruder scheme for crippling the public service and abolishing Ministerial

responsibility has never been suggested; but its apologists may, if they think fit, quote in their defence the example of Mr. PERCEVAL. In an important crisis of the Peninsular War, the most incapable of Prime Ministers warned Lord WELLINGTON that he must not exceed the sum which had been voted by Parliament for the conduct of the war.

The most efficient check on administrative extravagance is exercised by the Committee of Public Accounts which has sat regularly since 1861. "It is this most admirable "addition to our political fabric which justifies the asser- "tion made at the opening of this essay, that the House of "Commons exercises a satisfactory and vigilant control "over the public expenditure." The duties of the Committee necessarily relate in great measure to forms and matters of detail. The Treasury, which by law and custom controls the expenditure of all the departments, habitually seeks unnecessary outlay. It probably derives valuable support from the authority of the Committee, which keeps watch over all the public accounts. Since its first institution the Committee has the credit of "the rearrangement "of the Empire's financial system upon the most approved "method, and the subjection of that whole system to a "complete and independent audit." The minute nature of some of the functions of the Committee is exemplified in its consideration of the question whether a torpedo ought to be charged to the accounts of the army or the navy. As a naturalist includes bats in the class of quadrupeds, so the Committee after long reflection assigned the amphibious machine, or rather its cost, to the military accounts. Only an enthusiast in book-keeping would believe that either saving or profit resulted in this instance from the deliberations of the Committee; but the anxious taxpayer may derive consolation from the knowledge that in the administrative universe not even a torpedo is overlooked. The only regret which weighs on the mind of the Reviewer is that there was no Committee of Public Accounts when Sir C. BARRY perpetrated his unauthorized expenditure. Similar eccentricities have now become impossible as well as shocking.

One of the chief difficulties which beset the Treasury and the Legislature is the more or less prevalent tendency to apply to one purpose of a department money voted for another object. It constantly happens that savings, as they are called, occur in the course of the year, because circumstances have prevented or delayed a work for which funds had been provided. If the outlay is only postponed, the money must be voted again in another year; and therefore the saving is only imaginary. Until lately savings were often transferred to the supply of deficiencies in the same department, as when, in 1860, 100,000*l.* voted for Dockyard works at Portsmouth was divided among Whitehall, Hong Kong, and Malta. A partial remedy has been provided for the alleged evil by compelling every department to pay annually into the Exchequer all its cash in hand. The consent of the Treasury is required to all diversions of money from its original purpose; and, finally, the transaction must be ratified by the vote of the House of Commons. Unfortunately, it is found that in systems of national book-keeping, as in all other forms of human activity, the Scylla on one side is balanced by a Charybdis on the other. Deprived of the power of applying superfluous receipts to deficiencies, the departments have resorted to the practice of drawing up their estimates so as to cover all probable contingencies. "Acting thus, the Board of Works has "made excess demands amounting in five years to con- "siderably over 1,000,000*l.* The injury of a million's "worth of unnecessary taxation was thereby inflicted on "the community." This operation also has happily two sides. A community may be incommoded, but scarcely ruined, by the payment of its debts, which is equivalent to an investment of public money at 3½ per cent. The most approved sect of financiers is never tired of expatiating on the propriety of reducing the National Debt. The Board of Works appears to have promoted this desirable object to the not inconsiderable amount of 200,000*l.* a year. The ears which the reapers let fall are gathered by the gleaners behind them. Nevertheless the Committee of Public Accounts has been tempted by the result of the experiment to relax something of the stringency of its principles. It now recommends that, within certain limits, the Board of Works should be allowed to apply savings to payment of deficiencies. In England the employment of savings only affects the accounts of the year. No such anomaly can occur under the supervision of the House of Commons as the accumulation by the Prussian or the German Government of large sums which are reserved for unforeseen contingencies. On the whole, it appears that the management of the public accounts may be regarded with confidence and satisfaction.

THE AMERICAN AMNESTY DEBATE.

AN old debate and division in the American House of Representatives related, like other political movements of the present time, rather to the PRESIDENT's election than to the ostensible issue. A Democratic member proposed to abolish the few remaining exceptions to the amnesty by which nearly all the Confederate functionaries have already profited. Mr. BLAINE, on behalf of the Republicans, moved amendments imposing an oath of allegiance as a condition of amnesty, and excluding Mr. JEFFERSON DAVIS from the benefit of the measure. The original Resolution was carried by a large majority; but it failed to obtain the two-thirds plurality of votes which was necessary to give it effect. It might have been supposed that the trial of strength and its result would have satisfied both parties; but Mr. BLAINE, for some reason which is difficult to understand, renewed the contest by a motion to reconsider the vote. The mere extension of the amnesty could have little practical importance. Mr. ALEXANDER STEPHENS, late Vice-President of the Confederacy, is a member of the House of Representatives; and many of his former colleagues hold places of dignity and trust. At the late appointment of the officers of the House the Republicans complained that a preference was given to candidates who had done civil or military service to the Confederacy. If any of those who are still excluded care to recover their rights under the Federal Constitution, there can be no reason why they should object to take the required oath. Mr. JEFFERSON DAVIS might regard a Resolution directed personally against himself rather as a compliment to his services and ability than as a punishment. The leader of the unsuccessful party in a great civil war suffers no extraordinary hardship in being prevented from holding office in the political community which he had at one time voluntarily repudiated. He may consider himself fortunate in being allowed without molestation to enjoy the respect and gratitude of his Southern fellow-citizens, who will value his services the more because he is subjected to the nominal punishment of special disabilities.

The discussion, which was probably raised for collateral and party purposes, illustrates the remarkable generosity and the admirable good sense with which the Northern Americans have treated their conquered adversaries. With the exception of two or three officers who were convicted on charges of cruelty to Federal prisoners, not a single Confederate has suffered death, and the PRESIDENT himself escaped with a short imprisonment. The exclusion of some of the Southern States for a time from the exercise of their constitutional functions, whether it was expedient or unnecessary, was essentially a political act, and not a penal proceeding. The Congress would probably have been still more lenient if Mr. ANDREW JOHNSON had not caused irritation by his attempt to anticipate the action of the Legislature. Since that time the traces of civil war have been almost obliterated by the readmission of the excluded States. The magnanimity which was displayed to beaten enemies was in a great measure attributable to the consciousness that there was little or nothing to forgive. The persistency with which the supporters of the Union denounced the Confederates as rebels was a well-meant effort to cultivate a becoming indignation. It was all the time understood that the assertion of a right which up to that period had scarcely been disputed was extremely unlike rebellion. At the beginning of the struggle Mr. LINCOLN and Mr. SEWARD publicly recognized the right of secession; nor has any tribunal up to the present time judicially declared that the claim of the seceding States was inconsistent with the Constitution. The South had a balance of legal authority on its side; and, on the other hand, the Northern States, whatever might be the merits of the legal question, were perfectly right in their determination to maintain the national unity by force. At a later period the question of slavery complicated the original quarrel; but it would have been absurd to blame the Confederates for defending a state of society and a kind of property which had been uniformly recognized by law and custom. By this time the

majority of Americans have probably learned to take pride in the wonderful military achievements of the South. The triumphs of the stronger combatant in the latter part of the war effaced the mortification which had been caused by many early failures. GRANT and SHERMAN might fairly be placed on the same level with LEE and JACKSON; and the final capture of Richmond avenged the numerous defeats which had been incurred by former invaders of Virginia. Another cause which disarmed resentment was the decisive character of the ultimate victory. After the capitulation of LEE there was never reason to fear the revival of the war; and the Southern States are at the present moment more loyally attached to the Union than at any period for twenty years before the Secession.

Mr. BLAINE is an eminent member of the Republican party and an expectant nominee for the Presidency. As Speaker of the House of Representatives during the last Congress he increased his Parliamentary reputation, and at present he may be regarded as the Republican leader in the House. It is not to be supposed that he attached imaginary importance to the continued exclusion from office of those Confederates who might profit by a general amnesty. His conduct in pressing his amendments against an adverse majority may perhaps be explained by his belief that the best chance for the Republicans is to raise in the ensuing contest the same issues on which they have held power during the last fifteen or sixteen years. In opposing a complete amnesty, Mr. BLAINE virtually admits that his party will find no support among the white citizens of the Southern States. There is no risk in alienating a professedly irreconcilable opponent; and ostentatious disregard to the feelings of the ex-Confederates may perhaps be the best mode of securing the favour of the coloured population. The Republicans of the North, having not yet succeeded in devising any new declaration of principles, may perhaps find that old-fashioned or obsolete professions divide their party the least. Mr. BLAINE'S skill in political tactics has lately been shown in the adroit Resolution by which he met the No-Popery appeals of his competitor, General GRANT. It was expedient to prove that the PRESIDENT was not the only Protestant champion; and nothing could be more popular or more harmless than a protest against Established Churches. It is but fair to give Mr. BLAINE credit for equally skilful calculation in his opposition to the relief of Mr. JEFFERSON DAVIS from disabilities. It is a felicity of the politicians of the United States that in their party struggles they play with counters, instead of staking national institutions and great social interests on the issue of the contest. The Republicans and Democrats take a warm interest in the approaching election of a President, but neither party cares whether resolutions are passed to annoy the Roman Catholics, or whether Mr. JEFFERSON DAVIS is considered eligible for the Senate. The Republicans perhaps hoped that their adversaries would court certain defeat by adopting a policy of inflation or of repudiation; but a respectable section of the Democrats have had the good sense to vote against a proposed repeal of the Act for resuming specie payments.

Congress is entirely at leisure to amuse itself with debates which involve no practical consequences. The House of Representatives will not respond to Mr. BRISTOW'S request for an increase of taxation, and it is not known that any legislative measures are required. The amnesty debate has excited unusual interest; and it is thought that the result may affect the decision on the only remaining matter which calls for settlement. A Committee of Congress lately visited Philadelphia to examine the preparations for the Exhibition; and on its return it has reported in favour of a moderate grant for which the undertakers have applied to Congress. The wealth and liberality or enterprise of American citizens are curiously illustrated by the reasons which have caused the application. It is understood that the people of Pennsylvania, who have already contributed the greater part of the necessary funds, would be both able and willing to provide the remainder, especially as it is nearly certain that the undertaking will be remunerative; but they justly think that the national character of the enterprise ought to receive formal recognition in the form of a pecuniary grant. The Government of the United States is itself an exhibitor on a large scale; so that, if general considerations of sentiment and policy were insufficient, there is a technical justification for the grant. It now appears that some of the Democrats are disposed, if they are defeated on the question of amnesty, to display their resentment by opposing the grant to the Exhibition. Southern politicians would perhaps contend that a Union in which they were denied an equal share ought not to receive a national commemoration. It may be hoped that the grant will be, after all, unanimously voted. All parties must be aware that the contest on the amnesty is in the nature of a sham fight for objects which are no longer important. After considering the claims of the Exhibition, Congress meditates an early prorogation, involving the postponement of business until the Presidential election has been decided in November. A country may be esteemed happy which can afford to representatives elected for a term of two years a vacation of a year and a half.

A TRAP FOR POLITICIANS.

AN American journalist has, it appears, been lately exercising an impertinent ingenuity in experimenting on the simplicity of English public men. Holding the post of London Correspondent of that great journal, the *New York World*, he felt it to be his duty at a dull season to furnish his employers with something that should be particularly spicy and original. The exclusive habits of an effete aristocracy probably threw difficulties in the way of his paying those domiciliary visits which are the usual resource of a hard-up reporter in his native land; and he may have found it exhausting to make up accounts of imaginary interviews from a cursory glimpse of umbrellas in the hall. The Correspondent, however, saw another opening. If he could not call, he could write, and the masters might be more civil than the flunkeys. So he sat down and addressed a letter to a considerable number of "gentlemen "eminent in politics, theology, and social science"—we may be sure that his sense of their eminence was expressed with sufficient enthusiasm—requesting "an expression of "their views" concerning the proposals made by President GRANT in a recent Message respecting education and the taxation of Church property. It is obvious that the task of instructing the Americans in the management of their own affairs is one of some delicacy for English politicians to undertake, and that it might be doubtful whether the most benevolent criticism would be received exactly in the spirit in which it was offered. But this was possibly part of the calculations of the astute Correspondent, who must have been well aware of the irritation and excitement which would be pretty sure to be produced among his sensitive countrymen by the receipt of a great budget of letters from English politicians, philosophers, and divines, candidly pointing out the weak points in American arrangements, and predicting the disastrous consequences which might reasonably be expected.

As it happened, the trap, though cleverly baited, did not produce quite so good a catch as was no doubt expected. Perhaps the net was laid a little too plainly in the sight of the birds. Mr. GLADSTONE might have been fairly reckoned on for an elaborate reply, but he was strangely brief. He "regretted that it was not in his power to say more on the "letter which the Correspondent had been good enough"—so kind of the Correspondent!—"to address to him"; and it may readily be believed that his regret was sincere, and that he would have gladly said more if the too obvious imprudence of doing so had not deterred him. So he resolved only to express the deep interest with which he regarded the questions now raised in America, as, if he were to "go further with respect to pending issues, it would "savour of prescription, and do harm rather than good." If he had stopped here he would at least have been consistent; but the impulse of letter-writing was too strong for him, and he could not refrain from adding that he feared "the "United States might suffer inconvenience from the extreme "liberty which I understand it now allows of throwing "land into mortmain for the purposes of private corporations"—which may be true enough, but smacks rather of the critical tone which he professed to be anxious to avoid. The Archbishop of CANTERBURY is equally civil, but more steadily uncommunicative. He "trusts" that the Correspondent "will understand my feelings in the matter when "I say that I do not consider that I can well enter on the "question of President GRANT'S recommendations for Con"gress," for the reason that "the circumstances of "the United States are such that it is extremely difficult "for any person who is not actually a citizen to express an "opinion." The ARCHBISHOP might perhaps have added that it was not his business to lecture foreign countries on their private affairs, especially as he has plenty of other

things to do, and would get no thanks for his pains. The Duke of ARGYLL, we are told, "somewhat complainingly" —he is the only grumbler, the rest all taking the application as if it was the most natural thing in the world that they should be asked to supply copy for a New York newspaper—remarks that "public men have enough to do here "with the difficulties of their own country without being "called upon to form decisive opinions on those affecting America." It must be confessed that there is much painful truth in this remark, and that an international exchange of opinion and advice would scarcely be likely to simplify or sweeten the conditions of political controversy, which are trying enough already. Mr. BRIGHT takes no offence at the inquisition to which he is subjected, but is cautious in letting out anything. He thinks "the discussion which is unavoidable on these great questions" had better go on for a while before he takes a hand in it, and that for him at this stage of the game "to seem to "wish to teach or to influence American opinion would be "something like an impertinence or an intrusion." The Archbishop of CANTERBURY having been consulted, the Correspondent also thought it only fair to take the opinion of the Positive hierarchy, and applied to Mr. FREDERIC HARRISON as the most approachable of the apostles. Mr. HARRISON, however, declined to say anything of the PRESIDENT'S policy as regards America, although he added that it would do very well for England. Archdeacon DENISON responded in his usual hearty way, that the Devil had broken loose in England, and that he supposed he was busy in America too, and that much the same "miserable folly" was talked about religious education in both countries. The Bishop of PETERBOROUGH and Mr. FORSTER were also tapped by the Correspondent, but nothing could be extracted from them except copies of an old sermon and a couple of speeches, which perhaps were not exactly the sort of thing wanted for New York.

On the whole, then, the Correspondent's experiment seems to have been, from his own point of view, rather a failure. He has not "drawn" his eminent men to the extent he hoped for; but that they should have allowed themselves to be drawn at all is somewhat strange. The natural course would have been to take no notice of impertinent letters asking questions which the writer had no right to ask. As to the Correspondent's mistake, it is more easily accounted for. Once in a way the eminent men have been a little on their guard; but it cannot be denied that the foolish facility with which some public men in this country are perpetually rushing into correspondence on all sorts of subjects with obscure, or perhaps even unknown, persons, is calculated to produce in the mind of foreigners the impression that English politicians are singularly weak on this side of their character. Mr. GLADSTONE, for instance, seems to spend a large part of his time in replying to inquiries as to whether he is a Jesuit in disguise, which he invariably answers in so mysterious a style as to confirm the worst suspicions of his catechists. Indeed it has been supposed that his retirement from public life is chiefly due to his engrossment in private correspondence. There are so many people who want to know his opinion on all kinds of questions by return of post, that he has no leisure for anything else, and of course in such a case the affairs of the country must give way to the inquisitiveness of the old women and crotchet-mongers who require advice. He writes grave counsel to people who ask whether they ought to wear mourning, and even stoops to remonstrate with such a print as *Reynolds's Newspaper* in regard to his own family affairs. His last offence in this line has been a letter to a young man in business, who prefers to be described as being "engaged in mercantile pursuits" to being called a clerk, and who, though the son of a clergyman, is apparently so ignorant as not to know the origin of the word "clerical." "Unfortunately," says Mr. GLADSTONE, "with respect to 'clerk' as with respect to 'art,' we seem "to want a new adjective." If Mr. GLADSTONE has nothing better to do, he might invent a few. It would be perhaps less a descent from his former antecedents than setting up as a sort of supplement to a Spelling Bee, and new adjectives would be very serviceable to his late party. Mr. BRIGHT, too, is understood to be equally overwhelmed with inquiries from busybodies, which he conscientiously endeavours to answer. Little scraps of letters from him, settling in a couple of offhand epithets the biggest questions, are every now and then given to the world, and are eagerly picked up and worshipped with much incense on the altar of the *Birmingham Post*. A question which is certainly not free from difficulty—that of the proper punishment for brutal fellows who beat their wives —has just been disposed of in this way by the Birmingham oracle. Mr. BRIGHT holds that, if a brutal husband suffers flogging in addition to imprisonment and hard labour, he will probably be more brutal when he returns to his wife, and that therefore he should be let off as mildly as possible in order to coax him into not murdering his family. It does not matter to Mr. BRIGHT that the Judges and other authorities on criminal matters, who necessarily speak with a sense of responsibility, and who are likely to know more about such questions than one who only frequents respectable and peace-loving society, have come to a very different conclusion as to the use of flogging, and hold that, even though a sound flogging may not have much effect in improving the moral character of a man who has already reached such a point of brutality as to jump on his wife, it will probably make him hesitate to expose his own person to a second castigation. A bully of this kind is always a coward, and beats a woman because he knows she cannot hit back; but if somebody else undertakes to hit back in her stead, it will make him shy of another encounter. There is surely something very petty and undignified in men of distinction in public life catching at every small chance of writing a little letter which will perhaps be advertised in the papers. It is impossible that serious questions can be adequately discussed in this way, and nothing can be more ridiculous than the affectation of dogmatic infallibility which is suggested by attempts to settle everything in an oracular half-dozen sentences, including the compliments of the season. Eminent men have surely a better use for their faculties than competing with the "Answers to Correspondents" in the kitchenmaids' weekly paper.

RAILWAYS AND SCENERY.

WHETHER a Bill for making a railway from Windermere to Ambleside, and thence through Rydal and Grasmere to Keswick, is or is not introduced in the coming Session, there is little doubt that some such application will be made in the course of a year or two. As regards scenery, it seems almost beyond the power of Railway Companies or hotel-keepers to kill the goose that lays the golden eggs for them. No matter how completely the characteristic qualities of a beautiful district may be destroyed, greater facilities of approach bring crowds of undiscerning travellers whose custom more than repays the loss of those who no longer care to look at a landscape which has been vulgarized past endurance. The change is not merely insufficient to outweigh in the minds of the new arrivals the fact that they can reach the scene of their holiday in a shorter time and with less inconvenience; it has for many of them positive attractions of its own. Monster hotels, with a *table-d'hôte* for every meal, and the opportunity of seeing everything in the society of a congenial crowd, are not drawbacks to be got over in consideration of counterbalancing advantages; they are, in themselves, additional recommendations. Cheerfulness takes the place of seclusion, and the heart of the tourist leaps within him as he recognizes the signs which tell him that he is not far from his kind. Even if there were no other reason for proposing to carry the railway beyond Windermere, the anxiety of innkeepers whom the successes of their better-placed rivals will not suffer to sleep would probably supply sufficient promoters. Besides this, there may be fresh mines discovered in the mountains on either side of the valley, so that the new line might hope to secure industrial as well as passenger traffic. With these possibilities in prospect, it is useless to put aside the question as one which is not likely to become practical. The application for a new railway through the very heart of the Lake country will certainly be made, and it will be well if Parliament has had time beforehand to consider what answer shall be given to it.

There was a time when consent would have been almost a foregone conclusion. Until the financial collapse of so many lines had proved that, even as regards the means of locomotion, the supply may sometimes exceed the demand, those who preached that the construction of railroads is not an end in itself had no chance of gaining a hearing. For the moment the world and all that is therein belonged to the engineer and the contractor, and any one who

dreamed of setting bounds to their efforts was set down as a reactionary dreamer. Financial embarrassments have at length given the objector a chance of being listened to. Amidst the disgust which accompanies bad investments, the position that a given district is not of necessity the happier for the possession of a railroad no longer seems a patent absurdity. It must be admitted indeed that the *primâ facie* argument is always on the side of railways. The villagers of the district through which it is proposed to carry one will dispose of their produce to greater advantage, by reason both of the increased facilities for sending it to market and of the increase in the number of those who will consume it on the spot. If, in addition to this, new kinds of industry are developed, and mines or factories spring up on the mountain-side or along the course of the streams, still larger commercial gains may be gathered in. Are there any considerations of sufficient force to outweigh these? In answer to this there are two things to be said. In the first place, the welfare of the particular district concerned is not the only point to be kept in view. It might conceivably be highly convenient to the inhabitants of Queen's Gate and Lancaster Gate to have a railway carried across the centre of Kensington Gardens. Mutual visits would be promoted, especially in bad weather, and a healthy competition might be created between the tradesmen in the two neighbourhoods. But no amount of local unanimity would avail anything against the general determination to retain Kensington Gardens for the benefit, not only of the bordering districts, but of the whole of London. If there is any part of Great Britain which can be said to be held in trust for the whole nation, it is the Lakes. It is the most generally accessible of the mountain districts, and notwithstanding all that has been done round Coniston and Ullswater, it is still the most unspoiled. What even mountain districts can become under certain combinations of industry and locomotion may be seen in parts of Yorkshire; and if the ascent of Helvellyn or Fairfield had to be begun amidst the smoke of chimneys, the roar of furnaces, and the shrieks of railway engines, the special charm of the Lake scenery would be gone. Much, no doubt, that is striking and beautiful would remain, for it would be long before even the most sanguine speculator would be tempted to reproduce the Rigi railroad on a smaller scale; but the seclusion and freshness of the valleys would be destroyed, and the enjoyment even of the mountains would be half neutralized by the annoyances clustered at their feet. We will not go the length of saying that there is no conceivable gain to the inhabitants of Rydal and Grasmere which would constitute a sufficient reason for depriving Englishmen of this means of escape from the irritating surroundings of town life, and especially of town life as it exists in the manufacturing districts, but the case made out ought to be one of very unusual strength. As a matter of fact, there is no ground to suppose that any case at all can be made out. The conversion of mountain valleys into theatres of mining or manufacturing industry may be a benefit to the country generally or to mankind, but it is a benefit which is usually conferred at the sacrifice of some of the comfort of the inhabitants. The question is not, therefore, whether the interests of the people of the Lake country are to be subordinated to the interests of those who visit it in their holidays. It is whether the interests of those who wish to make money out of the Lake country ought to be treated as paramount over those of other classes. There are circumstances, no doubt, which might make it necessary to carry on the railway from Windermere; but these circumstances should be strictly investigated and severely judged. The creation of another valley bristling with chimneys and machinery would be but a poor compensation for the loss of one of the few districts left in England in which really grand scenery is still uninjured by man. Of the first-kind of spectacle Yorkshire and South Wales have examples enough to offer. Of the last the number is now too small to make the destruction of any one of them a light matter.

It is not merely the substitution of one mode of locomotion for another that is involved in the extension of railways in the Lakes. If nothing but the conveyance of passengers were concerned, it might be possible so to construct the line as to prevent it from greatly disfiguring the country through which it passed. Much of the injury which has been inflicted in this way has been due not to the fact that a railway has been made so much as to the fact that it has been made in a particular way. A little deviation from the course actually taken, a little additional outlay in making a viaduct or embankment less conspicuous, or a bridge less ungraceful, even the simple expedient of planting an ugly wall with creepers, or hiding it with fast-growing trees, would often have made an immense difference. There has been great and culpable carelessness in this respect on the part of those have had the power to say whether a railway shall be made or not. It ought long ago to have been made the duty of some department of the Government to see that, wherever the Legislature is asked to confer additional powers of taking land, no needless injury shall be done to the scenery of the district through which the Company applying for these powers proposes to carry their line. Even in the absence of such a department, a Parliamentary Committee might insist on exacting proper security against the needless disfigurement of so exceptional a district as the Lakes. But in this case the railway is only a small part of the danger to be feared. The landowners in the interior of the Lake country are but human. They have their expenses, their embarrassments, their natural desires to increase their income or to lay up capital for their families; and if a railway is brought to their doors, it is certain that some of them will be induced to test the contents of the ground they own, in the hope that it may prove as rich in mineral wealth as the ground on the outskirts of the district has already proved. If it is urged that when this time arrives it will be soon enough to inquire how the destruction, so far as natural beauty is concerned, of a district in which, though it be not national property, the nation has a certain intelligible interest, can be prevented, it is enough to say that it will then be too late. Parliament must have greatly changed its nature before it interferes to hinder a landlord from doing what he will with his own land. If a man has a railway at his door there is no force, at least none that is likely to be brought into play, strong enough to prevent him from opening a mine in his field. Indeed, as the law stands now, there is no force strong enough to prevent him from so polluting the stream that flows through his land that it becomes loathsome alike to sight and taste. These things he can do without asking Parliament to help him, and with a reasonable certainty that Parliament, even if asked, will do nothing to hinder him. But so long as there is no railroad nearer than Windermere, Rydal Water is not likely to be invaded by either mines or mills, and as a railway cannot be made without the aid of Parliament, it is at this point that obstructives can most conveniently take their stand. We have guarded ourselves against being supposed to say that no more railways ought to be made in the Lake country. It is enough for our purpose if it is conceded that no more ought to be made without careful inquiry, without full consideration of the weighty arguments against their extension in this particular district, and without a preliminary recognition that a very much more imperative case ought to be made out for their prohibition in this particular district than in almost any other. So far as is yet known, no advantage that we do not already possess can be secured by prolonging the railway beyond Windermere; whereas it is evident that against any gain that may be realized by such prolongation must be set certainly the partial, and possibly the entire, destruction of scenes of natural beauty, and, by comparison, of unbroken solitude, which can never be reproduced. In the present condition of England this argument ought to have a strong influence on the Legislature which has to decide the question.

MEN OF THE WORLD.

THAT "the world is too much with us" is no doubt true, but in spite of our devotion to material things, very few of us acquire the first rudiments of the great art of living in the world. We quit life in lamentable ignorance of its simplest laws, and without even understanding the causes of our constant failure. What is called the wisdom of our ancestors seems to be here of very little avail, nor are there any pages of history which repeat themselves with such certain punctuality as those that record the persistent neglect of the most simple and enduring conditions of life. Men and women appear to acquaint themselves with the blunders of those who have gone before them, for no other end than that they may be able to commit them again; and this truth is now so widely recognized that we have invented a particular phrase to characterize the few who exhibit a better knowledge of the practical rules which govern existence. Men of the world

are, in fact, men who understand how to adjust their lives to the circumstances that surround and control them. They possess in a high degree that genius for the art of living which is so strangely denied to the greater number of their fellows, and they have the patience to study with due attention the facts which most men deem too simple and obvious for consideration. And although we may all claim to be men of this world, in so far as we have no present access to any other, there are but very few who possess the qualifications which give to the privileged class its special distinction. The majority of men need more than a life's experience to determine the exact balance between possibility and desire, whereas the man of the world, endowed with the art of living, leaps at once to the conclusion, and is prudent without the long education of failure. He is not a philosopher, because he has no theory to support or expound, nor has he the temper of those religious enthusiasts who look forward to some future recompense for present ills. On the contrary, his constant endeavour is to show by example that life may be endured without protest or rebellion, and to prove by patient acceptance of what is unalterable that the antagonism between man and his fate is not so bitter as others suppose. Taken in this highest sense, therefore, the term does not imply any kind of reproach. To do our duty in that state of life unto which it has pleased God to call us is indeed enjoined by the Catechism, and the man of the world only enlarges this precept of the Church in striving to make himself as much at home as possible on the earth on which he finds himself. Nor is it extraordinary that a person so gifted should be looked up to with respect, even by those who are cast in a very different mould. The most ideal beings are occasionally arrested by the inert force of dull facts, and in such straits they are naturally willing enough to seek aid from others who are well informed in material things, and to render a certain amount of homage to the man who, not being "above his place" in the scheme of creation, keeps an unshaken course by dint of a grave reserve of imagination and desire.

But even the soundest creed may be travestied, and the principles by which men of the world regulate their lives are specially susceptible of caricature. Among those who ape the distinction without possessing the qualities implied by the title two varieties have always been prominent. The first consists of persons who make a very little world of their own and then pride themselves upon understanding its conditions. They commit the original sin of mistaking Pentonville or Belgravia for the universe, and assiduously cultivate local wisdom which becomes the veriest folly when pushed beyond the narrow limits of their domain. They suppose that existence is depend[illegible] upon the due observance of the most trivial social rules, and they find in a reverent obedience to the latest etiquette a sufficient cure for all the maladies that overtake the soul. It makes but little difference in the essential character of this type whether it is found in the "upper ten" or the lower millions. In either case the pigmy individuality is about the same size, and whether it dictates the laws of life to the drawing-room or the kitchen matters absolutely nothing. With such a person the man of the world is often confused. The larger outlook over life is not distinguished from the quick insight into trivialities, and it is rashly concluded that, because a man knows exactly the most appropriate costume for the skating rink or a garden party, he therefore understands the eternal conditions of human existence. This type presents, of course, the extreme form of caricature. The second variety affects a more plausible appearance, and the radical imposture is not quite so easy of detection. He is not only a practical man, but a philosopher, and he is able to formulate the results of his experience for the benefit of his fellow-creatures. He professes to have endured in his time all the trials that overtake the most ideal beings, and to have collected a series of maxims which are to serve as a sure defence against all attacks of the rebellious spirit. No problems of the soul are deemed too great for his drivelling analysis. Life in its highest aspect is only the expression of a few trite proverbs which may be committed to memory like the rules in a Latin grammar. Once learned, these epigrammatic guides to conduct ought to serve for all the needs of human existence, and the man who cannot thrust his life into the narrow dimensions of this diminutive philosophy is a fool or a madman. It would of course render existence very easy if its profoundest principles could be set to the sort of droning music in which the philosophic man of the world delights. The art of living could then be acquired like a recipe for a pudding, and failure would always be attributable to the omission of some particular ingredient.

Within the limits of a single play Shakspeare has admirably personified these three varieties of human character. It was necessary for the full expression of Hamlet's nature that he should be brought into contact with the exponents of practical ideas, and accordingly the dramatist, with the utmost refinement of art, has relieved his essential unworldliness against different depths of the worldly character. So refined indeed is the first contrast that it holds within it an element of harmony. Between Hamlet and Horatio there is a close and enduring friendship—a friendship which is in truth based upon the most profound differences of nature. Horatio is the true type of the man of the world, but his worldliness is so noble and unseeking that it contrasts, without conflicting, with Hamlet's ideal vision. Hamlet is in himself the expression in art of the artistic attitude towards actual facts. He is no nearer to the world than a spectator of a play to the life which it symbolizes, and he is as incapable of carrying on the practical drama of life as the same spectator, if suddenly summoned from his place in the audience, would be of completing the unfinished action of the stage. His constant endeavour is to put himself outside the circumstances with which he is brought into contact, and to get far enough away from them to be able to measure their value and determine their drift. This, which he believes to be the necessary preliminary to action, renders him at last entirely powerless to act. At each step he is only carried further from the real world, and though his vision of it grows in distinctness, he becomes only the more incapable of altering or reshaping the fixed lines of the picture which rises before him. It is true that his fate combines with his character to keep him thus a mere spectator of actual life. With happier fortunes he might have gradually bridged over the gulf that separated him from the reality, and he had already by his love for Ophelia attempted to find an ideal pathway that should lead him beyond the confines of mere speculation; but on the very threshold of the new realm he is met by a crime that makes him shrink back with double recoil, while at the same time it compels him to terrible action. Side by side with this character we find the steadfast nobility of Horatio. Without a touch of what is sordid or selfish he nevertheless possesses the unfaltering grasp of facts and the sober reserve of feeling which mark the true man of the world. He bears himself gravely, but without cynicism or bitterness, as a man who has tutored himself to moderate desire by instinctive knowledge of the little that life has to offer. Shakspeare takes the earliest opportunity of showing the different realms which these two men inhabit, and their natural remoteness from one another. Horatio's incredulity about the Ghost, his terror in its presence, and his final array of precedents for such supernatural intervention are entirely characteristic of a man strong in contact with all the shapes of earth, but weak as soon as he ceases to feel the firm ground beneath his feet. And Shakspeare has made Hamlet both feel and express the support which such a character gives him. The speech in which he declares his admiration of Horatio may be taken to sum up the qualities that belong to the man of the world:—

> For thou hast been
> As one, in suffering all, that suffers nothing,
> A man that fortune's buffets and rewards
> Hast ta'en with equal thanks. And blest are those
> Whose blood and judgment are so well commingled,
> That they are not a pipe for fortune's finger
> To sound what stop she please.

Those whose blood and judgment are so commingled are the only men fitted to grapple with life as it is. They are not lost in the trivialities of existence merely because they studiously limit their vision to what is possible, nor do they ever err so far as to mistake the petty rules of conduct for a divinely inspired philosophy.

Between Hamlet and Polonius the contrast is sharper and more abrupt. The man who could appreciate the worth and nobility of Horatio's character, notwithstanding its distance from his own, did not fail to detect the social charlatanism of the old courtier. Polonius is a type of the class of men who delight to translate a narrow wisdom into a still narrower philosophy. He holds a firm belief that the landmarks of human life are wise saws and trite proverbs, and his lamentable failure to understand all that lies beyond the trim garden of his own mind renders his philosophy, even at its highest point of wisdom, just a little short of the facts which it pretends to control. He begins by an endeavour to interpret the young Prince's nature. For a little while he indulges the belief that he knows both the source of the disease and its cure, and he gravely informs the King and Queen that he has discovered "the very cause of Hamlet's lunacy," proceeding afterwards, with a pompous decorum, to trace its growth through the different stages of sadness, fast, watching, weakness, and lightness. But, like all who suppose that practical wisdom is a mere store of neatly-garnered proverbs, Polonius is, throughout the whole drama, persistently at fault in his calculations. Notwithstanding his most laborious efforts to be wise, he is never in the centre of the situation, and is at last hurried out of life without even being permitted to indulge the kind of edifying death-bed scene that would so well have suited his ceremonious folly. He could have no part in the serious and awful climax towards which the drama was swiftly tending, and he is rightly despatched by the dramatist at the moment when he might have overheard things too great for his feeble soul to compass. But Shakspeare has reserved the most glaring contrast for the last. The pragmatic wisdom of Polonius has deceived many besides Claudius and the Queen, and his glib philosophy has been quoted with approval by all who suppose that "brevity is the soul of wit," and that the rules of life can be made a short lesson. Osric is a more evident caricature. He appears at a time when not even the true manhood of Horatio is of any avail to stem the fatal current of events, and when his precise triviality and elaborate devotion to fashionable etiquette cast a lurid light upon the principal action of the drama. Hamlet admirably hits off the qualities of the race of men who flutter upon the surface of society and pretend to a knowledge of the world. They have "got the tune of the time and outward habit of encounter; a kind of yesty collection which carries them through and through the most fanned and winnowed opinions; and do but blow them to their trial, the bubbles are out." Osric, in his antique costume, is perhaps scarcely recognizable by his fellows of the present day, who do not wear rapiers nor speak his particular dialect; but he is neither better nor worse than hundreds of every age who are accounted men of the world merely because they do not transgress the laws of the drawing-room. It is remarkable that Shakspeare has not endowed any of these characters with personal ambition. Horatio, Polonius,

and Osric have all an existence independent of the main action of the drama. They are not interested in the plot or its event, although they are prominent during its progress, and the contrast which they present with Hamlet is purely one of character uninfluenced by fortune. In other places Shakspeare has imaged for us men of the world whose control of facts is gained and exercised for private ends, and whose practical power is directed by ambition. Bolingbroke in *Richard II.*, and Octavius Cæsar in *Antony and Cleopatra*, are splendid examples of great power used with distinct purpose. But in *Hamlet* the dramatist has simply endeavoured to contrast differences of character without the antagonism which is begotten by opposing interests. Horatio was Hamlet's true friend to the last; Polonius was not less friendly in intent, and Osric's diminutive brain could not have held ambition.

SCIENCE AND MORALITY.

MR. AUBERON HERBERT has brought a sweeping indictment against men of science in these days which would perhaps scarcely require a serious answer if it stood by itself. It is important, however, as an indication of the mood and temper of a certain class of minds in regard to the course of modern science; and it may be well that scientific men should not ignore it, for it contains some degree of truth and warning. Mr. Herbert accuses modern science, and especially that branch of it which deals with physiology, of having practically repudiated all connexion with the moral side of civilization. The humour of science to-day, he says, is "to renounce all law higher than its own law, and all responsibility as to its influence, to adapt morality to its convenience, and to find an all-sufficient end in itself"; and this end, he suggests, is the gratification of a spirit of "fierce personal ambition," "the making of personal reputations." The question now is, as stated by Mr. Herbert, whether science is to exist for the world, or whether the world is to be counted as a huge field for scientific experiment. He pictures the men of science "undisturbed by knowledge or appreciation of what in its glorious history the human mind has thought and felt, with a faint pity for poet and prophet, for whom no science primers were written," giving themselves up in placid self-content to their special studies, "with the mental absorption of a child collecting his shells, or a Dutchman growing his tulips." The result has been that they have created around them "a moral chaos, the old landmarks and rules of life disappearing," and have heard on all sides "the cry of bewilderment from men and women," and yet they have done nothing to lighten the burden of the bewildered ones. And, looking into the future, Mr. Herbert sees ahead the "Nemesis of a suppressed life," "a race of men growing up with minds so far materialized that they can only conceive of the mechanical forces of society; their one cry of evangelization, public money and State patronage; their one literary ambition, the writing of another text-book; their one flight of fancy, a new method of getting rid of us when we are dead; their one system of conversion, repression; their one remedy for all social evils, the appointment of themselves as inspectors for life, independent of parish authorities." There is, we allow, some truth in this satire. Physical science is still comparatively in its infancy, and is not yet very closely associated with poetry, philosophy, or religion; and unfortunately the rude and arrogant tone which is occasionally adopted by some scientific teachers, not merely on their own subjects, but on others with which they have very little qualified to deal, no doubt tends to provoke the antagonism of sensitive and reverent minds. But the caricature is here exaggerated in a way that spoils its point, and betrays the inability of the caricaturist to appreciate the qualities of his subject. Mr. Herbert is known from his previous utterances to be not remarkable for the scientific precision of his language or the lucidity and coherence of his ideas; and nothing can be more natural than that he should fail to enter into the spirit of that kind of thought and knowledge which is based on cool research and cautious progress from fact to fact. In his bent of mind and way of looking at things the censor is completely opposed to the school which he attacks, and hence, while pointing out some of its defects, he is quite incapable of understanding its use and influence in other directions.

Mr. Herbert has, it seems, a special quarrel with the physiologists on the question of vivisection, and we need hardly say that to a great extent we should sympathize with him if we were sure of the truth of all the stories on the subject which have got about. The question, however, has been referred to a Royal Commission, which may soon be expected to report; and it is only reasonable to wait for the result of its inquiries before venturing on a decisive judgment. This is a point on which it may possibly prove that some of the men of science have been led astray; but, even admitting this, it is absurd to make it the ground of a sweeping accusation that science has renounced morality, and is, in fact, engaged in undermining it. It is only those who misinterpret the results of physical research who are thrown into a panic by them, and if these persons find themselves plunged into bewilderment and moral chaos, it can only be because they have previously had an insecure foundation for their opinions, or have misconceived the grounds on which they rested. What scientific study does is to clear the mind of cobwebs, to enable it to distinguish between facts and speculations, to teach cautious and scrupulous accuracy in research, and to inspire a more vivid and real interest in the processes of life in which we have a part. There is nothing here to disturb morality; but, on the contrary, there is much to strengthen and elevate it, by making men more thoughtful, and opening their eyes to aspects of the world to which they have hitherto been blind. Even on this question of humanity to animals it is not difficult to see how much the increasing interest which is taken in the scientific study of nature has done to check cruelty by simply teaching consideration. Thoughtless stupidity is at the bottom of nearly all cruelty to animals, as well as to man. At first an animal is regarded as a soulless brute, closely akin to a log or a stone, which has been provided for man's use in any way he chooses, and on which any tender consideration would be thrown away. The idea of any obligations on the part of men towards the brutes similar to those between man and his own kind is of slow and gradual growth. It is only when people begin to think what animals are, of their delicate and complex organization and sentient capacities, so closely akin in many respects to those of man, that any scruples about ill-using them spring up. We agree with Mr. Herbert that in such matters legislation can only help us within comparatively narrow limits, though it serves to mark the standard which is gradually being advanced. It is not so much by legal penalties as by the spread of education and intelligence that manners have been softened in regard to the treatment of animals; and it is by such means that the process will continue to be carried on. There is nothing which tends so much to shake up men's minds, to make them think what they are about, and what are their relations to things and creatures around them, as scientific research; and at the same time it imparts an interest to the animal kingdom beyond the gross instincts of mere sport. It is dulness of mind and want of imagination which chiefly lead men to take pleasure in putting animals to pain for purposes of sport. They must have some object in view in order to stimulate the exercise of their skill or courage, and they take the readiest to hand, without troubling themselves to think of the consequences to the victims. Bull-baiting, ratting, cock-fighting, badger-drawing have successively come under the ban of intelligent opinion. Nowadays almost the rudest Englishman can hardly help feeling instinctively uncomfortable if he passes a driver who is brutally lashing a horse, or a drover worrying an ox with his goad. It is not too much to hope that in the course of years the thoughtlessness which still permits cruelty in other directions will also give way to a humane consideration; and the more physical science becomes a popular study, the more likely is this to be the case.

Mr. Herbert explains that he has selected the men of science for attack in preference to the perpetrators of the commoner kinds of cruelty, because the former are "a greater force in the future of society" than the small boy who fishes with a worm in the Serpentine, or even the distinguished persons who wound and kill elephants for brief personal gratification; and he accordingly assumes that the apparent patronage of cruelty by eminent men of science is calculated to set it up in a respectable position, and to encourage the idea that man has only to think of his own convenience in dealing with animals. It seems to us that this is a very imperfect view of the distinction between the more vulgar forms of cruelty and the pain which is inflicted in scientific experiments of an honest kind; and Sir Henry Thompson's reply also leads to some confusion on the subject, for he discriminates in favour of the latter on the double ground that the amount of pain—we suppose he means in the aggregate—inflicted in experiments is infinitely less than in sport, and that it is inflicted, not for amusement, but for a high and useful purpose. It is on the latter ground alone that science can take its stand, and the more the question is simplified the easier it will be to form a judgment on it. For the reasons before mentioned, we have no intention of at present discussing this question: but we may point out that an important advance is made when the question is ripe for discussion, and when the issues are definitely framed. It would at least be a gain on the present state of things to have it laid down as a fixed principle that pain cannot be justifiably inflicted on animals except when it can be clearly shown to serve an important and necessary end which cannot otherwise be attained. Whether or not scientific vivisection comes within this category we are not just now concerned to argue; but it is evident that the recognition of this principle as the rule of conduct would go a long way to remove all doubt as to cruelties which are produced by sheer stupidity and thoughtlessness. When the point has been reached that a reason, and a good reason, must be given, rational humanity has made considerable progress, and we may hopefully look forward to the ultimate triumph of intelligent reflection. Here, again, physical science does good in putting a direct question in a plain manner, and cutting the ground from under vague phrases and hypocritical pretensions. In attacking the practices of cruelty, it is surely more reasonable to begin by exposing those which have no valid excuse at all than those which have at least a plausible excuse, though it may not approve itself to every human conscience. Whether vivisection, under careful regulation, is permissible to any extent or for any purpose, is a question on which people may hold different opinions; but it is only people who do not think at all who can have any doubt as to the propriety of such brutalities as otter hunting and some other sports, as well as of various ways of killing for food, in which torture is wantonly inflicted in order to gratify a caprice of the palate. Nothing can be more unfair in such a controversy than to ignore what has been done by science to check the spread of disease, and to alleviate human agony.

Those who wish to promote the humanizing process which has already made such good progress should remember how much has already been due to scientific enlightenment; while, on the other hand, it may be hoped that men of science will be more delicate in handling sensitive feelings and respectable prejudices than they have occasionally shown themselves in bringing forward such subjects as vivisection, cremation, and some others, before the public.

PUBLIC SPEAKING.

THE United Law Students' Society has passed a resolution that "the importance to a young practitioner of acquiring the art of effective speaking cannot be valued too highly, and that such acquisition should be deemed an essential part of a legal education." This resolution may remind us of the old story of a rich, vulgar mother who, being told by a music-master that he found her daughter had not got a talent for music, answered, "Then I insist upon it that you goes and buys her one." It is much easier to show that the faculty of extempore speaking is useful to lawyers than to explain how it may be acquired. Young Englishmen, for the most part, are shy and awkward in addressing even a small and friendly audience, and can only with great difficulty make themselves heard and understood. It is one thing to supply words, and another to teach how to utter them; and, although rules and practice can do little for the former, they may help greatly towards the latter. At schools and colleges generally, and also at the proposed "School of Law," when it exists, much help might be given towards acquiring correct habits of reading and speaking. At most schools there is an annual "speech-day," and select passages of prose or poetry, scenes of plays, and even entire plays, are recited from memory on these occasions. Some parents perhaps think that time is wasted in getting up these performances, but that is a mistake. If the passages are well chosen, and if they are carefully studied and well delivered, there cannot be a more useful exercise. The mind is stored, and the body is trained. But if such exercise is useful, why should there be very little of it at school and none at all at college? At some colleges, indeed, there are prizes for reading in chapel, and these prizes are not always given for regular attendance at chapel, although that mode of selection has been sometimes adopted. But objection may be fairly taken to making the lessons for the day a mere vocal exercise, besides that the occasion is unsuitable for correcting faults and too brief for practice. There are, or were, in some colleges "declamations," chiefly formal, and, although the name of "wrangler" still survives at Cambridge, the thing which it represented has long since perished. Both at Cambridge and at the Inns of Court disputations which at one time were real, first became formal and then were abolished. Within twenty years the practice was for legal students to pass after dinner in Hall before the benchers of their Inn, and read from a paper put into their hands a sentence asserting or denying a woman's right under particular circumstances to dower. Almost within living memory an "Act" was kept at Cambridge in nearly the same way. The disputant was expected to repeat correctly one out of three propositions from Newton's *Principia*, and as the "Moderator" kindly repeated the same question until he got the proper answer, you were sure to come right at last, which was a great comfort to nervous gentlemen. This was surely the mildest form of "exercise" ever invented, and the usual compliment, "Bene et recte respondisti Domine," was cheaply earned. In course of time, perhaps, the absurdity of the performance became too much for the actors in it, and at any rate it was abolished, and thereby Cambridge confessed its inability to do that which the Law Students' Society now desires some "School of Law" to do—that is, to teach young men to discuss some question orally. Whether the question belongs to law, physical science, or divinity, matters little. You may easily put knowledge into a youth, while it shall be almost insuperably difficult to get any of it out of him. In a class there would probably be one or two talkers and many listeners, and the teacher in despair of getting the class generally to talk to him, would fill up the time by himself talking to the class. If this is a correct estimate of the prospects of what may be called a debating class, it seems to follow that improvement in debating power can only be gained by practice in voluntary associations where every member may speak in turn if he can, and no one is obliged to listen longer than he likes. The Law Students' Society exists, as we understand, for this among other purposes, and other Societies for the same purpose have long existed in which legal, political, and other questions are debated either with or without the illumination of tobacco, as the constitutions of the Societies, or of their members, may require. Although the Hall of Lyon's Inn is no longer available for this purpose, yet rooms, and speakers, and even listeners, may be found, and it may be doubted whether those who cannot learn to speak in this way could be taught by professors in a "School of Law." Many learned lawyers, and many useful members of Parliament, never acquire the art of speaking half-a-dozen sentences without painful effort on the part both of themselves and of those whom they address. Even perfect knowledge of their subject will not give confidence or facility, and it seems impossible to suggest any plan by which they could have been taught in youth to do that which at mature age is so hopelessly beyond them.

It may interest law students to know what a clergyman has to say as to the difficulties of extempore speaking and the means of overcoming it. In a little book called *The Speaker at Home* (George Bell and Sons), the Rev. J. J. Halcombe starts with the assumption that, for gaining the attention of a congregation, speaking is preferable to reading sermons. One reason for this is that, as Archbishop Whately has pointed out, the audience view the speaker as a swimmer supported by his own exertions, and if he escapes drowning, they admire his performance, especially if they feel that they could not do the same. But if the swimmer were supported by corks, the spectators would withdraw their interest, and an audience would be similarly affected by the appearance of a manuscript. The young clergyman is encouraged to attempt to swim without corks by several considerations. He may perhaps conclude that he has not sufficient fluency of speech from the fact of feeling a defect in ordinary conversation. But many successful orators have felt this same defect, and with some it has never been surmounted. Another apprehension is that of failure of subject-matter; but the clergyman is bidden to observe that the lawyer has seldom much difficulty in speaking, because he has always fresh facts and fresh arguments to convey to his hearers. This ought to encourage the lawyers. But a beginner may fear that he has no power of arranging his ideas in a clear argument, and it is allowed that the majority of men have no definite ideas at all, and this aspirant may be among the number. He cannot possibly convey to others that which he has not clearly conceived himself. But if he desires to acquire clearness of mind, he will have recourse to writing. We may remark that, in following this sensible advice, he will imitate some of the best speakers, who have written their speeches, not once only, but many times, although they never spoke them exactly as they were written. The aspirant who has overcome these apprehensions and begun to speak will get into the middle of a sentence and find himself unable to finish it grammatically. Under these circumstances he had better go on daringly to the end; and it is probably true that in speaking, as in other undertakings, boldness is one of the best qualities a man can have. The title of this little book seems to suggest that a man can learn to speak at home, but we do not think much of the plan of hearing oneself paraphrase a passage of Hume or Macaulay. A book addressed to young clergymen could hardly assume that they were married, but we may venture to remark that a wife would be better than no audience at all, although perhaps it scarcely comes within a wife's marriage vow to listen to her husband's speeches. The best plan is for a few young men to agree to speak and listen to one another in turn, or, in other words, to form a debating club. The advice often given to beginners to speak on every possible occasion would produce alarming results if oratory were generally cultivated. An eminent barrister used to say that his own rule was to make at least one speech on every circuit for himself, and this did him good and did nobody else harm, except that he perhaps wasted a little public time. The curate is advised to practise in lecturing to school classes, and when he first attempts to speak in the pulpit he should use a written sermon, with an extempore conclusion. It is suggested that the congregation may, under this arrangement, regard the contingency of his "breaking down" with composure. He may also adopt the plan of writing and learning by rote his peroration, which is always a safe, and generally an effective, plan. Dr. Chalmers practised this method largely when he spoke elsewhere than in the pulpit, but his sermons were mostly written. Macready records in his Diary how he composed and committed to memory speeches some of which did not come off.

Perhaps the best summary of what to do, and how to do it, is given in the words which this writer quotes from Cicero:—"Invenire quid dicas, inventa disponere, deinde ornare verbis, post memoriæ mandare, tum ad extremum agere ac pronuntiare." He probably did not mean that the whole speech must be committed to memory, but only the general scheme of it, and perhaps passages of special elaboration. This clerical commentator thinks that, "in the case of metaphor or simile," the power of memoriter speaking will be useful, as if a speaker does not wish to run the risk of getting hopelessly confused, he ought clearly to foresee where such figures of speech will lead him. The worst effect of this proceeding will be that which he predicts—namely, that the passage containing the metaphor or simile will be recited like a schoolboy's lesson, with an irresistibly ludicrous effect.

These suggestions are sensible as far as they go, but they rather confirm our original impression that a man must teach himself to speak, at least as regards finding and producing matter. As to management of voice and hands, there are many treatises, and some of them very absurd. The notion that one can learn to pronounce either one's own or any other language from a "pronouncing dictionary" seems unfounded. Young persons who commit to memory columns of "orthoepy" from one of these dictionaries deserve success in speaking, although we may doubt whether they will attain it. Left entirely to themselves, they would be quite as likely to get wrong in the orthoepical as in the orthographical division of the book. To learn tone and gesture from a manual is manifestly hopeless. But these may be taught either to an individual student or to a class, and systematic teaching on rational principles would be useful to clergymen, lawyers, and all others who have to speak, as well as to the great body of the public who have to listen. Sir Frederick Pollock told the Law Students' Society that he never had any instruction in speaking until long after he was called to the Bar, and then he owed it to the circumstance that

he happened to be a friend of Macready, who gave him a few simple rules. That accomplished actor probably understood his business too well to believe in manuals of elocution, and it may be usefully observed that his pupil Mr. Ryder equally undervalues what may be called "writing about" speaking. In reading, says Mr. Ryder in his *Ten Simple Rules*, "all answers to questions must be given in a different tone of voice to that of their interrogations." This may be compared to Macready's precept "to speak to the furthest person in the room." Such rules are easily understood and remembered, and may be practised without risk of going wrong. A person who had never heard either of them before, and who undertook to read, say, the familiar quarrel-scene between Brutus and Cassius at a Penny Reading, would enormously improve his delivery by attending to them. If it be said that people ought not to need to be told such obvious things as these, we answer that people do need it. But manuals generally attempt too much, and are apt to cause worse errors than they cure. We can hardly conceive a more ludicrous spectacle than that of an ambitious and self-confident youth who had instructed himself in oratory from a manual.

TRAÜ.

VISITORS to Spalato—and we will assume, at least in courtesy, that Spalato has visitors—should, if possible, not fail to pay a visit to Traü. To most readers the very name will doubtless be strange. Yet Tragurium is an old city, a city old enough to be named by Polybios, to say nothing of later Greek and Latin writers. As in countless other cases, many readers may have passed by the name without any notice at all; others may have turned to the map, and, having once found Tragurium, may have presently forgotten that Tragurium was anywhere recorded. The case may be different with those who carry on their studies so far as to have dealings with the Imperial topographer from whom we learn so much about the Dalmatian cities. In Constantine Porphyrogenitus the name of the city has got lengthened into Τετραγγούριον, and we are told that it was so called *διὰ τὸ εἶναι αὐτὸ μικρὸν δίκην ἀγγουρίου*. We are not ashamed to confess that the word *ἀγγουρίου* gave us no meaning whatever, and that we had to turn to our dictionary to find that *ἀγγούριον* means a water-melon. But where the point of likeness is between the town of Trau and a water-melon, and why the name should have been lengthened, so as to suggest, if anything, the notion of four water-melons, we are as much in the dark as before. Those therefore who have made acquaintance with the city in the shape of Τετραγγούριον will have a chance of keeping it in their minds. But with those who light only either on Tragurium or on Traü, it will most likely happen as most commonly happens with places which play no great part in general history. The name passes away as a mere name, till something happens to clothe it with a special meaning. Salona the parent and Spalato the child are names which never can become meaningless to any one who has a decent knowledge of the history of the world. But the name of Tragurium, Traü, will probably always be purely meaningless, save to those whom anything may have led to take a special interest in Dalmatian matters. Tragurium has a history—no place is without one—but its history is purely local and Dalmatian. As far as one can venture to judge, the great course of human affairs would have been much the same if Tragurium had never become a city. But there it stands, and, as it stands, its position, its buildings, even its local history, combine to give it no small interest. They make it no contemptible appendage even to the famous spots in its immediate neighbourhood. Whatever was its origin, Tragurium became a Roman town, and it was one of those places on the Dalmatian coast which so long and steadily clave to their allegiance to the Eastern Cæsars. As the Byzantine power declined, the town was disputed between the Kings of Hungary and the commonwealth of Venice, and once at least it is said to have felt the hand of Saracen plunderers. By each of the Christian powers by which it was disputed it was won and lost more than once, till it finally became Venetian in 1420. Perhaps the point of greatest interest in these dates is that Traü was a Hungarian possession at the time of the building of its cathedral church in the thirteenth century. It is said to have points of likeness to other great Hungarian churches of the same date.

The approach to Traü is a speaking commentary on the state of things in days when no one but the lord of a private fortress could be safe anywhere except within a walled town. The road from Spalato to Traü goes through Salona, through the heart of the ruined city, and keeps on alongside of the bay, with the water on one side and the mountains on the other. This road passes through the district of the *castelli*, forts with surrounding villages which various lords, spiritual and temporal, held by a feudal tenure of the Serene Republic. It was under the oligarchy of Venice as it was under the democracy of Athens. A private fortress in either city was unheard of; neither Dêmos nor the Council of Ten would for a moment have endured the existence of such towers as we still see at Rome and at Bologna. But in the outlying possessions of either commonwealth greater licence was allowed. Alkibiadês had his private forts in the Thracian Chersonêsos, and a string of Venetian nobles and subjects of the Republic were allowed to have their private forts along the shores of the bay of Salona. When at last we reach Traü, we see further how needful it was, even in the case of a walled town, to plant it in the position best suited for defence. Traü, now at least, belongs to the class of island cities. At the point where the large island of Bua comes nearest to the mainland, a small island lies between it and the shore, leaving only a narrow channel on each side, spanned in each case by a bridge. But the language of the Emperor who likens the city to a water-melon might suggest the idea that the site was once, not insular, but peninsular. Constantine places his Τετραγγούριον on a small island, but the small island has a neck like a bridge which joins it to the mainland (*μικρόν ἐστι νησίον ἐν τῇ θαλάσσῃ, ἔχον καὶ τράχηλον ὅσος τῆς γῆς στενώτατον δίκην γεφυρίου, ἐν ᾧ διέρχονται οἱ κατοικοῦντες ἐς τὸ αὐτὸ κάστρον*). This somewhat contradictory way of speaking sounds as if, as in the case of some other peninsular cities, a narrow isthmus had been cut through. In the Peutinger Table too, "Ragurio" is made distinctly peninsular. Now, however, at least the likeness of a bridge is exchanged for the reality; the island is an island, and on this island is built the main part of the city of Traü. A small part only spreads itself on to Bua, where it begins to climb the hills, though it goes up only a very little way, by paths almost as rugged as though they were in Montenegro. This outlying part, which contains two churches, may pass as a suburb, a *Peraia*; for Bua may reckon as a mainland when compared with the neighbouring islet, and the real mainland of Dalmatia seems to have been carefully avoided by the builders of Tragurium. The view in Wheler would give no one any idea of the size of Bua, any more than the Peutinger Table would give any idea of its position. But Wheler's view well brings out the relative positions of mainland, islet, and island, and it shows how strongly Traü was fortified in his day. Such a site as this was a valuable one in days when security was the main object; but it hardly tends to prosperity in modern times, and Tragurium must be reckoned among the cities whose day is past. While Spalato is putting on the likeness of a busy modern town, Traü has nothing to show but its ancient memories.

Traü, as we now see it, is indeed an old-world place. Owing to its peculiar position, the fashion of narrow streets, common to all the Dalmatian towns, is here carried to an extreme point. Indeed the crooked alleys through which the visitor has to thread his way, and the dark arches and vaults under which he has to pass, give the place a Turkish rather than a Venetian look. The explorer of Trau might almost fancy himself at Trebinje. One wonders how the Tragurians manage to live; it is only on the quay and in the open place by the cathedral that there seems room to breathe. Yet, uninviting as the streets of Trau are in their general effect, they are far from being void of objects of interest. As elsewhere in Dalmatia, we ever and anon light on ornamental doorways and windows. In Trau some of these show better forms than those of the familiar Venetian Gothic; one or two windows are in style, whatever they may be in date, genuine Romanesque. Of the Venetian defences some considerable portions remain; close by the water, at the south-western point of the smaller island, is a castle bearing the badge of St. Mark, whose chief feature is a tower of irregular octagonal shape, singularly and ingeniously vaulted within. Of civic buildings the chief is the Venetian *loggia*, now dirty and uncared for. But it still keeps at its east end what at first sight seems like an altar, dedicated, not to the Evangelist, but to his lion, but which really marks the judgment-seat of the representative of the Republic in Traü. The building was repaired over and over again, the last renovation dating early in the seventeenth century; but it keeps a colonnade which, whenever it was put together, was put together out of materials of far earlier date. One column has a Corinthian capital which seems closely akin to those in Diocletian's peristyle; another capital is covered with rich foliage of a type rather Byzantine than classical. And on either side of the *loggia*, one of them utterly hidden from view, the other proclaiming itself as the main ornament of the town, stand the two most important ecclesiastical buildings of Trau.

The chief architectural ornament of the city is undoubtedly the formerly cathedral, now only collegiate, church. This is a work of the thirteenth century, with a stately bell-tower—one only of two that were designed—of the fourteenth or fifteenth. The inscription on the southern doorway gives 1215 as its date—one on the great western doorway names 1240 as its date, and Radumnus as its artist. Looked at from the outside, the style is of the best and most finished kind of Italian Romanesque, and we have here, what is by no means uncommon in Dalmatia, an example of the late retention of the forms of that admirable style. The tower palpably belongs to a later date, as it shows the distinct forms of the Venetian Gothic, though, as usual in Dalmatia, in a not unpleasing form. Eitelberger quotes an inscription which gives the date as 1321, while in his text he speaks of it as 1421, just after the Venetian capture of the town. And the course of Italian, and specially of Dalmatian, architecture is so capricious, forms are found at dates when one would so little have looked for them, that we really cannot undertake to decide between the two. The inside of the church is striking, with its round arches resting on massive square piers of German rather than Italian character, and with its clerestory and vault, in which the round and pointed arch are struggling for the mastery. The pulpit, the stalls, and other fittings are also striking in many ways, and the triapsidal east end shows us a rather simple Romanesque style in all its purity. But the glory of Traü is at the other end. The stately *loggia* veils the still more stately western doorway, in which, if the purity of the architectural style is somewhat forsaken, we forgive it for the richness and variety of its sculpture. The Scriptural scenes in the tympanum, the animal forms, the statues

of Adam and Eve, the crouching turbaned figures—some call them Turks, some merely Morlacchi—the strange blending together of sculpture and architectural forms, make together a wonderful whole, none the less wonderful because it is clear that everything is not exactly in its right place, but that there has been a change or removal of some kind at some time. The details of this splendid doorway, and of the church in general, must be studied in the elaborate memoir of Eitelberger, which, with its illustrations, goes further than most memoirs of the kind to make the building really intelligible at a distance. But the *duomo* is not all that Trau has to show in the way of churches. Two smaller churches of purer Romanesque than itself stand in its near neighbourhood. The little church of St. John Baptist, save that it has a square east end, is a model of a small Romanesque outside, and just beyond the Venetian loggia is the little desecrated church of St. Martin, now called St. Barbara, one of those domical buildings on a small scale of which we have seen other varieties at Zara and at Spalato. A walk outside the walls in the direction of the Venetian castle leads to other churches, one of which, attached to a house of Dominican nuns, surprises the visitor, like the ruined chapel of the Gaetani by the tomb of Cæcilia Metella, by its almost English look. A few hours may well be spent in examining the antiquities of this strange little island city, and in taking in the varied views of land and sea which are to be had alike from the lofty bell-tower and from the higher ground on Bua. The journey back again gives us objects which have become familiar to us, but which are now seen in a reverse order. We mark the ever shifting outlines of the hills, the islands and the bay which they surround, the ruins of fallen Salona, Clissa on its peak, the stream of Giadro, the aqueduct of Diocletian, till we again mount and descend the little hill on the neck of the isthmus, and find ourselves once more under the shadow of the palace-walls of Spalato and of the bell-tower which soars so proudly over them.

ULTRAMONTANE SUPERSTITIONS IN FRANCE.

WE had occasion to refer cursorily the other day to the startling development of Ultramontane superstition in France of late years. But the phenomena of this kind are at once so marvellous, so abundant, and so unimpeachably well-vouched, that it may be worth while to recur to the subject a little more in detail. First, however, it must be premised that, even when such facts or utterances as we are about to specify do not—as they often do—rest on direct episcopal authority, they may claim at the very least the fullest tacit sanction of ecclesiastical authority. It is a common boast and, *ceteris quantum*, a just one, with Roman Catholic controversialists, that the discipline of their Church is incomparably stricter and more effective than that of other religious communions, and notably of the Church of England. But it follows from this that, while the vagaries of individual clergymen on the one side commit nobody but themselves, the public teaching of Roman Catholic priests—and still more of large numbers of them, and for a long time together—does, if unrebuked, distinctly compromise their superiors. If, for instance, the favourite indictment of Ultramontane assailants of the Church of England is a fair one when they urge that, whatever High Churchmen may say about her formularies, the deeply ingrained ultra-Protestantism of the majority of her members can only arise from a long course of ultra-Protestant teaching on the part of her ministers, it is an obvious retort that the deeply ingrained superstitions prevalent among French Catholics—for we will confine ourselves for the present to France—must have a similar origin. And what gives double force to such a retort is the very circumstance which such reasoners are never tired of insisting on, that there is within the Roman fold an absolute unity of teaching as of faith. To say that, if a Catholic wants to know what he is to believe, he has only to ask the next priest he meets, is a very common way of asserting the contrast between the certainty of Catholic and the hopeless doubt and variety of Protestant belief. Be it so; then it is a matter of some interest to ascertain what a very large, and by far the most influential, portion of the French priesthood proclaim from the housetops to their disciples, often with the express sanction, always with something more than the connivance, of their bishops. The Abbé Michaud, in his recent work on *The Present State of the Roman Catholic Church in France*, classifies these religious eccentricities under the head of "pilgrimages, apparitions, miracles, revelations, prophecies," &c., and supplies copious illustrations of what he means. We can only find room for a few specimens here, partly culled from his pages, partly from elsewhere.

As to pilgrimages, M. Michaud fills a whole page with the mere names of some of the principal pilgrimage places in France, and we learn from another source that the *Almanach du Pèlerin* for this year announces no less than one hundred and twenty different pilgrimages in France and Belgium for 1876. The same annual counts upwards of three million pilgrims in 1873. This is probably a great exaggeration; for we find, *e.g.* that in 1872, when the Ultramontane journals spoke of 100,000 pilgrims to Lourdes, the accounts of the Railway Companies only bore witness to 10,000. And this number too is swelled by those who treat the pilgrimage as a party of pleasure, and take advantage of the opportunity of visiting at a reduced fare what the advertisements often take care to describe as very picturesque spots. Still the number of pilgrims is very considerable. These pilgrimages are mainly the work of the Jesuits, and have received the express approval of Pius IX., who declares them to mark the opening of a new era. They are, of course, generally, as in the case of Lourdes and La Salette, connected with apparitions and miracles, resting often on the evidence of children or persons of doubtful character, who are got out of the way if they seem likely to prove troublesome. Thus the witness of an apparition of the Virgin at Mulhouse in 1873 is now in prison for breach of trust. A Life has just been published of Maximien Giraud, the boy who testified to the La Salette apparition, and who died last year, in which he is said to have adhered constantly to his original statement to the last. It is not said that he confessed to the Curé of Ars that it was a pure invention, or that for several years he was living at Paris with an actress, in a parish where there was actually an image of him, as a kind of saint, erected in the parish church. Let us give an instance of the testimony on high authority to the efficacy of Lourdes water, taken from a paper in the current number of the *Contemporary Review*. It is a formal document issued by the Latin Bishop of Anthedon, and countersigned by his metropolitan, the Bishop of Mohilev in Russia. The Bishop states that, being ill of dropsy, he drank the Lourdes water daily for two months, "without however neglecting the prescribed medical remedies," and was gradually cured. The writer who quotes this not inaptly observes that it reminds one of Mrs. Nickleby's cure of a bad cold which came on at Christmas and yielded by the middle of the next April to a steady application of hot water, "with a pound of salt and sixpen'orth of bran in it," to her feet every night, which (to her as to the Bishop of Anthedon) "seems quite a miracle, when you come to think of it." It is satisfactory to know that the little capsules authenticating the Lourdes water are sold separately, and can therefore be attached to any bottles—whether they convey the miraculous virtue is not explained. All prelates, however, do not seem to share the Bishop of Anthedon's personal confidence in the miracles he authenticates. M. Michaud tells us that the Bishop of Grenoble, in whose diocese La Salette is situated, prefers himself to resort to the waters of Vichy. Another testimony to the efficacy of the Lourdes water is too remarkable to be passed over:—

"C'était il y a quelques années. L'embranchement de Lourdes à Pierrefitte n'était pas encore terminé. Des soldats que Barèges avait guéris laissèrent au chef de gare de Lourdes leurs bequilles, dont ils n'avaient plus que faire. Celui-ci les jeta dans un coin. Un jour, un missionnaire qui desservait la chapelle de Lourdes, les aperçut.—Que faites-vous de ces bequilles? dit-il au chef de gare. Rien; ce n'est bon qu'à être jeté au feu. — Donnez-les-moi — Prenez-les. Ces bequilles sont aujourd'hui suspendues à la voute de la grotte de Lourdes, et témoignent de la vertu de ses eaux miraculeuses! *Sic vos, non vobis!* On a beau savoir d'où elles viennent, n'importe! ce spectacle fait impression! tant de bequilles! et l'on s'agenouille!"

It is not wonderful under the circumstances that a week never passes, during the pilgrimage season scarcely a day, without some new miracle. Demand and supply naturally react on each other.

We do not care to enter here on the *cultus* of the Sacred Heart, to which we had occasion to refer a year or two ago in connexion with the pilgrimage to Parray-le-Monial. But, whatever theological defence may be urged for this method of devotion in the abstract, there can hardly be two opinions as to the worship of the Sacred Heart of Mary, which appears to be supplanting it in France, and still less about the worship of the Sacred Heart of St. Joseph, which, we are sorry to say, is an English importation, invented, as the *Universe* admiringly assures its readers, by Dr. Vaughan, the Roman Catholic Bishop of Salford. There is something, however, still stranger than this, which Montalembert not unnaturally denounced as "idolatry," and which recalls, if it does not exceed, the *præsens divus habebitur* of the latest and worst days of the old Roman Empire. Cardinal Manning has been eloquent in his exposure of "Cæsarism"; we do not defend it, but what is to be said of Papism? We quoted the other day the astonishing language of Mgr. Bertoaud, Bishop of Tulle, preached and published, as to the exclusive and confidential relations subsisting between the First Person of the Holy Trinity and the Pope, so that when the Roman Pontiff speaks it is something "higher (*plus haut*) than when Christ speaks." This *culte*, like that of Lourdes and La Salette, has also its legendary and miraculous support. Here, for instance, is a striking narrative of events not generally known, which is communicated to the public by the French *Almanac of the Friends of our Holy Father, Pius IX.* The English Protestant Governor of Malta, we are told, gave a dinner of fifty-four courses in honour of the new (Roman Catholic) Bishop, at which he proposed the health of "that great and incomparable man, Pius IX., who is still the most powerful monarch in the world," adding that he had been honoured with an audience by his Holiness, and was "struck with veneration and admiration in presence of that sovereign and Holy Pontiff, the greatest man on earth." The guests in their turn were, it is said, "extremely struck" with these words, which was followed by the Hymn to Pius IX. On the other hand, a profane person who in mockery called his dog Pius IX., while playing with the animal, was so severely bitten that after a few minutes he expired. So close is the affinity between the Pope and the Immaculate Virgin that during last April three miraculous pictures of her, at different places in Italy, moved their eyes and worked miracles in token of her resolve to discharge with interest the debt incurred to him for his proclamation of December 1854; and, on a Lourdes medal presented to his Holiness by the Bishop of Tarbes, she is represented as saying to him, "Whosoever will glorify me, I will

glorify him" (1 Sam. ii. 30). We are also informed—correctly enough this time, no doubt—that Pius IX. has himself crowned more miraculous images of the Madonna than all his predecessors put together. From the same authority we learn that the Bishop of Digne and the superiors of the seminaries of that diocese testify to the miraculous cure of a young novice who was dying of disease in the spinal marrow, but who, on receiving a piece of the Pope's cassock, kissed it, saying, "Pius IX. will be my salvation," and four days afterwards recovered, on the very day the Pope had telegraphed his blessing to the community. Elsewhere an old man of eighty, who was dying, was restored by having a portrait of the Pope laid on his heart and lips by his son, who made "an act of faith in the prerogative of the Vicar of Christ." Still more revolting—not to say blasphemous—is the systematic adaptation to the Pope of forms of devotion in general use addressed to our Lord. Thus the "Stations of the Cross," a very common devotion in Roman Catholic churches in honour of the Passion, have been turned into *Chemin de la Croix de Pie IX.* We can only find room for a few of the "Stations." In the sixth, where St. Veronica wipes the Saviour's face, which is impressed on her handkerchief (a legendary incident itself, though not devoid of allegorical significance), we find the Blessed Virgin rewarding Pius IX. for decreeing her Immaculate Conception, by granting him long life and infallibility. In the eleventh Pius is forced to ascend the Cross, since which time a mysterious darkness, moral and religious, has overspread the earth; but, it is added, "Has one bitter word ever come down from that Cross? Has any one ever heard a single complaint? *No, never!*" We can only say that, if so, there must be a general conspiracy among all reporters of the speeches and Allocutions of Pius IX. for the last five years, Ultramontanes included, to falsify the text. It is the natural result of this that, in the fourteenth Station, when Christ is laid in the grave, "Pius IX. is confined in the living tomb of the Vatican, shut in by the stone of universal suffrage." It is hardly a figure of speech to call this sort of devotion "idolatry."

One little anecdote from this same *Almanach des Amis de N. S. P. le Pape* we must subjoin, in illustration of the standard of historical accuracy maintained in these pious publications, even when there is no question of miracles. It has a further interest as the hero of the story is a countryman of ours, who, we may be sure, has not sanctioned the strange liberties taken with his name. Father Rowe, of the London Oratory, formerly a member of Trinity College, Cambridge, became a convert, we believe, about twenty-five years ago. Here is the Almanac's account of his conversion. He formerly held the Professorship of Theology at Cambridge for two years. One day he was in the library of the College (Cambridge College apparently) with twelve young doctors, when it suddenly occurred to them to force open a long disused door at one end of the room. It opened into a dark chamber containing a number of theological works (the titles of which are not specified), which they at once began studying, and found therein conclusive proof of the exact identity in every particular of the present Roman Catholic Church with the Church of the Apostolic age. They accordingly threw up the University and the Established Church and their incomes, averaging at least ten thousand francs, and came over in a body to Rome. When contemporary history is written after this fashion, we cease to wonder at such travesties as Rohrbacher and other Ultramontane writers manufacture of Church history in the past. Meanwhile, amidst an entire absence of any syllable of warning against the popular superstitions, except from Mgr. Dupanloup, another French prelate, Mgr. de Ségur, whose works enjoy the express approbation of the Pope, publishes a solemn warning against the claim to scrutinize and judge those Papal utterances which do not touch on faith and morals, thus making a clear sweep of the main argument of Dr. Newman's Reply to Mr. Gladstone. We will merely add, in conclusion, though we do not propose to dwell on the point in detail here, that this abject superstition, whether sincere or not, is unfortunately not associated with any peculiar holiness of life. It is often and plausibly argued that the Ultramontanes, however mistaken, are at least the party of goodness and piety in the Church. M. Michaud gives abundant evidence, supported by chapter and verse, for demurring to this estimate. That the law of celibacy is frequently violated in France, both by secular priests and members of religious orders, male and female, and in ways which have drawn on the offenders the penalties of the law, is not merely stated, but proved in detail. This sort of procedure has even got the name of *Dufourisme*, from the case of a Jesuit named Dufour, which came before the courts in 1872. The crimes of the Christian Brethren, who have an immense number of schools under their management, cannot be more than hinted at. But we may cite the unimpeachable testimony of a circular issued by their own General Superior in 1861:—

> Si jusqu'à ce moment il nous a semblé utile d'indiquer le mal à mots couverts, aujourd'hui de tels ménagements ne peuvent plus être gardés, vu la gravité des circonstances et les faits déplorables qui se produisent presque successivement. Vous le savez, un certain nombre de sujets de notre Congrégation et de plusieurs autres sont dans les fers: la justice informe sur quelques autres; le scandale est semé comme à pleines mains.

The legal reports supply only too much evidence that matters have not improved since. We do not say that some allowance is not to be made for those who may discover too late that they have placed themselves under an intolerable yoke; but, whatever such a plea may be worth, it tells with intensified force against the institution of compulsory celibacy, which is thus made to bear the brunt of the indictment. But that institution, like the strange medley of extravagance and fraud on which we have been commenting, rests on the authority of the supreme and infallible Pontiff.

A FRIENDLY POLITICAL CORRESPONDENCE.

WE have all of us very different ideas of our hereditary lawgivers. In the eyes of some they occupy the position of the gods in Lucretius; nor are our joys and sorrows taken cognizance of by them. It is only at times that they are as other men—are excited by passions, are led astray by envy or by gout. If ever it was necessary for them to show to the admiring world their calm serenity and unruffled dignity, now is the moment. In two or three weeks they will have to receive among them a batch of respectable country gentlemen, whose familiarity with horses and the things pertaining unto horses has fitly pointed them out for an hereditary seat. Alas! that the Lucretian gods should leave Olympus and descend into the hubbub of public life, or allow the petty details of electioneering matters to trouble their peace. Even a still lower depth than this is reached when the country newspapers chronicle their correspondence, and their private affairs become a topic of conversation for Philistines and critics. Lord Forester, whose succession to the title on the death of his brother, rather more than a year ago, caused a vacancy in the representation of Wenlock, addressed a meeting of his old constituents some time last month, and was rash enough to say in his speech that he would relate an anecdote. In England, where all things are remembered, it is almost unnecessary to say that Mr. Brown, one of the present members for Wenlock, gained his seat in 1868, kept it in the election of January 1874, and supported Mr. Lawley in his contest with Mr. Forester (the present Conservative member for the borough) in the following October. We return to the anecdote, and remark incidentally that great encouragement should be given to this mode of oral teaching, which since the days of Sydney Smith has fallen so sadly into disuse:—

> In the summer of 1873 I was walking up St. James's Street, London, and met Lord Wenlock, whom I addressed as follows, after asking him after Lady Wenlock. I said: "There must be a general election soon, this year, perhaps, when I hope you will give the Father of the House of Commons your support, as I do not think our views differ so widely." Well, gentlemen, what do you think was Lord Wenlock's reply? It was this: "Why should we not join and turn out that Radical Brown?" to which I said: "No, Lord Wenlock, all I ask the constituency of Wenlock for is my own seat, and having represented them since 1328, or forty-six years, I am not going to betray my friends who have always when I have wanted them been found staunch to me and the cause I represent."

Lord Forester went on to say that in Mr. Lawley's address, written, he had no doubt, or supervised, by Lord Wenlock, he found a paragraph stating that he, Mr. Lawley, hoped to co-operate with the present excellent member Mr. Brown. Hence these tears. When Lord Forester's nephew contested the seat against Lord Wenlock's son, the Radical Brown became an excellent member.

The next stage on which the anecdote enters may teach us the enormous difficulty of writing history. May Mr. Freeman and Mr. Stubbs and Mr. Green, should they ever embark upon a short history of St. James's Street, lay the lesson to heart. What is called a correspondence ensues, and Lord Wenlock writes to say:—

> Dear Forester,—I see a report of a speech of yours at Madeley, wherein you say that in 1873 'I made an offer to coalesce with you to turn out that Radical Brown' from the representation of Wenlock. I must say that I think that, either intentionally, or unintentionally, you have misrepresented any words which may have passed between us. I distinctly affirm that not only did I never make such a proposal, but I never dreamed of the possibility of such a coalition taking place. I have never forgotten a conversation which took place at Lord Methuen's dinner table, on July 10th, 1867, when, in the presence of Lord Craven and several other guests, you proposed to me that our families should unite to divide the representation of the borough, and in reply to your offer I said "I'll see you d—d first."

More material for a private history of the century is given us. Here we have another anecdote, shocking as it is to us. The Lucretian gods never said such things. We know a lady who, on being asked whether she had ever heard the condemnatory word above, confessed to having once seen it with an asterisk; but here its naked simplicity is but slightly veiled by the omission of some of its letters. If we remember rightly, it was *Wuthering Heights* that first excited the horror of the British public by an unveiled use of the word we are commenting upon. This is an age of private enterprise and interest in private gossip, and we propose to print our recollections of men whom we have heard called —— fools in St. James's Street and its neighbourhood, issuing at the same time a few copies on vellum with the word —— *in extenso* for clubs and amateurs. We have little doubt that it will be the literary feature of next season. We return to the correspondence, for Lord Forester shares our horror, having never heard the wicked word:—

> Dear Wenlock,—It is quite correct, I did make a speech at Madeley, in which I mentioned your name, and stated a conversation that took place between us in the month of June or July, 1873. I never said you made a direct offer to coalesce with me 'to turn out the Radical Brown.' What you said was in reply to a question put by me, asking for your support at the approaching dissolution. Your reply not being "Yes or no," but in the Irish fashion of asking another question, "Why should we not join, and turn out that Radical Brown?" This is my impression of the conversation. I am sorry it has annoyed you, but I cannot retract. With regard to the other conversation you state took place on the 10th of July, 1867, at Lord Methuen's dinner table, I have not *the slightest recollection*, which I think I

must have if you made use of the same language in reply to my then proposition, which you do in your letter of the 23rd of December, as it is not the language used in the society I am in the habit of frequenting.

Yours truly,
FORESTER.

It is a comfort to think that there is such a thing still left to us as good society, and that Mr. Sturt's susceptibilities will not be wounded by profane jests or double meanings when he moves into the Upper House. One more letter closes the controversy, and the battle of the gods ends, with an appeal to the public "through the medium of the press":—

Dec. 29, 1875.

DEAR FORESTER,—I beg to acknowledge the receipt of your letter of the 28th inst., and I accept your disclaimer made in that letter, viz., that "I never made a direct offer to coalesce with you to turn out the Radical Brown." At the same time I cannot accept your version of our conversation in St. James' Street as a correct one. As your recollection seems to have failed you about the incident in 1867, to which I drew your attention (which I confess has left a stronger impression upon me than it has upon you), I cannot but think that your memory may be equally treacherous as to the details of the conversation you refer to. You allude, in your letter, to the society which you are in the habit of frequenting. I leave it, therefore, to your own sense of propriety to decide whether you think that society would deem it right for you to repeat, at the end of two years and a half, a conversation which could not but be considered a private one between two gentlemen.

With regard to the allegation which you make in your speech that I supervised, if I did not actually write, my son's address to the Electors of Wenlock, I beg to say that I never saw it until after it was published.

I remain, yours truly,
The Lord Forester. WENLOCK.

What a shocking state of things is here revealed! Are we not now a perfect people, recording our votes always in favour of the candidate who possesses the highest moral and intellectual qualifications, and unbiassed by party politics or social considerations? Have we not passed two Reform Bills, and do we not contemplate a further enfranchisement of the enlightened agriculturist? Yet in 1867, and in 1873, in the midst of us, propositions, we will not say appear to have been made, but appear to have given others the impression that they were made, which strike at the root of our independence. It is a fitting theme for "the Radical Brown" to descant upon, and he should be escorted to the House on its opening by twenty Amalgamated Associations, whose resolutions might terrify the Government, and open the way for indefinite permissive legislation.

It is difficult to see what object is served by the publication of a correspondence such as this. We wonder from what *bema* the Father of the House of Commons uttered his virtuous sentiments. Was it from the steps of Brooks's or the window of Boodle's? His knowledge of this sad world might have led him to know that, if you ask a favour from a political opponent, you will be expected to return it in kind. In these days men tie the ladder very securely before they help another man up it.

We fear that all this excitement will be more than Shropshire can bear. Nature has done more for that respectable county than its inhabitants. Its recesses have at times afforded a shelter for types of life to which modern civilization is hostile, and Shrewsbury can boast of having returned to Parliament Jack Mytton, no doubt the last squire who ever wrote the word d——d without a line or an asterisk. Nothing, however, will tend to enliven the county or quicken its senses more than a few altercations carried on in the public newspapers. If the candidates for the Northern Division will only repeat all the private conversations they have listened to, and publish them in the form of a pamphlet with a preface by Lord Forester, the wits of the Salopian electors will be preternaturally sharpened, and they will be able to understand within a fortnight the differences that divide the Whigs and Conservatives on the Land question, and to estimate the conscientious scruples which will affect Mr. Disraeli in his treatment of the Burials Bill. Should this result not be attained, they will at any rate have a supply of dirty linen capable of concealing all the Falstaffs of the West of England.

PIECEWORK.

THE engineers' strike at Erith, whatever may have been its origin, is evidently assuming the form of a general movement on the part of the Trade-Unions. The Amalgamated Society of Engineers has warmly taken up the cause of the men on strike, and is not only urging its own members and those of kindred Societies to supply them with funds, but has issued an appeal to the working class at large to make common cause against what it denounces as the "pernicious system" of payment by piece. On the other hand, the Employers' Association, although it has wisely resolved not to enforce a lock-out except in the last resort when all other measures have failed, thoroughly identifies itself with the firm which has been chosen for attack. It would be a great mistake, however, to suppose that this is merely a question of wages between operatives and employers. It is a question in which the public has also the deepest interest on its own account, seeing that, though the assault is, in the first instance, directed against employers, it is really aimed at the whole body of consumers. The Strike Committee at Erith complains that the newspapers "teem with leading articles and mendacious letters" against the strike, and expresses a hope that, "when the public know both sides of the question, truth will prevail." We also share that hope, and are sorry that the Unionists themselves do not set an example of candour. Whether piecework is or is not a good thing in itself—and we readily admit that it is not equally suitable for every kind of work—there can be no doubt that it has for years provoked the avowed and systematic hostility of the Unions. It is true that hitherto they have not ventured to insist upon its entire suppression, but their views on the subject distinctly indicate a desire for its destruction, root and branch. Indeed the essential principles of the Trade-Unions' system render opposition to piecework almost a logical necessity. Their object is, on the one hand, to repress competition among workmen by reducing them to a level; and, on the other, to make room for the employment of as many hands as possible by enforcing additional restraints on the doing of the work, so as to spin it out, and make the most of it as a measure of wages. It follows, therefore, that, as piecework tends to promote both competition and production, it is naturally obnoxious in the eyes of the Unionists.

The subject was fully investigated by the Royal Commission on Trade-Unions a few years ago, and it is worth while to observe what they have to say about it. "The opponents of overtime and piecework," they say, "appear to hold that the man who works overtime takes so much from the common stock of labour, and injures the rest; and that the man who takes piecework, besides that he gets more than his share of the common stock of work, is apt to show what may be done by skill and industry, and so raises the standard of expectation on the part of the employers." Another of the arguments against piecework is that it leads men to hurry over their work in a slatternly manner, and so results in inferior workmanship; but the Commissioners quote evidence on the other side showing that it is easier to check the quality than the quantity of work and wages, and that, in some cases at least, piecework has the effect of making such a reputation for a firm that it can command higher prices than other firms. The Commissioners also point out that the Unions resort to other expedients with the same object in view—such as rules or a tacit understanding confining each class of workmen to their own division of labour, as, for instance, restricting the mason from on any occasion setting or displacing a brick, or the bricklayer a stone, or either of them from doing any portion of the work which belongs to a plasterer; rules against "chasing," that is, prohibiting the leading man, when several workmen are working in line, at proceeding at more than a moderate rate; and rules limiting the number of bricks to be carried in a hod, prohibiting the carrying of bricks in a wheelbarrow, or working stone in the quarry, and the like, "matters which, although they may have the appearance of being of minor importance, are vexatious and harassing to the employers, and are sometimes attended with great inconvenience and loss." When we turn to the testimony of the Unionist witnesses, we find that they were emphatic and unanimous in denouncing piecework in every form. "We object to piecework," said Mr. Applegarth, the then Secretary of the Carpenters and Joiners' Society, "because it leads men to neglect their homes, to work too long hours, and to attend more to work than to the education of themselves and their families. We believe that the men are thoroughly selfish who act that way"—that is, who do their best when at work. Mr. George Potter thought that piecework tended to produce a gradual diminution of the rate of wages, "because a man who could work, perhaps, and felt inclined to work, longer hours and harder than others, would be thought by the employer to be getting too much money, and he would make it a reason for reducing the contract next time"—a theory which of course assumes that employers are so blind to their own interests as to disregard the value of the work done. Mr. Allan, who was at the time Secretary of the Amalgamated Engineers, said on this point:—"To be candid with you, we believe piecework has a tendency to injure the trade; that is to say, that by the introduction of piecework, and every one being allowed to use his own discretion in the matter, ultimately our wages will be brought down to something like the sweating system among tailors, and so we endeavour to destroy the system wherever we possibly can." And then he explains why, on the ground of competition between workmen themselves, the practice is objectionable from the Unionist point of view:—"The wages of piecework are generally settled by an expert workman; that is, the employers generally give a piece of new machinery, or whatever they want doing, into the hands of an expert workman—so that, if he gets what may be considered a fair wage, those who are not such good hands come down to almost starvation price." The plain meaning of this is, of course, that the able workman is to be denied a fair wage because his superior industry places the idle and incompetent workman at a disadvantage. Mr. R. Harnott, Secretary of the Operative Masons' Society, was asked by Mr. Frederic Harrison whether a man who could with perfect ease to himself produce more stonework and better stonework in a day than most men could, would be prevented by the rules of the Union from so working; and the answer was in the affirmative.

In the face of such evidence as this it is ridiculous to pretend, as Mr. Burnett and others do, that the Unionists are not hostile to piecework generally. That they have not ventured openly to attack piecework all round may be attributed to their prudence, but it is quite clear that they are, in principle, opposed to it, and anxious to do all they can to get rid of it. Mr. Burnett himself urges objections which, if true, go to the root of the system. In the first place he says—"We dislike it on principle, as tempting men to over-exertion, and also leading them to care less for the quality and soundness of their work than for the quantity turned off." It rests, of course, with the employers to reject bad work, and

if they neglect to do so, they and their men are simply confederates in defrauding the public. It would be difficult to devise a system by which working-men would be entirely relieved from the temptations to which they are exposed in common with the rest of humanity, and, on the whole, it may be thought that the general good is more likely to be promoted by a stimulus to energy than by a premium on inertia. Another of Mr. Burnett's arguments is very characteristic of the attitude of his class. He complains that "numerous instances can be quoted to show that men in our trade who have taken work by the piece have been in debt to their employers when the work was finished, and this debt they have been compelled to pay." When other people than working-men make a rash bargain for themselves, or are not up to their work, they have to take the consequences; and if they have drawn money without earning it, they are not surprised that they have to pay the debt. At a meeting of the men on strike at Erith it was also set forth as a monstrous grievance that, when they threw up a job, "they had to sacrifice their detention money," and that in this way "the masters made a great profit and the workmen suffered a great loss." It may be supposed that the employers, if consulted, would prefer to have the work contracted for done, and that the detention money will seldom cover their losses when they have to disappoint customers. The men must be perfectly aware of the meaning of detention money when they make the bargain, and it cannot be left entirely at their option whether they will fulfil it or throw it up. If there were any doubt as to the rooted hostility of the Unionists to piecework, it would be set at rest by the resolutions of the Conference of Delegates of the Amalgamated Society of Engineers at Manchester in July 1872. It was then declared that "piecework, even in its best features, is, without doubt, the worst evil we have to contend against, for under the most favourable conditions it is utterly selfish in its operation, and is calculated to set man against man, by tending to benefit those most opposed to our Society and all similar institutions"—this being of course, in the eyes of Unionists, the unpardonable sin—and the resolution went on to urge the Council "to use its utmost influence to put an end to piecework." It is true that this was only a recommendation or suggestion to the Council, and that the latter has been wise enough to understand the necessity for not opening the campaign at the outset on too wide a line; but it is impossible, with such statements before us, to doubt that the Unionists are pledged to try to put down all piecework whenever they get a chance.

There can be no doubt that in some cases the system of paying by the piece is not fairly applicable; as, for instance, when the work to be done is of a novel or experimental character, or when for any other reason there is a difficulty in calculating exactly what amount of time and labour will have to be expended on it. If the Unionists had been content to limit their opposition to such cases as these, they would have had some reason on their side; but it is plain that, whatever their specific demands may be for the moment, they are in principle opposed to all piecework, even, as they say, in its most favourable forms, and are anxious to eradicate it entirely. It remains to be seen how far the working classes will, as a body, take up this cry; but there can be no question that the principles which would be established if the movement succeeded would be very dangerous to society. Piecework, when it can properly be applied, is the natural and reasonable way of measuring wages. A man contracts to do a certain piece of work for a certain price, and, when he has done the work, he gets his money. On the other hand, when the workman is paid in proportion, not to what he actually does, but merely to the time during which he is or professes to be occupied, employers are paying for a commodity of a very indefinite kind. The value of time depends on the use which is made of it, and it is notorious that the ingenuity of the leaders of the Trade-Unions is chiefly directed to devising rules by which time shall be simply wasted, so that two hours shall be required for an hour's work, or two men to do the work of one. Payment by time affords no test whatever of the performance of the bargain, and places the smart man and the slow man, the industrious and the lazy, the competent and the incompetent, on precisely the same level. In other grades of life men have to compete with each other, and have to prove the value of their labour by its results. They do not ask or expect their work to be taken for granted because they have gone through a show of doing work for a certain time, nor do they presume to neutralize or limit the superior capacity or energy of their competitors by fixing a hard and fast limit, at a very low point, beyond which effort shall not be allowed. The first principle of the Trade-Unions is, however, that working-men are not to be treated like other people. They are a special class apart, and must be allowed their own way. Instead of working-men endeavouring to exert themselves heartily, and to the fair limit of their natural powers for the benefit of society at large, as well as for their own personal advancement, they are expected to try how little they can do as an excuse for demanding wages. It is the blackest selfishness for a good workman to do his best for his employer and his family; but there is no selfishness in idle and incompetent workmen endeavouring to drag down their associates to their own level, and to claim a share of wages which they would probably never earn by themselves. It is urged as one of the reasons against piecework that it keeps men hard at work, and deprives them of time to improve their minds. A similar plea was made on behalf of the nine hours' movement a year or two since. It was said that the men would work during the shorter period with increased physical strength, as well as with more zest, and that, in Mr. Burnett's words, the new system would witness the execution of as much work as under the old ten hours' system. But what has been the result? Employers have, as a rule, found that, instead of getting nine hours' good work, the men begin to play and trifle before the eighth is over, and that, instead of work being made up to the old standard, the loss of one hour means the loss of two. It is strange that the operative engineers should fail to perceive that, in regard to piecework, they are arraying themselves, not merely against their employers, but against the whole public, who are affected both by the attempt to paralyse the free play of competition between the best men, and by the attempt to pass off so many hours of playing at work as genuine labour.

FASHIONS IN BAD LANGUAGE.

THE City magistrates have announced the laudable purpose of abolishing what is popularly called Billingsgate. We mean, of course, not the market of that name, but its peculiar language; and if the frequenters of that market have come down, as it appears they have, to mere ordinary swearing, it is time that the common rules of decency were enforced among them. The "Billingsgate" of forty years ago was something different. The fishwoman whom O'Connell hardly conquered by calling her "hypothenuse" must have had a genius worthy of the headquarters of London slang. Many of the sayings current there had a cleverness which almost redeemed their nastiness, and they might be compared to the expressive epithet which the Great Frederick loved to apply to his soldiers when they wanted to run away. It is right to put down swearing, but if slang is to be abolished, the City will be a dull place. We do not know the exact terms of the City Police Act under which a recent proceeding took place, and a report of that proceeding leaves it doubtful whether both profane and indecent language, or only the former, are struck at by the Act. It is one thing to pass an Act of Parliament and another thing to enforce it, and we might doubt the expediency of attempting to compel decency of language by criminal proceedings. There is an offensive word so frequently in the mouths of common people that it has come to be a mere term of general abuse. It would scarcely be expedient, even in the City of London, to prosecute for indecency in using this word, and much that is strictly "oaths and curses" has come to be equally meaningless. Nobody nowadays says "Zounds," but if that expletive were used, it could hardly be treated without absurdity as a profane oath. Even the sober "Ne'er stir," which Scott contrasts with the rollicking "God damn ye," is an oath, and a pretty strong one if taken literally. The Yankee who honours a compatriot as "'nation cute," forgets probably that he is using an expression to which his Puritanic ancestors would have objected.

The legislation of the last century against profane cursing and swearing seems to have been strangely at variance with its practice. An Act of 1746 recites that these practices "may justly provoke Divine Vengeance to increase the many calamities these nations now labour under"; and it must be owned that after the defeat of Fontenoy and the Rebellion of 1745 the outlook was not happy. For remedy of this evil it is enacted that, if any person shall profanely curse or swear, and be thereof convicted, he shall forfeit,

If a labourer, soldier, or sailor, 1*s.*

If otherwise under the degree of a gentleman, 2*s.*

And if a gentleman, 5*s.*

These may have been wholesome laws, but they became ludicrous in execution. One cannot help smiling at the report of a case under an earlier Act of the same nature, where James Sparling, "leather-dresser," was convicted for that he did profanely swear 54 oaths, and profanely curse 160 curses, and adjudged to forfeit 21*l.* 8*s.*, being at the rate of 2*s.* per oath or curse, whereas he ought to have been charged only 1*s.*, being described only as "leather-dresser," which was consistent with his being a soldier or sailor. The Court held the conviction "naught" for this exception, and also for another—namely, that the oaths and curses were not set forth, but the witness takes upon himself to swear the law, "and it is matter of great dispute amongst the learned what are oaths and what curses." So the conviction was quashed. In another case upon the same statute, the defendant was convicted for swearing 100 oaths and 100 curses, and it was objected that the oaths and curses ought to have been set out a hundred times, each particularly. But the Court held it sufficient to say he swore such an oath or made such a curse 100 times. The conviction was quashed, however, on another beautifully minute point. The Act of King William III., through which the legal coach and four was thus neatly driven, did not, it seems, prevent our armies swearing horribly in Flanders. To judge from the plays and novels of the time, everybody swore after his degree, and even the sentimental swearing of Bob Acres shows that "damn'ee had their day." Yet the Act of 1746 was passed, as we have seen, and as lately as 1863 a case arose upon its construction. One Scott, a mealman, was convicted for that he did profanely curse one profane curse (stating it) twenty several times repeated, and he was adjudged to pay 2*l.* After solemn argument in the Queen's Bench it was decided that, although only one offence can be included in one conviction, yet the swearing of many oaths consecutively is only one offence, of which the penalty is proportionate to its duration. One feels almost tempted to inquire whether there would be an allow-

ance on a quantity being taken. It is to be hoped that working-men are aware that the law allowed them to swear as long as they pleased at 1*s.* per oath, while a gentleman was charged 5*s.* It is not probable that the City Police Act makes a similar distinction, and nowadays, unless a gentleman were drunk, he would hardly ventilate his profanity so as to expose himself to an information. If he is not more religious than gentlemen were a century ago, he has a more fastidious taste, and he would think the pleasure of uttering oaths at 5*s.* a piece very dearly bought. Swearing is not now fashionable. If it were, we strongly doubt whether the tariff of 1746, or any other, could be enforced. But in the last century it was fashionable, and the best proof of the universality of the practice is furnished by the story of a Chief Justice trying a man who read other libels on religion to excuse his own, and muttering an imprecation on his own eyes if he sat there all day to hear that man blaspheme. Nelson at Copenhagen, and Wellington at Waterloo, both incurred at least 5*s.* penalty. And Mr. Chucks, in *Peter Simple*, argues with some force that if you say to a sailor "Do this, d——n your eyes," it is done directly.

We are not sure that "Billingsgate" was the worst variety of scurrility, and at any rate it was spoken only, and not written; and although swearing has gone out of fashion, penny papers have come in. A Judge of the Queen's Bench Division and a special jury have been lately occupied for an entire day with a dispute between a solicitor and the editor of a local journal, compared with which an interchange of slang and fisticuffs between two fishwives would have been an edifying spectacle. These proceedings arose not at Eatanswill but at Sunderland, where, as Mr. Justice Quain remarks, "there seems to be a great talent for smart writing." The editor exhibited his power of sarcasm and invective in his own columns, while the solicitor was obliged to have recourse to handbills, and ultimately to a court of law, to place himself on even terms with his opponent. Our ancestors corrected a "common scold" with the ducking-stool, and it deserves consideration whether this remedy might not be revived and applied impartially to both sexes. We are used to much absurdity of language at Parliamentary elections, and the nuisance might be tolerable once in four or five years; but in Sunderland lively personalities are exchanged at every election of town councillors. It is true that, in order to make one good joke, it is generally necessary to make many bad jokes, and we should not complain if the bickerings of Sunderland confined themselves to their birthplace, and did not annoy London. The plaintiff admitted that he had called his adversary "an unsuccessful village schoolmaster," and had referred to his journal as "a scurrilous print of which you are proprietor." It had been suggested that his own name, "Ritson," should be amended by the insertion of "w," in allusion to the alleged litigiousness of his disposition; and in the columns of the *Sunderland Daily Echo* the word "Ritsonian" had been introduced to designate a class of statements which two centuries ago might have been called "Dick Talbot's truths." The plaintiff answered that he had been taught from childhood to regard fib as synonymous with "Storey," which is his opponent's name. It may be allowed that he makes as good or bad jokes as the other side; but as the local *Echo* is not his handmaid, he engaged, regardless of expense, and for one day only, the nymphs of Westminster to ventilate and redress his wrongs. It is a coincidence that these nymphs live by the margent of the same stream as flows past Billingsgate, and they have been lately provided with an excellent substitute for live-fish tanks in an aquarium. Mr. Ritson's answer to Mr. Storey has been published by the tongues, if not of "queens of parley," yet of Queen's Counsel, and the echoes of Westminster, if not "daughters of the sphere," are nearly related to the telegraphic circle. We find that Sunderland is not only enlivened by an *Echo*, but watched by a *Sentinel*, and it was contended on behalf of Mr. Storey that part of one of the alleged libels referred, not to Mr. Ritson, but to the editor of the rival journal. This is Eatanswill complete, except for the omission, which we almost regret, of the carpet-bag and fire-shovel. Mr. Ritson has had the costly satisfaction of informing the whole English world that he compared Mr. Storey to the person who quoted Scripture for his ends, and that a friend of his, whose name he does not remember, suggested to him that the mercy of the Crown, extended, as Macaulay says, to one Samuel Storey, "a noted sower of sedition," was a mistake and a misfortune to posterity. Being asked why he abused Mr. Storey, he answered, "Because he abused me, and has for two years; so I took the opportunity." The jury, as might be expected, returned a verdict for the defendant.

It is difficult to suggest any amendment of the law or practice as to libel which could prevent the nuisance of such an action, and under the Judicature Act it will probably be more difficult than before to compel the washing of dirty linen at home, or, in other words, to oblige local politicians to vindicate their characters in the nearest assize court. Such proceedings are taken under the penalty of costs, but litigation, like other luxuries, may be enjoyed by those who can afford to pay for it. If a judge could know as much at the beginning of a case as he does at the end, it would be proper to refuse to waste public time and sacrifice judicial dignity by investigating such a trumpery dispute. Before the blessed invention of penny papers this quarrel would have been prosecuted by word of mouth, and an attempt to bring it before a court of justice would have been dismissed on the ground that the law does not take notice of "mere vulgar abuse" so long as it remains unwritten. The modern substitute for "Billingsgate" is scarcely an improvement.

CRETAN EMBROIDERIES AT SOUTH KENSINGTON.

MANCHESTER cotton has gained another victory over native art and national costume. The Cretan peasants have discarded their embroideries. Only old people among the mountains retain their petticoats and trousers of divers colours of needlework, and the picturesque *colletta* has disappeared. Foreign silk and spotted calico are in vogue, and the ancient embroidery is turned to account in horses' girths, saddle-bags, and dusters. We have no right to sneer. It is not so very long since a custodian of the Tenison Library cut up an illuminated manuscript to make a pair of braces out of the coloured borders. In Crete, fortunately, the English Consul came to the rescue. Mr. Sandwith has bought up nearly all that was to be found in the island, and, his collection having been sent home, a small portion has been lent to the South Kensington Museum, where a selection, arranged (or rather only placed) in cases, is displayed in the new architectural room. It seems but natural that an island which lies so nearly at an equal distance from Europe, Asia, and Africa, should acknowledge in its art, as in its history, the influence of all three. There are traces of Moorish, of Persian, but above all of Venetian design in the specimens exhibited, but it is only by a comparison of patterns, stitches, and colours that the elements can be distinguished. The Mahometans object to figures, yet figures are constantly found; and not the eagle only, which the Caliphs allowed their followers to depict, in memory, it is said, of the destruction of the Empire. Persian flower-work also occurs, and Persian stitches are often found mixed with the indigenous herring-bone. But rabbits, doves, dragons, and other real or fabulous animals, as well as churches and houses, men, women, and priests, are also to be seen; and, on the whole, after the lapse of two centuries and a half, the account given by Sir George Sandys remained fairly true. "The better sort of men," he says, "are apparelled like the Venetians; and so are the women"; and he adds in another place:—"Although in many things they imitate the Venetians, yet still retaine they their old vices, 'liers, euill beasts, slow bellies,' whereof formerly vpbraided by Saint Paul, out of their poet Epimenides." It was in the thirteenth century that Venice obtained a firm hold of the island, and though the Turks have now held it so long, many traces of the Venetian occupation, as well as the walls of Candia and Canea, and the remains of villas, attest the wealth and power of the Republic. The lion of St. Mark, mutilated and defaced, still guards deserted fountains, and in addition to the embroideries, a lace, not distantly resembling Venetian point, is among Mr. Sandwith's specimens. The older travellers all speak of the use of a white "under-smicket," as Tournefort calls it, which was probably bordered with lace, though Sandys seems shocked at its scantiness, "the women only wearing loose veiles on their heads, their brests and shoulders perpetually naked, and died by the Sunne into a lothsome tawnie." For the most part, the linen ground of the embroideries partakes of this "lothsome tawnie," but the beautiful needlework, once done, lasted literally for ages; and Tournefort congratulates the husbands of a neighbouring island because the ladies clothe themselves "but once for their whole life"—a remark which applies equally to Crete, though he makes it of Myconus; "the ladies of Mycone would not be disagreeable, were their habits but a little less ridiculous." The same idea, after the lapse of nearly two hundred years, seems unfortunately to have occurred to the fair Candiotes, and it can no longer be said that their husbands "have not the mortification of seeing them follow the Modes, and dipping their hands in their Purse every Change of the Season." The ingenious M. de Tournefort had probably sad experience of a different state of things in Paris, and we have to thank him for a most valuable, if somewhat quaintly minute, account of the costume of the women of the Greek Archipelago in the seventeenth century. In many respects besides costume things have changed for the worse among the Isles of Greece. Candia has suffered many things at the hands of the Turks, and the latest outbreak, though much English sympathy and a little English money were spent upon the insurgents, left them in a worse plight than before. The harbours of the island, which were good in the days of St. Paul and long after, are now almost obliterated for want of a little dredging, and Canea, the real, if not the nominal capital, exports little except soap, which, according to many travellers, the Cretans manufacture in large quantities, but neglect to use at home. The productiveness of the country, the labour of its peasants, the corn and oil and wine with which its slopes abound, the mineral wealth once said to exist in the caves where Jupiter was suckled, all are lost under the wasteful and repressive rule of the Turks. Crete is less known to English travellers than Egypt—even than Japan. We quote Gray about "Idalia's velvet green," yet it was reserved for an Italian, who held the office of American Consul, to dig up the remains of Cytherea's temple, and in the vases, sculptures, and jewelry—some, but not all, of which are in the British Museum—to offer us tangible evidences of what has been called the oldest civilization in Europe. Mr. Sandwith has done well to collect these examples of a later civilization, and every one who is interested in the many questions excited just now by Turkish misgovernment will enjoy looking at these beautiful productions of a perishing art.

The selection made by the authorities has not been a judicious

one. There was abundant material to form an interesting exhibition, and enough is known on the subject to have enabled an experienced person to arrange it in a certain amount of chronological order. But no attempt is made to classify the work, and pieces of Turkish and Persian embroidery and Russian lace are all indiscriminately gathered into cases which are labelled as "Old Cretan Lace and Embroidery." It seems a pity that none of Sir Henry Cole's relations should have studied the subject sufficiently to be able to catalogue these specimens without misleading the public. Nevertheless, for those interested, the cases will be found to contain valuable examples of a sort of work which seems to have been brought to great perfection by the Cretans, and which differs in several ways from that of other places with which we are acquainted. There is only one piece with a date, but as it is a typical piece, and seems neither to belong to the early manner in which the colours are more subdued, nor to the later where the patterns are more often in one colour only, we may almost conclude that 1762, which is the date of the petticoat border, was the time when the work was most used by the inhabitants. When Tournefort took his celebrated voyage in 1700, he saw nothing in Crete except coarse manufactures of wool and flax; and he does not speak of the dress of the inhabitants with admiration, as he certainly would have done had they appeared in the brilliant petticoats they are now discarding. On the other hand, as we have said, he speaks of the costly dress of the inhabitants of the neighbouring island of Myconus, and thinks it well that they only require one dress in a lifetime, seeing that it costs two hundred crowns or one hundred and fifty sequins. The costume he describes is not unlike that now worn by the peasants in the mountain villages of Crete, and deserves further notice. He describes it as consisting first of a sort of under "smicket" made of muslin, fine buckram, or silk, with wristbanded sleeve, and the whole trimmed with gold lace and embroidery; "and thus are their richest smickets no better than a penitential shirt, their trimming making a print on the skin." Over this was worn a smock of cotton or silk like a surplice reaching to the mid leg, and serving as an under-petticoat. This, too, was garnished with lace, or embroidered with gold and silver. There was always a handsome gorget or stomacher. A bodice without sleeves in summer, and long moveable sleeves in winter, completed the costume. The stockings were made in plaitings, and richly stitched in gold and silver, and sometimes several pairs worn one over the other, the material for cold weather being red cloth. The garters were of ribbon, edged with gold and silver lace. A long veil of muslin was twisted twice round the head and under the chin "in a very agreeable manner, giving them a sprightly air." Embroidery, he adds, being an invention of the Levant, they wear nothing without it. "and to speak the truth, they excel even the French in that sort of work as to neatness, but their patterns are not so well fancied." He is deep in admiration of the different kinds of lace with which everything is adorned. And some of the specimens at South Kensington fully bear out his praise. Almost every possible combination, not of pattern only, but also of colour, may be traced; coloured silk edgings, with embroidered additions, delicate arrangements of blue and silver, coarse laces of large and effective pattern, and rich, full-toned colour, such as may be seen in the pictures of Paris Bordone. We miss any examples of the cobweb materials so popular on the continent of Europe; but there are delicate borderings and "insertions" of exquisitely harmonious colour, as well as of a mixed white silk, silver and gold, which cannot be surpassed for satisfactory effect. Some of the collettas are trimmed with strong borderings, coarse but beautiful, and calculated to look well after years of wear and weeks of washing.

It is not very easy to arrive at distinct information as to the age, locality, comparative value, and probable use of many of the manufactures here assembled. Among the people of the district of Sphakia, which, high among the western mountains, contains the more primitive and unsophisticated inhabitants, the art of embroidery is claimed as the invention of their remote ancestors. No traditions of a foreign origin seem to exist. All the materials, the linen and the silk, are grown in the island, and manufactured with the great lumbering looms and spindles with which every household is provided. Even the brilliant and permanent dyes are made in Crete; and the women of the mountains, where the modern daughters of Mellisseus tend the descendants of Amalthea, having no agricultural employment, are able to sit at their work without the interruption and loss of manual delicacy incurred by their sisters of the arable plains. Their taste in colour is instinctive; but the ordinary petticoat of the middle period of Cretan embroidery is much more intense in its tone than in the earlier period, when neutral tints were more often introduced. There is some work of crimson silk in cross-stitch, whose character wholly differs from both kinds. Strange to say, very similar examples have been found in Servia. Most of the Cretan work is done on coarse, thick linen, and cushions for the divan, priests' vestments, and furniture for the altar, as well as ordinary clothing, are ornamented with lace and embroidery. There may be some symbolism intended by the patterns on the cloths for sacred use; but except the cross, it is not easy to decipher their meaning, and the want of arrangement, numbering, or classification, in the cases, renders it difficult to particularize specimens.

REVIEWS.

LETTERS OF SARAH DUCHESS OF MARLBOROUGH.*

SARAH Duchess of Marlborough, whatever her failings, was certainly not one of those women so unkindly said by Pope to constitute the majority of their sex, who have "no character at all." Her avowed regrets that she had not been born to the privileges of the other half of the creation may have been inspired by the fact that she had, as the phrase goes, character enough and to spare. It is, however, precisely for this reason that one never grows tired of reading about her, and is always ready to listen to her when—as she was at no time indisposed to do—she speaks for herself. A new series of letters from her hand is therefore naturally welcome. These Letters to her relative Mr. Jennens and his wife certainly for the most part turn on private affairs; but, on the other hand, they chiefly belong to a period in the life of the Duke and Duchess hitherto very imperfectly illustrated by such evidence. They accordingly well deserved publication, and we entirely agree with the author of the preface that there could be no imaginable reason for any longer withholding them from the world. As he observes with amusing gravity, "at this distant day any such consideration as that" (of these Letters being so completely private), "it is felt, can no longer have any weight, more especially as they reveal no secrets which are of a merely personal kind, but principally such as are more or less of historical interest, and the publication of which cannot justly be said to violate any confidence, or perpetrate any other wrong." In order not to be behindhand in boldness, we will for our part venture upon the prophecy that no reviewer will avenge the indiscretions of the editor of the *Greville Memoirs* upon any similar sins in the editor—as he may by courtesy be called—of the Marlborough-Jennens correspondence. The latter is liberal enough of generalities in his introduction, but in the body of the book his discretion goes so far as to have prevented the insertion of any note or illustration which might have removed the obscurities in these Letters, or have otherwise assisted the reader. He has confined his efforts to a preliminary essay sufficiently remarkable of its kind, but altogether useless for its purpose.

After recalling a few of the most familiar facts in "Her Grace's" biography, the author of the introduction, by way of novelty, develops at some length his view that "there is reason to believe that Her Majesty's gradual discovery not only of the Duchess's indifference to religion, but of her hostility to the Church, in those higher aspects at least in which the Queen had come to regard it, had no little to do, personally and privately, not only in estranging Her Majesty's affections, but also in forfeiting her respect." Apart from the grammar of this observation, we think it a correct one; although the evidence adduced in its support merely proves that a difference existed on the subject between the Queen and the Duchess, not that the gradual growth of this difference contributed to the Duchess's fall. At the same time, while we may grant everything that the author of the introduction says in honour of Queen Anne, and of the "higher aspects" under which she regarded the Church, we are somewhat surprised at the reflections he makes on the views of the Duchess and of the party with which she and her husband had identified themselves. In 1742 the Duchess confessed that in the old times she had not the same prepossessions on the subject of the Church as the Queen:—"The word CHURCH," she writes, "had never any charm for *me*, in the mouths of those who made the most noise with it; for I could not perceive that they gave any other distinguishing proof of their regard for the *thing* than a frequent use of the *word*, like a spell to enchant weak minds; and a persecuting zeal against Dissenters, not against those real friends of the Church who would not admit that persecution was agreeable to its doctrine." "Such," sternly remarks the commentator, "was the popular liberal cant of that day, as it is indeed of our own time; and puritanism and worldliness are, and ever have been, upon it." Such, we venture to add, is not the language of biographical criticism, but of party prejudice; and an impartial historian must admit that there was some truth in the Duchess's description of the "regard for the Church" which set on fire the pious enthusiasm of the Sacheverel mobs, and which afterwards gave rise to two pieces of legislation which so temperate a judge as Lord Stanhope has respectively described as "intolerant" and "tyrannical." Elsewhere the Whig party, now and then, is amiably described as including "most of those who sought, either directly or indirectly, the Church's overthrow—many of them, in fact, the overthrow of religion itself." Such expressions, while not tending to support the well-known saying of the distinguished historian just cited as to "how much a modern Tory resembles a Whig of Queen Anne's reign, and a Tory of Queen Anne's a modern Whig," at all events show that partisan acrimony is an element not wholly lost to historical writing even in the days of Queen Victoria.

We need not dwell any further upon the contributions made to this volume by the "editor," and may turn at once to that part of it in which he altogether withdraws himself from notice. In passing, however, it may be observed that the preface is hardly correct in describing the "splendid palace of the Marlboroughs" as "a Sovereign's grateful gift to the great Duke whose memorable

* *Letters of Sarah Duchess of Marlborough.* Now first published from the original MSS. at Madresfield Court. With an Introduction. London: John Murray. 1875.

achievements cast so brilliant a halo upon her reign." Doubtless the Queen, on conveying to the Duke the interest of the Crown in the manor and honour of Woodstock, issued an order that a splendid palace should be there erected at the Royal expense, and it was on this understanding that Vanbrugh began his much criticized construction. But the Sovereign's pledge, as is well known from the exposition of the matter by Archdeacon Coxe, was only partially redeemed, either in her reign or in that of her successor. On another point in the introduction, the author would have done well to consult Carruthers's *Life of Pope*, before being at the pains of repeating a perfectly true, but by no means new, criticism. Pope's character of Atossa was no doubt either originally intended, or afterwards adapted, for the Duchess of Marlborough, although, according to a story of Spence's, resting on the authority of Warburton and afterwards repeated by Walpole, he read his character of the Duchess to herself as if intended for the Duchess of Buckingham. According to Walpole, the mystification did not deceive "the Marlborough," and the story of a thousand pounds having been paid to Pope for the suppression of the satire is well known, and seems to rest on fact, in so far as the acceptance of the money is concerned, though the nature of the consideration offered in return must remain matter of conjecture. But in any case the character, from whatever reason, contains touches which do not apply to the Duchess of Marlborough, as was at once seen by Bolingbroke, who, after Pope's death (before the actual publication of the satire), wrote to Marchmont:—"Is it worth while to suppress the edition? or should her Grace's friends say (*as they may from several strokes in it*) that it was not intended for her character? and should she despise it?" We are in hopes that Mr. Elwin's too long expected third volume of Pope may do something towards the elucidation of this mystery, with the existence of which the author of the introduction before us seems unacquainted, or he would hardly have contented himself with observing that the satire which he justly shows to be inapplicable to the Duchess of Marlborough "sadly overshoots the mark; and, as well as being characterized by malevolence, is full of misrepresentations."

The Letters themselves are divided into three sections, of which the first "embraces the period immediately preceding the quarrel" (doubtless the *final* quarrel) of the Duchess "with Queen Anne, and the defeat and disgrace of the Whig Ministry." To this is appended a hitherto unpublished letter of real historical value, dated August 8th, 1706, in which Harley pays the highest compliments to the Duchess for the management of her accounts as Mistress of the Robes. The second section comprises the period of the exile of the Duke and Duchess, and the third that of their return home, and restoration to the royal favour under King George I. Unfortunately, the year seldom forms part of the dates in the original MSS.; "but it is given on conjecture, in several instances, by the editor." In the first section, the year is dated at all only in two out of twenty-two letters from the Duchess. It will therefore be evident that there never was a book of this kind standing in greater need of notes, more especially as the Duchess seems to have had a habit of writing "strangely," not only in the matter of orthography.

Here are a few of the puzzles which the "editor" has left the reader to solve. In the very first letter the Duchess states that she "began this Year with being lucky at Play, having won at Dise with the King 568 Guineas." We cannot call any king to mind who was in England during the period of the Duchess's ascendency at Court, except "King Charles" of Spain, and this was in 1703-4. In Letter VI. the Duchess writes:—

> I find that when the D. of *Marl.* lived all [viz. the accounts] were allways in the country.

This is an evident slip in a letter where the Duke of Marlborough is referred to as alive, but which the Duchess had "write so fast I think 'tis hardly possible for you to read it." Surely, too, in the same letter a note was requisite to explain the startling question:—

> Has not the *Q.* her Sister confessed that she should live in *England*, tho she was the next Heir, with so much Virtue as made it very dangerous?

If "the Queen her Sister" is the wife of the Pretender, is not this the first time this extraordinary design on her part has ever been mentioned? Or can the reference be to some intention, in the past, of Mary when Princess of Orange? We confess ourselves wholly at a loss. In Section II., Letter I., "the Fate of *Marl.*" is an evident slip of the pen for the Duke; but what, in Letter IV., "The Ellector of Sonnes" may be a slip of the pen for, we are quite unable to guess. In short, if a reverential consideration for the Duchess's more or less mysterious slips prevented the elucidation of them, and the correction of even such a misspelling as Jernas for Jervas, would it not have been preferable to print her letters in facsimile, like a Shakspearian quarto, and leave the reader at all events the possibility of conjecture?

To have touched the spelling of the Duchess would, we admit, have been little short of sacrilege; for, though defiant of rule and reason to the last degree, it suits the general style of these letters, and seems to lose its temper with the writer. With her correspondents Mr. Jennens and his wife she seems, however, to have remained on the best of terms, till at last provoked to anger with the former by his evidence in a lawsuit, the not very interesting details of which occupy a great part of the last section of the correspondence. Otherwise she shows herself a considerate as well as a constant friend to her relatives; and the favourite form which her interest in them takes is that of medical advice. She frequently commends "her beloved Sir *W. Rawleigh's* Cordial," and on one occasion refers to it by way of analogy as follows:—

> I have been much entertained to-day in reading several of Mr. *Steel's* Papers, and Nothing has pleased me better a great while than Sr. *Walter Rauleigh's* Letter to Prince *Henry*. You may remember what a Meracle I did with his Cordial upon poor Mr. G. I wish the Nation could tast his charming Notions upon Government before 'tis too late, tho I am confydent One might rase One from the Dead sooner than One could make Mrs. *Morley* sensible of Sir *W. R.'s* good advice.

For regular physicians, on the other hand, she seems to entertain as little respect as for Mrs. Morley's later advisers themselves, among whom "the Sorcerer," as she calls the statesman whom the still ruder populace knew by the nickname of Robin the Juggler, naturally receives the greatest share of vituperation. Her observations abroad are pretty equally divided between an appreciative enjoyment of the honours paid by the Elector of "Miance" and others to her consort, and violent expressions of abhorrence at the forms and ceremonies of the Roman Catholic religion. She, however, continues an eager observer of political affairs both at home and abroad, though with regard to home matters she has little to urge beyond apprehensions that the country is drifting into the arms of the *P.* of *W.*, and from abroad little news to send except that the demolition of the Dunkirk fortifications proceeds with the utmost tardiness. For herself she does not profess to loftier sentiments than she possesses, and her philosophy, if not quite so magniloquent as that of Bolingbroke in exile, has the true ring of a common sense very far from ashamed with itself:—

> Now I will confess to you, tho nothing upon Earth could move me to doe what I thought an ill Thing, I believe my Vertue is not like Cato's, for my concern is not for *England*, but for my Children and a few Friends and good People that are there. I fear there is not many, and if I would not bee in the Place of the most powerful of these Wretches, 'tis for my own Sake purely, because my Notion is that they are of all Creatures the most detestable. I know one must dye some Time or other, and I really think the Matter is not very great where it happens or when; but if I could have my wish it should bee in *England*, in a clean House, where I might converse with my Children and Friends while I am in the World; but if that must not bee I submitt, and I will own to you that I am not so much to be pittyd as some people, having never seen any Condition yet that was near so happy as 'twas thought. When I was a great Favourite, I was railed at and flattered from Morning to Night, neither of which was agreeable to me; and when there were but few Women that would not have joyned me for the Happynesse they thought I enjoyed, I kept the worst Company of any Body upon Earth, and had Reason to be much more weary then of any that can happen. Still wee are like a Sort of banished People in a strang Country, and I could say Something to every Part of my Life that would convince you that 'tis only a new Scean of Trouble which few are free from in this World, and I thank *God* I can bear any Thing with some sort of Patience as long as I have the Satisfaction to know that I have not been the Occation of what is called so great a Misfortune myself; and why should not I bear with any Misfortunes that happen to the whole Country as well as to me?

Such was the way in which this remarkable woman thought, and expressed her thoughts; nor is it difficult to recognize beneath the labyrinth of her sentences a strong and sturdy spirit which must have been very hard to resist and not very easy to endure for those who had once fallen under its control. The ascendency of a woman like the Duchess of Marlborough over such a one as Queen Anne is as easily explicable as the rupture between them. With the latter event the political life of the Duke and Duchess was really at an end; after their return to England, the Duke, though restored to office and admitted into the Cabinet, was in reality a mere cipher, "for the Duke of Marlborough," writes his wife at the end of the year 1714, "if hee has any Power it is still a Secret to me. I have seen no effect of it yet." Before long, the palsy had smitten down the hero of so many fights, though his life was still protracted for several years. After it had ended, the Duchess survived for two-and-twenty years, and as one reads the last section of these Letters, one almost feels that, justly famed as was the Duke of Marlborough for the self-command he displayed in the hour of danger, a courage hardly less extraordinary of its kind was displayed by the two noblemen who, if his biographer is to be trusted, sued for the hand of his widowed Duchess. These Letters do not add much to our previous knowledge of her character; but, on the other hand, they take nothing away from the consistency of one of nature's, not satire's, most curious types.

KAYE'S SEPOY WAR.—VOL. III.*

(*First Notice.*)

SIR JOHN KAYE has at last given us another instalment of his work, and it must be confessed that the volume before us appears under many disadvantages. Public interest in the great Mutiny was still vivid when the first volume appeared; the general story was familiar to all; the episodes, as told by the historian, were only full and authentic accounts of deeds which had been the theme of talk in every country house and every club in England. Which of us,

> Cujus octavum trepidavit ætas claudere lustrum,

does not remember how, in the smoking-room of the old place in the country, men told stories that made the blood to boil and the hand to clench; stories that filled one with admiration for the quiet, enduring courage of the women as well as the men who so well upheld the British name in India; stories that made one realize from actual observation the secret by which a handful of the conquering race won India against all odds under Clive, and held it against still more frightful odds under Lawrence

* *History of the Sepoy War*, 1857-8. By John William Kaye, F.R.S. Vol. III. London: Allen & Co. 1876.

and Campbell. One knew that the young fellow who sat, never volunteering, but good-humouredly allowing to be extracted from him, the account of his comrades' exploits and his own, had shown in the hour of need calm readiness of resource, presence of mind, and indomitable courage. One saw that now, when from the nettle danger the flower of safety had been plucked, he no more dreamed of boasting than in the hour of peril he thought of fear; and one felt that this was no exceptional Englishman, but a type of the conquering race.

Nineteen years have passed since the Sepoy Mutiny. Great events have happened in India since then. The Indian prophecy has indeed been literally fulfilled, though hardly in the sense in which it was interpreted by the mercenaries who rose against their master. It was said that in 1857 the Raj of the Company would come to an end, and so it did. But it was not succeeded, as the Hindoo prophets declared, by the restoration of the native race. British India passed from the dominion of the Company to that of the Crown, and the Queen became Empress of a stronger India than ever was subject to the sway of the Company. In those nineteen years there has been time for the great Mutiny to be consigned entirely to the limbo of bygone history. We have read the record, and we have turned the page. We cannot afford in these stirring days to dwell at too great length on a past peril, however great it was or at whatever cost surmounted. It is fitting that there should be a record of the strife, and for this we have cordially to thank Sir John Kaye; but he must not expect this volume to be welcomed as it would have been welcomed if it had followed at a reasonable interval after the two others. To say the truth, Sir John Kaye must be content to be judged now as one who writes for posterity. Though many will read his picturesque narrative and animated descriptions, he must not be surprised if his volume falls rather flat. The first volume appeared in 1864, and, after an interval of six years, the second was given to the world in 1870. In noticing that volume we commented on the inevitable disadvantage which he must labour under who would thus tell a story piecemeal. To understand the second volume one had to hunt up the first, then grown scarce, and almost out of print; but at least the reader was cheered by the assurance that the third and last volume was to follow in quick succession. Six years have elapsed since then, and we seem no nearer the end than ever. "The story," wrote the author in 1864, "is to be comprised in nine books, making three volumes." But the third volume is now in our hands, and we find it a mere collection of episodes, without beginning or end. This is perhaps inevitable, but it sadly diminishes the interest, and will affect the popularity of the book.

Sir John Kaye has hardly a right to assume that those into whose hands his book will fall are familiar with his former volumes. In the years which have passed since they appeared, the most tenacious memory has had ample time to forget the sequence of events, and to feel utterly at a loss as to the position, relative to other occurrences of the Mutiny, occupied by the circumstances of which we read. There is not an index to either of the volumes, and it is therefore only by dint of trouble, from which busy men may not unreasonably consider that the author ought to have relieved them, that we are able to find out whereabouts in the story we are. We would suggest to Sir John Kaye, when he presents his next volume to the public, that he give, by way of prologue, half-a-dozen pages stating the scope of the whole work, what is the portion which has already been dealt with, and the particular events which are discussed in the portion under consideration.

The history of the Sepoy Mutiny is that of a single year. It began, or rather the first actual outbreak took place, at Barrackpore, in March 1857, and a public thanksgiving for the pacification of India was held in England in May 1858. But long before the latter date the main danger had passed away; indeed, after the capture of Delhi on the 21st September, 1857, the backbone of the rebellion was broken. The outbreak at Meerut, on the 10th May, gave the signal for a simultaneous rising at almost every station in Northern India; and before the end of the month all the military posts which lay at short intervals along the banks of the Jumna and the Ganges were in a blaze. The first act of the mutineers, after massacring the Europeans, was in each instance to cut the telegraph wires and to stop the mail posts. Thus no concert was possible between the British. They fought in small bands, with the courage of despair, each on the spot where the outbreak of the Mutiny had chanced to find him. Against what overwhelming odds they held their own, with what tenacity each little handful confronted the treacherous foe, Sir John Kaye is telling us in slow detail. It is then no pitched battle, with a definite and concerted plan, that has to be told, but rather a series of hand-to-hand conflicts. Every post had its own story, and in each the defender, at least in the earlier part of the war, has to do what was best in his own eyes to meet with vigour an unexpected crisis. A time for retribution and concerted action came; but at first the sole connecting link which could be discovered in the dismal story was the broad fact that the black race had risen against the white.

In the spring of 1857 there were but few regiments of British troops in India. Sir John Kaye, as far as we can remember, has not been able to spare a single page of his three thick volumes to give a list of them. At the outbreak of the Mutiny we had but eighteen European regiments, giving not more than fifteen thousand effectives, along the whole line of the frontier from Cabul to Burmah. A glance at the map will show how small a proportion that force must have borne to the native garrisons. After the Sikh war the Punjab required seven British regiments; two were wanted in Burmah, the rest were scattered at such places as Agra, Dinapore, and Meerut. One regiment was usually left to guard Calcutta, and some were usually sent to take their turn of refreshment at the hills. It, however, so happened that there were fewer European regiments in India at the time of the Mutiny than there had been before the annexation of Oude. By that step we had added enormously to native discontent, but had not added to our means of keeping it in check. Lord Dalhousie, it is said, before leaving India asked for more European troops; but none were sent, and the Governor-General's intention of annexing Oude to the British dominions was carried out without any preparations for what might be the consequences of the measure. Our frontier line was sixteen hundred miles in length, with a population of not less than eighty millions. We had recently conquered three great countries—the Punjab, Pegu, and Oude—yet we had not a single additional English soldier to prevent a possible outbreak. The Mutiny surprised us at a time when we had no European regiments at Benares, at Allahabad, at Cawnpore; none at Feruckabad, Bareilly, Fyzabad, or Delhi; none at Dacca, Berhampore, or Patna. At Calcutta there was but one half battalion.

We are not indebted for this information to Sir John Kaye; and we think that readers may reasonably complain that a book pretending to be an exhaustive account of the great Sepoy war should have reached the end of its third ponderous volume before setting forth such obvious preliminary information as a detail of the defensive force at the disposal of the Governor-General. It is not necessary here to give any account of the Mutiny; we propose only to furnish a few dates which may show the relation which the events narrated in Sir John Kaye's present volume bear to the general story. There was an outbreak in January 1857 at Barrackpore, the great military depôt of Bengal, on the subject of the greased cartridges; but it was quelled, and all relapsed into quietness. Many warnings were given and disregarded during the next few months, and the outbreak of Meerut on the 10th May found the Government as unprepared as if they had received no warning at all. The Meerut mutineers slew their officers and marched on Delhi, where they proclaimed their king on the 12th. Three native regiments were disbanded at Lahore, and General Corbett took such measures as preserved the tranquillity of the Punjab; General Anson, who was at Simla when the outbreak at Meerut took place, rather too leisurely decided to march on Delhi; he died of cholera on the 27th May, and was succeeded by Sir Henry Barnard. On the 30th took place the Mutiny at Lucknow, and on the 3rd of June the rising of Allahabad was put down by Neill. From that date the Mutiny spread with fearful rapidity throughout Bengal. Horrible massacres of women and children took place at Meerut, Delhi, Cawnpore, Nusseerabad, Neemuch, Hansi Hissar, Jhansi, Bareilly, and Allahabad. And many other stations in the country round Lahore, in Oude, and throughout the length and breadth of the valley of the Ganges, rose in open revolt. On the 1st of July the Residency of Lucknow was besieged by the rebels, and on the 4th Sir Henry Lawrence died of his wounds.

Then the tide began to turn. Only one place, Dinapore, revolted after this date; on the 12th June Nicholson won his first victory at Seaforte, five days later Havelock recaptured Cawnpore, and soon after commenced, 29th July, his victorious march. But it was not till the 14th September that the assault on Delhi began, and it was not till the 20th that it was taken. On the 25th Havelock and Outram relieved Lucknow. Then followed, at the end of September and the first days of October, Greathed's avenging campaign. Sir Colin Campbell had been appointed Commander-in-Chief in July. In November he appeared before and took Cawnpore. This was the last exploit of the year 1857. The year 1858 made a clean end of the Mutiny, and in September 1858 British India passed from the dominion of the East India Company to that of the Crown.

Such is the story which Sir John Kaye has to tell. In one sense there is an epic unity in it, for it is the history of the great and simultaneous revolt of a subject race; but, on the other hand, it is difficult to keep the threads of the narrative all in hand, for its interest lies in the heroic nature of the detached episodes, alike in character, brought about by the same causes, identical in point of time, and differing only in the actors and minor details.

We cannot but think that the author threw away a great chance when he adopted the plan on which his work is written. He says of himself in the preface to the second volume:—

> The events to be narrated covered a large area of space, but were compressed within a small period of time. Chronologically they moved along parallel lines, but locally they were divergent and distracting. The question was how it was best to deal historically with all these synchronous incidents. To have written according to date, with some approach to fidelity of detail, a number of separate narratives, each illustrative of a particular day, or of a particular week, would have been easy to the writer, and would in some sort have represented the character of the crisis, one of the most distinguishing features of which was derived from the confusion and distraction engendered by the multiplicity of simultaneous outbursts in different parts of the country. This mode of treatment, however, though it might accurately reflect the situation, was not likely to gratify the reader. The multiplicity of personal and local names rapidly succeeding each other would have bewildered him, and no distinct impression would have been left upon his mind. But though the nature of the subject utterly forbade all thought of unity of place and unity of action, with reference to the scope of the entire work, there was a certain unification of the several parts which was practicable, and which suggested what might be called an episodical treatment of the subject, with such connecting links, or such a general framework or setting, as historical truth might permit.

Sir John Kaye then determined deliberately to write, as he calls it, episodically; and we must confess that the result is to the last

degree exasperating. Any attempt at dramatic unity has been abandoned. If all the work had appeared at once, it would have been something; but as it is, we are treated at intervals of six or seven years to a bundle of episodes, bearing no apparent relation to each other, which might as well be entitled "Anecdotes of British Heroism" as a *History of the Sepoy War*. The book is also disfigured, as we think, by a fundamental defect. Sir John tells us over and over again that he has striven to be impartial. He says that a historian is worth nothing unless he can write as impartially of the living, or of those newly dead, as he would of those who lived ages ago. But Sir John Kaye cannot attain that judicially impartial frame of mind; it is foreign to his very nature. The man who would write contemporary history with impartiality must be made of sterner stuff than he, and his pen must be dipped sometimes in a fluid bitterer than the lubricating mixture which serves Sir John Kaye for ink.

(*To be continued.*)

ROUND MY HOUSE.*

THE purpose of this book, as Mr. Hamerton tells us, is to make two nations understand each other better, or rather to make Englishmen understand a little more about Frenchmen. There is obviously room for such a kindly office; and Mr. Hamerton's book is excellently adapted to discharge it. The first of these propositions needs very little proof. Nothing can be more ludicrous than the misconceptions which every nation forms of its neighbours. Amiable people labour to show the unreasonableness of various international prejudices. It would perhaps be better to say that, properly speaking, there is no such thing as international prejudice at all. Dr. Holmes remarks in one of his most amusing books that there are really six persons concerned in every dialogue. Besides the real A and B, there are the imaginary A and the imaginary B contemplated by A; and, in the same way, there are B's A and B's B. Only two of these persons have an objective existence; but the other four, for the most part entirely different from either of them, must be taken into account to understand the conversation. This is most strikingly true in regard to nations. When we say that an Englishman hates Frenchmen or Americans, we are speaking inaccurately. He really hates a creature of the imagination, some of whose qualities, it is true, have been more or less derived from observation of concrete human beings, but who is for the most part as imaginary as Iago or Shylock, and much less vividly conceived. We need only draw the moral in passing that it is absurd to resent antipathies of this kind. Why be angry with a Frenchman for detesting England, when the real object of his detestation is a purely fictitious John Bull constructed out of vague traditions, inherited prejudices, and all sorts of absurd blunders? By "foreigner," we may say more generally, is understood the reverse of myself—the *non-ego* of a particular race; and therefore hatred of the foreigner is simply the reverse side of patriotic vanity—a foolish sentiment it may be, but not one which calls for any special resentment.

It is desirable, for most obvious reasons, that a conception more in correspondence with objective facts should take the place of the old shadowy image. All manner of misconceptions are prevalent in regard to the French people, and few English travellers, even though of exceptional intelligence, are in a position to judge for themselves. England, says Mr. Hamerton, is as far from rural France as China, though France is a good deal nearer to England. We go to them, that is, much more often than they come to us. But as an Englishman's acquaintance with any part of France outside Paris is generally confined to a bird's-eye view from a railway carriage travelling at the rate of thirty miles an hour, it is not very trustworthy or exhaustive. Nine Englishmen out of ten would define France as the eighteen hours of railway which intervenes between Calais and Geneva. Mr. Hamerton, on the contrary, has had singularly good opportunities of observation. He has lived in a French country district for years; he has been familiar with people in all classes, and he has been an eye-witness of changes destined to mark a great historical epoch. He has moreover the powers required in a good observer. He has the eye of a painter; he is a man of singularly liberal mind, and has thus one advantage even over Frenchmen, for he can both admire a Catholic bishop and sympathize with the worship of Garibaldi; he is a man of great literary and artistic culture, and is therefore capable of judging by a high standard, and taking an interest in questions of real importance. Finally, he is able to communicate the results of his observations in a very pleasant and direct style; and gives the pith of his conclusions with enough illustrative anecdote to bring out his points. There is thus far more to be learnt from this very modest little book than from many pretentious volumes filled with political philosophy and ambitious description.

The scope of the book is tolerably wide. After an amusing account of his troubles in search of a house, Mr. Hamerton proceeds to describe the region in which he ultimately settled, and then gives the natural history of the population. He gives a clear account of French country society, of the position and influence of the aristocracy, of the various pleasures and troubles of housekeeping, of the "peasant-world," of the ecclesiastical organization, and of French ideas about money, education, and marriage. The book concludes with a graphic account of the state of things during the German war, and of a battle which Mr. Hamerton had the good, or ill, fortune to witness from his garret window. It would not be difficult approximately to identify, by means of some of the details incidentally given, the geographical position of Mr. Hamerton's house; but, as he abstains from mentioning names, we must follow his example. It is enough to say that Mr. Hamerton lived near a French country town, and watched, as only an intimate can watch, the habits both of the urban and the purely rustic population. The French peasant, of whom he gives an interesting portrait, is chiefly familiar to English readers of French literature from the writings of Balzac and George Sand; but it is difficult to know what is the substratum of bare fact which underlies the beautiful idyls of one writer and the hideous revelations of selfishness, meanness, avarice, and cunning, which compose the ideal of the other. Mr. Hamerton's account may help to explain how the same figure may serve as a model for two representations so curiously different. One must begin by realizing the extraordinary interval which still separates the peasant intellect from that of the educated classes. The peasant, as Mr. Hamerton says, lives upon tradition and rumour. He still believes implicitly in witchcraft, and does not object to science and art inasmuch as he is absolutely unaware of their existence. He speaks a *patois* confined to a limited district, and only partially intelligible to even cultivated natives. Rumour therefore supplies the place of newspapers in the outside world. The priests are generally supposed to control the peasant mind, but their heads that the priests were Prussian agents during the war. The source of this curious delusion is thus explained by Mr. Hamerton. It had been imagined by the peasants before the war that the Pope wanted to occupy the French throne, and they explained the re-occupation of Rome by the theory that Napoleon sent his troops there to keep the Holy Father quiet. But what caused this view of the Papal hostility? The reason seems to be, says Mr. Hamerton, that, under a monetary convention, the Papal money circulated in France. The Papal Government took advantage of this by coining great quantities of franc-pieces of intrinsically small value. The French Government at last declared that these pieces were only to be received for their value as bullion. Thus every peasant who had a hoard of silver suddenly found that all the francs marked with the Pope's head were lowered in value to ninety centimes. This was enough to make the Pope hated; and it was at once inferred that he wished to conquer France, that he was the ally of Prussia, and that his priests were spies. If this curious story be correct, it reveals strange possibilities. Who can say what strange notion may next enter heads so singularly incapable of appreciating political realities and so pertinacious in errors once adopted? If the peasantry were conscious of their own strength they could govern France. But how are minds to be reached which are so hopelessly beyond the pale of reason? No more serious question can be asked.

The peasantry, however ignorant, are undoubtedly very shrewd judges of things within their narrow radius of intellectual vision, and are thoroughly independent. The French generally are economical beyond the conception of wasteful Englishmen, and the peasant is economical beyond all other Frenchmen. He has his own land, he lives chiefly upon soup and potatoes, and he saves money by efforts which are sometimes heroic. Though modern luxury is altering his old habits and ideas, the process is a slow one. His ignorance is dense, and Mr. Hamilton mentions an intelligent youth, possessing 400*l.*, who, as he showed by incidental questions, had never even heard of printing, and could not understand the difference between books and manuscript. On what side in politics will this vast mass of population, so cut off from all other currents of thought, so pertinacious, and so bigoted to old traditions, throw its weight? The peasant tradition is derived from pre-revolutionary days, and consists chiefly in a bitter hatred of the ancient privileges of the noblesse. The peasant, so far, tends to Republicanism, but he has hitherto associated Republicanism with the insecurity of property. The experience of the last few years has tended to remove that fear, and hence the many symptoms of the growth of Republicanism amongst the rural population. The influence of the Church, however, is on the other side, and it is a very difficult question to decide how deeply that influence is rooted. It is on one side obvious that sceptical ideas have spread to a certain extent from the towns. On the other hand, the peasant is still intensely superstitious, and the Church knows well how to turn his superstitions to account. Mr. Hamerton tells us a typical story of a girl who was slapped on the back one morning by a figure which instantly disappeared in the mist. Mrs. Hamerton tried to persuade the girl that the cause of this strange phenomenon was some young man's propensity to "larks." The priest upheld the doctrine that the girl's father had come back from purgatory, and meant to give a hint for more prayers on his behalf. The priest seems to have had the best of it. The Church of course exercises an enormous influence over the women in all classes, and where there are such superstitions to be worked upon, an unscrupulous use of its power may do much. The question is, as Mr. Hamerton says, whether the scepticism of the men is a thin film overlying a substratum of genuine belief, or whether the comparison should be inverted. On the whole, Mr. Hamerton seems to incline to the view that, in his neighbourhood at any rate, the set of opinion amongst the male peasantry was in the sceptical direction; but evidently there are

* *Round My House.* By P. J. Hamerton. London: Seeley, Jackson, & Halliday. 1876

materials in any case for a long and complicated struggle. In view of such a result, his description of the mode in which the priests use the powers of a most perfect organization to strengthen their influence amongst all classes is interesting, though the main facts are sufficiently familiar.

We have not space to give further illustrations of Mr. Hamerton's very interesting book. Not the least curious part is that in which he expounds without prejudice the theory and practice of French marriages. We will merely make one obvious remark, which, however, is generally overlooked. When French novels are quoted to show the corruption of French society, people forget that the one great source of interest in an English novel is impossible. When the objection to flirtation is carried so far that a young woman is not allowed, as a rule, to see a young man till she is engaged to him, it is obvious that the poor novelist is driven to post-matrimonial love-making. It does not in the least follow that the thing is more common in France than in England. Probably the actual standard of feminine virtue may be about the same in the two countries. The worst result of the French system is that it keeps the feminine intellect in a state of torpor by exaggerating beyond all reason the barriers to a free communication between the sexes. The life of a nun is only the prolongation of the life of the ordinary *jeune fille;* and a young lady kept in conventual seclusion till marriage, and absorbed in household duties after it, has not much chance of enlarging her mind.

FISHER'S HISTORY OF LANDHOLDING IN ENGLAND.*

THERE was in the days of our youth a Mr. E. H. Barker, who wrote many books, and who amazed mankind by putting after his name the letters O.T.N. No one knew of any degree or order of knighthood or learned society which could be expressed by these three letters. At last it was found out that O.T.N. stood for "Of Thetford, Norfolk." Now the four letters F.R.H.S. are not quite so mysterious as the three letters O.T.N., because the F. and the R. and the S. are all familiar in such positions; we might guess that F.R.H.S. betokened fellowship of some society, perhaps even of some royal society. And so it is; Mr. Fisher's discourse on the History of Landholding was read at a meeting of the Royal Historical Society, and "it will be published in the Transactions of that body." Mr. Fisher adds that, "as *it* is an expensive work and only accessible to the Fellows of that Society," he has "thought it desirable to place *it* within the reach of those who may not have access to the larger and more expensive work." Mr. Fisher is a little vague with his *ils*, but we gather from all this that F.R.H.S. means Fellow of the Royal Historical Society. We seem to have heard the name of that Society before; but we cannot say that we know very much about it. What we do learn now is that, but for Mr. Fisher's kindness in putting forth his views about landholding in the form of a thin book of ninety-five pages, they might have remained inaccessible to all but the Fellows of the Royal Historical Society. But this gives us a very odd idea of the Royal Historical Society, its Fellows, and its Transactions. One might perhaps think that Transactions from which we learn that *gavelkind* came from "gave-all-kind" (p. 60) might, without much public loss, remain inaccessible to the world in general. Nor should we counsel any of our friends to spend much money on an "expensive work" where they will read that "*Guy*, Earl of Warwick, 'the King-maker,' sank overpowered on the field of *Tewkesbury*" (50), and where, two pages on, they may find the additional and striking detail that "he lay gory in his blood" on the said field. We might be tempted to say that, things being so, the purchase of the expensive work would be what one of the prophets calls "giving our money for that which is not bread." Mr. Fisher is "aware that much might be added to the information it contains." Those who have read Maine and Nasse and the Maurers, Stubbs and Kemble and Waitz, might perhaps doubt whether in strictness anything could be "added to the information" contained in Mr. Fisher's book. To add one thing to another implies that there is some community of nature between the two things which are brought into contact. But we can see no community of nature between Mr. Fisher's book and anything that can be called "information." To those who know anything of the history of landholding it might seem that Mr. Fisher's very foundation would have to be grubbed up before any fabric of "information" could be reared on the same site. Mr. Fisher "possesses materials which would have more than doubled its size." Such a prospect is really frightful. Unless the materials which have been kept back are something very different from the derivation of *gavelkind* and the gory overthrow of the Earl of Warwick, we must beg, in the interest alike of scholars and of the general public, that they may be kept shut up in expensive volumes accessible only to Fellows of the Royal Historical Society.

Mr. Fisher's book is the *History of Landholding in England;* in tracing that history he goes back to times before the beginning, but he leaves the beginning itself out. He starts with "the Aborigines," and adds, with much truth, "The Aboriginal Period is wrapped in darkness, and I cannot tell with certainty whether the system which prevailed was Celtic and tribal." We must ourselves beg to be allowed to keep utter silence as to the aborigines of Britain and their system till the palæontologists have made it quite clear who the aborigines of Britain were. But we doubt whether much can be learned from "an old French customary in a manuscript treating upon the antiquity of tenures," which says that "the first English King divided the land into four parts," and that "he gave one part to the *Arch Flamens* to pray for him and his posterity." We quite agree with Mr. Fisher that "the terms used"—such as earls, knight service, socage, burgage—"applied to a much more recent period and more modern ideas." Nor do we see that anything can be learned of the aborigines from Cæsar, Diodorus Siculus, Geoffrey of Monmouth, Tacitus, or even "Dr. Henry quoting Tacitus." One is inclined to ask whether, as an important official in Oxfordshire believed that Richard King of the Romans came before Cæsar, so Mr. Fisher believes that Geoffrey of Monmouth came before Tacitus. But, whatever the date of Geoffrey, and whatever faith we put in his stories, it is hard upon him to make him talk of "the laws of Dunwallo Molmutius." Then come the Romans; then, according to all rule, should have come the Saxons; but, instead of them, we get as number III. the Scandinavians, and as number IV. the Normans. Mr. Fisher, we observe, dates from Waterford, which might perhaps justify a little tinge of the Berserker element. But Mr. Fisher is very calm and judicial; there is nothing in him of the grand rush which sweeps everything before it in the pages of some other writers who are strong on the Scandinavian side. He thus gives judgment:—

> I am disposed to think that we shall look in vain among the customs of the Teutons for the basis from whence came the polity established in England by the invaders of the fifth century. The Anglo-Saxons came from a region north of the Elbe, which we call Schleswig-Holstein. They were kindred to the Norwegians and the Danes, and of the family of the sea robbers; they were not Teutons, for the Teutons were not and are not sailors.

and presently, yet more decisively:—

> I therefore venture the opinion that the settlement of England in the fifth and six centuries was not Teutonic or Germanic, but SCANDINAVIAN.

Notwithstanding all this, our breath is a little taken away when we hear of "the nomenclature of *feudalism* introduced into England in the fifth century." And then we have a prodigious deal of talk, with references to the decisions of judges, and extracts from law books about feudalism in England before the Norman Conquest, references to Pontopidan and "Wacterus" for the derivation of "odal" and "feudal," and references to Old-English laws in which King Æthelstan is made to speak of two otherwise unknown classes of men called "thegur" and "theodia." There is also a vast deal about "liberi homines." Mr. Fisher seems to have got some notion into his head that the condition of freeman and vassal are inconsistent. Full of this, he runs tilt at the Gemot of Salisbury in 1085, and goes quoting a good many lawyers and a good many modern historians, all of whom are under "mistakes" and "misapprehensions" because they had not grasped this dogma of Mr. Fisher's. And so he goes on through nearly the whole history of England, seeing everywhere this same distinction between the "Anglo-Saxon" freeman and the Norman vassal, as if vassalage and freedom hindered one another. The most amusing thing is that, after Mr. Fisher has bowled over several writers old and new, he says with great simplicity, "Since the paper was read, I have met with the following passage in Stubbs's *Constitutional History of England*, vol. i, p. 265." Here of course Mr. Fisher, if he had had sense enough to understand what he read, would have found an explanation of the whole matter. But no, Mr. Stubbs is charged by Mr. Fisher with having "overlooked" something. This is certainly a most unusual accident with Mr. Stubbs; but what the Professor is charged with overlooking is the most curious part of the whole business.

In turning over Mr. Fisher's pages the reader will be ever and anon struck with references to "55 William I.," sometimes exchanged for "I.H. William I." Whatever we make of the latter, the former is the usual way of quoting a statute by the years of a king's reign. Thus "55 Henry III.," or "55 George III.," would not be amazing; but we are a little startled at so great a number of years being attributed to any king but those two. The nursery rhyme indeed assures us that "William the Conqueror long did reign"; but, in sober chronology, "21 William I." is the highest figure which could possibly be got at. But, after a little searching, we find out that the "55 William I." is not a date, but a reference to the alleged Laws of William, according to the copy given in Selden's Appendix to Eadmer. Now we should really have thought that any human creature who was able to read any Latin at all might have found out the difference between Eadmer's own text and Selden's Notes and Appendix; but not so Mr. Fisher, F.R.H.S. Will it be believed that, in p. 34 of the *History of Landholding*, Mr. Fisher, after introducing "Eadmerus," as one might say, with mickle worship and with mickle procession, bringing him in in the glory of capital letters, and with a short account of his life, actually took the laws which Eadmer's editor printed in his Appendix to be part of the text of Eadmer himself. So it is: and on the strength of this he charges Mr. Stubbs with "overlooking the complete narration of the alleged laws of William I. given by Eadmerus, to which I have referred." If Mr. Fisher wishes to know something about the subject on which he has taken upon himself to write, he will find all that is good for him in the Preface to the second volume of Roger of Howden; but, if he chooses to stick to Selden, and to call him Eadmer, he might at least not attribute to either of them such nonsense as he puts into their mouths both in Latin and English. Mr. Fisher quotes as Latin:—

> LV. De *chartilari* seu Feudorum jure et ingenuorum immunitate. *Volume* etiant, &c.

* *The History of Landholding in England.* By Joseph Fisher, F.R.H.S. London: Longmans & Co. 1876.

This Latin gibberish is translated by the following English gibberish:—

Concerning *cheutilar* or Feudal rights, and the immunity of freemen.

We confess that we were simply baffled by both Mr. Fisher's languages, and, not having the passage by heart, we had to turn to Selden to see that the real word is "*clientelari*."

If (*quod absit*) Mr. Fisher should ever write another book, he will do well, instead of charging Mr. Stubbs with "overlooking" this or that, to get, if not Mr. Stubbs himself, yet some one who can read English and Latin, to "overlook" his own manuscripts or proof-sheets.

And so we go on to the alleged charter of William to Count Alan, which scholars have ceased to believe in, but copied in such a fashion that things are granted "Alano Brittania comiti et hæredibus tuas," and that the things granted appear as "omnes villas et terras quæ nuper fuerent comitas Edwin in Eborashina cum feodis militia et aliis liberatibus," and where the English Earl himself appears in the nominative case as "Edwinius." Then Mr. Fisher comes across "the Saxon Chronicles, p. 238," quoting, it would seem, the edition of Gibson, though it is rather hard that the "deoules and yuele men" should be softened into "wicked men, or rather devils." Then, in Stephen's day or later, according to Mr. Fisher,

The nation was mapped out, and the owners' names inscribed in the Doomsday Book. There were no unoccupied lands, and had the possessors been loyal and prudent, the sovereign would have had no lands, save his own private domains, to give away, nor would the industrious have been able to become tenants-in-fee. The alterations which have taken place in the possession of land since the composition of the Book of Doom, have been owing to the disloyalty or extravagance of the descendants of those then found in possession.

The possibility that a family might become extinct without either disloyalty or extravagance does not seem to have come into Mr. Fisher's head. Perhaps they manage these things better at Waterford. As we go on we come to some more strange things here and there. Thus, when we get to the Great Charter, we read:—

The Plantagenets had not begun to call Commons to the House of Lords. The issue of writs was confined to those who were barons-by-tenure, the *patricians* of the Norman period. The creation of *nobles* was the invention of a later age. The baron feasted in his hall, while the slave grovelled in his cabin.

At much later times, those of Tudors and Stuarts, we are again puzzled when we read:—

The abolition of retainers, while it relieved the land of the nobles from the principal charge thereon, did not entirely abolish knight's service. The monarch was entitled to the care of all minors, to *aids* on the marriage or knighthood of the eldest son, to *primer-seizin* or a year's rent upon the death of each tenant of the Crown. These fees were considerable, and were under the care of the Court of Ward and Liveries.

Directly after, still in the section devoted to the Tudors, we read:—

The artisan class had, however, grown in wealth, and they were greatly strengthened by the removal from France of large numbers of workmen in consequence of the revocation of the Edict of Nantes. These prosperous trades people became landowners by purchase, and thus tended to replace the *Liberi Homines*, or freemen, who had been destroyed under the wars of the nobles, which effaced the landmarks of English society. The liberated serfs attained the position of paid farm-labourers; had the policy of Elizabeth, who ensured that each of their cottages should have an allotment of four acres of land, been carried out, it would have been most beneficial to the State.

This sounds as if Mr. Fisher thought that the revocation of the Edict of Nantes happened in the time of Elizabeth. Under the Stuarts we read that "the suppression of retainers converted land into a quasi-property," and that "the contest *eventuated* in a military protectorship." On the Revolution of 1688 we have a very dark passage indeed:—

William III. succeeded, *as an elected monarch*, under the Bill of Rights. This remarkable document contains no provision, securing the tenants-in-fee in their estates; and I have not met with any treatise dealing with the legal effects of the eviction of James II. All patents were covenants between the king and his heirs, and the patentees and their heirs. The expulsion of the sovereign virtually destroyed the title; and an elected king, who did not succeed *as heir*, was not bound by the patents of his predecessors, nor was William asked, by the Bill of Rights, to recognise any of the existing titles. This anomalous state of things was met in degree by the statute of prescriptions, but even this did not entirely cure the defect in the titles to the principal estates in the kingdom. The English tenants in decapitating one landlord and expelling another, appear to have destroyed their titles, and then endeavoured to renew them by prescriptive right; but I shall not pursue this topic further, though it may have a very definite bearing upon the question of landholding.

And another passage, under the House of Hanover, is, if possible darker still:—

The possession of wealth and of rent gave back to their possessors even larger powers than those wrested from them by the first Tudor king. The maxim that "what was attached to the freehold belonged to the freehold," gave the landlords even greater powers than those held by the sword, and of which they were despoiled. Though nominally forbidden to take part in the election of the representatives of the Commons, yet they virtually had the power, the creation of freehold, the substance and material of electoral right; and consequently both Houses of Parliament were essentially *landlord*, and the laws, for the century which succeeded the accession of George I., are marked with the assertion of landlord right which is tenant wrong.

The only way to get any meaning out of this is to suppose that Mr. Fisher believes that landlords and peers of the realm are convertible terms; and it is a new discovery in hagiology that the first Hanoverian King left the earth after the manner of Enoch and Elias.

We go back again to the beginning to remark that Mr. Fisher knows the approximate population of Britain in the time of the aborigines and in the time of the Romans; and that he knows exactly what it was in 1066 and in 1154. Also he believes the story of the Lord of Shobington and his sons coming to meet William riding on bulls. Nay more, he tells us, what we are not quite sure whether Sir Bernard Burke tells us or not, that, as "this was the period when hundreds of herds of wild cattle roamed the forest lands of Britain," so, "failing horses, the Shobingtons collected a number of bulls"—which seem to have been easily broken in—"rode forth on them, and routed the Normans, unused to such cavalry." How bulls could anyhow form cavalry is even darker than by what process of fiction the well-known Wiggod of Wallingford, the real Lord of Shobington, got turned into this mythical rider of bulls.

FOGG'S ARABISTAN.*

THIS is a book of which the most favourable view must be expressed by the well-known legal phrase, "factum valet, quod fieri non debuit." There seems to be no particular reason why the author's loose memoranda and superficial impressions of travel should ever have assumed the shape of a volume of three hundred pages. A good deal of the ground is thoroughly well known to a host of Anglo-Indians, or to invalids compelled to exchange the fog of a London December for the bright sun and exhilarating atmosphere of Cairo. The slang of Egyptian donkey boys, the feats of amphibious Arabs at Aden, the processions of devotees to spots forcibly identified with remarkable scenes of the New Testament, are either familiar to many of us already or have been fully treated by far more learned and picturesque writers. There was nothing very exceptional in the author's route. He went by steamer to Alexandria, and thence to Cairo, where he found that a party which he had intended to join had already started to look for an oasis supposed to be situated in the very heart of the Libyan desert. At this point, too, he might have formed one of Colonel Gordon's expedition, bound for the region so well described in *Ismailia*; but he thought it better to proceed to Turkish Arabia, having previously paid a visit to the Suez Canal, Port Said, Jaffa, and Jerusalem. At least one hundred and fifty pages devoted to these well-known spots might have been spared. Still the work is one not forbidding in its aspect nor hard to read. The style, though occasionally "slangy," possesses some animation. Americanisms are frequent, and there are blunders not a few. We do not quite like the Introduction by Mr. Bayard Taylor, who tells us that he is induced to stand godfather to the work because he has long known Mr. Fogg, and because the description of Palestine and Egypt, which he does know, induces him to trust the pictures of Bagdad, of the plains of the Euphrates, and of the ruins of Babylon, which he does not know. This style of recommendation might easily become a nuisance. A book of travels, like any other compilation not based on the joint-stock principle of limited liability, should have strength and buoyancy enough to float itself. If it possesses any inherent merits, such as novelty of scene and incident, quickness of observation, and vigour and attractiveness of style, it may defy criticism and dispense with patronage. If it is dull and commonplace, neither Mr. Bayard Taylor nor any writer of his nation will make it go down with an English public. When we proceed to draw attention to several Transatlantic forms of expression and modes of spelling, it is by way of protest against their finding a permanent place in current literature. Mr. Fogg and those whom he joins are always "travelers," and describe scenes which are "marvelous." A road may very well be called "wide and smooth," but we must reject the phrase "well-graded," though its meaning may be sufficiently clear. Of a young Arab it is said, in a preterite tense apparently borrowed from the Jabberwock, that he "dove head foremost through the crowd to present his cap for *bakshish*." Why should it not be said of a critic that he "smole" on reading this? The word "location" is used frequently, and anecdotes told by a genial host at a farewell dinner at Bagdad are "located in New York, Savannah, and New Orleans." To "loan" a rifle is, after this, very pardonable. We have no objection to a writer of travels dedicating his work to a *compagnon de voyage*, but the name of "Steriker Finnis, junior," to whom, as well as to the English residents of Bagdad, the volume is inscribed, is suggestive of Dickens's "War Correspondent, Mr. Jefferson Brick." Queer-sounding names, unless associated with great personal merit or public approbation, had in most cases much better be kept out of a title-page.

That an American gentleman should teach Englishmen how to amplify and add dignity to their own tongue is what we must always expect; but there are errors and misapprehensions in the work before us which do not admit of argument or excuse, like the omission of superfluous and unnecessary consonants or the forcible conversion of intransitive into transitive verbs. "The Arab," we are told, "unlike his Hindoo brother, has no idea of mercy to animals." If Mr. Fogg, at this present time especially, could only inspect the backs of a few wretched ponies harnessed to the carriages of a Transit Company in Upper India, or the tails of bullocks well twisted and mauled by a Bengali peasant, or the head of an elephant into which the mahout has repeatedly

* *Arabistan; or the Land of "The Arabian Nights." Being Travels through Egypt, Arabia, and Persia, to Bagdad.* By W. Perry Fogg, A.M. London: Sampson Low & Co. 1875.

driven two inches of his sharp iron goad, he would have a very different notion of the necessity in India for a society for the prevention of cruelty to animals, or for the operation of an Oriental "Martin's Act." Then Kerbela, the famed resort of Mahommedan pilgrims, is said to contain the shrines of "Abbas and Hassain." These martyred saints should be Hassan and Hassain, as Mr. Fogg might have learnt from the splendid description of Gibbon, if from no other source. We may take this opportunity of quoting for the use of Eastern travellers a very concise and easy couplet in the Hindustani or Urdu language, which commemorates the "five holy persons" specially venerated by one great division of Mahommedans:—

Nabi o Ali, Fatima o Hassan,
Hassain ibn-i-Haidar, yo hain Panj tăn.

That is to say, "the Prophet, Ali his son-in-law, Fatima his daughter, and Hassan and Hassain, his grandsons, these are *the* five persons." The Peninsular and Oriental Company have not always been lucky in the choice of their captains or the management of their ships, and the clever play of the *Overland Route* is scarcely an exaggeration of what may have happened at the wrecks of the *Alma*, the *Colombo*, the *Ava*, or the *Carnatic* steamers. But we do not think that any *infames scopuli* in the Red Sea are to be credited with the loss of "a magnificent steamer" belonging to the said Company "with all on board," consisting of "two hundred passengers." As far as we can make out, Mr. Fogg must have been shown the rock where the *Alma* was wrecked, or that on which the *Carnatic* grounded some six years ago, broke her back, and slipped off into deep water, the loss of life on the occasion being very limited. A more extraordinary blunder occurs at p. 244, where Mr. Fogg tells us that at Bagdad he was shown the ex-King of Oudh, who was lucky enough to have yielded up his royal dignities and palaces to the English before the breaking out of the Indian Mutiny. This terrible episode in history is here enlivened with statements not generally known, to the effect that the said ex-King has ever since resided on the banks of the Tigris; that he has "traveled" all over Europe, and that in England he was "received by the Queen with all the honours due to his former rank." Probably, the author, writing from recollections or imperfect memoranda, has muddled up the history of the Nawab Jubal-ud-Dowlah with anecdotes of the ex-King, and with the visits to England at intervals of the late Prince Ghulam Mahommed, a son of Tippoo, who appeared in London to remind us of the rapid growth of our Indian Empire, as well as to prove that the descendant of one of our most soldierly antagonists could be a high-bred gentleman and a loyal and attached subject of the Queen. The pensioner whom the author saw is the grandson of a well-known former Nawab or King of Oudh, Saadut Ali. He has resided at Bagdad for some thirty years, on a pension gradually increased to 3,000*l.* a year for his loyalty and for good service rendered during the Persian war. The real ex-King of Oudh, we have every reason to believe, may still be seen at Garden Reach, Calcutta, writing flowery odes in very choice Persian, flying innumerable pigeons, and feeding a host of aquatic birds.

Mr. Fogg's impressions as to the standard of official morality in Turkish Arabia we give for what they are worth, and that cannot be very much. He puts no faith in stories of functionaries accessible to easy bribes, or of fraudulent contracts entered into in behalf of the Government, or of local agents who paid arrears with bricks instead of with hard cash. The particular instances quoted may be exaggerated, or merely typical; but the truth is that no person making a hasty visit of this kind, ignorant, as he admits, of the language, and treated with considerable attention by Pashas and Sheikhs in virtue of his nationality, has any business to give a decided opinion on the matter. Those who, after a life spent in public duties or devoted to commercial enterprise in Turkish Arabia or Persia, have thought proper to give their experiences to the world, do not lead us to endorse the favourable estimate that dishonesty is the exception and not the rule. But the condition of the countries visited is probably no mean test of the effects of absolute government and of the standard of official morality. And, tried by this criterion, the author's hasty judgment ought to be reversed. We admit, however, that we have glimpses of the exceptional and spasmodic vigour of unfettered Governors when meeting emergencies, which make us inclined to doubt whether Boards and municipalities can ever deal so effectively with epidemics or floods. One morning the Tigris threatened to inundate the city. Dikes were thrown down, crops damaged, and a dry plain was converted into an immense lake. Redif Pasha was equal to the occasion. He closed all the bazaars and shops for four days, and impressed all the able-bodied population to work on the dikes. One body of men was sent ten miles off to check the mischief at its source; and the remainder were kept labouring in the immediate suburbs of the town. The breaches were repaired, and the city saved. The same vigorous Governor enforced his orders for quarantine by directing that any one who attempted to break the line should be shot. In fact, the only part of this volume which can be favourably recommended to the public, or which throws any light on Eastern manners and customs, is the description of the Pashalik of Bagdad. Here, thanks to good introductions and considerable powers of endurance, Mr. Fogg saw something besides narrow streets thronged with buyers and sellers and roofed in from the glare of the sun. Cook's Tourists have not yet made the old capital of the Khalifs as common as Jerusalem or Damascus. Mr. Fogg had also the advantage of being escorted by Dr. Colvill, the medical officer attached to the British Residency, and was introduced by him to the spiritual head of the Copts. In the course of conversation he caught the word "Yankeedonia," or something similar, which he imagined to have been coined to signify his own country. But he tells us that he discovered the phrase to be "a proper Arabic word," meaning the New World. What he really heard was "Yengi Dunya," or the phrase for America current all over the East—the first word, if we mistake not, being Turkish, and the second Arabic. On another occasion he seems to have been favourably impressed with the energetic Pasha already referred to in the matter of the inundation, who fully comprehended "that England and America are two distinct and separate countries." Like most Mahommedans of rank and position, this Governor, in his address and bearing, was worthy of his position.

With a local and lesser luminary at Moseyib our author rapidly became on easy and familiar terms. Mr. Fogg had left Bagdad with the intention of visiting Nineveh, but was stopped at Moseyib with the astounding news that quarantine had been established owing to the plague. Here was a terrible dilemma; our traveller could neither go forward to the ruins, nor return to the city, and had the prospect of passing forty days in a second-rate Eastern town, at a high temperature, with the chance of infection. However, he is clearly a man of readiness and expedients. He invited the Governor to take up his quarters on his own boat, which, under the official shadow, could then at least return to Moseyib. How the Turk accepted this invitation, smoked pipes like one of his own race, and consumed Bass's ale and English brandy like any Christian, without losing his head, may be learnt in the author's own words. But this adventure, which is by no means badly told, led Mr. Fogg to reflect that, although obliged to forego "the satisfaction of standing on the spot identified with so many associations," he had "an atmosphere of the antique" all round him; whereupon he set to work at Mr. Layard and Sir Henry Rawlinson, and has presented the public with a neat summary "of the celebrated explorations and discoveries of the last thirty years." This is indeed *voyager sans changer de place*. This specimen of American cuteness reminds us of a characteristic reply lately made by a lively Frenchman in different circumstances and from very different reasons. Being employed in the compilation of a guide-book for all Northern Italy, he was found by an English gentleman digesting sundry stale productions and comfortably enjoying the scenery and climate of Venice, without showing the slightest intention of stirring from the spot. His reasons were such as only a Frenchman would avow:—"Moi, monsieur, je trouve ici une maison charmante, et une cuisine très-recherchée, et je ne bouge pas." It is obvious that if the fear of quarantine or the attractions of the dinner-table are to preclude personal inspection of majestic ruins and galleries of art, a very great deal of expense and trouble will be saved. Indeed, in some instances, the result may be more valuable. By a careful reference to standard works and good maps all inaccuracies will be avoided, and we shall lose only those personal adventures which are not always retailed with good taste. Indeed, while the author admits that he was obliged to give up Nineveh altogether, he does not appear to have been much more successful in regard to Babylon; for, unless we very much misinterpret his language, he only caught a sight of the Birs Nimroud from a distance, and then had to hurry back to his boat. This hasty glimpse of ruins which require days and weeks for their due inspection, or for any fresh discoveries of worth, is followed by an account of Daniel's stone lion taken from other writers. Now it would scarcely be thought necessary for one traveller to write about the Kootub Minar when he had only seen it from the suburbs of Delhi, or for another to give us a history of the Knights of St. John because he had stepped on shore at Malta from the deck of a P. and O. steamer. We do not wish to be hard on a Transatlantic author who decides on his route, makes annotations, and passes judgments on national character with the characteristic rapidity of his race. But when we deduct from this work the chapters on places which have been described without being seen, and on those which, having been seen, need not have been described, it is quite obvious that the value of the book must be materially reduced. We part friends with the author, and trust that, when he next doth ride a race, like Gilpin, or venture abroad in search of fresh topics, he may not be driven off his boat by quarantine, nor be nearly lost, as was the case, on the rocks of Cape Madraka, on which his good steamer *Mesopotamia* had been carried by what in these and similar cases of blundering and miscalculation it is generally safe to call "an unknown current."

LE DERNIER DES NAPOLÉON.*

THE rapid sale of this volume in France is due to the vigour with which it criticizes Napoleon III. and the people who surrounded him; but the work is at the same time anything but complimentary to the French people themselves, who have bought five editions of it, which we hope may do them good. The state of a French Republican's feelings when he reads these pages must vary between a deep satisfaction at the hard hits given to the Empire, and some degree of irritation at the way in which Frenchmen in general, and French Republicans in particular, are con-

* *Le Dernier des Napoléon.* Cinquième édition. Paris: Lacroix. 1875.

stantly dealt with by the author. Nobody exactly knows by whom the book was written, though French readers generally attribute it to a well-known Austrian diplomatist. It is likely enough to be the production of some one in the diplomatic service of a foreign Power; for it is difficult to believe that a Frenchman would have treated his own country so unmercifully, and, on the other hand, it would be difficult to find a foreigner able to write such lively French without having spent some years in Paris. We do not attach much importance to the revelations which the author makes from time to time of matters known to himself and not before known to the public. The fact is that most of the stories he tells, as well as most of the criticisms which he makes on the Emperor and Empress and their Court, were already known in one form or another, so that the book does not contain very much that is positively new; but it is a rapid and effective summary of the current criticisms on Louis Napoleon. The supposition that the author is an Austrian is supported by the fact that Austria is the only country in Europe that he speaks of quite respectfully. He has the dislike to England which is so common all over the Continent, except in Italy and the small Northern States, and he hates Prussia even more than he hates France. He speaks of the Italians as every one of them were a personal enemy of his own, and of their King in the most disrespectful language. On the other hand, he has feelings of sympathy and veneration for all the Imperial family of Austria, and dedicates his book to the soul of the Emperor Maximilian. In the dedication the author contrives to inform his readers, whilst addressing the soul of Maximilian that he knew his late Majesty personally, and did all in his power, in a private conversation on the terrace at Miramar, to dissuade him from accepting the throne of Mexico. To this he says that Maximilian replied:—"The Emperor Napoleon has done to my country and family all the harm he could. He has come to understand at last that this policy would be sooner or later fatal to France. At present he can but desire our good." The author considers the ruin of Louis Napoleon as the punishment of his conduct towards Austria.

He begins by affirming, with perfect assurance, that the cycle of the Napoleons is closed. Few Frenchmen would feel quite so confident of this, however ardently they might desire it to be true. Notwithstanding the great strength of the present Republican party, there is scarcely a member of it who does not think with more or less anxiety about the young Prince at Chiselhurst, as the principal source of future danger to the Republic. The author of the work before us considers the Empire essentially transitory because it is a phase of the Revolution, which he hates intensely in all its forms and fruits. He declares that virtue and honour and legitimate power are the only bases upon which kings and peoples can seat themselves with safety and develop their grandeur and prosperity. We should be delighted to believe that such a very moral and encouraging theory was true, but we are afraid that in history success is not always quite so uniformly on the side of virtue and honour as might be desirable. Our author shares the opinion, which has been so very commonly received both by foreigners and by many Frenchmen themselves, that France is in a condition of mortal decadence. He even speaks of the country as people do now of Turkey, saying that it is "moribond." One sign of this decadence he takes to be the nomination of Louis Napoleon as Chief of the State. The plain truth is that the people who talk as if France were on the point of death are generally Legitimists, like the author of the work before us, and their pessimist are the result of political discouragement. Legitimacy in France is past revival by any art of doctoring; it is really "moribond," if not already dead; the Legitimists are fully aware of this, but, instead of saying that their own cause is lost and their own party dissolving, they say that France is dying.

The author of *Le Dernier des Napoléon* is not more plain-spoken about the genealogy of the late Emperor than a Legitimist would naturally be on a question of hereditary right. He reminds us of the earnest protest by King Louis in 1839, which is historical. It is a fact that the husband of Queen Hortense firmly denied that he was the father of Louis Napoleon, in whom there was never a trace of any physical resemblance to the Bonapartes. This absence of family likeness was particularly striking when the late Emperor was seen with his uncle Jérome and his cousin Prince Napoleon, who were both so visibly Bonapartes. The absence of family likeness, even when so total as it was in this instance, would not, however, prove anything by itself, for it is often very striking in families where there is not the slightest reason for suspecting the virtue of the mother; but, taken in connexion with the repeated protests of the reputed father, it certainly is significant. But whoever may have been the real father of Napoleon III., he was recognized by the first Emperor himself as his eventual successor, and therefore was really heir to the Empire as far as Napoleon I. could make him heir. Our readers will remember the affair at Forlì, where the elder brother of Louis Napoleon met his death, probably from one of his fellow-conspirators against the Papal Government, because he would not march with them to Rome. According to the author of this book the ex-King of Holland wrote a letter to the Pope on this occasion, of which the following is an extract:—

Saint-Père, mon âme est accablée de tristesse—et j'ai frémi d'indignation quand j'ai appris la tentative criminelle de mon fils contre l'autorité de votre Sainteté. Ma vie déjà si douloureuse devait donc encore être éprouvée par le plus cruel des chagrins, celui d'apprendre qu'un des miens ait pu oublier toutes les bontés dont vous avez comblé notre malheureuse famille.

Le malheureux enfant est mort, que Dieu lui fasse miséricorde!

This relates to the elder brother, but the letter contains also a reference to the younger, who afterwards became Napoleon III.:—

Quant à l'autre, qui usurpe mon nom, vous le savez, Saint-Père, celui-là, grâce à Dieu, ne m'est rien. J'ai le malheur d'avoir pour femme une Messaline qui accouche. . . . &c., &c.

There is nothing new in this volume about the earlier years of Louis Napoleon, or even about his life before his accession to the throne. The author has the trick of quoting very appositely and in the right place for effect, and therefore it happens that some of his quotations are so interesting that we are tempted to quote them over again. One from that remarkably clear-sighted philosopher Proudhon is worth notice:—

Vous ne fonderez ni une dynastie ni rien de stable, parce que votre situation et votre provenance sont contradictoires et s'excluent. Vous vous proclamez empereur; vous allez être forcé d'exagérer l'autorité, vous qui l'avez combattue à main armée—vous allez faire de la compression et de l'arbitraire, vous qui avez tant prôné la liberté.

Allez, la Liberté n'a rien à craindre de vous! Sans que vous vous en doutiez, vous ferez plus de mal au principe de l'autorité que tous les conspirateurs ensemble.

The sequel has proved the last sentence to be quite true. The desire for a free Constitution is much more general now in France than it was in 1848, although the Republic of that date was more decidedly what is called Republican than the present. There was at that time a fiery Republicanism in the towns, but the middle classes in the country had so little objection to Cæsarism that they positively preferred it to the risks of popular government. In those days the middle-class rurals thought that Cæsarism would be a protection. In the present day Cæsarism is more generally considered to be a source of danger to the country, and it is the reign of Louis Napoleon which has left this impression on people's minds. The present Constitution is due much more to hatred of Bonapartism than to any particular enthusiasm for the Republic, and it may be fairly asserted that Louis Napoleon has done more for it than anybody else. Even now that he is dead he still works very efficaciously against Cæsarism in France, if only by supplying a subject for such books as the one before us, which are incomparably more efficacious than any mere condemnations of Cæsarism in the abstract.

The anonymous writer affirms that Napoleon III. was the victim of an extreme and almost invincible idleness, that he was so much afraid of work as only to apply himself to it at the last extremity, and that he was a dreamer whose faculties evaporated in the clouds. This, we have reason to believe, is true in the main, but rather exaggerated in the way the writer puts it. Compared with the all but superhuman energy of Napoleon I., and his ceaseless vigilance and activity, the habits of Louis Napoleon appear extremely indolent; but we are not aware that, when he enjoyed tolerable health, he was lazier than many rich men generally are. He liked ease no doubt, but he was perfectly able to conquer his own indolence whenever he clearly perceived the necessity for doing so. His worst fault as a ruler appears to have been a want of personal curiosity as to what was being done by his subordinates, and a disposition to submit beforehand to the evil-doings of corrupt agents as something inevitable, whereas the first Emperor was always determined to be cheated as little as possible, and looked into everything that could possibly be inspected by him. Louis Napoleon might have gone through life blamelessly as a constitutional monarch in a settled kingdom with capable and honest advisers: but the position in which his fate placed him required that incessant overlooking of subordinates, and that attention to minute detail, which belong rather to military commanders than to statesmen like the late Emperor. The author of this volume believes with most people that the late reign began comparatively well, because the Emperor had some useful and wise advisers then, and that after the death of these advisers he began to be directed by less able councillors, especially by the Empress Eugénie, whose advice proved fatal to him in the end. The general impression in France is that De Morny was the wisdom of the Emperor, so that, when that intimate adviser died, the Imperial sapience perished along with him. The Court of the Tuileries is described with the utmost severity as a scene of vulgar extravagance and dubious society; nor does the writer spare the Empress, blaming the absence of severity in language and manner which was really one of her womanly charms, and condemning with unnecessary energy some picturesque fancies of hers, some arrangements of *tableaux vivants* at the Tuileries, which were a good deal talked about at the time. The writer is evidently as hostile to the Empress as a gentleman can permit himself to be towards a lady. Speaking of the opening of the Suez Canal, he is very hard upon the Empress for riding upon a donkey, and for trying the experiment of mounting a dromedary. It would be simply charitable to suppose that she committed these great crimes in a spirit of innocent good humour, inspired by the delights of travel. A want of charity is also observable in the writer's way of criticizing the extravagance of the Empress when at the Tuileries. He does not take into consideration the fact that she really believed her extravagance to be a form of charity towards the poorer classes, by the encouragement it gave to trade. A sounder political economy condemns extravagance as a source of poverty to nations, because the labour absorbed in its maintenance might be more usefully employed; but the Empress did not see so far; she believed herself to be doing unmixed good, when in reality she was doing harm.

The writer speaks very respectfully of English diplomacy, as being fully alive to the interests of England, and always perfectly awake; but he has the utmost contempt for the French ambassadors and other agents in foreign countries under the Empire:—

Quand on a vu à l'œuvre la diplomatie française de l'Empire à l'étranger on se rend parfaitement compte de la longue suite de ses mécomptes et des désastres qu'elle a laissé arriver sur le pays, sans les prévoir, sans les prévenir.

Ambassades et consulats, ces postes si importants, non-seulement pour la dignité du pays, mais pour ses intérêts les plus graves, étaient livrés aux mains les plus inaptes, souvent à des mains criminelles: ici un de ces fonctionnaires était surpris en flagrant délit de vol—ayant dissipé les fonds de toute la colonie confiés à sa garde;—là tel autre usait de ses hautes fonctions pour extorquer du gouvernement auprès duquel il était accrédité, des sommes arbitraires et iniques dont il prélevait la dime. Vous comprenez comment de pareils agissements donnaient une haute idée de la France aux fonctionnaires et aux populations des pays étrangers.

Notwithstanding his compliments to our diplomacy, the author has the usual Continental opinion of our disinterestedness. He says we would recognize Robespierre himself if the recognition could make us sell one bale of cotton the more. He traces the origin of the Crimean war to Napoleon's desire to get his wife received at the English Court, so that the social position of the Imperial couple might obtain that corroboration of which it stood so much in need, and his theory is that the interests of France were sacrificed to the personal *amour-propre* of the Emperor and Empress. The consequences of the Crimean war are described as more injurious to France than to any other people, not excepting Russia herself, who made great strides in internal improvement in consequence of the lessons learned twenty years ago:—

La France y sacrifia gratuitement et inutilement son avenir, ses soldats, et ses millions.

Nous disons gratuitement, et le mot est impropre. Elle fit plus.

La France, malgré la prise de Sébastopol, conservait bien des sympathies en Russie. Elles se réveillèrent vivement à la fin de la campagne quand la France refusa son concours à l'Angleterre pour détruire Cronstadt et St. Pétersbourg, et accorda à la Russie une paix honorable qui ne lui coûtait ni une humiliation ni un pouce de territoire. Napoléon III. pouvait s'allier la Russie à toujours, et l'avenir et la grandeur de la France étaient assurés.

Mais il ne sut qu'infliger à l'Angleterre, son alliée, une blessure, qu'elle n'oubliera et ne lui pardonnera jamais, sans profiter de la reconnaissance et du bon vouloir de la Russie.

C'est ainsi que la campagne de Crimée profitera à tout le monde et ne nuira qu'à la France, qui a si chèrement payé la victoire.

The author writes just as an Austrian might be expected to write about the Italians and their independence. He hates them intensely, attributing to them many vices and but one virtue—patriotism:—

L'Italien a sa manière de haïr, comme de conspirer.

Pour vous détruire, il se fera plus pieux que le Pape, plus humble que l'esclave, plus dévoué que le dévouement, jusqu'à ce qu'il vous ait attiré dans son nœud coulant. . . Alors il vous étrangle avec un cynisme et une quiétude féroces.

Intelligent, il a appris la patience et la duplicité avec une astuce, une souplesse, un sens politique profonds. Il sait attendre, il sait dissimuler; dissimuler encore mieux que feindre.

Il se croit le premier des peuples, et il n'ignore pas qu'il en est le dernier. Il hait et méprise tous les peuples étrangers, sauf l'Anglais, qui lui paraît original et solide. Il n'y a rien que l'Italien ne puisse faire, mais du plus vil au plus élevé il est patriote.

The action of Napoleon III. in favour of Italy is represented as one of the great examples of his political incapacity. By humbling Austria he was advancing the interests of his future enemy, Prussia, and by helping to constitute Italy without making an ally of her, he was preparing the condition of things which we see to-day, when Italy is much less French than Prussian, when the Emperor of Germany is received with real enthusiasm in Italy, and the Italians are training themselves in German ideas by a diligent study of German literature. No doubt all this is true; we can all see now how Louis Napoleon prepared the way for Powers which either have since become or may yet become very dangerous enemies to France; but after reading books like the one before us the remark which obviously suggests itself is that it is easy to be wise after the event. We can all see now what were the great mistakes of Louis Napoleon, just as we can point out the blunders of his uncle. We all know that the Mexican war was a great blunder, and we see plainly that, from a French point of view, M. Thiers was right in condemning the policy which led to the unity of Italy and Germany. The great defect of Louis Napoleon's mind appears to have been that he would go far enough on a line of action to incur the cost of it, but not far enough to reap the full benefit of it for his country. His policy was rather that of a private schemer than of a patriot acting for the country which he represented, and this may have been due to the fact that he never really took root in the country, and never could feel himself secure on his own throne. He had too many home anxieties for a sound foreign policy. He might have had a very valuable ally in Italy had he allowed the Italians to go to Rome, but then the French clerical party had to be conciliated, and so the advantages which he ought to have derived from the campaign of 1859 were lost to him. The last act of his reign, the fatal march to Sedan, was a consequence of his dread of the Parisian Republicans. Every one knows, and he knew himself, that the proper course in the interests of France would have been a retreat in the direction of the capital, but the well-known disaffection of the Parisians made him prefer anything to that. The one lesson of his reign is that a sovereign whose throne is unstable is in a false position, and cannot, if he would, follow steadily a truly national policy. The late Emperor and his wife had to think of the dynasty as well as of France, and the consequence has been fatal to both, yet still more fatal to the dynasty, which is overthrown, than to the country, which is gradually recovering its strength, and something like a sound political organization.

STORY'S NERO.*

THE word "dramatic" is often used in a very loose way as a laudatory epithet merely synonymous with exciting, or lively, or interesting. When a series of actual events is in itself such as to lay hold on the imagination more strongly or suddenly than usual, or when the like effect is produced by the art of the reciter in the presentation of real or fictitious accounts, we are apt to say without more ado that the events or the narrative are dramatic. Those who speak thus have generally no intention of passing judgment on the question whether the particular subject is of a kind fitted for artistic treatment in the dramatic form; indeed we may safely assume that the question is seldom present to their minds at all. Such a habit of speech, however, could not have arisen, or at any rate could not have become current with educated writers, except in a society where, however many theatrical performances and playgoers there may be, there is little real dramatic art and little knowledge of its conditions, and consequently where there is vague and confused thought, if any thought at all, on most matters connected with it. And the usage once established is doubtless powerful by way of reaction to keep up the confusion whence it sprung. The story is exciting, says one. Yes, it is dramatic, says the next. Ay, very dramatic, says a third; *ergo* an excellent subject for a play, and a play we will make of it. Nor is the error necessarily a gross or obvious one in the particular case. It may well have a certain admixture of truth, or at least sufficient elements of plausibility. It often happens that several scenes and incidents in a story, taken by themselves, are dramatic in the true sense, while the story as a whole is nevertheless quite impracticable for that purpose. Again, the habit of composing works in a dramatic form which are avowedly not meant for the theatre and are not bound either as to length or as to incident even by the physical possibilities of actual performance, must to no small extent be answerable for blunting the finer sense of dramatic propriety. So long as one is entitled to ask what the effect would be on the stage, there is something to go by which is ascertainable and in the main intelligible, though perhaps not always capable of logical exposition. When this test—an efficient one as far as it goes, if rude and narrow in some respects—is once swept away, it is difficult to bear constantly in mind that there are still some few canons of design and construction which are inseparable from the dramatic form, even when it is divorced from the visible action that gave it a name, and from the observance of which the author is not absolved. It is far too late, indeed, to complain on this or any other ground of the practice of writing plays for the closet, as it is called, which on the face of them are not stage-plays. It has given us a certain number of really great additions to literature; and besides, it is at least as old as Seneca, or whoever else it was that, among other productions of the same sort, in part anticipated Mr. Story's theme with the tragedy of *Octavia*.

Coming thus to Mr. Story, we have to say that he appears to have fallen to some extent into a mistake of the kind pointed out above. He tells us that "the story of Nero, as recorded by ancient writers, and especially in the vivid sketch of Suetonius, and the more elaborated and highly-coloured pages of Tacitus, had long haunted my mind as a powerful subject for dramatic treatment." That is, because the tale as told by Tacitus or Suetonius—in other words, in the manner and with the instruments of the historian—is powerful to compel pity, terror, amazement, or indignation, therefore it is fitted to produce the same effects in a different way, and by different means, in the hands of the dramatic writer. Admitting that in the particular case it is easy for "indolent reviewers" to be wise after the event, we hold that such an inference must ever be unsafe; the two things are consistent, but the one is not evidence of the other. And, while the narrative of Tacitus is, in the looser sense of the epithet, one of the most dramatic ever written, the reign of Nero seems to us, wholly apart from any notion of actually putting it on the stage, in the strict sense an essentially undramatic theme. For it offers no real unity of thought or purpose which the poet's imagination can grasp, and which his skill can bring forth to a new life through all the successive changes of place and person. There is no strong character to be developed, either for good or for evil. Nero's character is too hopelessly removed from the normal and healthy standard of mankind; there is none of our common humanity to be studied in him. His victims are pitiable, but that is all; as Tacitus himself remarked, their submission to their fate was, with some splendid exceptions, so ignoble as almost to deserve a share of the indignation we bestow on the tyrant. So, too, there is no real development of events, but a mere succession of nameless and shameless crimes, ending in a fall of the tyrant, not brought about, as it were, at an appointed time by some of the imposing combinations which destiny reserves for the fall of greater men, but happening simply when the loathing of a world utterly wearied of him has gathered courage—one hardly knows why at that moment more than

* *Nero.* By W. W. Story. Edinburgh and London: Blackwood & Sons. 1875.

another—to quicken itself into active hate; nor does the end bear with it any sign of what shall come after, save the fatal secret, only afterwards to be understood and fully disclosed, that emperors can be made out of Rome. And this last point, the one result of real political importance which the reign of Nero left behind it, is just one of those which a dramatic author can do nothing with. We do not say that all these objections might not be set aside by that quality and force of genius which has surmounted no less difficulties in the past, and of which we are not without living examples; it would be the merest pedantry, for instance, to bring such considerations as the foregoing to M. Victor Hugo's work. But it does seem to us that these are reasons why a man putting his trust in skill and understanding short of transcendent genius should not deliberately choose for a drama such a subject as Mr. Story has chosen; and in assigning these reasons we have at the same time shown what kind of feeling, speaking of the effect as a whole, we have in fact experienced in reading the book.

It must be understood that we have entered upon this discussion because Mr. Story is a writer who deserves to have his choice seriously discussed. Given the general scheme, the merit of the execution is of a high order. Mr. Story's language is strong, simple, and dignified; the dialogue is neither too abrupt nor too diffuse for the circumstances; and the characters are sustained with considerable spirit. As to the events, the historians are followed with close, and even minute, fidelity; indeed there is hardly a saying or anecdote preserved by them in relation to the topics here embraced which Mr. Story has not worked into his verse. In some places his faithfulness to his guides has driven him to the extreme verge of what can be spoken of by a modern writer. Far from censuring him for this, we agree that the picture of Nero, if it was to be drawn at all, could not be true without these last damning touches; and even here a commendable gravity and reserve in tone as well as in words secures his writing from all suspicion of evil tendency. And in general there is a very proper avoidance of the revolting scenes and descriptions for which a coarser hand would have found ample temptation and opportunity. To give some notion of Mr. Story's accuracy, which we believe we have pretty well tested, we can find no departures from the recorded facts beyond a slight compression of incidents in the matter of Piso's conspiracy against Nero, and the expression that

> Justice bent
> Its head before him when Longinus fell,

which is not quite appropriate to the case of one who was indeed exiled, but lived to be recalled after Nero's death. Not only is there so little alteration, but there is hardly any addition; the poet is in truth almost cramped by the abundance of his authorities; and the temptation, or let us say the apparent duty, of almost turning Tacitus into blank verse, has probably led to some loss of dramatic opportunities. But, on the whole, there is little room for detailed criticism; there is only the general consciousness that this is the laudable work of a good and even excellent ability, though here, as it seems to us, expended on ungrateful matter, and that genius would have done it otherwise or done something different. We do not know, however, why Agrippina is addressed as *madame*: why the Latin *salve*, if introduced at all, is put in the singular in the mouth of a person speaking to more than one other; or why we are expected to read Epicharis for Epicharis in the face of both quantity and accent. We should mention that Mr. Story is not insensible to the artistic difficulty arising from the general deformity of the characters; for he tries to contend with it by ascribing touches of human interest, and even of comparative virtue, to Poppæa. For instance, he makes her express some pity for the Christians (for which, historically speaking, her known patronage of the Jews would be an ambiguous argument), and Nero's fatal fit of anger is brought on by her protest against his appearance in the circus. As concerning these exhibitions, by the way, Mr. Story seems nowhere to bring out adequately the specially Roman feeling of contempt and disgust for the prince's conduct. But he is overborne by his own authorities. The traits thus invented are incapable of disproof, but it is impossible to forget Tacitus. Another and even less hopeful attempt of the same kind is made with Sporus. From the same motive perhaps, Agrippina's affection for Nero is so much overdone as to detract from the grandeur of unscrupulous and relentless ambition, such as it is, which properly attaches to her. But as the reader must check for himself, if he will, our criticism on the general plan, we must give him the chance of verifying on the spot what we have said of the performance in detail. We choose a speech of Nero, at the highest intoxication of his power, after the great fire in Rome:—

> NERO. We must build up these galleries anew,
> The fire hath spoiled these marbles utterly.
> Gods! what a sight it was when the fierce flames
> Licked the black night, and all Rome was ablaze—
> A sight to make one's spirits leap for joy!
> Here night on night I stood and gazed at it,
> Never was weary: now and then a crash
> Shook all the palace; then a bursting mass
> Of sparks and smoke and ashes flew aloft
> And rained again to earth; then darting tongues
> Of living flame ran swift along the roofs,
> Insatiate to destroy, with a fierce rage.
> They say, I hear, I set our Rome afire;
> That's a mean lie. They tell such lies of me!

For another specimen we take Galba's acceptance of the Empire—or, to speak more correctly, of a command which led to Empire—in a scene which, though out of the main action, has to our mind more of the true dramatic ring than almost any other:—

> OTHO. Ay, Galba, we are all in this agreed.
> Give us your pledge. Think upon him who slew
> Our dearest friends, and drive him from his place.
> Think of our country over whom he broods
> Like some dread incubus—and shake him off.
> Let virtue yet be possible in Rome.
> GAL. If I accept, 'tis not because I crave
> That gilded circle. 'Tis not that I feel
> Ambition's goad—but that my country calls—
> My bleeding country, trampled under foot
> By this wild despot, by this bloody boy,—
> This riotous, debauched, and murderous boy.
> I am the legate of the Senate here,
> And of the people—bound to act for them—
> Ready to sacrifice my life for them.
> Yet I am old; age, cares, have thinned my blood;
> And better peace and rest would suit my wish
> Than to be lifted high, where every blast
> Would shake me. Still, unto my country's call
> I yield; and, though I do not take the crown,
> As legate of the Senate I accept
> The leadership. Do with me as you will.

TEN YEARS OF MY LIFE.*

PRINCESS FELIX SALM-SALM is one of those persons who cannot be accused of mistaking their vocation when they take to writing their personal memoirs. Whether the success of their books is likely to increase their subsequent popularity among their acquaintance is another question. The Princess is evidently blessed with an excellent memory, supplemented perhaps with some powers of fancy; nor is she trammelled by any over-sensitive delicacy in making free use of her recollections or being perfectly outspoken in her appreciation of character. It is but fair to say that these frank appreciations never sin on the side of ill-nature. When she does drag any gentleman forward into a strongly unfavourable light she has generally what she believes to be reason for honest indignation, as in the case of the Austrian and Belgian Ministers accredited to the unfortunate Maximilian of Mexico. Rather there is the same absence of reserve about her which made Boswell so inimitable as a biographer. As she is entirely open as to all that concerns herself, it does not occur to her that other people may object to having themselves or their affairs put in print as matters for public gossip. She was devoted, as we cannot doubt, to her deceased husband, nor has she ceased to sorrow over his memory. But she throws no veil over his little failings; she tells us repeatedly how she was right and he was wrong, when they differed as to some step they were discussing; how his heart was decidedly better than his head, and how his hasty temper made him prompt to ire on very insufficient provocation. We have the detailed story of his youthful indiscretions, when, after having run through his modest patrimony, he recklessly carried on the desperate game on any terms the usurers dictated; and we learn that the household management of his maturer years was entirely in harmony with the habits of his youth. But all this unreserve makes most lively reading, and in many parts the book is of no small historical interest. Prince Felix was a high-born adventurer, whose gallantry and good-humour made him welcome everywhere, backing up the recommendations he brought in his birth and letters of introduction. The Republicans of the United States made almost as much of him as Maximilian and his circle of foreign courtiers and soldiers. He saw a good deal of active service during the American civil war; he went through some sharp fighting in Mexico before he had to surrender with the unhappy Emperor. More fortunate than his master, he was spared to return home, and, gaining the good graces of King William of Prussia, was advanced to an honourable command in the Prussian service, to fall gloriously before St. Privat. So that his wife, who in her way was more of a marked figure in society than her husband, and who, possessing an equal share of spirit, seems to have had all the qualities that command social success, made the more or less intimate acquaintance of a great number of eminent personages. And, as we recognize the resemblance in those portraits of which we are in a position to judge from some knowledge of the originals, so we are inclined to take for granted her likenesses of Americans and Mexicans, to which she has at all events imparted characteristic individuality.

The chapters relating to the author's stay in Mexico are, of course, the most interesting in the volumes. When, at the close of the American war, Prince Salm-Salm lost a General's command and was cast on the world, it occurred to him to try his fortune in Mexico. He had formerly held a commission in the Austrian service; his family had kept up hereditary relations with Austria as well as Prussia; and Maximilian welcomed him cordially, and attached him to his person. President Johnson, although he gave him a high testimonial, could not supplement it with an official introduction; for at that time he had set the machinery in motion which was to upset the tottering empire of Mexico. Soon after the Salm-Salms arrived in the country, the French took their departure. The joy expressed on the occasion appears to have been mutual, though the unfortunate Emperor, as well as his wisest advisers, must have felt the fatal insecurity of the position to which they were abandoned. But the Princess tells us that the conduct of the French had been disgraceful, and if they were

* *Ten Years of My Life.* By the Princess Felix Salm-Salm. London: Richard Bentley & Son. 1876.

guilty of half the deeds with which she charges them, they must have behaved more like bandits than disciplined soldiers. They insulted and assaulted the men, and vilely outraged the women. As for Marshal Bazaine, he was "bad, cruel, brutal, and mean." It has been given out that his wife was a lady of large fortune. This, the Princess says, is a mistake, and the report was originally set in circulation as a blind, the fact being that Bazaine amassed great sums of money by opening a couple of shops in Mexico, where he retailed the foreign articles which he had imported duty free. Be that as it may, the desertion by the French threw Maximilian into the feeble arms of the Mexican Imperialists. Having chosen his line, he resolved to follow it unreservedly. He thought it wise policy to leave his foreign troops behind him when he took his departure from his capital for Queretaro, and it was only by accepting an appointment on the staff of a native general that Prince Salm-Salm obtained permission to attend him. The drama was drawing rapidly to its climax. Marquez, "a little lively man, with black hair, black keen eyes, and a sinister, swarthy face," marched out of Mexico to be ignominiously beaten; and galloped back first of the fugitives, to announce his own discomfiture to the citizens. Shortly afterwards, Princess Salm-Salm heard, as a casual piece of news, of the treason of Lopez, and his sale of Queretaro and its garrison, her husband included. Then began a period of agitating activity for her; in which she went through three days of travel without changing her clothes, and compromised herself deeply in favour of the prisoners. We agree with her that it does credit to Mexican chivalry that she was not cast into prison, or sent out of the country at the least. As it was, she was treated with extreme courtesy by all the Mexican officers of rank, although naturally some of them now and then lost their temper when they detected her in bribing and intriguing with their staffs. For, although the Prussian Minister professed to think otherwise, from the first she cherished no illusions as to the fate in store for the Emperor. Popular feeling was too excited to admit a reasonable hope of reprieving him; and the President, in approving the sentence of death, was but the passive instrument of the popular will. Thus the only alternative was to effect an escape; and although Maximilian was strongly guarded in the convent of the Capucines, the enterprise was believed to be possible could they command a sufficiency of ready money. But upwards of two hundred thousand dollars in gold was not to be easily procured under the circumstances; and the half-bred Indian officers declined sagely enough to risk their persons and military standing on bare promises to pay. What was wanted was the signatures of the European envoys, on which cash might be made forthcoming; but these signatures the envoys declined to give. Unquestionably they behaved with much timidity, and the Princess describes the cowardice of the Austrian Baron Lago and the Belgian Mr. Hoorickx as carried to ludicrous lengths. But it must be confessed they had good grounds for anxiety; had they been accused of favouring the Emperor's evasion, their diplomatic positions would have been no protection to them in the excited temper of the country. At all events they would risk nothing; and Colonel Palacios, who might have been seduced by a bag of gold, shook his head over a scrap of signed paper, and then walked off to inform his general of the attempts made to tamper with his honour. The indefatigable temptress, still strangely left at liberty, hurried off to throw herself at the feet of the President. She had previously had an interview with Juarez, relative to the terms of the surrender of Queretaro; and it must be remarked that he, as well as Iglesia, one of his Ministers and confidential advisers, had made a very favourable impression on her. Juarez she describes as "a man a little under the middle size, with a very dark-complexioned Indian face, which was not disfigured, but, on the contrary, made more interesting, by a very large scar across it. He had very large piercing eyes, and gave one the impression of being a man who reflects much, and deliberates long and carefully before acting." On this occasion he was courteous, and listened to her patiently, but was not to be moved. He said that the sentence was final; that it was cruel to prolong the prisoner's agony, and that the Emperor must die on the morrow. "I saw the President was moved; he, as well as M. Iglesia, had tears in their eyes"; and she adds, "The trying scenes through which the President had gone that day were too much for him. He retired for three days to his room, and would not see any one."

On their return to Europe the Prince was somewhat disappointed by his reception at the Austrian Court. The truth was that the Emperor had been persecuted by people who had urged their claims upon him on the strength of services rendered to his brother: and besides, he may well have shrunk from anything that recalled the humiliating tragedy of Mexico. Subsequently, however, he generously granted the Princess an annuity of 1,200 "dollars"—florins, we presume. But the Austrian dominions were made somewhat hot for Prince Felix by his old creditors, and it was after his release from arrest in Vienna that he withdrew to Prussia to receive a commission by the special favour of His Majesty. His regiment being quartered at Coblenz, the Salm-Salms chanced to witness the eventful interview with Benedetti in the gardens at Ems in the summer of 1870. On the evening of July 8, the Princess was seated at table next the King, when he expressed his anxieties to her about Prince Hohenzollern's acceptance of the Spanish Crown. Next day they dined with the Queen in Coblenz, and after dinner they left for Ems in the middle of a garden party given to the Coblenz people. They were caught in a heavy shower on their way from the Ems station to the Promenade at the Kursaal, when the King good-naturedly condoled with them on the damage their gay plumage had sustained.

Just when the King left us and went away with Count Lehndorff, the French Minister, Count Benedetti, stopped His Majesty and said something to him, on which our noble sovereign became two inches taller, and his kind face acquired an expression which I had never before seen on it. Making an impatient motion with his hand, towards Count Lehndorff, he went away alone; leaving the oily Frenchman quite petrified.

It will be seen that many of the Princess's recollections are really valuable as contributions to history, while all her experiences and adventures are told so as to make them very agreeable reading. She succeeds in placing herself on such friendly terms with her readers that we cannot doubt she is right in assuming that they will be interested to know that, after all her worries and wanderings, she is settled in a comfortable home, where she lives in the enjoyment of a modest competency. And we may offer her our congratulations on having escaped the conventual seclusion to which she had nearly condemned herself in an inconsiderate impulse, when the Sovereign Pontiff showed his good sense by telling her frankly, on her consulting him, that she was mistaking her vocation.

CONIFERS AND PEAT-SOIL SHRUBS.*

THE chief faults of Mr. Gordon's solid and exhaustive *Pinetum*—for instance, the enumeration of certain pseudo-species, and a rather too scientific principle of arrangement—have been amended in the second edition of the work, to the great convenience of the amateur, who hereby gains a knowledge of varieties for which room has been made, and the means of speedy reference by the introduction of alphabetical order. It would be injustice to Mr. H. G. Bohn, the veteran publisher, who is himself a successful and experimental grower of conifers, to omit mention of the index of popular names, English and translated, which he has compiled and appended to his new edition of Gordon. This is a feature of infinitely more value than the attempt at derivations of genera and species, such as "abies" or "cedrus," for example, which the original author makes, without actually going bail for them. It would be hard to persuade scholars that "abies," the spruce fir's generic name, is derived either from "apios" a pear-tree, or from "abeo," *to rise or spring up*; or, again, that the cedar takes its name either from "*kaio*, to burn, and *drio* (?), to sweat or distil," or from the brook Cedron, on the banks of which the cedar of Lebanon was plentiful (Gordon, p. 60). It is obvious that all such stuff should be unsparingly eliminated from a book of reference. The new edition of the *Pinetum* may be advantageously studied with the aid of Mr. Fraser's truly handy volume which has just been published. *The Handy Book of Ornamental Conifers*, indeed, furnishes in an unambitious way just the sort of popular volume fit for the amateur planter, assisting him to extend his knowledge and experiments in two of the most attractive fields of modern horticulture.

On account of the brief life of bedding plants, and the climatic influences which render fleeting the reign of floral colour in our gardens, it is well to resort to the contrasts of evergreen dwarfs and larger specimens of the coniferous kind, and to study the culture of rhododendrons, as well as of the peat plants and herbaceous plants which group well with them. Rhododendrons, not barren nor unsightly when out of bloom, may find their handsome glossy leafage diversified effectively by a number of "herbaceæ" enumerated in the last ten pages of Mr. Fraser's volume, such as grasses, ferns, yuccas, tritomas, and gladioli, to say nothing of lilies of divers kinds, and some less aspiring plants of equal beauty. Of Mr. Fraser's book about two-thirds are devoted to the conifers; the rest, with the brief section just mentioned, to the rhododendrons and peat-loving shrubs. It will be seen from the glance we are about to take at the first and chief part of its contents, that, without achieving the precise excellences of Mr. Mongredien's book which we reviewed about five years ago, it will serve every needful purpose, and, if less suggestive, will prove sufficient, whilst more portable.

The work just referred to gave a decided impetus to the effective contrasting of conifers with deciduous trees, and that which lies before us gives ample assistance in carrying out this aim with taste. Some of those which are especially commended carry their contrast in their very names, such as, among spruces, Abies alba and A. nigra, both brought from Canada and the United States at the end of the last century. The latter is a hardy conical-shaped tree, with short thick leaves of a very dark green above and a bluish-white below; while the former is so light, glaucous, and silvery of hue as to present a delicious contrast to the dark foliage of pines and firs, like its opposite, or the yellow and crimson leafage of the sugar maple. We get a warning, however, which is not unseasonable, against letting this contrast be heightened by trying, for the sake of its brighter foliage, a variety called "Abies alba glauca," which is less robust. In some of the firs the contrasts are not so marked between themselves, though distinct enough as regards other trees and masses of foliage. Mr. Fraser distinguishes the Californian Albertiana, a most hardy ornamental spruce of

* *Handy Book of Ornamental Conifers and of Rhododendrons and other American Flowers and Shrubs, suitable for the Climate and Soils of Britain.* By Hugh Fraser, F.R.S.E. Edinburgh and London: William Blackwood & Sons. 1875.

Gordon's Pinetum: a Synopsis of all the known Coniferous Plants. Second Edition, enlarged. By George Gordon, A.L.S. London: H. G. Bohn. 1875.

rapid growth and tree-like form, from its Canadian rival, the hemlock spruce, which has been grown in England for the last hundred and forty years, by its shorter, denser, slenderer leaves, and its pyramidal outline. The hemlock spruce has broad leaves in double rows, of a light green upper and glaucous under surface, whilst the Albertiana's leaf is pale green above and only sub-glaucous below. It may be doubted whether in the moist rich soil which it appreciates the hemlock spruce need cry second to any of its kinsfolk, with its beautiful bushy broad head and the cedar-like character of its branches. But few of the spruces can match with Abies Douglasii in results. Where there is rich loamy or alluvial soil and moderate shelter, it rears its symmetric outline, and its numerous branches regularly whorled around its trunk in slow but sure growth at first, and then afterwards at a pace that makes up for previous hesitation. As a park or lawn tree it becomes a pride to its planter, and its hardiness seems to attach to its variegated variety, A. Dougl. Stairii, a veritable silver, indeed an almost pure white species. Of this Mr. Fish, who saw the parent plant at Castle Kennedy, writes that "it is impossible to conceive anything more novel or charming than a free-growing spruce with young shoots almost as white as Acer Negundo variegatum" (p. 16). In many respects A. Menziesii approaches A. Douglasii, being "a most hardy evergreen of free rapid growth, regularly branched from the ground upwards." "The leaves are bristly, very sharp pointed, bright green in the upper surface and silvery beneath, giving the tree a shining appearance when the branches are agitated by the wind."

Other spruces to which Mr. Fraser accords high praise are A. Morinda or Kutrow, with its handsome stem clothed with drooping branches, and these with a profusion of deep grey leaves. We can speak to its merits on a sheltered hill slope and rich open soil, though with us it rarely reaches its Dropmore height of thirty-five feet. Abies orientalis, though attaining to sixty or eighty feet in its native Crimean valleys, is of but slow growth, but hardy enough in this country. Mr. Fraser speaks of the profusion of its short, dark-green leaves, and of its conical habit, thickly branched from the ground. He might have added a word about the singular appearance of the younger branches, resembling green ropes in their round form and close-pressed foliage. All accounts, however, confirm his verdict that "for a small lawn, or where a neat, compact evergreen is desirable, no plant can be more strongly recommended" (p. 22). Another short-leaved spruce, Pattoniana, also of slow growth, comes from California, and is designated by Mr. Fraser distinct and handsome. Gordon goes further in his praise when comparing it "in habit and appearance with the Deodar, though more thickly branched and densely foliaged (light green above and glaucous underneath), and by far the handsomer tree." It is irresistible to turn from the spruces to the silver firs, from the Abies to its sub-genus, the Picea, and to this our authors do full honour. The silvers are distinguishable from the spruces in having longer and flatter leaves, silvery beneath, and more obviously *two-rowed* than those of the spruces; cones erect, produced on the upper side of the branches, and deciduous, as the scales fall off when ripe. As a rule, they prefer low-lying, sheltered places, and a rich loamy soil, having a tendency to become stunted on gravelly soils and high ground. A good hint is given in the "Handy Book" (p. 109) as to those silvers which are apt to shoot early into growth and suffer accordingly from late spring frosts. They should be planted where there is shade from early morning suns, which are more fatal than the frost itself to the young growths while still frozen or too rapidly thawed. We also gather from Mr. Fraser's book why, though very hardy and ornamental, many of the Northern Californian Piceas are still so scarce. This is not owing to a difficulty in getting cones, but arises from the ravages of an insect which deposits its eggs in the yet crude seeds of the soft and green cones. The result is that seeds despatched to this country in perfect good faith reach it so perforated and hollow as to render germination impossible. In Mr. Fraser's picked list, P. amabilis, raised by cuttings or grafted on other species, for the reason above stated, is placed highest, and is said to repay any amount of pains and patience; it is a lovely tree truly, in its slender habit, thick branching, and leaves incurved and glossy-green above and silvery beneath. The Cephalonian fir makes an interesting single specimen; and P. pinsapo, from the higher mountains of Spain, is still more eligible, whether singly or with room enough for development, on account of its perfect hardiness, and its network of stem-concealing branches from the ground upwards, with short leaves of a pleasant light green. The Californian Lasiocarpa, or woolly-scaled silver fir, introduced in 1860, is one of the best of contrasts to other species in its sparing leaves of distinct light green. It has, too, the virtue of not being fastidious as to soil. But of all the introduced Piceas none is hardier or more beautiful, none of greater promise in its future, than Douglas's Picea nobilis, a quick, free grower, with bluish-green and silver leafage, crowded on every shoot of its level tiers of branches.

Of the pines we get a discriminating choice. P. excelsa, from Nepal and the Himalayas, is graceful in its slightly pendulous habit, and distinct in its silvery fleece of thick-set slender leaves. This is (according to Gordon) the Kail or Cheel of Himalayan travellers. P. insignis has the fault of making late autumn growth, and so being a victim more or less to frosts; but, with the caution above given as to Piceas, this blot may be avoided, and it is worth trying for its dense, grassy-green, informal branches and foliage. Lambertiana, like the P. cembra, has edible seeds, and, when young, the look of a Weymouth pine, from which it is distinguishable by its larger, glaucous leaves, light green colour, and graceful, feathery branchlets. The hardy, bright green Laricio, or Corsican pine, ought to be largely planted, not only for its curious twisting of bright-green leaves, but for its rapid growth and unsusceptibility to the attacks of hares and rabbits. The sand-binding quality of the Pinaster, the large cones and leaves of the striking Macrocarpa, the virtues of P. Austriaca, as a shelter, a nurse, a specimen tree, or as proof against sea-breezes, are all here duly commemorated; whilst those who love the form and habit of the indigenous "Pinus silvestris" are introduced to several desirable miniature varieties of it; as, for instance, P. sylvestris aurea, a pretty plant for a small lawn, of slow growth, and distinguished by golden variegations. Amongst larches we are recommended to Larix Europea pendula, said by Gordon (p. 170) to be a weeping sub-variety of the Tyrolese larch; but most persons who have seen the larch planted out in a park with stint of room must have noticed its pendulous tendency. If we must vary the common type, it should be by getting one or two samples of the Golden larch, which Gordon names Pseudo-larix Kaempferi, a Chinese species sent home by Fortune in 1852. The Chinese call it Kin-le-sung, or Golden Pine, from the yellow autumnal look of its ripened leaves, and from the cones, whose deciduous scales resemble at the points the common artichoke. Kept from frost in early spring, the Golden Larch will repay its nursing. Near to the larch in the alphabetical order of the "Handy Book," the "Libocedrus decurrens," or Incense Cedar, is best known to ordinary observers as Thuja gigantea, being indeed in foliage and habit nearly allied to the Thujas. It is in this country credited with a designation belonging more properly to Thuja lobbii; but, call it as we may, there is no mistaking its claim to conspicuous notice in "its close spire-like habit of growth and deep sombre colour." Mr. Fraser suggests its alternation with other conifers of diffuser form and lighter green or glaucous tints (*e.g.* Cedrus deodara, C. Atlantica, or Cupressus Lambertiana), in avenue rows.

On cypresses, cedars, junipers, Biotas, Thujas, and Thuiopses—to omit other notable families of conifers—we have a rich abundance of interesting and helpful notes and suggestions in the volumes before us. In choosing a specimen cypress, a novice would not err in singling out C. Lawsoniana, "a rapid-growing, plume-like shrub of a symmetrical conical form, abundantly clothed with branches; the dense branchlets slender and drooping, and of a light green, sometimes slightly glaucous, colour." The summer aspect of these cypresses is rendered more attractive by the profusion and beauty of their golden, and in some varieties purple, cones. The account of C. Goveniana or Gowen's Cypress, in p. 56, might, however, make one hesitate; for not only is it "a pretty evergreen shrub of conical growth, light green feathery branches, and bright golden catkins in summer," but it enjoys a great rapidity of growth in this country, "where there are now specimens fully double the height named as the maximum in its native habitats by its discoverer, who in all probability took his notes from plants growing in exposed places or thin poor soil." It is to be wondered, when glancing at the list of cedars, that for all its qualities of hardihood, rapid growth, and good timber, it is not as widely planted as its rivals, the Deodar and the Lebanon, especially as it combines the tall, tapering habit of the one with the horizontal set of the other, and is distinct in its shining silvery foliage. Persons who are solicitous to call things by their proper names will be glad to be reminded by Mr. Fraser that the popular "Golden Globe" of our terrace vases, geometric-bed centres, and small lawns, is not so correctly designated "Thuja aurea" as Biota orientalis *aurea*. It was raised, as we learn from Gordon, in the nursery of Messrs. Waterer and Godfrey, at Knap Hill. Between Fraser and Gordon we ought to get suggestive hints as to rearing the distinct and handsome Patagonian Fitzroya, which, though found naturally at high elevations, is apt to suffer from spring frosts. It likes a good shelter, north aspect, and dry rich soil, and this is not inconsistent with its native habitats, where it grows up to fifty or a hundred feet in the shelter of valleys, though it dwarfs to a small bush as it nears the borders of perpetual snow. Its slender spreading branches, bending down at the tips into a curve, make it a very desirable evergreen, and one that it is worth some pains to nurse. Under the head of Araucarias (which, by the way, we bar from avenues), we get a good hint as to preserving them from the failure which befalls them in low situations, or cold stiff clays, with wet impervious subsoils:—

> Where the situation is very damp and complete drainage impossible, it is a good plan to raise the plant to the surface, banking the new soil round it. This is resorted to very frequently in such circumstances with complete success, the long underbranches bending down and covering the bank in such a way as to modify what might be considered a somewhat unsightly object.

We can confidently recommend Mr. Fraser's handbook for brief and sufficient directions as to various other species (*e.g.* Retinosporas, Salisburias, Sequoias, Taxodiums, &c.) which we cannot here dwell on. It is just the sort of book to refer to in a puzzle betwixt two claimants for favour or purchase, or on points of hardiness and proper culture. Such also will it be found as regards rhododendrons and peat-plants; so much so indeed that its help should be called in before a visit to Knap Hill or to Woking. The lists have been made with an eye to habits of growth, colours, time of flowering, and uses in garden decoration, and profess to be rather representative than exhaustive. And the burden of the cultural directions is of a character to reassure those who, while coveting the brilliant addition of a rhododendron bed or two to garden or shrubbery, are deterred from the venture by the non-existence of

peat in the neighbourhood. A soil may be created containing all the elements and constituents of peat; and those who would learn how this can be done, as well as much about rhododendron culture, will do well to consult the pages of Mr. Fraser's "Handy Book."

THE SQUIRE'S LEGACY.*

BEFORE the publication of *The Squire's Legacy* its writer produced two works. In reviewing each of these we expressed a belief, founded upon certain portions of what, as a whole, was very far from excellence, that the author could write something worth her own, and, what is perhaps more important, her readers' trouble, and a hope that she would do so. In her present venture there is less of absurdity than was found in much of her former productions, and there are occasional touches of grace and feeling. It does not, however, by any means fulfil the expectations which might not unreasonably have been excited by the treatment of one character, Mrs. Payte, in the writer's last book. Judged by the standard which one could wish to see applied to works of fiction, *The Squire's Legacy* could not possibly be described as a good novel. On the other hand, judged by comparison with much that passes for good, it assumes some importance from the fact that, besides being free from vulgarity or coarseness, it is written in tolerable English, and contains one or two pretty passages. The style of the author is, however, as heretofore, disfigured by certain tricks of petty pretentiousness. Here, for instance, is a singular example of what passes among some people for fine writing. A former owner of the house where the story is laid once entertained the Prince Regent, when he "had such a week of revelry within the fine old house that even *he* remembered it until—his revelry over—he wore that plain court dress which boasts no flash of jewels." The passage is decidedly obscure; but it seems probable that it may be translated into plain English as "until he died." The substitution of the long string of words just quoted for this clear phrase recalls the scraps of sounding expressions dragged by desperate schoolboys from the depths of a Gradus, and thrust anyhow into their verses to make up a line. The task of the novelist is, indeed, not unlike that of the victim of Latin metrical composition. The one has to complete his allotted number of lines, as the other has to fill the prescribed three volumes; and both might be excused for wandering into nonsense in order to complete their tales. Only there is this important difference, that the schoolboy is obliged to write and the novelist is not.

The plot and characters of *The Squire's Legacy* are not much more probable than were those of *Old Myddelton's Money* or of *Victor and Vanquished*. The hero, by name Scot Monkton, is, as heroes no doubt should be, beautiful alike in person and in mind. Indeed, the only fault that can be picked in him is what seems from the context to be intended as a merit. He has hair which is "almost the colour of the old bronze-velvet cushions" of a folding-chair. There are a good many shades which bronze velvet may assume under the influence of time; but it is not easy to imagine hair which took any one of them upon itself being anything but a monstrosity. It is further to be noted concerning Scot Monkton's appearance that, as he lies back in his folded chair, his "lazy attitude" is "rather at variance with the firmness of the bearded chin and the pleasant look of the untired eyes." Why a lazy attitude should be incompatible with a pleasant look, and how it can be seen through the disguise of a beard whether a chin is firm or not, is left in doubt. The description of the hero is followed by that of a certain M. Sourdet, who is as complete a specimen of villany as Scot Monkton is of heroic virtue. This person comes to Kingswood, the house of Scot's father, with a request from Stanley Monkton, the cousin who would, in the event of Scot's death, succeed to Kingswood, that the bearer may be allowed to see the family portraits. In the course of his inspection he puts various questions to young Monkton, who offers to act as his guide, which are not only impertinent, but are of so peculiar a character that, if Scot Monkton had ever read a three-volume novel, he must have suspected his guest of some dark design. All he does, however, is to show "a glimpse of the natural, quiet haughtiness which lay below his easy cordiality," until M. Sourdet asks to see the family photographs as well as the pictures:—

> "Have you finished your examination of the pictures, Monsieur Sourdet?" inquired Scot, pleasant and genial in his character of host, though his whole nature recoiled from this man; "and are you not tired of it?"
>
> "I should never be tired of such occupation, Mr. Monkton; and just as you spoke I was about to ask you if I might see the family photographs. You have some very valuable ones, I have heard."
>
> A cloud gathered on Scot Monkton's brow. Did his cousin's letter oblige him to show this man private family property? He would do much for Stanley Monkton, because it was so hard for him to have a healthy life between himself and a fine estate which he might have inherited; but still he surely need not do that.
>
> "You must be very fond of studying family portraits," he said, idly.
>
> "You must be very clever at it," observed Miss Windish, her light eyes fixed upon the Frenchman's face with no expression at all, though he stirred uncomfortably under their gaze; "very clever, indeed, to have recognized me from a poor portrait taken thirty years ago."
>
> "I could not mistake you, madam," he answered, with a bow; "and it *is* a favourite study of mine, Mr. Monkton."
>
> "It must be," remarked the young secretary, addressing Scot, "for Monsieur Sourdet has allowed me to understand that he has spent two years in this study among the English gentry."
>
> "Then have you not discovered," asked Scot, "that the English gentry—like the English peasantry—like to possess one or two little articles of property which they may call exclusively their own?"

The Miss Windish spoken of above is called, at her own request, Miss Windish, but is really Mrs. Hawthorne. She is an aunt of Monkton's, and has returned suddenly in the midst of his interview with Sourdet, having left her husband for no apparent reason, and has announced her wish never to hear her married name again, but to take up precisely the same position which she occupied at Kingswood when she was in reality Miss Windish—a somewhat singular desire, which she is enabled to gratify with equally singular ease.

Sourdet, after his mysterious conduct at Kingswood, has an interview, in which his conduct is no less mysterious, with a so-called labourer, whose actual profession is that of poaching and thieving, named Oliver Wakeley. This man has by some means, which the writer does not condescend to explain, persuaded an exceptionally charming woman to become his wife. She knew when she married him that he was a gaol-bird, and she hates him cordially; but her presence as his wife appears to be considered necessary to the course of the story, in which she appears from time to time—at one time talking excellent English; at others, when it may be supposed that the writer recollects the position in which she has placed this creation of her brain, speaking with an inaccuracy carefully marked by the excision of h's. Shortly after this interview between the villain Sourdet and the man Wakeley whom he makes his instrument, the old Squire Monkton is described as he returns from London to Western Junction, the station nearest to Kingswood. On his way he notices a poverty-stricken young man in whose face there is something that awakens in him a strong interest. The young man is sending a telegram of which he seems to be painfully counting the cost:—

> The clerk answered, and the young man bent to his writing again; but the Squire's telegram lay unfinished, and he stood waiting still, and, to all appearance, listening still. He fancied he had waited a long hour so, when the young man at last rose to an upright posture, and, raising his hat for a few moments, drew a small cotton handkerchief across his forehead. The fingers of the Squire's left hand, which lay upon the telegram, closed and opened again with a convulsive spasm, but he did not move from his leaning attitude; though when at last the clerk asked if he had completed his message, he turned and answered, with a laugh, that he supposed he had said sufficient.
>
> "One-and-sixpence, sir."
>
> The Squire put down a half-sovereign.
>
> "I cannot wait for the change," he said, speaking genially to the young man beside him. "Will you oblige me by allowing the clerk to consider that that half-sovereign pays for your telegram too? There's my train. Telegrams are great nuisances, aren't they?" And he left the office before the young man could answer.

It might appear to some that there was something officious in this courtesy in spite of the Squire's "genial" speech. But this view is not taken by the young man himself, who accepts the position without comment. This is of the less consequence as that invention of modern times which is so peculiarly useful to modern novelists, a railway collision, takes place soon afterwards and causes the death of the Squire. Scot Monkton is sent for and arrives just in time to see his father, who, before he dies, leaves him some mysterious injunction—the Squire's Legacy—the result of which is that Scot abandons Kingswood and establishes himself in company with Aunt Windish or Hawthorne on a small farm, where he has the greatest difficulty in making a decent livelihood. This is a reduction to the absurd of a common and mistaken tendency which may be observed as well in novelists of considerable power as in those of the third or fourth class. It is supposed that, as there is a hero to deal with, some heroic deed must be assigned to him, which is reasonable enough; it is further supposed that a sacrifice in the cause of duty is a heroic deed, which need not be controverted. But the sacrifice is constantly foisted on to the hero, or the heroine, as the case may be, without any show of reason. The writer of *The Squire's Legacy* has reached the depth of unreason in making her hero give up his estate, when there is nobody to give it up to, on no better ground than that of a likeness which has struck his father. One cannot help feeling what excellent common sense there is in the advice of Sourdet the villain, who for his own ends is anxious that Scot Monkton should abandon his ludicrous self-sacrifice. Sourdet is possessed of certain papers which he pretends are of the last importance to the Monkton family, and which he is ready to sell to Scot Monkton, who refuses to buy them, partly on the ground that he has no money, which we may say with Pepys was "one of his devilish lies." It is a little singular that although, when Scot Monkton refuses to buy the papers, Sourdet is unable to make any use of them, yet when Sourdet is found burnt to death in a conflagration of his own making, as it afterwards turns out, on Scot's premises, there is a strong suspicion among the neighbours that Scot has compassed his death in this fiendish manner in order to get hold of these documents, and Scot is arrested and tried upon this charge.

Before this unfortunate event various personages of more or less interest have made their appearance. There is a young detective gifted with that preternatural skill in disguise and penetration which unfortunately is found only in the detectives of romance. There is an old lawyer who, without having been brought up to the trade, proves himself almost as good a detective as this remarkable youth. There is further

* *The Squire's Legacy.* By Mary Cecil Hay, Author of "Old Myddelton's Money," "Victor and Vanquished," &c. 3 vols. London: Hurst & Blackett. 1875.

a pair of engaged lovers, the lawyer's son and a girl named Doris Egerton. It is in the scenes where she appears that the passages of grace and feeling of which we have spoken are to be found. In her there is something that is true and touching; but the pretty treatment of one character is not enough to support the weight of three volumes which, if thoroughly harmless, are very far from thoroughly wise. The young man who is the first lover of this girl is the too familiar figure of the poet consumed by his own inward fire, who dies just as his first tragedy is applauded by a full house. The writer wishes her readers to believe that he dies from excess of emotion acting on a weak frame; he really dies because he must be got out of the way to make room for lover number two. The child upon whom much of the plot turns is but a weak copy of Paul Dombey, the shadow of a shade, and Aunt Windish or Hawthorne is a mere lay figure, dressed out with a habit of tearfulness. *The Squire's Legacy* is a book which must disappoint any one who has entertained hopes of its writer doing good work. It proves either that good work is beyond her power, or that she will not be at the pains of producing it.

NOTICE.

We beg leave to state that we decline to return rejected Communications; and to this rule we can make no exception.

THE SATURDAY REVIEW

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

Price 6d.

CONTENTS OF No. 1,056, JANUARY 22, 1876:

England and the Austrian Note.
The *Edinburgh Review* on the Suez Canal Purchase.
Pending Elections. The French Senate. Parliament and the Public Accounts.
The American Amnesty Debate. A Trap for Politicians.
Railways and Scenery.

Men of the World.
Science and Morality. Public Speaking. Trail.
Ultramontane Superstition in France. A Friendly Political Correspondence.
Piecework. Fashions in Bad Language.
Cretan Embroideries at South Kensington.

Letters of Sarah Duchess of Marlborough.
Kaye's Sepoy War—Vol. III. Round My House.
Fisher's History of Landholding in England. Fogg's Arabistan.
Le Dernier des Napoléon. Story's Nero. Ten Years of My Life.
Conifers and Peat-Soil Shrubs. The Squire's Legacy.

CONTENTS OF No. 1,055, JANUARY 15, 1876:

Count Andrassy's Note—The Press Abroad—The French Ministry—The Liberal Party and its Advisers. Foreign Loans—The Erith Strike—Irresponsible Army Reformers—The Fugitive Slave Question. Railway Responsibilities.

A Modern Phase of Melancholy. The Catholic University of Paris. Greenlorious Amusements. Salons—At Sea in Winter—Theatrical Feminism—Working-Women's Clubs—The Old Masters at the Royal Academy. II.—*Clytie* at the Olympic Theatre.

Bicknell's Hafiz—Manners at the Court of Florence—Burton's Ultima Thule—The River Dee—Annals of England—Carols—Giles's Chinese Sketches—Honours Divided—The Amateur House Carpenter—German Literature.

ADVERTISEMENTS.

CRYSTAL PALACE.—NOTICE to ARTISTS.—The results of the Exhibition and Sales of this Season have been so gratifying that the Directors will again offer MEDALS for the BEST PICTURES and DRAWINGS EXHIBITED for 1876-7. Receiving days: February 21st and 22nd, at St. George's Hall, Langham Place.—For conditions apply to Mr. C. W. Wass, Picture Gallery, Crystal Palace.

THE SOCIETY of PAINTERS in WATER COLOURS.—The FOURTEENTH WINTER EXHIBITION of SKETCHES and STUDIES is NOW OPEN, 5 Pall Mall East. Ten till Five. Admission 1s.
ALFRED D. FRIPP, *Secretary.*

DORÉ'S GREAT PICTURE of "CHRIST LEAVING the PRÆTORIUM," with "Dream of Pilate's Wife," "The Night of the Crucifixion," "La Vigne," "Soldiers of the Cross," "Christian Martyrs," "Gaming Table," &c.—DORÉ GALLERY, 35 New Bond Street. Ten to Six. Admission, 1s.

ELIJAH WALTON.—WINTER EXHIBITION now OPEN.—A Large Collection of Fine Water-Colour Drawings on VIEW, and for SALE. Burlington Gallery, 191 Piccadilly. Ten till Dusk.—Admission, including Catalogue, 1s.

OXFORD and CAMBRIDGE SCHOOLS EXAMINATION BOARD.

The EXAMINATION for CERTIFICATES in the present year will begin on the following days:
(1) June 5; (2) July 10; (3) December 6.
The Certificates give Exemption, under certain conditions, from Responsions at Oxford and the previous Examinations at Cambridge, as well as from the first Examinations of many of the Professions.
The Examination can be made to form part of any School Examination held under the authority of the Board.
It will also be held—
(1) In JUNE at Oxford; (2) In JULY at Oxford, Cambridge, and London; (3) In DECEMBER at Cambridge and London; and at other places where it is found that a sufficient number of Candidates will present themselves.
A Copy of the Regulations will be forwarded post-free on receipt of Sevenpence in Stamps from the Clarendon Press Depository, Oxford; Deighton, Bell, & Co., Cambridge; Macmillan & Co. Bedford Street; and the Cambridge Warehouse, 17 Paternoster Row, London.
Applications for further information should be made to one of the Secretaries—
ALFRED ROBINSON, Esq., New College, Oxford; or E. J. GROSS, Esq., Caius College, Cambridge.

UNIVERSITY of LONDON.—PRELIMINARY SCIENTIFIC M.B. EXAMINATION.—INSTRUCTION is given at GUY'S HOSPITAL in all the Subjects required for this Examination, by Lectures and Special Classes, during the Winter and Summer Sessions.—For further information, apply to Mr. STOCKEN, Medical Secretary, or the Dean, Dr. F. TAYLOR.
Guy's Hospital, S.E.

PROSPECT HOUSE, MALTON.—The Misses HALL, Principals of the above SCHOOL, offer a sound and comprehensive Education for YOUNG LADIES. Their Pupils have passed the Cambridge Local Junior, Senior, and Higher Examinations, and a Special Class is formed for Ladies wishing to prepare for the latter. Prospectuses will be forwarded on application. The Term commences January 26.

CLIFTON COLLEGE SCHOLARSHIPS.—EIGHT or more will be open to COMPETITION at Midsummer, 1876, value from £20 to £50 a year, which may be increased from a special fund to £90 a year in cases of Scholars who require it.—Further particulars may be obtained of the SECRETARY, the College, Clifton, Bristol.

LEAMINGTON COLLEGE.—Classical, Modern, and Junior.—*Head-Master*, The Rev. JOSEPH WOOD, M.A., late Fellow of St. John's College, Oxford. The NEXT TERM begins January 25.—For particulars, apply to the Rev. the VICE-MASTER, College House.

ALDENHAM GRAMMAR SCHOOL (near Watford).
Founded A.D. 1597.
Under the New Scheme, Nine Exhibitions are founded, of the value of £50 per annum for Three Years, "to be tenable at any University or other place of liberal education, or for the purpose of fitting the holder for some Profession."
Also, Ten Junior and Ten Senior Platt Scholarships are to be established, the first to defray about one-half, the latter nearly the whole, of the expense of maintenance and education in the School.
An Election to Three Junior Scholarships, of the value of £30 per annum for Three Years, will be held at the end of January. The age of Candidates must be between Ten and Fourteen years. Two are to be entirely open, but one restricted to certain Grammar Schools in Herts and the adjoining Counties.
The Terms for Boarders are 60 Guineas per annum, including the School Fees and charge for Bedding. Further information will be given on application to the Rev. ALFRED LEMAN, Head-Master; or to C. R. VINES, Esq., Brewers' Hall, Addle Street, Aldermanbury.

DR. HAYMAN, ex-Head-Master of Rugby, Rector of Aldingham, near Ulverston, on coast of Lancashire, prepares PUPILS for the Universities, &c.

TOURS, France.—Rev. C. DOWMAN, LL.B., T.C.D. (Ex-Mathematical Honourman) Receives FIVE PUPILS to Prepare for Army, University, and other Examinations. French Gentleman resident in the house. Two Vacancies.—4 Rampe de la Tranchée, Tours.

COMPETITIVE EXAMINATIONS.—Army, Ceylon Writerships, Indian Forests, Chinese Interpreterships, Factories, &c.—Mr. W. M. LUPTON, Author of several Manuals for the Competitive Examinations, has been most successful in Indates for the above.—9 Rathbone Place, Oxford Street.

WOOLWICH, ARMY, COOPER'S HILL.—MORGAN JENKINS, M.A. (Wrangler,), assisted by an able Staff of Graduates in First Class (including a 2nd in 1st class of Nat. Sci. Tripos), prepares RESIDENT and NON-RESIDENT PUPILS for the above. The only Three sent up for Woolwich, one 15th in 1st Thursday's List; Three out of Four at one Examination for Cooper's Hill, and Three out of Four at another for the Army, have passed.—Address, 30 Cornwall Road, Westbourne Park.

HURSLEY, WINCHESTER.—A. M. HEATHCOTE, B.A. Oxford, prepares BOYS, between Seven and Twelve, for Public Schools. Terms 100 and 120 Guineas. Holidays as at Winchester College. After Easter he can receive Two or Three Boys.—Address, Home Close, Hursley, Winchester.

TOR CREST HALL, Warberry Hill, TORQUAY. PREPARATION for the PUBLIC SCHOOLS and UNIVERSITIES, under the Rev. T. R. R. STEBBING, M.A., sometime Fellow and Tutor of Worcester College, Oxford. First in I Second Class Classics, First Class in Law and Modern History, and formerly Tutor and Assistant-Master at Wellington College. The situation is lofty and salubrious. The Pupils are treated as members of the Family. Fees under Fourteen, 150 Guineas; over Fourteen, 200 Guineas.

PRIVATE TUITION and COMFORTABLE HOME.—The RECTOR (Married) of a small Country Parish, an old Rugbeian and Graduate of Trinity College, Cambridge, who takes FIVE PUPILS, has Vacancies. Classics, Mathematics, French, and thorough German. Peculiar advantages for young men fond of country life and pursuits. Shooting, fishing, and hunting, if desired. Terms (inclusive), 180 to 200 Guineas.—Address, Rev. H. R. L., Holdgate Rectory, Much Wenlock, Salop.

PRIVATE TUITION.—The Rev. F. W. YOUNG, M.A., Oxon, Scholar of his College three of whose Pupils (11, 13, and 15 years) have recently gained open Public School Scholarships, receives a few high-class PUPILS. He is assisted by an Eighth Wrangler, an Oxford Honour-man, and other able Masters; offers every facility for the Modern Languages, and unusual advantages to Backward Boys. References to Parents of Position. Inclusive terms, 100 Guineas.—Cherbourg, Malvern.

PRIVATE TUITION.—MILITIA OFFICERS, CANDIDATES for Direct Appointments and other Competitive Examinations, are prepared by a HERTFORDSHIRE INCUMBENT, of great experience and success, late Fellow and Senior of Cambridge University. Number limited to Four. Good Stabling and River.—Address, F. P. S., London Institution, Finsbury Circus, E.C.

MATRICULATION at OXFORD.—An OXFORD TUTOR, of long and successful Experience, who receives a Few PUPILS into his House to prepare for Matriculation, has at present a VACANCY.—Address, M.A., care of May's Advertising Offices, 169 Piccadilly.

DR. WOLTERS, Four years resident in London, recommends his Educational Establishment to those English Parents who desire for their SONS EDUCATION in GERMANY.—For particulars, and references to Parents of Young Gentlemen at present with the Advertiser, apply direct to Dr. WOLTERS, Langestrasse 35, Dresden.

EDUCATION for YOUNG GENTLEMEN in CANNSTATT, near Stuttgart.—Professor HIRSCH, established more than Twenty years, has a few VACANCIES. Diet English as much as possible. Recommended by more than 100 Pupils, and by Rev. W. Blackley, Waltham Rectory, Hants; Rev. Dr. Charteris, Professor, Edinburgh; Rev. R. D. Buchanan, Glasgow; and N. Trübner, Esq., Publisher, Ludgate Hill. Prospectuses to be had from the latter.

EDUCATION.—BOSTAL HILL, ABBEY WOOD, Kent.—A limited number of BOYS received, who live on a home footing, entirely with the Head Master. References to many Noblemen and Gentlemen. High Terms. Ages from Seven to Sixteen.—Address, HEAD-MASTER, as above.

A SMALL HIGH-CLASS SCHOOL, Preparatory for the Public Schools, &c., is conducted by an OXFORD GRADUATE (High Classical Honours), in a very Healthy District.—Address, RECTOR, Great Blakenham, Ipswich.

HIGH MATHEMATICS.—EVENING INSTRUCTION in this subject by a CAMBRIDGE GRADUATE and WRANGLER, experienced in Tuition.—Address, E. R., 11 Norfolk Road, St. John's Wood, N.W.

CHELSEA HIGH SCHOOL for GIRLS.—A BOARDING-HOUSE for PUPILS from a distance attending this School of the GIRLS' PUBLIC DAY SCHOOL COMPANY, has been opened at 7 Durham Place, Chelsea, close to the School, under the Superintendence of Miss C. SMITH, to whom applications for terms and other particulars should be addressed.

LITERARY PARTNERSHIP and PUBLISHING BUSINESS, £1,000.—A GENTLEMAN, having considerable Experience and an extensive Literary Connexion, desires to meet a Gentleman with above amount to join him in starting a PUBLISHING BUSINESS under exceptionally favourable auspices. The Advertiser is an Author of no mean standing, and would prefer an Author as a Partner, or, at least, some one having a taste for and a knowledge of literature. Highest possible references given both as to personal character and ability.—Address, GERALD, 9 Tollington Place, Tollington Park, N.

TO PARENTS and GUARDIANS. WHOLESALE TEA TRADE.—An OLD-ESTABLISHED FIRM have Openings for YOUTH. Terms: Three Years. From Philpot Lane, E.C., where references can

ARMED PEACE.

THE absorption of Europe in preparations for war is a matter of so much regret that it is only natural that benevolent persons should do their utmost to protest against it, to show its evil consequences, and suggest how the mischief may be cured or abated. That very large sums are abstracted from productive employment, that industry is fettered by the conversion of workmen into soldiers, and that individuals go through much inconvenience and some hardship which they would gladly escape, are all things which in themselves are to be lamented. But it must be owned that, when we descend from general statements to particular cases, it is not very easy to measure accurately the extent, or to apprehend precisely the nature, of the evil. It is often said that the possession of large armies is itself a temptation to use them, and that war comes because the preparations for it can no longer be borne. There is much truth in this assertion, if it is based on the experience of nations which relied on large professional armies at the disposal of rulers who made war when they pleased. But it is doubtful how far it applies to countries where the army is composed theoretically of all persons qualified to serve in it, and where the Government is obliged to pay some attention to the wishes of the community. It seems unnatural that men should burn to leave the ordinary avocations of peace to engage in unnecessary war. And, if they cannot much like the struggle itself, they have no hope of war giving them a different sort of future. They no longer get rid of the preparations for war by fighting. Conquerors or conquered, they will have to bear the burden of military service after the war is over no less than they had to bear it before the war began. Nor can it be said that the maintenance of large armies of the German type, which is the type now in fashion on the Continent, does nothing but harm. In Italy the army does so much good as the symbol of order and unity, and as a means of fusing the inhabitants of different provinces, that Italy is generally spoken of as an exception; and it is owned that in this one case conscription, which elsewhere seems a burden on wealth, is itself a cause of wealth. But we have only to pass to Germany, and we find the Germans talking of their army, in language not very different, as the best of all instruments of national education and national unity. And this is not all. Not only do we discover that large armies are evils which have some advantages to compensate them, but we are puzzled to know how far the usual estimates of the scale on which preparations for war are being made correspond to the facts. Statisticians inform us that seven millions of men are, or soon will be, under arms on the Continent. Russia is to have two millions, France and Germany a million and a half each, Austria and Italy a million each; or, if these figures, being in round numbers, are too large, the minor States are thrown in to make up the difference. This certainly is an enormous amount of soldiers, but is it a true amount? It is rash to speak confidently without a thorough and accurate knowledge of the secrets of administration of many foreign countries; but there seems good reason to suppose that, to a great extent, this total is a purely imaginary figure; that, from various causes, it will remain imaginary; and that, so far as it may be expected to be approached, the approach will be effected by a departure from the theory which makes this vast total a deduction from the number of persons available for the purposes of industry.

Certainly, as far as France goes, nothing can seem more delusive than to speak of there being a million and a half of Frenchmen who are, or who are likely to be, taken from industrial pursuits and turned into soldiers. When the German papers have nothing else to write about, they amuse themselves with describing how eager and ready France is for war. It is a popular topic; it is interesting and exciting; and German journalists, who write on almost everything with a fine or a prison before their eyes, turn with avidity to the only sphere in which they are at liberty to invent as much false news as they please. In answer to some German writing of this kind, a French journalist has recently given what professes to be an accurate account of the present state of the French army. His object is to show that France could not possibly think of attacking Germany, although, if attacked, it might hope to make a good stand against the aggressor. The picture he paints is not one very inviting for Frenchmen. It is but little, he thinks, that has been done or gained since the conclusion of the war. The Staff and the Intendance are as inefficient now as they were in 1870; there is a great dearth of inferior officers, and the efforts made to keep these useful persons in the ranks have been in vain. The whole service projected to guard communications is non-existent. The territorial army of the Republic is as imaginary a body as the Garde Mobile of the Empire. The Reserves, or at least a considerable portion of them, were called out last year, but only for twenty-five days. Many of the new forts are so far from being realities that scarcely the plans of them have been drawn. The Artillery has been improved since the war, but the new German rifle is considered to be a better weapon than the Chassepôt. The nominal strength of the French army is 425,000 men, but the writer calculates that not more than 250,000 could be placed in the field. This is a very considerable melting down of the million and a half with which we started; and if it is said that no one supposed that France would have a million and a half of soldiers, all of the best quality, it may be replied that the secondary portion of the army hardly exists in France, and that, so far as it does exist, it consists of men who are called out for twenty-five days after harvest is over, and this is a very different thing from a million and a half of men being taken away from industrial pursuits. It may be, or it may not be, the fault of the authorities, but, as a matter of fact, the French army seems in quantity and quality to be exceedingly like what it was six years ago, before France bought the sad experience which it was supposed had moved her to adopt military establishments on a totally different scale from anything known before.

It is, however, so painful to think of the waste of money and energy and happiness which large armies involve, that enthusiasts naturally set themselves to devise remedies for the state of things they deplore. A writer in the *Quarterly Review* has shown what kind of things might be done towards the desired end. In the first place, he suggests that it was a calamity for France that she was not treated after the surrender of Paris as Prussia was treated after Jena, and did not have her army compulsorily cut down to a very humble figure. Not having to support more than a tiny army, she would have grown rich. Meantime Germany, being no longer afraid of France, would have got rid of Prince BISMARCK, quarrelled with itself, and broken in pieces; and then France, with her hoarded wealth, would have been mistress of the situation. The best preparation for war would thus be to have no army at all, and if the remedy could be applied universally, the seven millions of soldiers would disappear like snow in the sun, and every one would be happy. The writer is, however, candid enough to own that, although things

might turn out as the nation that first tried the experiment of going without an army calculated, they also might turn out differently; and he owns that the experimenting nation would have an awkward time of it if its calculations were defeated. He therefore proposes a second remedy, of so different a kind as to show a most creditable fertility of resource. His second remedy for the huge armaments of the Continent is that England should largely increase her army. This certainly looks like putting the fire out by heaping more coals on. But it does not seem so to the writer in the *Quarterly*, because he is able to draw a very striking difference between England and other countries. There is a peculiarity about England which, he thinks, separates it as a nation apart, and this peculiarity is that England would always fight on the right side, and would only help the oppressed weak against the oppressive strong. The terror of English justice would thus keep the Continental Powers in awe; they would forswear ambition, and, with ambition gone, armies would go too. This is a beautiful dream, and the author may be left to dream it; but there is one fallacy which it involves which is by no means an uncommon one, and on which a word or two may be said. This fallacy is, that there is in every war an obviously right and an obviously wrong side, and that the nation which proves the stronger is generally, if not always, in the wrong. Nothing can be less like real life. In the French war, the French who were beaten were, in the eyes of most Englishmen, obviously wrong at the outset. In the war of 1859 the French, who provoked the war and proved the stronger, did a great service to Europe by starting the liberation of Italy. In the war of 1866 Prussia began the contest, after having duped and insulted Austria in a manner that may fairly be called outrageous; but the results of the war, the union of Germany and the liberation of Venice, were of the greatest benefit to Germany, Italy, Europe, and even Austria itself. The only case, in fact, in which the writer thinks we ought to have gone to war when we did not was in 1864, when Denmark was threatened by Prussia. He says that the aggression of Prussia was without the shadow of a pretext. This is perhaps a mere matter of opinion, although we believe that, if Parliament had been really invited to sanction a war on behalf of Denmark, and the question had been freely debated, the English public would have been much surprised at the strength and validity of the German case. However, as it happened, in this instance the English Ministry was willing to go to war, but it had a juster sense of what was possible than to undertake the struggle without an ally; and as France would not co-operate except on the understanding that victory was to give it an extension of territory, England, disliking this, was obliged to abandon Denmark to its fate. The remedy suggested was actually tried, and it failed. England cannot always help the weak. It can only do so under favourable circumstances. That we should have a really efficient army, able to defend the country, and to afford, under favourable circumstances, valuable co-operation abroad, and that money should be freely spent to attain this end, is beyond dispute. But it is no good deceiving ourselves; and to think that Continental armies will be made smaller if ours is made bigger appears to be a mere delusion.

MR. BRIGHT ON LAND.

MR. BRIGHT'S speech at Birmingham differed widely in character from the conventional addresses to constituents which have been delivered by other members of the Liberal party. Though a strong partisan, and not indifferent to the duty and pleasure of criticizing his opponents, Mr. BRIGHT, as an artist in oratory, knows the advantages of concentrating his efforts on a few definite issues. Instead of frittering away his energies on the isolated miscarriages of the Government, he disposed of the Fugitive Slave Circular with the significant remark that he was not quite clear as to its merits, and on the Suez Canal purchase he bestowed only a passing sneer. For the matter of his own discourse he selected the past achievements and present claims of the Liberal party, the extension of household suffrage with a redistribution of seats, and the laws of settlement and entail, which in his opinion cause the accumulation of landed property in the hands of comparatively few owners. Lord DERBY will probably have been surprised to find that his late speech at Edinburgh furnished Mr. BRIGHT, after an interval of several weeks, with an ostensible text. It is scarcely worth while to inquire whether there are 3,000 Conservative working-men at Edinburgh, but Mr. BRIGHT's test of their numbers by their votes at elections is evidently fallacious. There has for a long time been no chance of returning a Conservative member for the city, and consequently the party has had no motive for trying or exhibiting its strength. The last general election shows, that, in spite of Mr. BRIGHT's plausible and probable arguments, there are in many boroughs working-men who, for once at least, voted on the Conservative side. They will probably not be greatly moved by the argument that gratitude demands from them a support of the Liberal party. A party of movement which has from the first proposed to itself definite changes ought in consistency to become a party of rest as soon as its objects are accomplished. Mr. BRIGHT's fond recollections of the triumph of Free-trade thirty years ago naturally fail to move the active sympathies of a younger generation. The advocates of Mr. BRIGHT's democratic principles are in almost every part of the world, except England, obstinately opposed to Free-trade.

The distribution of landed property raises questions greatly more important than the controversy whether Conservative working-men are fictitious beings, or whether the past exploits of the Liberal party entitle it to perpetual precedence and supremacy. Lord DERBY at Edinburgh properly censured the easy credulity with which Mr. MILL and Mr. BRIGHT himself formerly accepted a statement that the owners of land in England and Wales were only 30,000 in number. According to Lord DERBY, a forthcoming return will show that there are really about 600,000 landowners. Mr. BRIGHT replies that the smaller number possess by far the largest part of the land; and that he thinks it unnecessary to include in his calculation petty owners of houses and gardens. The explanation is, perhaps unconsciously, an afterthought, and it affords no answer to Lord DERBY's criticism. Mr. MILL's estimate of 30,000 included the smallest class of owners; and it bore no reference to the extent or value of their holdings. The ready acceptance of so paradoxical a statement could scarcely be explained except by Mr. MILL's passionate prejudice. On investigation it appeared that, of the 30,000 landowners of the Census, one-half were women; and it is known to all but philosophers that a vast majority of the actual possessors of land are men. The explanation of the apparent misstatement was simple and obvious. The Census contained the list only of those who, in default of any other designation, had returned themselves as landowners; and women who happen to own land have generally no other profession or description. Male landowners are in the great majority of cases included under some of the other headings in the Census; for a lawyer, a physician, or a merchant who owns land, or a workman who occupies a freehold tenement, is likely to describe himself by his calling rather than by the nature of his property. It may be conjectured that the list of Mr. MILL'S 30,000 landowners excludes all, or nearly all, the members of the House of Lords, whose vast landed estates nevertheless constitute the greater part of the grievance. When it is admitted that there are 600,000 owners, large and small, Mr. BRIGHT's inquiry into the comparative magnitude of their holdings becomes natural and relevant.

It may be at once admitted that the number of petty agricultural freeholds is small and diminishing. Many theorists on social economy regret the detachment from the soil of the great mass of the population. There can be no doubt that the possession of land by cultivators tends to promote a certain class of virtues, including frugality, and tenacity of ancient customs. Whether repugnance to change is in itself a wholly admirable quality is a point on which Mr. BRIGHT is fully capable of judging. The French peasantry are thrifty, domestic, and probably on the whole happy. They are also profoundly ignorant, deeply prejudiced, and wholly indifferent to political liberty. The majority of the English population, for the most part, possesses the opposite qualities. The working classes are too often prodigal in proportion to their means, and they are easily moved to discontent. It is the less necessary to compare two dissimilar types of character, because Mr. BRIGHT and his more rational opponents are agreed on the proposition that neither a peasant population, nor a population living on wages, ought to be created by law. If economical reasons promote or discourage the subdivision of land, it is not the business of Parliament to

counteract on speculative grounds the operation of natural laws. Mr. BRIGHT's opinion deserves the more respect because he expresses his entire dissent from the communistic or levelling doctrines of some of his political allies. He expressly condemns Mr. MILL's proposed confiscation of the "unearned increment" of land, and he disapproves the compulsory partition which has been borrowed from France by a great part of the Continent. Mr. BRIGHT may perhaps be aware that many French politicians and economists regret the consequences of the subdivision of property after the death of every owner. The system has undoubtedly both limited the increase of wealth in France and checked the growth of population. The controversy is nevertheless entirely theoretical, for no French Government or Legislature would dare to meddle with the most popular of existing institutions.

In Mr. BRIGHT's judgment, the division of land into large estates is principally caused by the law of settlement and entail. He would make every life tenant absolute owner in fee, with power either to divide the property after death, or to leave it to a single devisee. In this manner the tendency of dispersion by death, by waste, or by private inclination, would be left to operate freely; and apparently Mr. BRIGHT believes that the consequence would be a large increase in the number of freehold occupancies. There is something to be said for Mr. BRIGHT's proposal, though it is doubtful whether the abolition of settlements would produce the results which he anticipates. The difficulty in effecting the change would arise from the traditions and wishes of that large portion of the community which holds either real or personal property. Marriage settlements are almost universal, where there is anything to settle. Parents nearly always insist on a provision for the wife in the contingency of widowhood, and for the unborn children. It would be unjust and invidious to prohibit the settlement of a farm as long as the settlement of shares or debentures was allowed. The devolution of large hereditary estates would probably be but slightly affected. Spendthrift landowners would leave their heirs penniless, as they sometimes now leave them, when the actual tenant happens to be last in the entail. In the great majority of cases a large landowner would keep the property together, and leave it to his eldest son. Mr. BRIGHT's pity for the cadets of great families is entirely misplaced. The younger son of a nobleman is much better off with his moderate portion than he would have been if his grandfather's property had been equally divided. It is true that, although the effect of abolishing settlements and entails might be comparatively small, it would operate wholly in one direction. Mr. BRIGHT's desire for more frequent dispersion of estates would be gratified, and the change might perhaps in some respects be economically advantageous. It by no means follows that the partial release of the centrifugal force would not be balanced by an increase of centripetal tendency. Capitalists might more often take the place of peers or squires, but artisans and labourers would probably remain where they are. Mr. BRIGHT quoted, without answering, Lord DERBY's argument from the large quantity of land which now comes from time to time into the market. There is nothing to prevent the purchase of such property by Land Companies for subdivision among the members. The operation proceeds rapidly and constantly when building land is sold, and it would therefore seem that the reason why small freehold farms are not bought is because they would not be profitable investments. As long as the wealth and population of England are progressive, or even stationary, land must be a luxury to be bought and sold at a fancy price. A rich man can afford to indulge his taste for ownership. A poor man must do without a farm for the same reason which requires him to drink beer instead of claret. Mr. BRIGHT's actual proposals on this subject are not in themselves revolutionary or menacing to property, and there is time to consider them calmly, as they are not likely to be advanced for the present in Parliament. For his audience at Birmingham they could have but an indirect and speculative interest, for no law would convert a town artisan into a small freehold farmer.

SPAIN.

THE Spanish Government may reasonably hope for some improvement in its position during the present year; but just now it has enough to do at home and abroad. The elections to the Cortes have probably caused the Ministers less anxiety than civil war and foreign complications. No country has overcome more completely than Spain the difficulties which sometimes attend representative institutions. The late French Empire might have envied the facility with which successive Spanish Governments manipulate universal suffrage. While M. BUFFET is loudly vituperated in France on the charge of interference with elections, Señor CANOVAS DEL CASTILLO, after securing the return of himself and some of his colleagues for Madrid, anticipates with well-founded confidence a large majority which will approve his policy, whatever it may be. The last Parliament which met in Spain was Republican; the last but one was unanimously Progressist; and the last but two not less harmoniously Moderate. Constitutional purists may perhaps regard the working of the electoral system in Spain as suspicious or unsatisfactory; but, as long as the Carlist war lasts, it is better that the Government should not be embarrassed by serious opposition. The approaching campaign is pregnant with graver results than any which are likely to ensue from debates in the Cortes. Some of the large bodies of troops which have been collected in the North are already in motion, and, as spring advances, the possibility of suppressing the insurrection will be practically tested. The army unavoidably includes a large proportion of recent conscripts, who cannot yet have been perfectly disciplined; but for the most part it consists of good material, and it is commanded by chiefs who have had time to acquire experience in civil war. MORIONES and MARTINEZ CAMPOS have on different occasions displayed energy and ability; and, although the best of the Carlist troops are perhaps superior to their own, they have greatly the advantage in numbers and in resources.

During the long continuance of civil war, Spain has had no reason to complain of the demeanour of European Governments. Germany has, in consequence of outrages on German subjects committed by the Carlists, openly discountenanced the insurrection. Russia, after hesitating in apparent deference to obsolete traditions, has joined the rest of Europe in recognizing King ALFONSO; and for some time past France appears to have performed, to the satisfaction of the Government of Madrid, the onerous duties of frontier neutrality. If England had been disposed to increase the embarrassments of the Spanish Government, the anomalous state of affairs on the Northern coast would have furnished reasons for remonstrance or for interference. It has been found necessary to give notice in the *London Gazette* of the dangers incurred by vessels which approach the forts in the possession or neighbourhood of the Carlists. It is officially announced that the Carlist batteries fire on all ships which come within their range; and it seems to follow that some Government or authority must be responsible for the mischief and danger. As the Carlists have not been recognized as belligerents, the Spanish Government is technically liable; and yet it is difficult to apply for redress to a Government which is itself the primary object of the acts of violence which are the ground of complaint. If the complication lasts for any considerable time, it will become necessary to take into serious consideration the possibility of discovering a remedy. The Americans during their civil war, and the Germans in the war of 1870, persuaded themselves that, in the distribution of duties and rights, neutrals were exclusively liable to burdensome obligations for the benefit of belligerents. There is nevertheless something to be said on behalf of peaceable nations which, without fault of their own, are troubled by the quarrels of their neighbours. In this particular case it seems strange that, having, as against their opponents, exclusive possession of the sea, the Spaniards have never employed their considerable navy in the efficient protection of the coasts and harbours. A Carlist battery which fires from the shore on unoffending merchant vessels might sometimes, if an effort were made, be silenced by an ironclad man-of-war.

In the conduct of a second or colonial civil war Spain has to deal with more exacting neighbours. The American SECRETARY OF STATE, in his accumulation of grievances or pretexts of quarrel, assigns a prominent place to the atrocities which are committed by his clients, the Cuba insurgents. Their warfare is, it seems, characterized by acts of barbarism, incendiarism, outrage, and all manner of violations of the rules of civilized warfare. As Mr. FISH forcibly argues, these crimes are perpetrated by insurgents whom Spain still claims as subjects, "and for whose acts,

"if they be its subjects, Spain must be held accountable "in the judgment of the world." The inference that the American Government may be induced to aid the barbarous incendiaries in the establishment of their independence is rather suggested than openly deduced. The constructive injuries to the commerce of the United States which Spain inflicts through the agency of the insurgents are placed in the same category with direct offences which are attributed to the authorities at Cuba. The *Virginius* dispute is still open, and Mr. FISH demands the trial of General BURRIEL, who was the principal agent in the transaction. Estates belonging to American citizens are said to have been illegally confiscated; and Americans who have been accused of complicity with the insurgents have not received a satisfactory trial. In addition to more specific provocations, the United States complain of general inconvenience from the proximity of the struggle in Cuba. Mr. FISH is less excusably annoyed by "the "large expanse of ocean which separates the Peninsula "from the island," and by the want of sympathy which he supposes to exist between the home and colonial population. The English Government, which has been invited to give a general assent to Mr. FISH's remonstrances, will probably reflect that nearly the same expanse of ocean is interposed between Great Britain and the British West Indies. There have been times when the sympathy of the English nation with the planters on one hand and the coloured inhabitants on the other might have been regarded by a captious critic as imperfect.

Too much importance has been attached to Mr. FISH's communication of the Spanish Note to England and to other European Powers. It is certain that neither the PRESIDENT nor the SECRETARY of STATE proposes to abandon the pretensions which are known as the MONROE Doctrine; nor indeed is Mr. FISH's courteous overture inconsistent with the claim of an exclusive right to deal with American policy. No such privilege has been, or can be, recognized by England; but it is unnecessary to discuss a question which is not raised in the Cuba correspondence. The President of the UNITED STATES asks the English Government not to share in any possible intervention, but to use its friendly influence for the purpose of inducing Spain to give the required satisfaction. It would be premature to take any active steps in the business until it appears whether the American Government proposes to follow up Mr. FISH's Note by action. The document, which is now published in full for the information of Congress and of the world in general, has already done service on more than one occasion. When Mr. CUSHING was sent to Spain, it was announced that he had received instructions which were in substance the same as the Note. The Note itself was presented, and the communication was announced in the Washington papers immediately before the autumn elections in Ohio and Pennsylvania; and now the full text will enable the people of the United States to appreciate the vigilance and patriotic spirit of the PRESIDENT. Since the delivery of the Note the Spanish Government has hastened to give or promise satisfaction of the demands for the security of the life and property of American citizens in Cuba. The intimation which has on this and on other occasions been made, that the PRESIDENT considers the independence of Cuba the only feasible solution, cannot be admitted by any Spanish Government which desires to retain the support or allegiance of the nation. It may be taken for granted that a demand which cannot be conceded will not be seriously pressed as long as there is no present purpose of a rupture with Spain. The reasons which would render intervention in Cuba inexpedient for the United States have often been enumerated. Independence would only perpetuate the civil war; and annexation would introduce an alien and troublesome element into the Federal system. It is possible that considerations of ambition or of interest may at some future time prevail over more cautious counsels; but Mr. FISH's Note is only intended to keep alive a claim which may or may not be prosecuted hereafter, and at the same time to exercise a reflex operation at home.

PARLIAMENT OUT OF SESSION.

MR. FORSTER has followed the example of Lord HARTINGTON in speaking, before Parliament meets, of the purchase of the Suez Canal shares, in a manner which no one can complain of as unfair, and yet so as to intimate that, so far as can as yet be seen, there is a strong case against the purchase. The possibility that the conduct of the Opposition in criticizing the step taken by the Government might be condemned as captious or unpatriotic occurred so strongly to Mr. FORSTER's mind, that he thought it worth while to defend expressly the right and the duty of the Opposition to act as an Opposition. To those acquainted with the meaning and working of Parliamentary institutions such a defence seems wholly superfluous. Criticism of the Government is the business of the Opposition, the great service it renders to the nation, the justification of its existence. It may expend criticism on paltry objects, or it may devote its energies to delaying, by manœuvres and artifices, measures which it knows must be carried. These are the faults into which an Opposition may run, and a leader of the Opposition who, like Mr. FORSTER, respects himself, may properly show that he and those with whom he works have not made errors of such a nature. But the purchase of the Suez Canal shares is not a small matter. The nation needs to be enlightened as to its meaning, its cost, and its consequences; and this enlightenment can only come from debate. The Opposition is not only entitled, but bound, to see that everything is said and done to make the country understand the real character of the step that has been taken. Of course Parliament will ratify what has been done. Not only can the Ministry rely on a majority which is sure to support it, but the reluctance of Englishmen generally to disavow any act of a Ministry with regard to foreign nations is so strong, and founded on considerations of such weight, that, even if the Conservative majority were less compact and large, the ratification of Parliament would scarcely be withheld. But it is one thing to approve a measure which seems doubtful and dangerous simply because it is too late to do anything but approve it, and another thing to approve it because what has been done is wise and reasonable in itself. To have the purchase approved in the first way would be a defeat, as to have it approved in the second way would be a triumph, for the Ministers. It is therefore true that, although the result of a Parliamentary vote could not be doubtful, the Ministry is on its trial. It has to justify what it has done, and the Opposition has to make it justify its act in an intelligible and adequate manner. It is commissioned, so to speak, to cross-examine the Ministry, and the more effective the cross-examination the better. The Ministry has had plenty of time to prepare for the scrutiny, and thus the Opposition is not liable to be met with the excuse that answers cannot be given until fuller information is received. If Mr. DISRAELI had wished to baffle inquiry, he would have best effected his object by doing that which the Opposition complains of him for not doing; he would have called Parliament together without delay to approve an operation the nature of which could not then have been properly understood.

It is, however, as well that those who look forward with lively interest to the coming debate on the Suez Canal purchase should be prepared for some disappointment. It is not unlikely that we shall get at the fringe of the question rather than at the question itself. Behind the foreign policy which we can discuss publicly is the foreign policy which we cannot discuss publicly. All that has to do with the commercial part of the business—the value of the investment, the legal position of England as a shareholder, the complicated bargain between M. DE LESSEPS and the KHEDIVE—will be thoroughly sifted. It will also be asked, and it will be difficult to answer, how it is supposed that anything but physical force, which we should possess equally whether we held the shares or not, could give us the command of the Canal in time of war? But even if we suppose it to be proved that we have made a bad bargain, that as shareholders in a French or an Egyptian Company we are in an awkward position, and that our navy and not our shares must be trusted to keep the passage open in time of war, no one will be satisfied that the purchase is indefensible. In other respects it may be disadvantageous, but as a step in our foreign policy it may be advantageous. The real difficulty of the debate will be that such advantages as, viewed in this light, the purchase may possess, are of such a nature that they cannot be discussed frankly and in the face of the world. The first view of the nation was, that the Ministry had struck a bold stroke; and that, seeing the dissolution of the Turkish Empire to be imminent, it had outstripped competitors and

done much to secure Egypt for England. It is quite possible that this may be the ultimate result of the purchase. The Ministry may or may not have foreseen and intended this result; but, in any case, there can be no question that the path for active intervention in Egypt has been cleared, if under unforeseen circumstances this or any other Ministry should feel inclined to follow it. The English public would seem to itself not wantonly aggressive, nor a mere sharer in general plunder, if intervention in Egypt was proposed to it but as an honest proprietor going to look after his own property. But this cannot possibly be now avowed in Parliament. Whatever may be the real views of the Cabinet, they must speak of the purchase so as to give no offence abroad, and so as to avoid the appearance of sanctioning schemes for the appropriation of the spoils of Turkey. Their language, and in consequence the language of the Opposition, must on this part of the subject be purely conventional. Even in minor matters the same thing will in all probability happen. One of the difficulties with which, before the purchase, Lord DERBY had to contend, as representing English interests, was that the French Government, as representing the shareholders, thought itself bound to take a line opposed to the wishes and demands of England as to the use of the Canal. England will now be able to say that France no more represents the interests of the shareholders than England does. This seems as if it cleared away the difficulty; but it may only give rise to a fresh difficulty. France may reply that England does not regard its shares as other shareholders do. It wants not to make profit, but to have the best possible Canal with the lowest possible freights. To use our shares as we should like to use them—that is, to do the best we can for traders—may bring us into collision with French shareholders and the French Government. Not only should we thus be at as complete variance with the French Government as we were before, but we should be exceedingly hampered in our negotiations by the technical and legal difficulties in which the purchase had involved us. It is difficult, however, to see how this point, which is a very important one, can be fairly debated. The Ministry will naturally say that it hopes to work in entire harmony with France, that the French Government will always allow our representations and wishes due weight, and that we cannot ask for more. The Ministry cannot be expected to announce what use it would make of its position as a shareholder in cases which have not arisen, or to contemplate difficulties which it can safely say it hopes may be always averted by good sense and good management.

Mr. FORSTER'S remarks on such a subject as the Suez Canal are worth discussion at some length, because they are the remarks of a leader of what may be termed the organized Opposition on a matter which it especially belongs to this Opposition to discuss. The utterances of the disorganized Opposition, of such Liberals as Sir CHARLES DILKE and Sir WILFRID LAWSON, are numerous enough, but there is not much of practical value to take hold of in them. Any point in politics, present, future, or barely possible, is seized on by these free lances and made their own. They are at liberty to make any assertions they please. Sir WILFRID LAWSON a few days ago calmly informed his hearers that the objections to disestablishing the Church of England were weaker than the objections to disestablishing the Church of Ireland. Sir CHARLES DILKE informed his audience that no public grounds for the visit of the PRINCE OF WALES to India had been made out. Everything they have to do with seems to such men of supreme and vital importance. Sir CHARLES DILKE told the story of the sorrows he had suffered in trying to carry a Registration Bill, as if they had been the sorrows of a hero who was on the point of saving a nation, but had been baffled by the malice and perversity of mankind. Sir WILFRID LAWSON stated that he conceived the belief in the existence of a wise and good Deity to be intimately associated with the carrying of the Permissive Bill. Nor is any subject considered to be too remote and obscure for these speakers and their audiences. Sir CHARLES DILKE was great on Kashgar. Everything depended on Kashgar; our Chinese policy ought to be a Kashgar policy; our Russian policy ought to be a Kashgar policy. If Chelsea could but see Kashgar in the right light, all would be well, and India comparatively safe. We do not suppose that Sir CHARLES DILKE really believed that any single person in the room knew even where Kashgar is. His justification would be that he was addressing, not Chelsea, but the newspapers, and, through the newspapers, the public. But how can the public suppose itself to be any judge about Kashgar? or what reason has it to believe that Sir CHARLES DILKE is at all likely to be right about Kashgar? The words of the heroes of the disorganized Opposition are for the most part waste words. They fly about like pieces of chopped straw, engaging our attention for a moment and then disappearing we know not and care not whither. The most that can be said for the members of this Opposition is that it adds to the intellectual life and to the political activity of the country that there should be men to address constituencies who are bold and positive in a narrow range, who make random assertions according to their fancy, and are capable of enthusiasm over small things. Sir CHARLES DILKE and Sir WILFRID LAWSON are better than utter stagnation. Lively error is a means of education; and the constituencies want education so badly that perhaps no means of educating them are to be despised.

M. GAMBETTA AND THE SENATE.

M. GAMBETTA has at no time an easy part to play, and just now he is surrounded with more difficulties than ordinary. Paris has been busy in appointing the delegates who are to elect the Senators, and M. GAMBETTA has been striving to reconcile not merely opposing principles, but opposing persons. Compromises which have for their object the construction of a common list of candidates are attended with peculiar inconveniences. M. GAMBETTA'S successes in this direction have usually been gained in the Assembly, and though even here there are some Irreconcilables, still a Radical deputy is, as a rule, much more open to argument than a Radical elector. He has gained some familiarity with Parliamentary ideas and Parliamentary traditions. He has occasionally tasted the pleasures of voting in a majority, and he has discovered that this pleasure cannot often be enjoyed except by making allowance for other people's convictions. The Radical elector, especially in Paris, has had no such training. His experience of public life, if he has any, has been gained in the meetings of some small knot of fanatics like-minded with himself. Enthusiast as he is, he is not so blind to facts as to imagine that he can hope to see the speedy establishment of the Republic, as he understands the term, and he has consequently no inducement to put aside the immediate triumph which it may be in his power to compass, the return of a candidate who shall be in all respects as impracticable as himself. If the leaders of the Left could consult their own wishes, they would perhaps think it best to surrender Paris to the Extreme party, and be content with the victory of moderate ideas in the smaller constituencies. But it is very difficult for any section of opinion that claims to be popular to let Paris go uncontested. A Frenchman cannot forego his destiny, and act as though Paris was not in existence. Nobody really cares for the opinion of Paris, because, for Parliamentary purposes, it is exclusively the opinion of one section of the inhabitants, and that the section which is politically the most ignorant and the least important. But it is the fashion to pretend to care for it, and for this reason the moderate Republicans have had to start their candidates for the Senate, and M. GAMBETTA has had to do his best to get them accepted.

The controversy has mainly turned on the issue whether a definite programme should be submitted to the candidates, and judgment be pronounced on them according as they consent or refuse to make it their own. For the time M. GAMBETTA seems to have been animated by a hatred of programmes which Sir WILLIAM HARCOURT might envy. A programme, he argues, implies agreement in detail, and the problem the Republican party have to solve is how to work out certain results without agreement in detail. If all its members understood the same thing by the word Republic, there would be no need of arranging compromises between the several sections. The foundation of all these arrangements is the existence of a common belief that the present Constitution, either as it is or as it may be made, is the best attainable Government for France. Upon this common platform men of very different ideas may meet and work together. But if those who would like to see the Constitution amended refuse to accept any candidates who will not declare that they wish the same thing, the opinions of the extreme section will be made the measure of the common agreement, and then the compro-

mise is at an end. When M. Gambetta talks in this strain we seem to be listening to Mr. Bright exhorting the Radicals to give a hearty support to Lord Hartington. In England such counsels are commonplaces because, however they may be ignored when no serious contest is going on, they are always remembered and acted on when the prospect becomes hopeful and success seems really within reach. But in France they are newly discovered truths, and as such their announcement by M. Gambetta has a genuine interest. His attitude is the more remarkable because the programme which he repudiated was one which he was personally ready to accept, and one which, considering by whom it had been drawn up, cannot be called extravagant. An amnesty, abolition of the state of siege, liberty of meeting and association, liberty of the press, free compulsory education, the defence of civil society against clerical encroachments, universal military service, the election of mayors by the municipalities, revision of the taxes tending to burden industry, and the separation of Church and State, make up a list which is more formidable in appearance than in reality. Of the ten points which it contains, five would at once be accepted by English Conservatives, while of the remaining five all but two are accepted by many English Liberals who are not supposed to be socially dangerous. Universal military service raises no political question, and the amnesty, if it is to be taken as explained at Lyons by M. Jules Favre, cannot be held a very dangerous experiment. Ten years ago M. Gambetta would have agreed with the framers of this programme that it embodies the minimum of the conditions to which the Republican party ought to assent; now his whole influence is employed to prevent a minimum from being fixed.

Those who see in M. Gambetta's policy nothing but a prolonged manœuvre to get into power under false colours will probably not change their opinion upon this evidence. They ought, however, to recognize that every fresh instance of moderation on M. Gambetta's part constitutes a fresh obstacle to the acceptance of their theory of his character. We do not say that anything that M. Gambetta has yet done is absolutely incompatible with the notion that he may yet throw off his sheep's skin, and come forward in his original character of the Radical wolf. But there is an accumulation of small inconsistencies which, unless he very soon changes his tone, must in the end amount to an incompatibility. This preaching of moderation in the choice of Senators for Paris is perhaps more difficult to explain, on the hypothesis that he is merely disguising his intention and biding his time, than anything he has yet done. It is not M. Gambetta's interest to increase the distrust in which he is already held by the Paris Irreconcilables. After all, he is before all things the leader of the Extreme Left; and if he were to break altogether with his original followers, he might find it hard to get any others. Moderate men rarely prefer a convert to an old believer; and if M. Gambetta were to seek for admission into the Left Centre, he would probably have to expiate past offences by a long period of silence and obscurity. The distrust in which he is now held by the Irreconcilables is certainly greater than that in which he was held by them at the time of M. Barodet's election, yet the policy he now pursues is the contrary of what he pursued then, and, had it been pursued then, would have enrolled him among the supporters of M. de Rémusat. In his anxiety to unite all supporters of the existing Constitution into a common Republican party, M. Gambetta is even willing to welcome Imperialists, provided that they have seen their mistake and are not scheming to restore the Napoleons. If a one avowed desire is that the Republic should go on without alteration until the end of Marshal MacMahon's term of office, and, with ten years of working success scored to its account, he predicts that there will be no disposition to exchange it for any other form of government.

M. Buffet has been opposing M. Gambetta's policy by an incidental electoral manœuvre of a not very creditable kind. The final Report of the Committee appointed to inquire into the conduct of the Government of National Defence has not been presented to the Assembly—at all events it has not been read from the tribune. But, in as much as it is especially hostile to M. de Freycinet, the War Minister at Tours under M. Gambetta, and one of the Republican candidates for the Senate, it is too useful a weapon to be allowed to lie unused. It has accordingly been published in the official *Bulletin Français*, and circulated gratuitously in every commune in France. It is introduced by a little paragraph insisting on the peculiar value which attaches to its conclusions "at the moment when, by a free vote, the country itself is "about to pronounce on its destinies." Those who study its contents will, it is predicted, draw the conclusion that only men resolved to combat revolutions in every form are deserving of public confidence. There are two things to be noticed in this little sermon. One is, that if the members of the Government of National Defence are to be opposed because they were the authors, instead of the antagonists, of revolution, the Bonapartists have the best of the argument. The Empire was overturned by a revolution, and the most direct and obvious way of showing detestation of revolutions would be to restore the Government which the last revolution displaced. M. Buffet has often been accused of cherishing a concealed liking for the Empire; but he has never so plainly declared his dislike of the means by which it was destroyed. From disliking the means to disliking the end attained by them is not a very long step. Is it the step which M. Buffet proposes to take next? The other point is, that M. de Freycinet, to injure whom this Report is being circulated, had nothing to do with the revolution of the Fourth of September until it had passed into a stage in which it established a just claim to the respect of every Frenchman, without regard to his political opinions. Legitimists and Orleanists agreed in supporting the five months' resistance which M. Gambetta was able to offer to the German invasion, and it is strange that political prejudice should now impel them to renounce the credit they thus obtained because they cannot enjoy it without some reflection of it falling on M. Gambetta. It is one of the most offensive characteristics of French party spirit that it cannot refrain from blackening the authors of the one feature in the war which redeemed France from disgrace. If M. Buffet could have his way, Sedan would be the last memory to which his countrymen can look back.

PROTECTION AND FREE-TRADE IN THE COLONIES.

A BODY called the Board of Trade of the Dominion of Canada has adopted a resolution in favour of protective duties which need cause little surprise. Whether the Board of Trade has an official character, or is merely a Chamber of Commerce, the dislike to Free-trade which is common to Canada with other English colonies is already notorious. Democratic communities are perhaps not more selfish than aristocracies, but they have no majority outside to protest against exclusive privileges, and the pursuit of what is supposed to be the popular interest is regarded as a virtue. It is only when intelligence has become widely diffused that combinations of producers are discovered to be mischievous oligarchies. It may be conjectured that the Canadian Board of Trade represents manufacturers rather than merchants; and that its members are bent on securing and extending an existing monopoly at the expense of Canadian commerce. The pretext for the demand of increased protective duties is the depression of trade; but any other state of things would serve the purpose equally well. It would be not less desirable to cherish a flourishing trade than to legislate for the removal of stagnation. There can be no doubt that for the most part protective tariffs effect their sole object in encouraging local production. It would be strange if artificially high prices were not profitable to sellers, though they are in a larger proportion injurious to buyers. If an article which might be imported for a shilling is made on the spot and sold for half a crown, the consumer pays a tax of 150 per cent., while the monopolist manufacturer receives the smaller difference between the selling price and the cost of production under natural disadvantages. Such industry ought, if the interest of the community were consulted, to be not only depressed but abolished. The reactionary majority of the Ottawa Board of Trade would probably admit that some parts of the Dominion are better adapted than other districts to the prosecution of particular branches of industry. It is only when political divisions furnish opportunities for gratifying selfish instincts that monopoly is demanded. Even in the United States it would be impossible to organize a faction which should insist on the protection of the less favoured portions of the Union against domestic competition. The French provinces in the early part of the eighteenth century were more consistent. Before the days of Turgot there were in France more than a dozen internal lines of Customs which were only in degree more

vexatious than similar contrivances for impeding the mutual intercourse of independent States.

The practical meaning of the Ottawa resolution is probably contained in a second clause. The Board of Trade recommends the establishment of reciprocal duties between Canada and the United States. The language of the telegraphic despatch, though ambiguous in itself, may probably be interpreted by the aid of previous negotiations and discussions. There has always been a party in Canada which inclined to a Customs Union with the United States, which would involve the imposition of differential duties to the detriment of English manufactures. The ulterior political consequences of such an arrangement are not difficult to divine. An English colony which excludes English imports for the purpose of establishing entire free-trade with a foreign country is not likely long to maintain for sentimental reasons a connexion utterly inconsistent with its commercial policy. At present the less illiberal tariff of Canada imposes a certain pressure on the supporters of monopoly in the United States. It is impossible to prevent contraband trade on a land frontier extending for thousands of miles, when the interests of purchasers on one side and vendors on the other are equally opposed to restriction. American protectionists would derive an obvious advantage from the transfer of the Customs frontier to the Canadian seaboard; while they would at the same time secure the command of a new market with four millions of customers. The manufacturers of New England and Pennsylvania are not afraid of Canadian competition; and the Canadians prefer dealing with their neighbours rather than with their fellow-subjects in the conviction that their wares are dearer and worse. It is possible that the resolution of the Ottawa Board of Trade may not have gone to the extreme length of a Customs Union. The renewal of the Reciprocity Treaty which was denounced immediately after the close of the American Civil War has often been proposed; but neither party has been willing to recur to the former system without modifications. A fortunately abortive negotiation on the subject two years ago was, on the English and Canadian side, a remarkable specimen of bungling diplomacy and of economical ignorance. The Imperial Government may perhaps influence future transactions of the same kind; but if Canada really desires to exclude or discourage English trade, it will be impossible to prevent the accomplishment of the enterprise. Possibly, however, the more liberal and loyal party may prevail. Since the abolition of the Reciprocity Treaty, Canadian prosperity has largely increased, and the shipowners of the Dominion, who exercise the most flourishing and important industry, need no protection.

Economical heresy, though it finds a congenial soil in Canada and the United States, expands with fuller luxuriance among the remote democracies of Australia. The Americans, who have provided artificial protection for almost all other commodities which can be produced at home, have always had the good sense to permit and to favour an unlimited importation of labour. It was reserved to Australia to pass laws for the discouragement of that increase of population which is the first condition of the growth of a new community. The majority, finding itself in possession of supreme power, thinks first of the object of maintaining a high rate of wages. In New Zealand mob meetings protest against immigration; and demagogues quote or invent statistics for the purpose of showing that the supply of labour already exceeds the demand. The ancient blessing on a nation, which was to become as numerous as grains of sand on the shore, would be regarded as a curse by the dominant class in the Australian colonies. The new and sole possessors of political power rely as strongly as the most selfish mediæval oligarchy on artificial legislation. An ex-Minister in Victoria avows with laudable candour his belief that taxes ought not to be imposed exclusively for fiscal purposes. In his judgment, a financier ought at the same time to be a social reformer, dispensing benefits and burdens in accordance with any political theory which he may happen to adopt. Mr. Berry, in proposing a tax to fall exclusively on owners of large landed properties, announced his intention of discountenancing a distribution of land which failed to receive his approbation. Even in England the duty of equal taxation has often been disparaged by Income-tax reformers and other irresponsible projectors; but, on the whole, it is admitted that a Chancellor of the Exchequer is entrusted with the duty of raising a revenue, and not of disturbing the relations of society.

It is not unnatural that foreign and colonial protectionists should attribute the predilection of Englishmen for freedom of trade to the possession of industrial supremacy; but the real explanation is to be found in political causes. The universal acceptance of Free-trade doctrines in England was caused by the accident that, until thirty years ago, the kind of property which was most conspicuously favoured by protective legislation belonged to an aristocratic minority. In the Corn-law struggle Mr. Cobden and Mr. Bright appealed not only to economic principles, but to social jealousy and to democratic passions. Nearly the whole nation was united in denouncing the extortion of the landowners; and when the Corn-laws disappeared, Free-trade had become finally identified with the cause of the Liberal party. If the land of England, as of France, had been divided into small freeholds, it is doubtful whether the Corn-laws could have been abolished. The landowners, when they had once been deprived of their unjust privilege, had no further motive for defending the vicious system of Protection. The general diffusion of prosperity has incidentally compensated them for the loss of their monopoly; and in relation to all other kinds of industry or property they are consumers and not producers. On the Continent of Europe, and especially in France, the example of England has been partially followed, though on many occasions a reaction against sound doctrines has occurred. Russia, the United States, and the English colonies, are slower to learn; but there is no reason to doubt that sooner or later Free-trade will become universal. The conflict of arguments might proceed for an indefinite time; but in every country, though not as obviously as in England before the repeal of the Corn-laws, the sufferers by Protection greatly outnumber those who profit by monopoly. When the respective forces are accurately estimated, the majority will insist that its own interests shall prevail.

THE GREAT NORTHERN COLLISIONS.

THE double collision on the Great Northern Railway, not only by the number of its victims, but by the peculiar horribleness of some of its incidents—such as the charge of the down express into the sufferers from the first collision, and the slaughter, as if by a stroke, of whole families together—must have brought home to every one, in a very keen and poignant manner, the perils to which railway travellers are constantly exposed; and it may perhaps be hoped that the personal danger which a couple of Railway Directors have themselves experienced will not be without its effect in securing proper consideration for this very serious subject. In other respects, however, the accidents seem to have been of a very ordinary kind, and to have been due to just those common and notorious defects of railway management which are sure to be disclosed at every inquiry. There is, no doubt, a certain chance in starting on a journey by any given train that no disaster will happen; but travellers, if they reflect at all, must be aware that their fate is little better than a ticket in a lottery, and no one can say whose turn it will be to be sacrificed next. There is in the general conditions with which the Companies insist on surrounding railway journeys a chronic element of danger, which may or may not break forth. The Great Northern has a good reputation among the chief Railway Companies; it is a steady prosperous undertaking, not afraid to spend money, and, on the whole, it compares favourably in its general management with most of its rivals. Its plant and rolling stock are kept in good order; improvements such as interlocking signals are not neglected; and the absolute block system is in operation, or at least is supposed to be in operation, over the whole or the greater part of the system. And yet even here we find an accumulation of those wanton stupidities and perversities which render worthless the most elaborate and costly precautions, and are the fruitful source of terrible accidents. It appears that on this relatively well-conducted line it is usual to mix up express trains, for which a free and uninterrupted run at the top of speed is an essential condition, with slow goods and mineral trains, which have to get along as best they can in a fitful, intermittent kind of way, now snatching a few miles over open ground, then seeking shelter in a siding, like a hunted beast, and, all the time, never quite sure whether to shunt

or keep on. The passenger service of the country on this and other lines is exposed to a perpetual ambush of these murderous irregulars, and most of the bad accidents are due to their erratic movements. It is obvious that there is no good in elaborate time-tables, improved signalling apparatus, and so on, if wild goods trains are allowed to play mischief in this way.

The Board of Trade inquiry into this complicated disaster has been adjourned till Tuesday week, and in the meantime the evidence is too loose and imperfect to justify a definite opinion as to the degree of blame to be attached to the minor officials who are concerned in the matter. Enough, however, has come out to show that there was unpunctuality, recklessness, and neglect of the commonest precautions in the working of the line, the responsibility for which goes much beyond mere signalmen and engine-drivers. The facts of the case seem broadly to be these. A coal train was despatched southwards from Peterborough at 5.53. It should have gone at 5.35, but there was some delay in starting, and time was further lost on the journey. It was the duty of this train to get out of the way before the Scotch express could overtake it; and according to the bill it was to be shunted at Abbot's Ripton, some twelve miles from Peterborough. As the express was timed to leave the latter station at 6.28, it is obvious that a very narrow margin was left for the coal train, even if the express happened to be late too, as indeed it was. Before reaching Abbot's Ripton the coal train might have been shunted at Holme, but for some reason, which is still a matter of controversy, it ran through the signals, which are alleged to have been set at danger, though it is admitted that they might have been deranged or obscured by the snow. Beyond Holme there is an upincline to Abbot's Ripton, which would of course be trying for a heavy train, especially as there was snow, wind, and frost. These were the circumstances under which the slow coal train had to keep ahead of the express running down from the North, and it is certainly no wonder that it failed to do so. At Abbot's Ripton the coal train was only partly in the siding when the express overtook it, and a collision of course ensued. There seems to have been a good deal of exaggeration in the evidence about the weather, and it should also be noted as regards the alleged effect of the snow on the signals, that during twenty years' experience, Mr. PIGOTT, the Chief Signal Inspector of the Company, never knew of an instance in which snow entirely prevented a signal from working. Still there can be no doubt that the wind and the snow must have been very troublesome to those in charge of trains, and it is also not unlikely that the signals were partially affected. On the other hand, however, a snow-storm is not altogether an unprecedented phenomenon during an English winter, and the difficulties of the case ought to have been taken into account in working the line. This, however, does not appear to have been done. The Scotch express dashed on at pretty much its usual pace, and received no warning of the possible and even probable danger ahead. No fog-signals were put on the rails, nor did it occur to any one to stop or caution the express at Holme. It is practically admitted that, if this had been done, no accident would have happened; and the question, therefore, is, why it was not done. Probably the officials at Holme will be held responsible for it by the Company; but the Company is surely responsible to the public for allowing a coal train to be so closely followed by an express. Even under ordinary circumstances, such close proximity is clearly dangerous; but on such a night, considering the difficulties of a mineral train going uphill, and the possible derangement of signals, extra time should have been allowed. As it was, what under favourable conditions would probably have been rather a close shave, became under difficult conditions an impossibility. As for the second collision, when the down express plunged into the wreck of the Scotch train, although there is here also some doubt as to the state of the signals, there seems to be a concurrence of evidence that, after the express from London received warning of danger, it had about a thousand yards to pull up in, but the brakes were not powerful enough for the purpose. Here, again, if this is true, it is the Company which is responsible for the deficiency.

On the whole, there can be very little doubt that the accidents in this instance arose from the uncertainty and confusion caused by the reckless mixing up of mineral trains and passenger trains, and the further recklessness of working the line in a snow-storm just the same as in clear weather, without reducing the speed of trains, allowing longer intervals between them, or supplementing the ordinary signals with special ones. Of course, as is usual on these occasions, the instruction-book of the Company is triumphantly produced; but what would be more to the purpose would be to know what the Company does to enforce its instructions as to keep up a state of careful discipline and prudence among its men. Nothing can be more certain to produce disaster than that the working staff should be continually worried and bewildered by having to decide offhand on nice calculations as to the intervals between trains, and whether they should be sent on or shunted. It is obvious that such an intruder as the mineral train in this instance simply runs amuck through the elaborate time-tables which are framed on the fanciful principle that time is punctually kept on all sides, and that no margin need be left for accidents. We may of course expect that this disaster will be used by the Companies as an argument against the block system. In point of fact, it only shows that the block system cannot always be left to itself without the assistance of human care and foresight. When the weather creates special difficulties, there should be special precautions for meeting them. Travellers will, however, never be placed in reasonable security until the overgrown traffic of the railways is simplified by separate lines being provided for mineral and passenger trains. This may be a costly operation; but then, as the Great Northern will probably find, accidents are costly too, and, in any case, human life is entitled to some consideration.

ELEMENTARY TEACHERS IN IRELAND.

ONE of the latest achievements of the Session of 1875 was a measure to increase the salaries of National School teachers in Ireland by means of an optional rate. It was remarked at the time that Sir MICHAEL HICKS BEACH seemed to have considered every aspect of the subject except the chances that the Bill would work. He was confident that there would be no room for the introduction of the religious difficulty; he laughed at the notion that the Guardians would have any claim to a share in the management of the schools in return for the money paid to the teachers; and he warned them that they would be naturally and properly blamed by the teachers if, "for the sake of the small tax of one penny in "the pound," they should hesitate to make this great improvement in their position. But he carefully abstained from saying anything as to the probable effect of the law. To those who are familiar with the temper of English ratepayers when called on to find money, there was never much doubt as to the result of this invitation to Irish ratepayers. Some of the most important Unions had by anticipation protested against the proposed increase, and it was to be expected in the nature of things that the example thus set beforehand would be generally followed. The picture drawn by the CHIEF SECRETARY of the Guardians cowering beneath the righteous wrath of the poverty-stricken teachers might have been correct if the Guardians had already been in possession of the money, and the only question to be settled had been how to dispose of it. But, with the money still to be raised, and with the decision whether to raise it or not left to the absolute discretion of the Guardians, it seemed probable that the Guardians would think much more of the blame which would be laid on them by the ratepayers if they imposed the tax than of the blame which would be laid on them by the teachers if they refused to impose it. If Sir MICHAEL HICKS BEACH supposed that the teachers would have influence enough with the ratepayers to make the imposition of an additional rate a popular measure, he must have credited the Irish people with very great reverence for very little learning. If he supposed that the Guardians would prefer being popular with the National School teachers to being popular with the ratepayers, he can hardly have remembered that the ratepayers stand to the Guardians in the position in which constituents stand to a member of Parliament. To hold up the wrath of the teachers as a motive for incurring the wrath of the ratepayers was about as likely to be effective as to threaten a man with the wrath of the newspapers if he dared to please the electors who have given him his seat.

If the Government hoped that this measure would serve to check the demand for improvements in the Irish system of elementary education, they are likely to be disappointed.

Possibly, if the Guardians of the Poor had estimated the privilege of levying an additional rate as highly as the CHIEF SECRETARY professed to expect, some temporary results might have been reaped from it. But the Irish Boards of Guardians have, as a rule, declined to use the power given them; and, what is even more annoying to the Government, they have set to work to collect reasons to prove that they ought never to have been invested with it. Perhaps if the CHIEF SECRETARY's estimate had turned out to be accurate, and the rate required in each Union to provide the proportionate part of the 60,000*l.* had been only a penny in the pound, the Guardians might have been content to treat the Act with neglect. But, as a matter of fact, the proposed rate has in several cases been very much more. In one large Union in the South-west of Ireland it amounted to more than threepence in the pound; and in Cahirciveen—the poorest Union, we believe, in Ireland—it amounted to fivepence-halfpenny in the pound. Even the smaller of these sums would be a very serious addition to the local burdens of a poor district; and so long as the Act remains simply permissive, the Unions in which the rate is levied may have the additional annoyance of knowing that in a neighbouring, and perhaps richer, Union it is not levied. Further than this, it is objected that, when all the circumstances of Ireland are taken into account, the salaries of the National School teachers are not so low as has been alleged, and that carelessness in exacting the school fees is a principal reason why they are not higher than they are. The opponents of the special rate contend that the average pay of a teacher is from 60*l.* to 70*l.* a year, and that, by proper attention on their part to the collection of fees, this average might be increased by 30*l.* a year. In that case, it is said, National School teachers would be better off, as regards salary, than bank clerks in country towns, or than shopmen even in large concerns; while, if the hours of labour are taken into account, the superiority of the teacher's position becomes more apparent still. The time for which elementary schools are open on the five working days is less than the time for which banks are open, and very much less than the time for which shops are open; while Saturday is always a holiday, and there is a considerable summer vacation. It seems clear that before making the Act of last Session compulsory on the Guardians—and, unless it is made compulsory, it may, for any good it will do, as well be repealed—more accurate information than is at present attainable must be furnished about the school fees. If it is true that, by proper attention to this part of school administration, the average salary of the teachers might be increased by something like a third, they must either be insufficiently collected or very insufficiently accounted for.

Nor must it be forgotten that, even if the Guardians had used their new powers to the full, and spent the whole 60,000*l.* in increasing the salaries of the teachers, the object for which alone this increase can be properly demanded would not of necessity be brought any nearer. The end which Parliament had in view when it passed the Act of last Session was not to put a little more money into the pockets of a number of deserving young men and women; it was to put Irish children into the hands of a better class of teachers. But good teaching is not exclusively a matter of payment, it is largely a matter of training; and an improvement in the former respect would not necessarily be accompanied, while it would be useless unless accompanied, by an improvement in the latter. The ordinary career of Irish National School teachers is to get what education they can in their parish schools, then to become pupil-teachers in the same school, and from that to pass to be master or mistress of some other school. Such a course as this involves no training, properly so called. They pick up a certain amount of instruction while they are scholars, and according as they are intelligent or unintelligent, and their teacher has or has not some notion of what teaching should be like, will be their chance of attaining some proficiency in the end. It is a purely haphazard method of obtaining teachers, and one which completely ignores all the progress that has been made in the theory and practice of teaching during the last thirty years. This, however, is the method on which the great majority of Irish teachers are obtained, and it is not easy to see why, so long as this method is persisted in, any mere increase of salary should have the beneficial results expected from it. Thus we are brought back to the difficulty which the Government were so unwilling to face last year. It would be useless for the National Board to insist on no teachers being employed who have not attended a training-school, because under the existing Irish system training-schools must be undenominational. The result is, as we pointed out when the Bill was under discussion, that, as Catholic managers will not employ any but Catholics as teachers, and as Catholic parents will not send their children to be trained as teachers in schools from which religion is excluded, "the National Board have to put up with untrained "teachers as a better alternative than having no teachers at "all." We do not pretend to say how this difficulty is to be got over. It is enough if the Government can be brought to understand that it is here that the shoe really pinches, and that until it is eased here no solid improvement will have been effected. In a Roman Catholic country trained teachers can only be had from training-schools which are in harmony with average Roman Catholic opinion. Protestants may wish that Roman Catholic parents were enlightened enough to send their children to Protestant training-schools, though, as a rule, they are not particularly ready to prove their superiority to religious distinctions by sending their own children to Roman Catholic schools. But the question is not what Protestants wish so much as what they can get, and experience has proved that in Ireland the choice does not lie between teachers who are Ultramontanes and teachers who are not Ultramontanes, but between Ultramontane teachers who have been trained for their work and Ultramontane teachers who have not been trained for their work. Ultramontanism is for the present an inseparable accident of all Irish Catholic teachers; but we need not make bad worse by insisting that it shall be Ultramontanism of the most uninstructed and inefficient type.

FLATTERY.

IT is often said that the love of flattery is a mark of what Mr. Swinburne has not unhappily termed parvanimity. According to this current view, it is one of the surest signs of a higher moral and intellectual culture to dislike flattery, and to feel contempt for those who proffer it. But though this admirable theory is so frequently advocated in words, we much doubt whether many persons even among the more refined classes of society consistently hold by it in practice. Although it is doubtless true that certain forms of naked adulation have long since become distasteful in good society, a close observer will still be able to detect traces of a refined appreciation of this easy kind of lip-service. Very few, we suspect, even of the polite classes are wholly unsusceptible to the charms of a gracefully executed stroke of flattery, and it seems to be rather an affectation of extraordinary moral severity to denounce the flatterer's art as something radically vicious. Perhaps a common-sense investigation of the matter may show that, after all, there is nothing so very terrible in this fondness for the sweets of artfully arranged adulation; that, although it is to be classed among the frailties of human nature, it is not the vulgar and despicable vice which our fine maxims appear to represent it as being.

Flattery may for our present purposes be roughly defined as a bestowal of praise by complimentary word or action to a degree not actually supported by the giver's deliberate conviction. There are obviously two things to be distinguished here, the desire to praise, and the insincerity of the laudatory action. Now praise itself is clearly a pleasant thing universally desired, and it is only a suspicion of its genuineness which makes it of doubtful value. If in any way all grounds for this suspicion can be removed or hidden from sight, it is evident that the flatterer may carry on his soothing art with perfect success. As a matter of fact, we find many persons of undoubted character and intellectual ability who are extremely slow to detect the hollowness of any piece of praise accorded to them. More especially, we may observe, among men of a certain renown in art or science, and among public officials, there are many who appear to take all kinds of adulation quite as a matter of course, and who, so far from rigidly scrutinizing the nature of the sweets thus tendered, seem to count on a certain amount of flattering attention as a perquisite of their elevated position. It is only necessary that a man be deeply impressed with a sense of his own merits in order to derive this amount of gratification from the unsifted praises of others. Biographies of eminent persons abundantly illustrate the facility with which even penetrating minds allow themselves to be hoodwinked when flatterers present their full-flavoured cup. It looks as if such minds were so readily agitated by the pleasant excitement of *amour-propre* as to have no space for the intrusion of critical doubts. They are so accustomed to indulge in a gentle admiration of their own personal excellence that all external praise, by harmonizing so well with their own sentiments, finds easy acceptance.

But again, even when people are not thus habitually uncritical in receiving praise, but show a fair amount of skill in discriminating the genuine coin from its counterfeits, they do not necessarily lose their relish for flattery. All who look closely

into human nature must wonder at its capacity for living on half-recognized illusions. It is quite possible for a person to go on drawing comfort from a pleasing supposition, as, for instance, that he is in possession of a certain moral dignity, and yet to be fully aware that the supposition is extremely doubtful. Those psychologists who lay stress on grades of distinct and indistinct consciousness might probably find an illustration of their favourite theory in this simultaneous play of a feeling and a critical suspicion of its legitimacy. If only the particular sentiment can secure a firm footing within the boundaries of clear consciousness, it will not be soon disturbed by any number of unwelcome reflections which flit around the belt of obscure consciousness. Thus it is that we cannot but like the graceful compliment even when there is a nascent recognition of its partial insincerity, and when only a moment's unfettered reflection would assure us of the fact. In the rapid flow of conversation there is little time for such reflection. The well-inserted allusion has just time to awaken a pleasurable glow of satisfaction, and is then expelled by new subjects of thought before it can have been submitted to a critical analysis. It would be a very lofty style of mind indeed which could execute this duty of critical investigation before indulging for an instant in the pleasurable sensations which such pretty allusions immediately awaken.

Nor is even this all that can be urged in explanation of, if not in excuse for, the widespread taste for flattery of a certain order. Even after there has been time for reflection, and when the hazy suspicion of the instant is transformed into a calm and settled acceptance of a probability, the compliment which was so delicious at the moment of its utterance does not necessarily lose all its piquant flavour. For it is exceedingly easy to find considerations which serve to reduce the probability to a minimum, and so to render it inoperative. For example, the person who is thus reflecting on a recently bestowed compliment is frequently baffled in his attempt to estimate its exact value by the vagueness of the language used. The utterances of the flatterer are essentially indefinite. They commonly owe their point to a particular emphasis of voice or manner, or at least to the employment of an exceedingly indefinite superlative term. Few, if any, of the customary forms of praise are susceptible of exact measurement. They seek rather to express a feeling in the speaker's mind than to gauge the precise dimensions of the object of the praise, and all affirmations which aim at expressing emotion are in their nature vague propositions. Suppose, for instance, that a lady has just been complimented in emphatic terms on the excellence of a musical performance. On cool reflection she will be apt to doubt, either from previous experiences of flattery or from certain circumstances in this particular case, the sincerity of the praise. Still she will find it hard to say why the language used palpably overstepped the limits of speaker's feeling at the moment. Strictly speaking, this could only be known with approximate certainty after a very full acquaintance with the particular person's modes of speech. Very warm language which would be fulsome, if not ridiculous, on the lips of an habitually stolid person, may be quite sincere when employed by a lively and demonstrative man. So that, even if on a *primâ facie* consideration a graceful compliment looks exaggerated, further reflection may find reasons to doubt this first doubt itself. Even supposing, further, that the lady thus complimented has good grounds for knowing that the person proffering the praise does not usually entertain so high an opinion of her skill as his language in the present case indicates, it does not follow that she will at once denounce the praise as silly or insulting flattery. For, since all praise expresses primarily the speaker's feeling, and not his general habit of feeling, but the single emotion of the moment, she cannot be at all sure that his declaration is insincere till she can ascertain in some other way the depth of the admiration he feels at this particular instant. Now this is rarely possible, for it is very hazardous to reason that, because a man does not often manifest a certain emotion, he cannot be experiencing it at this moment. As a matter of fact, we are not unfrequently struck by the spectacle of a customarily quiet temperament suddenly waking up to a lively enthusiasm. Thus, to return to our imaginary example, the person who praises the performance of a lady musician may, for some undiscoverable reason, really have been impressed in quite an unusual degree by this particular exercise of her art. And so it happens that people can nearly always find plausible grounds in justification of the more ambiguous praises which have been accorded them, and thus spare themselves the humiliation and pain of stripping off their newly-acquired laurels.

Yet once more, even if full and calm reflection leaves no doubt as to the presence of verbal exaggeration in an act of praise, we do not necessarily become indignant with the flatterer, or tread the agreeable offering under our feet. There are many cases in which we are assured of conscious exaggeration in a compliment paid to us, and yet do not resent it. All wide departures from truth in the bestowal of praise are of course offensive in themselves, and, when seen to be resorted to for the purpose of triumphing over our vanity and credulity, are simply odious. But slight exaggerations, though strictly speaking examples of flattery, do not always displease. For these may spring solely from an amiable motive—namely, a desire to please and encourage the person so flattered. A strong wish in a particular direction may cause a slight deviation of language from fact, even in the case of a habitually truthful man, and a kindly wish to find merit in others may easily carry a speaker a little beyond the strict bounds of truthful statement in apportioning praise. Nobody probably sees any harm in encouraging children and even backward adults by this kind of gentle flattery. This being so, it is scarcely to be expected that the person who receives such stimulating compliments should repel them as disagreeable. If only he is persuaded that the exaggeration is due solely to this momentary preponderance of a generous feeling over a strict regard for truth, the flattery may lose something of its value as a testimony to merit, but will still be very pleasant as a token of courteous and friendly sentiment. It is, we suspect, this ingredient of exaggerated praise which first made flattery a recognized part of courteous manners. The wearisomeness, not to say the repulsiveness, of fashionable adulation is due to its utterly senseless disregard for truth, and to its lifeless and mechanical nature.

There seems, then, reason to suppose that flattery in certain of its forms is not necessarily revolting even to generally truthful persons, but that it may find a place among the customs of the most refined forms of society. As the quality of veracity grows in delicacy and intensity, the province of flattery will of course be limited, but the considerations here dwelt on seem to favour the supposition that it will not soon grow out of date. It would be interesting, had we the space, to trace out the precise changes which intellectual and moral progress effects both in the dimensions and in the form of flattery. Culture seems to do for flattery what it does for one of its opposites, ridicule; it limits its sphere, and partially disguises it by softening its expression. If flattery is to be grateful to a sensible and truth-loving man or woman, it must clearly conform to several conditions. As we have remarked, it must not be too broad, wholly setting at defiance the bounds of truth, but must be recognizable as an approximation to the truth. Thus the compliment bestowed should clearly point to a meritorious quality having an undisputed existence. Further, it should never be forced on a person in an obtrusive way. It should be couched in modest language, and not break violently on our attention in bold eulogistic epithets. And it should not be kept before our minds so as to arouse a full and embarrassing consciousness of the speaker's meaning, but rather appear as a transient element in a fugitive conversation. It is always better to let the praise be inferred from the language used than to declare it in direct terms. In this way it will be appreciated by a swift movement of feeling, while there will be no time for its arousing a painful self-consciousness. Once more, flattery is always more acceptable when it seems to be the product of the moment, and not the result of premeditation, for in this case it has a greater appearance of reality. Or, if the speaker distinctly intends to indicate a deliberate wish to gratify, and so to show the exercise of forethought, the praise should be tendered with a certain delicate skill so as to assure the recipient of the giver's anxiety to make the offering as graceful as possible. The indirect ways of flattery are also worth attending to. One may flatter a person by saying to his intimate friend—for instance, his wife—something highly eulogistic, which it would be difficult to say to himself directly. Another and still more useful method is to flatter by action instead of by words, that is, by treating people as if they had a certain kind of merit or excellence. Thus we may studiously consult the taste of a lady whose aesthetic judgment we wish to extol, or may enlist the co-operation of a person in a benevolent scheme, and thus indirectly attribute to him a generous disposition. The advantage of this last mode of flattering is that it escapes the necessity of even a slight verbal untruthfulness. To appeal to a person's opinion is not the same thing as to declare him to be wise, even though he may be readily disposed to conjecture from the former that we mean the latter too.

THE END OF THE "REVEREND" CONTROVERSY.

WE write these words hopefully, as trusting that what ought to be will be, and that, with the late judgment of the Privy Council, we have heard the last of the very silliest dispute that ever was stirred up. The absurd question as to the use of the adjective "Reverend," as applied on a tombstone to a Wesleyan minister, has been decided by the highest Court, not only in the way most consistent with common sense, but on the grounds most consistent with common sense. The whole question about which so much has been said is summed up in a few words by Sir William James. "The Dean of Arches assumes that 'Reverend' is rightly the title of a man who is episcopally ordained. What connexion is there between episcopal ordination and the title of 'Reverend'?" To this question there is really no answer. As was shown over and over again in the evidence, and as must be familiar to every one who knows anything of the records of the last three or four hundred years, there is no connexion whatever between the two things. The judgment says, with the most perfect truth, "In the opinion of their Lordships, 'Reverend' is not a title of honour or courtesy; it is a laudatory epithet." This exactly hits the distinction which both sides in this grotesque controversy seem to have failed to understand. The Wesleyan minister doubtless thought that, in claiming the epithet of "Reverend," he was in some way asserting his own position; the Vicar, in refusing to allow him the epithet, doubtless thought that he was asserting his position. The judgment of the Privy Council ought to teach both of them that the disputed epithet has nothing whatever to do with the position of either of them, and that neither of them is in any way better or worse for the epithet being either granted or refused. The judgment marks the distinction, which lies at the root of the whole matter,

between a title and an epithet. The irregular assumption of a title might really be of importance, and it might be a duty to resist it; no such duty can arise in the case of a mere epithet. For instance, if the Wesleyan body in England had, as it has in the United States, officers who claim the title of Bishop, to allow one of them to be described on a tombstone by the title of Bishop would be quite another thing from giving him the epithet of Reverend, Right Reverend, or any other. It would, to say the least, be a fair question, and worth arguing, whether to describe the Wesleyan minister in any formal way as a Bishop was not an infringement alike of theological positions by which the Vicar probably holds himself bound, and even of the legal rights of the Bishop of the diocese. We do not presume to decide what the judgment of the Privy Council would be or ought to be in such a case; but we do say that such a case would be altogether different from the present one, and that the arguments on both sides would have to be altogether different from what they were in this case. A title asserts a fact or alleged fact; a mere honorary epithet asserts nothing. To call a man Bishop, or Colonel, or Barrister-at-Law, is in truth to assert certain facts about him; merely to call him "Reverend," or "Gallant," or "Learned," expresses no fact whatever. As we showed long ago, the only difference between the two cases is that, while modern usage attaches the epithets of "Gallant" and "Learned" to members of two professions, and the epithet of "Reverend" to a third, modern usage, or perhaps rather the zeal of the profession itself, has made the epithet in one case stick somewhat closer than it does in the other two.

The judgment goes on to sum up the whole matter in the shortest and clearest way. This laudatory epithet "has been used not for a great length of time, but for some considerable time by the clergy of the Church of England." That is to say, out of several floating epithets a process of natural selection fixed Reverend as the special epithet of the clergy about the end of the seventeenth century or the beginning of the eighteenth. "It was used in ancient times by persons who were not clergy at all." This needs no proof; indeed we suspect that survivals of this ancient practice might, as the Lord Chancellor himself hinted, be found still. We are not prepared with a case of the Lords of the Privy Council being called "Reverend," or "Right Reverend," but we should not be in the least surprised if such a case were to be found. "It has been used, and is used in common parlance of social intercourse by (of?) ministers of denominations separate from the Church of England." And the usage which made "Reverend" the special epithet of the clergy was fixed so late, and the time when it began to be given to ministers of other denominations came in so early, that, if there was any time during which the epithet was always given to the Established clergy and was never given to ministers of any other denomination, that time must have been a very short one. With these facts before him, it is hard to see how any rational man could help coming to the conclusion of the Court, "It is impossible therefore to treat this as an exclusive possession of the Church of England." The whole thing is simply a matter of usage, involving no point of law, principle, or fact; and usage has long ago settled the question in favour of the Wesleyan minister. And the Lord Chancellor goes on most pertinently to say "that if ever there was a case in which no possible misunderstanding could arise, it would be here." "There is no pretence to the position of ordained minister in the Church of England. The statement is one which claims nothing more than what is actually the fact." This exactly hits the point. Had the words "Wesleyan Minister" not been added, we do not say that there would have been any just ground for all this disturbance; but we can understand that some people might think that there was just ground. As it is, the whole question was whether an honorary epithet, which has no legal or theological meaning, should be applied to a person who openly declares his own status as a Wesleyan minister. We can understand the anxiety of Nonconformist ministers to claim the epithet of Reverend, because, with many of them, the claim is mainly a social one. At the same time, they would do well to abstain from the odd manifestations of temper on the subject which they sometimes show. We have heard of a case in which a Dissenting minister was very angry because a correspondent, writing in the third person, having spoken of him the first time as "the Rev. Mr. A.," went on through the rest of the letter calling him simply "Mr. A." Now, if we were writing in the third person, whether to a Nonconformist minister or to a clergyman of the Established Church, it would never have come into our heads to use the epithet at all in the inside of the letter, though we should certainly use it for both in the address on the outside. If, instead of "Reverend," the disputed epithet had been "Honourable," the absurdity comes out more strongly. There have been people in our own day who have commonly borne that epithet without having much right to it; we can conceive those persons being naturally angry if the epithet had been omitted in the address, or in any description that was in the least formal; but we do not believe that they would have expected the word "Honourable" to be tacked on to their names every time they were spoken of or to. On the other hand, there is something equally ludicrous in the strange importance which some of the clergy attach to a mere epithet which asserts nothing and proves nothing. There have been a good many clergymen who would think it scorn to have all the epithets of Hooker piled on them—to be spoken of as godly, learned, judicious, and eloquent—if the one pet epithet were left out. Now it appears that there are some whose zeal carries them the other way, who declare that it will be an insult to address them any more by an epithet which has been "desecrated." For a clergyman to object to be called "Reverend" because a Dissenting minister is called so too, seems as grotesque one way as what has hitherto been the climax the other way—the formula "Rev. and Mrs. A. B." on a card; Judicious Richard and Maiden Joan would never have thought of that.

Then the judgment of the Privy Council and the comments of the Lord Chancellor nothing can be better or clearer. They put plain sense into plain English. It is another thing when we come to the comments of the *Times*, to the talk about "unconscious sublimation of temporal accidents," "reflex action," and "effervescences of ecclesiastical prejudice." It is an elaborate confusion indeed when the *Times* says:—

> But when a Bishop talks of Episcopacy being of Divine institution, he unconsciously transfers the Divine sanction to his title, his Palace, his social position, and all his temporal prerogatives; and, similarly, when an Incumbent maintains, as he may think himself in duty bound, his claim to be the only true possessor of Ministerial authority, he transfers the peculiar prerogative thus implied to his title, his "freehold," and all the customary privileges of his position, forgetting that the latter, at all events, are mere matters of social or legal prescription, and are liable to be withdrawn at any moment by the secular authority which bestowed them.

Now those Bishops who would insist most strongly on episcopacy as a divine institution are just those who are least likely to transfer the divine sanction to their palaces, their social position, and all their temporal prerogatives. As for transferring it to their titles, that depends on what is meant by their titles. For the title of Bishop—that is, for the fact that they are all that is implied in the theological term Bishop—they would claim a divine sanction. They would claim no such sanction for the temporal title of "Lord," still less for the mere epithet of "Reverend" or "Right Reverend," unless they fell into the strange mistake of the Bishop of Lincoln in fancying that those epithets implied or denied any theological proposition. So in the case of the incumbent, the *Times* studiously confounds law and usage. Why does the *Times* put "freehold" in commas? No one doubts that the clergyman holds his tithe and glebe by a freehold tenure. No one doubts, on the other hand, that an Act of Parliament may at any time take them away. But, as long as the law secures them to him, he only does his duty to himself and his successors in defending his rights. But this has nothing to do with the present controversy, because to call the Wesleyan minister "Reverend" implied nothing in any way inconsistent with the freehold rights of the Vicar. As for "customary privileges," "legal and social prescription," the *Times* must be a little more explicit before we know what it means. What is "legal or social prescription"? Legal prescription is one thing; social prescription is another; "customary privileges" may mean Easter offerings; they may mean the epithet of "Reverend." But Easter offerings and the epithet of "Reverend" stand on altogether different grounds. The "temporal power," if by that is meant King, Lords, and Commons, may undoubtedly withdraw anything that it has bestowed, or anything that any one else has bestowed; no law can limit its powers; but the ordinary exercise of those powers is limited by the rules of common sense. It is quite possible that the temporal power may pass an Act to deprive the clergy either of their freeholds or of their Easter offerings. But the temporal power of the United Kingdom must have greatly changed its character if it ever sits down to make an Act of Parliament to say who shall be called "Reverend" and who shall not.

GOVERNORS AND CONSULS.

THERE are not a few professions which have very much the character of lotteries, but none more so perhaps than our foreign and colonial civil services. A gentleman who has shown more or less capacity for the post is gazetted Governor of one of our dependencies. He may have been painfully climbing the ladder of promotion hand over hand, and have received at last a tardy recompense for meritorious, though obscure, official services. He may have been a man of fashion distressingly out at elbows, whose unsuspected administrative talents have attracted the notice of some personage of influence like the Marquis of Steyne; or he may have had the fortune to have figured conspicuously in public life, and the gratitude of his party rewards him for a consistently loyal devotion with a position and income which will be exceedingly welcome. The fortunate recipient of the favours of the Colonial Office finds his new dignity more or less pleasant and profitable. He may be set down on the Gold Coast, or in some fever-stricken islet of the West Indies, to console himself for insalubrious exile with the maxim that every land is a native country to the brave; or his lines may fall to him in lucrative places among the pastures and gold-mines of Australasia, or in the scented forests of Ceylon. But, whatever his immediate fate, the only thing certain in his prospects is their uncertainty, unless indeed he should command extraordinary interest. He may perchance deal too vigorously with local disturbances to please that popular sentiment at home which naturally sways the opinions of his superiors, in which case he will be recalled, to be shelved for life, and may think himself lucky if he escapes the criminal tribunals. Or, without committing himself to some military *faux pas* that excites so general a sensation that it is impossible for the authorities to condone it, he may simply fail to give satisfaction to the gentlemen who are in a measure responsible for his administration. Or, again, when he has served his term, should he have no backers at head-quarters, his application may be quietly ignored when he petitions for a new

appointment. In either of these cases, the unfortunate man suffers the miseries of a sudden collapse of dignity and prosperity. He who, a month or two before, was a little monarch, ruling his petty realm almost autocratically by the aid of deferential Ministers or an obsequious Council, finds himself "lord of himself, that heritage of woe," and of next to nothing besides. The odds are that his ex-Excellency has little or no private fortune, and the recent occupant of Government House has to huddle himself, his family, and his suite of a single nursemaid, into cramped lodgings in Pimlico or Bayswater, while he dances disheartening attendance at the Colonial Office. It is a painful change from easy and dignified competence to shabby pinching; his dreams of laying by from his official income had vanished in smoke as he awoke to the inevitable claims on him; and, on the contrary, he has probably brought home a schedule of debts by way of memorial of his tenure of office. He has arranged with his creditors to settle by instalments, which involves him in a series of periodical defaults and expostulations. No wonder that he grows more and more pressing for re-employment, before he shall have been absolutely crushed under the accumulating weight of his difficulties. No wonder that he is more indefatigable than ever in his visits to the Colonial Office. The gentlemen who make it the business of their department to keep unwelcome suitors at bay begin to regard him as a bugbear instead of a mere cipher; the very messengers in the corridors come to detest him, and to dread the perpetually recurring visitations which they cannot prevent. And all the time he regularly goes the rounds of his limited circle of acquaintances, imploring them to help him with their exertions in quarters possible and impossible. There is just one chance in a hundred that he may prevail by importunity, and that his much crying may obtain him a fresh lease of official life, to expire again under aggravated circumstances. But then there are ninety-nine chances in a hundred that the good-humoured, hospitable administrator settles down into a moody discontented man, with wishes, and even with wants, out of all proportion to his means. Such extreme instances, we may admit, are exceptional. Able and trustworthy men, as a rule, will have something like justice done them in the end; and intelligent civilians who have enjoyed good opportunities ought to win favour in high quarters in the course of their career. But it must be remembered that even the ablest man is at a disadvantage when he is out of sight and mind in a tranquil community somewhere on the other side of the world; prejudice is more easily created than partiality; even a brief interval between a couple of appointments may leave a legacy of permanent embarrassments; and in any case such an extreme contingency as we have suggested, being always more or less on the cards, must make the most sanguine of men occasionally anxious.

After all, however, if high colonial administration is a lottery, there is brilliancy as well as substance in the prizes to be drawn in it. The Colonial Governor has his cares like crowned heads and their viceroys, but even at Cape Coast Castle or St. Kitts he presides over a petty court, and may count on receiving the respectful consideration due to the mouthpiece of Imperial authority. Her Majesty's Consuls, on the other hand, have few of the consolations of pomp in their more prolonged exiles, and must content themselves with "influence" in place of power. As for the pleasures of congenial society, nothing can be more precarious than their prospects in this respect, unless they chance to have some definite information beforehand as to the place where their services are required. Good things there are, no doubt. Paris is by no means a disagreeable place of residence; existence may be made very tolerable on the shores of the Bay of Naples or Palermo, especially if you have a weakness for sunshine or a tendency to pulmonary complaints. But then, again, conceive what a man's feelings must be on receiving his sentence to some city peopled by fanatics on the shores of the Arabian Gulf, or to some swamp-girdled charnel-house among the lagoons of Central America. The appointment may startle him, but he has practically no choice but to accept. So he gets his will duly executed in London, should he be lucky enough to have any property to bequeath, and proceeds to lay in a supply of quinine and Persian powder, with any other medicaments and specifics recommended for the local diseases and insects. The metal cases of his baggage are disagreeably suggestive of white ants and such omnivorous vermin. His fellow-passengers on board ship, with their sallow complexions, sunken cheeks, and shrivelled forms, are anything but exhilarating spectacles, disposed as he is to depression at any rate. Yet most of them will tell him with cheerful self-congratulation that they are bound to their homes in neighbouring cities that stand considerably higher in the sanitary scale than the low-lying seaport which is to be the seat of his consulate. When he casts anchor before it and comes on deck to gaze, possibly first appearances may be reassuring. The bay that is to be the special scene of his maritime jurisdiction is enlivened with some show of shipping. The town itself is picturesquely situated on rolling ground sloping back from a shelving beach, and commanded by a whited citadel with imposing tiers of batteries. Long quays of massive masonry stretch their arms into the water, palm and other feathering and umbrageous trees cast their shade here and there among the blocks of houses, while the place is girdled with masses of green, where irrigated clearings that look like gardens seem to run back into the virgin forest. He steps into the boat to be pulled ashore, and with each stroke of the oars an illusion vanishes. The weed-grown quays are but the dry and mouldering bones of the former substance of great prosperity. The water has silted into shallows; no dredging is done in the harbour: nor can any vessel of burden come alongside the wharf. The houses still look imposing from the sea, because they were solidly built several centuries ago. But the stucco has disappeared, the woodwork is in decay, even the walls are cracked and the roofs fissured by volcanic disturbances. The streets are encumbered by all manner of garbage that has been neglected by the dogs and the vultures, and the new comer's heart sinks within him when he goes looking for an eligible residence. He soon discovers that the social attractions of the place are as deceptive as the honeycombed guns that frown through the embrasures of the batteries. As for its society, the richest of the merchants are little given to hospitality. The most he may expect of them is a gracious smile and a cup of sugared water at one of their "At homes," if he should not have been sent unanimously to Coventry for discharging his duties to their prejudice. His consular colleagues tender him official courtesies; but, even if he escapes being the object of their jealousy and political intrigues, three or four families of promiscuous nationalities form but a limited circle from which to select the companions of one's solitude. At first he goes out for riding exercise in those glorious forests over which distance threw its halo of enchantment. But he finds that at the best of times they exhale languor and disease from the masses of rotting parasites that are interwoven through the dense undergrowth; and even if he can force his way along almost impracticable tracks, it is as much as his life is worth to be belated in their shade after sundown. If he lives through the acclimatizing fever that sooner or later visits each new arrival, or escapes the virulent epidemics which at intervals crowd the cemeteries, he may possibly grow case-hardened to the climate with time and careful living. But at all events the temperature and atmosphere will conspire with the other depressing influences of the place to make a burden of some of the best years of his existence. Yet nothing can be more delicate than applying to headquarters for a transfer. The dissatisfied functionary may obtain his recall without a subsequent reappointment, or may simply exchange the frying-pan for the fire.

Her Majesty's Consuls more than most other people have reason to regret the good old times. In former days some of the most disagreeable consulates had compensations which made them eminently desirable to many people. These agents of the Foreign Office had free liberty to trade, and necessarily they had special advantages in trading. But now official personages must shun even the appearance of evil, and all that is rigidly forbidden. There are no longer fortunes to be made in Paraguayan tea and Buenos Ayres bullocks, in Brazilian dyes and Honduras mahoganies. Fees are frequently commuted for hard and fast salaries, while long leaves of absence can only be obtained subject to inconvenient pecuniary drawbacks. On the other hand, the expenses and duties of the position have been increasing with the expansion of the national commerce and enterprise. A Consul who is already puzzled to make the two ends meet must often be considerably out of pocket when he finds a crew of his shipwrecked countrymen thrown on his hands. And a kind-hearted gentleman representing the British Government and nation cannot churlishly shut his purse when the widow and the orphan come crying for assistance, although he may know that it is very much more than doubtful whether his superiors will ever recoup him his outlay. Add to all this that every now and then a man conscious of unusual gifts and experience finds himself condemned to an indefinite period of humiliating banishment in the place of all others where his talents can be least turned to account—Captain Burton at Trieste, for example, and Mr. Gifford Palgrave at St. Thomas—and we may safely assume that the service is seldom a bed of roses to those employed in it. It does not seem too much to say that, having regard to the best interests of the country, there are certain modifications that might be advantageously made in the position of British Consul abroad, even if they involved some trifling increase in expenditure.

AN AQUARIUM *IN NUBIBUS*.

EVERY person of right feeling will, we are sure, sympathize sincerely with the Duke of Edinburgh on the unfortunate position in which he has been placed by the Directors of the Royal Aquarium. His Royal Highness is of course, in the absence of the Prince and Princess of Wales, an important member of the Royal Family, and he is also to a certain extent identified with the most popular branch of the national service. Add to this his characteristic liberality in the patronage of art, and it will at once be understood that he is a personage who ought to be treated with proper respect, particularly by those who claim to be not only loyal subjects, but in a special sense the friends of art and science. This, however, does not appear to have been the opinion of the Directors of the Royal Aquarium. These gentlemen, having obtained the use of the Duke's name for their puffing advertisements, further prevailed on his good-nature to consent to preside at the ceremony of opening their great national institution. His Royal Highness was probably much impressed by the exalted style in which "the advancement of science, literature, and art, in all its (*sic*) branches," was proclaimed in the circulars of the Company as the object of its existence; and he was no doubt justified in assuming that preparations had really been made to carry out the professions of the prospectus. If there was one thing more than another which the Directors were supposed to have at heart, it was

the promotion of science in the form of an aquarium. It is under this name, in fact, that the enterprise is presented to the public, and it was naturally expected that an aquarium would be the great feature of the exhibition. It turns out, however, that, whatever else the exhibition may be, it is not an aquarium, since it contains neither water nor fish. It is stated, indeed, that some day or other it will become an aquarium in reality as well as name, and the tanks are already provided. This, however, is a question of the future, and it may occur to some people that a sham Aquarium consisting of empty tanks is an odd sort of speculation to be "inaugurated" by a member of the Royal Family. But here we come upon at least one good end which this enterprise has providentially served. It is an ill wind that blows nobody good, and this *fiasco* in the slums of Westminster has been the means of enabling the *Daily Telegraph*, after years of struggle with the dictionary, to use a long word in something nearly approaching to its correct grammatical significance. It has discovered, with a joy and pride which reminds one strongly of M. Jourdain, that it has been using "the word inauguration" ever since it was born without having the faintest idea of its true meaning; but the happy thought has at last flashed upon it that inauguration "should generally be used in its obsolete sense, as signifying a good omen of that which is to come." Whether this means that it is a good omen that a public exhibition should pretend to be what it is not, we cannot say, but the case referred to does not quite strike us in that light. It might perhaps be said that, if it is ominous of anything, it is ominous of empty pretensions. The *Daily News*, which seems to be gradually slipping into the old clothes of the *Telegraph*, gets, in treating of this subject, into a mysterious bewilderment about "Dagon the fish-god, ancient father of mermaids," which, on "calm reflection," it identifies with "the Sun-god, far-shooting Apollo, the god of music himself"; and it then asks, "What is Apollo but the Belin of our woad-stained ancestors?" with more of the same stuff, all leading up to the moral that, though people may have been deluded into buying season-tickets and making themselves ridiculous with the name of Fellows, under the impression that they were to see an Aquarium, it does not in the least matter that no Aquarium exists, because, "if the fishes are not there, the tanks for them are." It is possible that this writer might not show the same equanimity if, on purchasing an article in a shop, the shopkeeper handed him an empty parcel of brown paper and string, and assured him that the contents were immaterial. A casual admission further on perhaps explains the writer's confusion of mind. It appears that the Council of the Society "entertained their friends at an elegant *déjeuner* in the Reading Room," and that "ample justice was done to the *faisans au soleil*, the *saumon à la Chambord*, and other delicacies provided by Messrs. Bertram and Roberts."

The *Times*' reporter, although also in a genial mood, is somewhat more guarded in his language. He treats the question pretty much as if it were a conundrum:—When is an aquarium not an aquarium? "This Aquarium," he says, "is not so much an aquarium as something else"; and then he goes over the long list of promises put forth by the Company, adding sententiously, "All this, and much more is promised," but "not quite all this is there at present." Then he goes off on a hopeful tack, and says, "There is no reason why such an attempt should not prove successful, and to judge from the programme, no pains will be spared to make it so." We should have thought that the mistake of judging such people as the Directors of the Royal Aquarium by the professions with which their programme is stuffed had just been very clearly demonstrated by the melancholy emptiness of the exhibition, which is admitted to be "not quite all there at present." It is possible that at some future time the Directors may fulfil their promises, but this is for the present perhaps a poor consolation for those who have paid their money to see what is "not quite all there." The *Times*' reporter indeed has a faint perception of this himself, for he remarks, with a dull sobriety in striking contrast to the animated, but rather incoherent, gaiety of the *Daily News*' gentleman, that "it may possibly"—he will go as far as possibly—"be a question whether it would not have been better to wait a little while longer, till there was some more immediate evidence in the present of the promise of the future." How exquisitely delicate a mode of suggesting non-delivery of goods! The Royal Aquarium is certainly not the only speculation of the day in regard to which investors would be glad to see "more immediate evidence in the present of the promise of the future." But then, again, the luncheon has its effect, and it occurs to the writer, with a twinge of remorse, that "this is a question which, under the circumstances, it would be ungenerous to urge." The question seems to us to be, whether a newspaper reporter, writing for the public, should not honestly say how far a particular entertainment comes up to the glowing promises of a Directors' prospectus, instead of inventing excuses for taking people's money under what looks very like false pretences. Before the Aquarium was opened the truth should have been disclosed as to the condition of the interior. What the Aquarium is at present is simply a public promenade, with music and refreshments. There is, indeed, what is called a picture gallery, but a glance at the collection is sufficient to show what chance there is of art being promoted by such an exhibition, or by the lottery connected with it. One of the chief attractions of this establishment was, we understood, to be that it would be the favourite resort of the British aristocracy; but as yet the aristocracy seem to be unaccountably holding aloof. The *Daily Telegraph* kindly suggests that this can only be because "Society is still absent from town," and that what "the company lacked in quality it made up in quantity"; but it may be feared that, even when Society returns to town, quantity rather than quality will still be the chief characteristic of the company.

Whatever else the Aquarium may be, there can be no doubt as to Messrs. Bertram and Roberts's part of it; that is real and conspicuous enough, and pervades the whole building. Art is perhaps represented by their coloured bottles, and science by the drinks they supply. Any one who had not read the prospectuses of the Company would certainly imagine that the chief object of this noble institution is, as the Duke of Edinburgh beautifully remarked, "to conduce to the moral and intellectual progress as well as the material welfare of the people" by promoting the trade of enterprising publicans. If his Royal Highness knew anything of the "splendid situation" of which he spoke, he would be aware that the sale of liquor was sufficiently provided for there already. One class for which it seems to be supposed that the Aquarium is likely to have great attractions is perhaps indicated by the *Daily News*, which thinks "it may be well to remind" its readers "that after dusk on weekdays no lady will be admitted unless accompanied by a gentleman." It is evident, therefore, that the Directors are prepared to exercise that "watchful care over their future arrangements" which the Duke of Edinburgh hinted at as "urgently demanded in this populous district," and that with a "gentleman" to every "lady" decorum will be provided for as amply as the more material wants of Messrs. Bertram and Roberts's customers. We have heard that the same rule prevails at some of the music halls, though whether it is very effectual may perhaps be doubted.

Such then, in its present state at any rate, is the exhibition which was described by the Duke of Edinburgh as "the natural result" of the part taken by his lamented father in the Exhibition of 1851. Although it is true that in one sense the Royal Aquarium comes by natural descent from the first Exhibition, its characteristics are very different indeed from the high and disinterested aims of the chief promoter of the honourable and successful enterprise of twenty-five years ago. It was certainly not during the Prince Consort's life that refreshment contracts became the mainspring of great Exhibitions for the advancement of science and art, and there can be no question as to the sincerity of his often-expressed desire for the refinement and elevation of public taste. It is melancholy to think that these theoretically noble projects should have since fallen into the hands of hucksters and jobbers, and that a cry for the "advancement of science and art" should now be the common cant of every puffing showman. There is, of course, no reason whatever why the Royal Aquarium, whether as an aquarium or only as a public-house with a licence for music, should not be conducted in a respectable manner, and prove profitable to its promoters; but the character of the speculation can be more safely judged from its results than from its preliminary pretensions. If the music is lively, and Messrs. Bertram and Roberts's tap satisfactory, there will no doubt be plenty of people who will find this sort of amusement suit them; but there is no necessity for trading on honoured names in the sale of such wares, or for keeping up the hollow pretence of anxiety about "science, literature, and art in all its branches."

MONTALEMBERT AND HIS CRITICS.

IT was not without considerable amusement that we read a paper in last week's *Tablet* headed "The late Count de Montalembert and Dr. Döllinger." Its object is to endorse an article which is quoted at full length, from the *Revue Générale* of Brussels, by the Baron de Haulleville, "a Belgian nobleman of high standing and unimpeachable character." This "communication," we are solemnly assured, seriously affects "the religious memory of one, and the literary honesty of another, of the two distinguished writers" just named, as well as the "controversial character of a no less distinguished English statesman"—namely, Mr. Gladstone. These are grave charges certainly, and we turned with some curiosity to Baron de Haulleville's article to see how they were made out. The *corpus delicti*, so to call it, appears to be the posthumous publication of a letter of Montalembert to Dr. Döllinger, written a week before the opening of the Vatican Council, to which we called attention ourselves not long ago *, and of a paper of his on the political condition of Spain, originally written for the *Correspondant*, which declined to admit it, an English translation of which appeared last year in the *Contemporary Review*. The publication of these two papers without the sanction of the Countess de Montalembert is stigmatized by the wrathful Baron as a violation of "common decency," and "an insult to the memory of one of the most illustrious champions of the Catholic cause in the present century." Now the first thing that strikes one is that the two heads of the indictment, like the Kilkenny cats, are mutually destructive of each other. If it was a breach of decency to publish what so seriously compromises Montalembert's religious character, then it is futile to plead in the same breath that it does not really compromise it at all. Yet this is precisely the Baron's position. "You will not find," he says, in the letter—the italics are our own—"a word of disloyalty to *the Church*, the mother and mistress of all nations"; and he complains of the false "judgments passed upon it." But if the letter itself breathes the unchanged spirit of loyal orthodoxy,

* *Saturday Review*, November 13, 1875.

surely, from his own point of view, the kindest thing to Montalembert's memory was to publish the text of it in full, and thus give the world an opportunity of estimating at their true value the floating rumours which had got about on high authority as to his change of mind. Of course the real question is what is meant by "loyalty to the Church," which may have borne a very different sense in Montalembert's mind from that assigned to it by his too officious apologist. Of the loyalty to the *Pope* displayed in this letter of his we shall have a word to say presently. Meanwhile, if Baron de Haulleville rightly interprets these last utterances of Montalembert, why should he accuse Dr. Döllinger of "blackening character" and committing a "scandalous" breach of confidence in giving them to the world? His case strongly reminds one of the old story of the borrower of the broken kettle, who pleaded, first, that it was broken before he had it; secondly, that, if he had broken it, he had mended it; and, thirdly, that it was never broken at all. As to the rest of the article, which is occupied with a panegyric on Montalembert's early zeal for Catholicism, it is neither here nor there to the argument.

So much for the indictment as a whole, but it is worth while to examine its separate counts a little more in detail. And first as to the bad faith and indecency charged on Dr. Döllinger and Mr. Gladstone for publishing these papers of Montalembert's without the authority of his widow. Now, even if the facts were exactly as their assailant states them, his case would be a very weak one. It is absurd to treat the writings of a prominent public character like Montalembert, dealing entirely with public questions, and addressed to friends also holding positions of public interest and trust, as mere private letters, over which his family may claim absolute control. There must clearly be a limit to this sort of deference somewhere, and it is difficult to see what can be fairer to the memory of the departed than to publish what he himself deliberately wrote on great public questions of the day, and what was, certainly in one instance, very probably in both, distinctly intended for publication when written. As regards the article on Spain, indeed, we happen to know that Baron de Haulleville's statement of facts is as inaccurate as his indignation is misplaced. Mr. Gladstone, if we are not entirely misinformed, had no more to do with its publication than the Baron himself. The statement therefore that Dr. Döllinger, in reply to a request of Montalembert's executors that it might not be published, "sent his copy of this paper to his friend, Mr. Gladstone, who forwarded it to the *Contemporary Review*," is a pure invention. This sufficiently disposes of one alleged "violation of the repose of the faithful departed," by publishing a paper expressly composed by the author for a French Catholic periodical, which, however, refused to insert it. And now to turn to the other occasion "when the German enemies of the Roman Church, in their Satanic hatred, sought to forge to themselves weapons out of the fragments of the sarcophagus of one of the staunchest Christians of our century." Montalembert's letter to Dr. Döllinger of November 7, 1869, already mentioned, contains the deliberate record of his view of the approaching Council and the state of parties in the Church. It is a letter dealing exclusively with public ecclesiastical questions in the Roman communion, written by one of the most distinguished Roman Catholic laymen of the present century. The writer might have reasons for not printing it at the time, but, unless he had expressly directed that it should be treated as private, there can obviously be no sort of impropriety in its posthumous publication, even if he did not, as he very probably did, contemplate and intend this himself. For he says expressly that he writes from "his coffin," and "with a voice which already, as it were, comes from the other world." There is no more, we may add, of "eloquent irritability" about the letter—which is Baron de Haulleville's account of it—than about the other publications of a writer who could never forget that he was an orator, and when most impassioned in his language was most entirely himself. The irritability belongs entirely to the critic who so far forgets himself as to call its publication "indecent," "scandalous," and "Satanic."

At the same time it would be affectation to say that we do not perfectly comprehend the real grounds of this outburst of passionate invective, though it might have been more discreet not to let the cat out of the bag in so very conspicuous a manner. The Baron and his friends cannot of course fail to be perfectly aware that what he calls euphemistically "the judgments passed on the letter" by Liberal Catholics are, in fact, the judgments passed in the letter on his own party, now dominant in the Roman Catholic Church. There may be "not a word of disloyalty to the Church," and the illustrious author himself would undoubtedly have insisted that his Catholic orthodoxy remained unchanged to the last. But when he "lashed a school of invective and oppression," he was lashing precisely that school of which the *Revue Générale* in Belgium and the *Tablet* in England are the accredited organs; and his own words leave no room for doubt that his sense of loyalty to the Church was very far from including an unlimited devotion to what he calls "the idol of the Vatican." On the contrary, he winds up his letter with the startling avowal that, "of all the mysteries presented by the history of the Church, I know none that surpasses or equals this transformation, so rapid and complete, of the French Catholic Church into a *basse-cour de l'anticamera du Vatican*." We must further remind the Baron de Haulleville that, if the judgments passed on this letter by all who read it in its natural and obvious sense are an insult to Montalembert's memory, the chief offender is no less a personage than the infallible head of his Church. The Pope, at all events, to whom the dying patriot's vigorous denunciations of Vaticanism had been reported at the time, by no means shared the Baron's opinion that "his generous soul never carried him beyond the lawful bounds of the *rationabile obsequium*." A few hours after the news of Montalembert's death reached Rome, in March 1870, the Pope happened to be receiving a large body of foreigners, chiefly Frenchmen, to whom he at once disburdened his mind on the subject of the departed Count with that extreme frankness which is habitual to him. "Il était malheureusement de ces Catholiques libéraux qui ne sont *que demi-catholiques*. Il y a quelques jours il écrivait des paroles"—here his Holiness paused, and then proceeded to express his hope that the Count had made a good death, adding, with a ludicrous misapprehension of his real character, that pride was his great fault. Meanwhile, the French in Rome had been invited to a solemn Requiem for Montalembert's soul at the church of St. Louis, as is usual in the case of Roman patricians, of whom he had been made one. When, however, some twenty French bishops, and a large number of priests and laymen, assembled next morning at the church doors, they found M. Veuillot, the editor of the *Univers*—Montalembert's old and bitter enemy—stationed there to inform them that the Pope had forbidden any service being held or prayers offered for the departed Count. The intense feeling of disgust excited among the French by this procedure was, however, privately intimated to the Pope, probably by the French Ambassador, M. de Bannoville; and, accordingly, some days afterwards, he drove privately to an out-of-the-way church, where he ensconced himself in the tribune, and directed a bishop who was there to say mass *pro quodam Carolo*. It was then officially announced in the *Giornale di Roma* that, "in consideration of the former services of Count de Montalembert, his Holiness had ordered a mass to be said for him at Sta. Maria Transpontana, and had himself assisted at it." And the Papal journalists were instructed to explain, as of course the *Tablet* at once did, that the previous prohibition had been issued because the Requiem "was intended rather as a political demonstration than a religious act" (of which there was no shadow of evidence), and all the arrangements had been made by the late Mgr. de Merode, Montalembert's brother-in-law, and a member of the Pope's household, whose fervent Ultramontanism nobody ever dreamt of calling in question. So much for Papal gratitude. Our object, however, in recalling the circumstance here is to point out how entirely Pius IX.'s estimate of the true significance of these later utterances of Montalembert's confirms the view which Baron de Haulleville calls "an insult to the memory of one of the most illustrious defenders of the Catholic cause." We may add that the *Tablet*, which now reproduces and endorses his angry complaints, must have fully shared that view at the time, for it devoted an article to showing that, throughout his proceedings about the Requiem, "the prudence and the charity of Pius IX. have been equally conspicuous."

The plain fact is, that Montalembert had come to see through the real drift and spirit of modern Ultramontanism, and was determined, in his own words, "to protest," though with his dying breath, "against the abominations (*bassesses*) to be brought forward at the Vatican Council, and which may even prevail there," as they did. This was clearly understood by everybody at the time, and by no one better than by the Pope himself, who accordingly denounced him as half an apostate, a charge freely re-echoed in Ultramontane circles. But now, after the lapse of five or six years, Ultramontanes are becoming sensitive to the scandal of having the name of so conspicuous and devoted a champion of the Catholic cause arrayed against them, and therefore wish to prove that he never meant what, after this "indiscreet" and "indecent" publication of his letters, they are no longer able to deny that he very distinctly said. Their speech on the subject is the reverse of "silvern," but for their own interests silence would have been comparatively "golden."

THE SOLDIER'S WANTS.

THE letters of Archdeacon Wright in the *Times* on the condition and wants of the private soldier furnish further support to the opinion that no satisfactory improvement in our military system can be made without a considerable increase of expenditure. He assumes that the country is determined not to have conscription or any approach to it, and he does not attempt, as some writers and speakers do, to evade the only practicable alternative. He contends that the pay and rations of the soldier are too small, and that the regulations of the service are often highly worrying; and, supposing that a better class of men could be induced to enter the army, we may allow that they must be treated differently. But the latter point will not be of much practical importance until the former has been adjusted. Archdeacon Wright proposes that the soldier's ration of meat, now three-quarters of a pound, should be 1 lb., and his ration of bread, now 1 lb., should be 1¼ lb., and that with this should be issued groceries and vegetables, and a cash payment of 8*d.* a day. But, he says, under the short-service system that small increase would not make the men contented. The young soldier who has enlisted for six years soon begins to look forward to the time of his discharge; he has quite enough money for the present, but learns that he has but a poor future before him. On his discharge he will have a mere 4*d.* a day, and periodical trouble therewith; and, what will be worse, as a carpenter, or brickmaker, or bricklayer, his hand will have lost its cunning, and masters are not very ready to employ those who

have been soldiers. To meet this difficulty, Archdeacon Wright would, in addition to the pay and rations already mentioned, put aside 3*d.* per day for the recruit from the day he enters the service, which would, at the end of six years, amount to nearly 30*l.* He should receive that money—10*l.* on discharge, 10*l.* six months after, and 10*l.* at the end of a year. That would start him well, and enable him to settle down comfortably. But how is he to be kept ready and willing in the Reserve, for that is "a most important matter"? To secure this, his retaining fee must be worth caring for. He should have on leaving the colours 8*l.* a year for the first six years in the Reserve, and 12*l.* a year for the second six years, or until the soldier reaches forty-five years of age, when he would be freed from all military duty, save in any great national emergency. Such is this writer's estimate of the necessity of the position; and if we assume a Reserve of 200,000 men, which is the least that ought to satisfy us, we arrive at an annual charge for pay alone of 2,000,000*l.*

In a more recent letter the Archdeacon, without going further into figures, enforces in general terms the obvious but neglected truth that, if the country would insure safety, it must pay the full premium. He desires a fair trial for the short-service system, by which he appears to mean that as much money is to be spent as will obtain as many men as we want: and, of course, if enough money is forthcoming, almost any system may be made to work. But it is to be feared that the Government will not venture to ask for means to carry out his or any other adequate plan, or, if it does, the Opposition will be tempted to pretend that less means would suffice. He urges that the army should have quiet. All ranks, he says, are unsettled because no one knows what is coming next. "The country is ever being told of schemes which will make soldiering cheap and popular," and unfortunately there are people who can themselves believe, and will try to persuade others, that such schemes are practicable. There has been enough of tinkering, and it may be hoped that these letters will help to open people's minds to perceive what is really wanted. The Archdeacon descants eloquently on the claims of a certain corporal to civil employment under Government, and although we heartily wish his advocacy of this and similar cases may be successful, yet we must own that the "gushing" style in which he writes rather shakes our faith in his calculations. Sentiment and statistics are not necessarily antagonistic, although they seldom dwell together harmoniously. It is unlikely that there can be places in the Civil Service for all the old soldiers, and it would be cheaper to pay pensions than to create places. Becoming vague and almost poetical, the Archdeacon tells us that we have only to be true to ourselves and to our soldiers, and our army will be easily manned, and ever prove our safeguard and our pride. This reads like an extract from a speech intended to be spoken after dinner, and it comes, when analysed, to little more than what the Archdeacon said to the corporal, that he would do anything in the world for him, only he could do nothing. Our army, he says, will be easily manned, because when once the soldier, whether under the colours or in the Reserve, is contented, he himself will take the place of the recruiting sergeant. So it all turns on this, that the soldier is to be made "contented," and the Archdeacon thinks he will become so if his pay and allowances are satisfactorily increased. If money is forthcoming, sentiment will be perhaps superfluous. He says in the earlier and less effusive part of the same letter that he feels sure that the short-service system will produce an efficient army and a large and contented Reserve, "provided only a fair payment be made for so great a result." But what is a fair payment? He contrasts the honest soldier, strong, trained, and ever at hand, and well worth 12*l.* a year, with the "miserable wretch" who receives 4*d.* a day from the State as long as it suits him, but when wanted does not appear. We hope, rather than believe, that a payment of 8*d.* a day will secure all the excellent qualities which the Archdeacon promises; but it is open to doubt whether the possessor of them would concentrate himself with requisite alacrity on a strategic point. The plan of keeping his pay, or part of it, in hand, and paying him a lump sum after a considerable interval, might perhaps be adopted. But, beyond that, we do not see what there is to trust to beyond an assumed improvement in the moral condition of the soldier, corresponding to increased pay and improved food and lodging during service with the colours.

A recent letter of Earl Grey, also published in the *Times*, substantially confirms Archdeacon Wright's view. Earl Grey insists on the inferiority of Militia to Reserve, and of course it is true that the Reserve man would have learned his duty more thoroughly than the Militiaman; but then it is possible for him to unlearn it. After a few years of civil life he might not be much more efficient than a younger man who had only served in the Militia. The military authorities, to which Earl Grey refers would not only desire long and careful training to make the soldier, but also a considerable amount of continuous exercise to keep him trained. Earl Grey's opinion would not, he says, have been affected by seeing certain Militia regiments after a month's drill at Aldershot; but surely the result was at least good enough to encourage the application of further polish to the same article. Earl Grey is willing to spend money, and by spending it you may get men, and it matters little what you call them. His complaint that the officers of Militia have made soldiering an occupation or amusement rather than a profession, may easily be remedied. If, as Mr. Holms says, we have too many officers in the Regular army, some of them can be spared to the Militia. If we had 200,000 troops well officered and composed mainly of agricultural youth, but with an infusion of seasoned soldiers, we might trust them to do a month's good fighting; and if we could not finish an invader in that time, he would finish us. As soon as it is conceded that money must be spent, we get rid of all pretences, whether founded on Lord Cardwell's plan or otherwise, that efficiency can be attained without spending money. Lord Grey would give less pay to Reserve men than Archdeacon Wright proposes, and would substitute for it a pension in old age, thinking that the fear of losing the pension would bring men back to the colours for national defence. He would hold out to all soldiers a reasonable prospect that, on leaving the army, their position would be at least as good as if they had chosen some other line of life. We do not say that even this would be sufficient; but until it has been tried we may adjourn the consideration of any larger measure. Improvement in the position of non-commissioned officers is rightly insisted on by Earl Grey; for under any adequate system, call it Militia, or Reserve, or what you please, the instruction and example of veterans will be greatly needed.

The discussion between Mr. Holms and his critics in the *Times* is more amusing than instructive. He had stated that a Prussian army corps on a war establishment amounts to 56,000 men, and a critic had answered that it varies from 31,000 to 34,000. With seeming triumph Mr. Holms refers to a paper prepared by our War Office, and showing a total of 56,712 officers and men. The critic retorts that Mr. Holms has got hold of a paper dated in 1870, and does not understand it. He has included in his corps on a war establishment depôt men left behind when the corps marches, and cavalry who do not march with it, and fusiliers who do not now exist, to the amount of upwards of 20,000 men. Deducting this, the corps stands on paper at 36,000; and the critic adds, and most persons will believe, that no commander during the war had under him quite that number, though some had very near it.

This discussion may be compared to a series of pleadings under the old system of Common Law, by which at the rejoinder or rebutter, or thereabouts, a definite issue was arrived at. In the fifth stage of the dispute Mr. Holms remarks that his opponent, in calculating the strength of a Prussian army corps, confesses to having deducted the men in depôt, "a most essential and important portion of it," and Mr. Holms "sees no cause to justify such deduction." But if Mr. Holms introduced the Prussian army corps in order to show how many men a general could command in the field, his hearers would probably see cause to justify the deduction from the corps which marches of the men who stay at home. And Mr. Holms did use this example to show that our own army, under the Mobilization scheme, would be over-officered. His words, in his own report of his speech at Manchester, are:—"A German army corps consists roundly of 56,000 men; the commanding officer of each division has therefore about 28,000 men under his care." Now certainly the men in depôt somewhere in Prussia could not be under the care of a general fighting around Paris. As regards the number of corps in the German army he has made even a more ludicrous mistake. The critic, adopting himself to the capacity of the plain man of business, observes that when A and B join their capital, they do not add to their joint capital. When the Bideners, Wurtembergers, and Hessians, who fought through the war by the side of the troops of the North German Bund, were enrolled in the same Imperial Army List as these, there was an amalgamation, but no real addition. But if Mr. Holms used this supposed addition as evidence of what Prussia could do with her resources, he misled his audience.

The *Times* reports that at Sheffield "Mr. Holms proceeded to show how Prussia by this system had been able to produce an army while we in England had been talking, especially remarking that since 1870 Prussia had added five and a half army corps." Nothing can be more delusive than comparisons between our own and other military systems founded on facts and figures misunderstood or misapplied. He asks, "What is done with the 43,000 additional recruits taken in 1874?" and the critic answers, as might be expected, that these are the recruits who used to be liable separately for the contingents of the South German States, and are now brought on the general roll of the Empire. Mr. Holms, thus getting worsted on paper, challenges his critic to meet him on the platform; but this is merely a diversion to cover his retreat. He gained some reputation by forcibly denouncing the hollowness of Lord Cardwell's scheme, and he has put strongly in general terms, what Archdeacon Wright urges by particular examples, that you cannot hope to draw the best part of the working class into the army unless you improve your terms by ensuring better pay and better treatment to the soldier. The latter is implied in the former, and therefore it may suffice to say that Archdeacon Wright's suggestions as to rations, accommodation, &c., deserve careful consideration.

THE WHISKY WAR.

THE "Women's Whisky War" has declared itself in England, and it will be at any rate a diversion from the rather monotonous proceedings of the Alliance. The publicans will not perhaps be much disturbed at the possibility of "Mother" Stewart's invoking fire from Heaven to consume their drinking-bars; and if she attempts to head processions or to hold prayer-meetings in the streets, as she has been doing in America, she is likely to be moved on

by the police, who are capable of mistaking the holy zeal of her followers for mere inebriety. Mrs. Stewart has already addressed an English audience at a chapel, being introduced by the minister with the odd remark that he hoped the audience would remember that the speaker was a woman, and we may add that we hope that she also will remember this. It must not be supposed that she or her associates will be permitted to assume a license of speech or action which would be denied to men. But as long as they confine themselves to preaching and praying in proper places nobody will interfere with them. The publicans, who have been holding a meeting of what they called their Defence League at Bristol, were informed that a newspaper has been secured as the "special organ" of the League, and they pledged themselves "to make the same a success." Perhaps this new "organ" will be useful as a set-off against Mrs. Stewart, and whatever may be her influence with other powers, the publicans are assured by Mr. A. Bass that they have friends on both sides in Parliament who will stand by them if their just privileges are assailed. Mrs. Stewart promises that "a thrill will pervade the land," so it may be supposed that she is coming out in the Moody and Sankey line of business at the commencement of the London season. She exhorts women to set their faces against the use of alcoholic drinks and beer in their homes, and by this advice she may unintentionally serve the publicans; for, if a man cannot get what he calls comfort at home, he will be apt to seek it abroad. Happily the majority of Englishwomen are too sensible to be guided by agitators in petticoats, native or imported, although they may perhaps be attracted by the novelty of "Mother" Stewart's meetings, and pleased with the opportunity of seeing their own names in a local newspaper.

Mrs. Stewart informs us that by agitation Abraham Lincoln freed his country from slavery, and she would, by the same "leverage," free both her country and ours from drunkenness. She relies on "prayer, works, and law," as the means of effecting her object; but we remember, if she does not, that President Lincoln used much stronger measures. There can, of course, be no practical objection to her use of prayer, although sentimentally we might object to class it as a species of agitation. It is perhaps the fault of reporters that her explanation of what she means by "works" seems unsatisfactory. Publicans, she says, might be brought to reasonable arrangements to induce them not to encourage the vice of drunkenness, and no doubt they might, at least if they were allowed to judge for themselves what is reasonable. Mr. Arthur Bass has lately stated that the drunkard is the very worst customer a licensed victualler can have; and even if his audience of licensed victuallers did not altogether approve his words, they were bound to look as if they did. But we do not doubt that all sensible members of the trade see that Mr. Bass is right, and they see also that they must put their case before the country, so that Mr. Bass and other members of Parliament may be able to support it. The Alliance will of course claim for itself the merit of having brought the publicans to disclaim any interest in drunkenness; but, as soon as the publicans came to look intelligently at their position, this conclusion would be obvious. They have much more to gain by developing business among sober customers than by inviting to excess. The future of the trade may be discerned from such signs as the opening of the Aquarium at Westminster, which, whatever else it may become, will always be a gigantic tavern, just as the Crystal Palace and the Alexandra Palace are taverns doing very large business. The enlightened publican will study popular inclination, and he may be tolerably sure that, whenever large numbers of people are collected together for amusement, eating and drinking will enter into the programme of the day. If he be wise, he will provide for every variety of taste, and will take to himself whatever profit can be got out of selling cups of tea and slices of cake. Even Mrs. Stewart and her allies must take refreshment as they travel from town to town to hold meetings, and thus, whether they will or not, they become customers to the publican. We mean of course that they take something at a railway-station where the trade both in cups of coffee and in glasses of pale ale is in the same hands. There is another point in which the publicans are open to "reasonable arrangements." Their leaders always say, and we entirely believe, that they desire uniform and not late hours of closing. And this, again, is consistent with the notion that the best part of their business lies among the orderly portion of the community. The saving of health and energy by cutting off an hour at night from business is important, and the same remark applies to closing during part of Sunday, to which also it appears that the leaders of the trade are favourable. One of them lately said that he saw no objection to closing every licensed house from midnight on Saturday to noon on Sunday, and this is another instance of the desire of the trade for simplicity and uniformity in the regulations imposed on it by law. The question of entire Sunday closing depends on the view which Parliament may take of Sunday, and it is not likely that the Sabbatarian view will prevail. But even this restriction, if fully and fairly enforced, would not be altogether mischievous to the publican. We know, however, that it would not be, and could not be, so enforced, and business would simply be transferred from open to illicit traders. Already the publicans are not exactly complaining, but remarking that a great deal of drunkenness goes on without their getting any profit out of it. Mr. Arthur Bass makes the remarkable statement that in Manchester one-fifth of the committals were for drunkenness between the hours of twelve at night and six in the morning, whereas all the public-houses are closed at eleven at night. The publicans suggest that at least part of this nocturnal drunkenness is due to the sale of wines and spirits under grocers' licences, and they complain that, while they are placed under restrictions, this rival trade is being constantly developed. If the Women's Whisky War is directed against the grocers, the publicans will maintain what may be called a benevolent neutrality in the contest. Their complaints are well founded to this extent, that the grocers ought to share the obloquy bestowed on them. But when they ask that magistrates should deal with grocer's licences in the same way as with their own, they raise the question, on what principle the system of licences may be reasonably maintained. The difference is obvious between consumption on and off the premises of the seller, and it may be properly made the ground of distinction among licences. The President of the Defence League proposed to its members at Bristol that they should join the Church of England Temperance Society in urging Government to place restriction on grocers' licences, and his hearers applauded his proposal for such a highly respectable association. The Church of England may promote temperance by other and more effectual methods than by limiting the number of grocers' licences, which would come to nearly the same thing as dividing the same amount of business among fewer shops. If it be true, as the publicans say, that intemperance among women and private families is largely due to the grocers' licences, they may claim Mrs. Stewart, as well as the Church of England Temperance Society, as allies against their rivals. There is, says the President, a firm which has two thousand agents among grocers for the sale of wines and spirits, and we may observe that this trade has been created during the period in which Sir Wilfrid Lawson has become famous. Another speaker at Bristol mentioned the increase of club houses, of which there are said to be one hundred in the "district" of Ashton-under-Lyne. We do not quite understand the publicans' view of these club-houses, but it appears to be that they are dangerous competitors in business. They have been formed, we presume, by working-men to obtain some of the comforts and advantages which the middle and upper classes derive from clubs, and it is probable that they will increase in number. Whether Mrs. Stewart and her female allies will denounce these clubs we do not know, but it is certain that all reasonable advocates of temperance will support them. The publicans' view appears to be that these club-houses are in effect taverns, and ought to be placed under the same restrictions as their own houses, and it is fairly open to them to urge this view, absurd as it is, upon the Legislature. Mr. Arthur Bass, who discoursed on the necessity of improving the dwellings of workmen in towns, would of course admit that a well-managed artisans' club is an advantage; and here again the publicans, whether convinced or not, are obliged to accept the judgment of their chosen leaders. There seems no end to the Leagues and Alliances which this controversy calls into existence. Mrs. Stewart proposes that women should "combine in league" to do that which hitherto they have been content to do in societies or individually. They are to visit the families of the poor, and especially the wives of drunkards, make them join the "Holy Crusade," and sign the pledge and "give every one good advice." Something like this is, we believe, done, or attempted, in most towns in England by what are called District Visitors, and if it can be done more effectually under the name of a League, let this American improvement be adopted. Attempts to check vice and mitigate the misery it causes may be called a crusade by any one who finds satisfaction in using that expression, nor can we object to a "Whisky War" so long as it is conducted with decency and regard to public order.

In a recent speech at Exeter Sir Wilfrid Lawson is reported to have said that, "if the Permissive Bill passed, *bonâ fide* workmen's clubs, where they could have drink without any one deriving profit from its sale, would meet every inconvenience." He had previously declared that he would support the publicans in attempting to take away the grocers' licences, and then invite the grocers to help him to abolish the publicans. But if all retail licences are abolished, where will the "*bonâ fide* workmen's clubs" obtain drink? Did the speaker mean that he would abolish retail trade and spare wholesale trade in drink, or would he abolish all trade, and prohibit both the making and importing of spirits, wine, and beer? This we take to be the logical result of his proposal.

THE OLD MASTERS AT THE ROYAL ACADEMY.

III.

THE Spanish school, whose resources in England are known to be abundant, has often been seen in greater force than in the present Exhibition. Morales could hardly have acquired, in common with Raffaelle, the epithet "El Divino" had he never given to the world a nobler conception than "Christ Bound to the Column" (200). The works of few artists stand so much in need of weeding. Morales, like Perugino formerly, has been fathered with a multitude of illegitimate works wanting a parentage. In past years the "Christ Bearing the Cross," in Oxford, was assigned to Morales; but, at all events, the Oxford picture and the one before us cannot be by the same hand. The reputation of this revered artist is known to have suffered by the "dismal Madonnas and chalky Ecce Homos laid at his door." The followers of the master were, as is invariably the case, "mere feeble imitators of his style, who exaggerated his faults and were devoid of his inspiration." See Sir Stirling Maxwell's

"Annals," p. 235. Mr. Ford is rather severe on Morales when he says that the artist was "called El Divino more from painting subjects of divinity than from divinity of painting." We next turn to the "Portrait of Donna Maria Padilla" (176), lent by the Marquess of Lansdowne. The description in the Catalogue may with advantage be amplified, in the words of Sir Stirling Maxwell, as follows:—

A beautiful head of a woman at Bowood, painted by El Mudo—and said to be that of Doña Maria Pacheco, wife of Padilla, the ill-fated leader of the malcontents at Toledo in 1522—is a gem even in the collection of Lord Lansdowne—brown Castile never produced a lovelier face, nor a more delicately painted head; but as a portrait it must either be ideal or a copy, since the brave lady died two years before the painter's birth.

The same author remarks that "El Mudo, the dumb painter, is as familiar to Europe as his works are unknown." The picture before us, eminently Venetian in colour, accords with the fact that the painter travelled in Italy and "studied for a considerable time in the school of Titian." Indeed, at first sight, we assigned this head to Venetian studios. "The Crucifixion" (177), ascribed to Murillo, though hung on the line, scarcely deserves a passing glance. The great master of Seville is known to have painted eight Crucifixions; but this is not of the number. Murillo had many imitators, and the parodies, both in England and on the Continent, are naturally passed off for originals. As for Zurbaran, there is no internal evidence against the three figures of "Santa Justa" (111), "St. Thomas" (137), and "St. Cyril" (141). The last two, contributed by the Duke of Sutherland, are said to have come from the famed Spanish Gallery of Louis Philippe, formerly in the Louvre. All three sustain the statement that Zurbaran, like Velasquez, formed the early "resolution that everything he placed on his canvas should be copied directly from nature." These "Old Masters" never seem complete without a *chef-d'œuvre* by the great master of Castile. This year the genius of Velasquez is triumphant in the "Portrait on horseback of Don Gaspar de Guzman, Conde Duque d'Olivarez, the celebrated Spanish statesman, the contemporary of Buckingham and Richelieu" (116). Velasquez is known to have honoured this powerful patron with the best of his art; eight portraits of him still exist; the one before us is a small replica of the life-size picture in the Royal Gallery at Madrid. The Duke, who is described as one of the best horsemen and among the handsomest of Spanish gallants, looks over his shoulder towards the spectator, while he turns his horse towards a battle raging in the far distance. We see in this masterly work how true it is that the strength of Velasquez lay in portraiture; his style, though differing from, was equal to that of Titian; possessing within himself an innate nobility, he raised his art above the decadence which had fallen upon Europe in the seventeenth century.

The early Flemish and German schools have one or two noteworthy examples, among which stands pre-eminent a small altar-piece in the form of a triptych (172), a well-known work belonging to the Duke of Devonshire. The middle panel falls into a not unusual arrangement; in the centre are the Virgin and Child, with the donors, Sir John and Lady Donne, and their children, kneeling, supported by their patron saints, Agnes and Barbara. On the one side of the two wings, or shutters, are St. John the Baptist and St. John the Evangelist; on the other, or outer side, appear in black and white St. Christopher and St. Anthony. Horace Walpole, who lived not in a critical, but in a credulous and conjectural age, assigned this all but faultless triptych to Jan van Eyck; on better authority it is now pronounced "in every respect one of the finest" of Hans Memling's works, which number no less than a hundred. The panel remains in unusually good condition, though here and there the thinness and rawness of the colour might indicate over-cleaning. Little is known of Memling; he became a citizen of Bruges, was possessed of considerable wealth, and died in the year 1495 in his adopted town, which still possesses astounding proofs of his genius. His style bears affinity with both Jan van Eyck and Roger van der Weyden; yet, as here seen, his outlines are softer, "the heads of his women are sweeter and those of his men less severe." Mabuse, who next calls for notice, had, it is well known, two styles; the earlier was Teutonic, the later Italian. The small "Portraits of Three Children of Christian II. of Denmark" (173), lent by the Earl of Radnor, belong to the period prior to the painter's Italian journey, and therefore tend to the manner of Van Eyck. Mr. Crowe tells us that Mabuse "painted for Charles II. of Denmark dwarfs and children"; the picture before us, quaint in character, and endowing little children with a gravity and premature wisdom belonging to their grandfathers, pertains to such a series. Yet we do not remember to have seen in Copenhagen any like pictures; and not even the name of Mabuse appears among the collections in the Castle of Rosenborg, or in the Royal Picture Gallery of "Christiansborg Slot." It is well known that between Denmark and England there have been for centuries continuous flirtations, political and other. Seven Danish kings, including Christian II., whose three children are here before us, were invested with the Order of the Garter. These interesting portraits, it were natural to suppose, ought to be in Denmark rather than in England. The little kingdom has been cruelly treated; yet for the most part the historic collections which enrich Copenhagen are well guarded by a patriotic and jealous people. Mabuse visited England and painted, among other portraits, a somewhat analogous picture to that here exhibited, "The Three Children of Henry VII.," half-length small figures at a table playing with oranges and cherries. If the Academy should feel itself strong enough to continue these instructive exhibitions, we hope that the difficulties may be overcome which have prevented the loan from Castle Howard of "The Adoration of the Kings," the masterpiece of Mabuse, and one of the most valued of English art treasures. Mr. G. P. Boyce has lent two fairly good samples of the generic "German school," "Portrait of a Lady in a White Cap" (238), and "Portrait of a Man in a Black Cap" (242). We are glad to see that, contrary to ordinary custom, no attempt is here made to pass off good sound pictures of a "school" under the name of the most distinguished master that could be conjured up for the occasion.

In this seventh year of "Old Masters" the competition lies chiefly between the Dutch and the English schools, both unusually strong. The art of Holland is never a very enticing topic to write about. "A Dutch Revel, signed J. Steen" (215), though it comes from Buckingham Palace, and is fairly good of its kind, cannot be over-savoury in the hands of such a master. Neither is it easy for enthusiasm to kindle under the contemplation of a "Kitchen, signed D. Teniers" (162), containing an old woman scraping turnips or peeling potatoes, set off by heaps of cabbages jostling copper kettles, to balance the composition on the other side. But subjects thus low are often redeemed by the most consummate technique, and, if apology be needed, Reynolds comes to the rescue when he writes, "Painters should go to the Dutch school to learn the art of painting as they would go to a grammar school to learn languages." "The Grammar of Art" is certainly understood and exemplified by the twenty Dutch masters here present; the compass of thought, and what may be termed the vocabulary of expression, are circumscribed; but as to the mere "Grammar of Art," the Dutch masters, now once again in these galleries, prove themselves more strict than the Italians. It may be said, to pursue the metaphor a step further, that they seldom get wrong in their moods, tenses, genders, or cases; and, what is a great thing in compact construction, the relative comes close on the antecedent. Few, if any, better examples of the Dutch school can be shown than those in the well-selected collection of Mr. Lewis Fry—a collection which may be quoted in proof of the still unexhausted art treasures of the country. These pictures were all but unknown in London till the Burlington Fine Arts Club a few years ago obtained from Mr. Fry, as one of its members, the loan of two choice works, "Sunset after Rain, signed A. Cuyp" (75), and "A Waterfall, signed with monogram by Jacob Ruysdael" (80).

We will now turn to some few figure pictures. Lucas de Heere presents a good portrait, said to be of "Mary Queen of Scots" (66), contributed by the Earl of Radnor. Of such pretended likenesses no fewer than fourteen were shown at South Kensington among "National Portraits." The curious part of the business was that not two out of the fourteen could be made to agree, and most were anonymous. The picture now forthcoming was absent from Kensington; and, judging from internal, in the absence of documentary, evidence, we do not incline to attach much historic importance to it. The habit seems to have grown up of attaching haphazard to fancy pictures of beautiful women the name of Mary Queen of Scots. The remaining Dutch figure compositions are of mixed merit. "A Dutch Fair" (96), assigned to Wouvermans, is untrustworthy. It is said to be signed with initials. When will the Academy learn that forgeries are, as a matter of course, always signed, as even living painters have known to their cost? We also venture to pronounce as unworthy of Netscher the "Portrait of Queen Mary, Wife of William III." (86); yet this picture is signed and dated. On the other hand, good in quality are "The Violoncello" (163), by Metzu, from Buckingham Palace; "An Interior, with Woman and Child" (205), by Peter de Hooghe; and the "Music Master and Pupil" (211), from Windsor Castle, by Vander Meer. The "Grammar of Art," of which we have spoken, is in some, if not in all, of these works exemplified in a well-calculated distribution of spaces, in the balanced relation of colour, and in the conflict, ending in perfect concord, between the light and the shade.

The landscapes, though not so large and important as in some previous years, serve to illustrate the diversified subjects and styles of Italy, Holland, and England. The Italian style of Claude, in warm glow of atmosphere, in symmetric composition of trees feathery in foliage, and of temples which in their gingerbread construction recall the painter's origin in a pastrycook's shop, declares itself in a couple of typical landscapes. One is "Europa" (154): the bull, this time, is not swimming, but walking on the shore in wooden fashion as a returned refugee from some Noah's Ark. The canvas has been murdered by the cleaner. Take as a contrast for purity of tone, undefiled save by a few ravages of time, always interesting to observe as records of a picture's life, "A Seaport" (167), lent by the Marquess of Lansdowne. It would seem that Claude holds his own notwithstanding the damnatory passages of Mr. Ruskin; it is not the first time that a painter has survived the reputation of his critic. "A Landscape" (120), lent by the Duke of Westminster, though assigned to Gaspar Poussin, is singularly after the manner of Claude. The picture with the Escurial Palace (226) is immense and coarse. Rubens, fortunately for his reputation, repudiates much part or lot in the picture; but an interesting story attaches to the work. "Donkeys and Sheep" (83), ascribed, we can only hope falsely, to Berghem and Van der Neer, are little else than a disgrace to an Academy whose motto seems to be that all is fish that comes to the net. Three views in Venice (72, 136, 140) reach the average standard of Guardi, and even more of like faint praise may

be extended to "A Landscape" (126), by Jan Both. A couple of pictures by Van der Capella (55, 101) ought not to pass without notice. Mr. Wornum, in the Catalogue of the National Gallery, declares the painter almost unknown, and Kugler says of him that he is "one of those masters whose worth can only be appreciated in England." He resembles Cuyp; his favourite scenes are quiet seas under a cheerful sky and a warm sun. A good example of the master is a "View of a Harbour, with Vessels" (55), lent by Mr. Fuller Maitland. There are no less than five pictures by Adrian van der Velde, the scholar of Wynants, and almost the rival of Paul Potter and Carl du Jardin in terseness of composition and lucidity of atmosphere—cattle and figures, clouds and foregrounds, all combining in unity of effect. But some of those hung are wholly unworthy of the master; the best is the pastoral, "Oxen and Sheep—Evening" (214), lent by Mr. Lewis Fry.

Ruysdael, Hobbema, Van der Heyden, and Philip de Koning, in some first-rate examples, complete the list of Dutch artists. Ruysdael, "beyond all dispute the greatest of the Dutch landscape-painters," whose masterworks abound in England, can scarcely even in St. Petersburg be better seen than in "The Seashore" (164); the sea under a flowing tide breaks in waves sportive in their play on a breezy beach. "A Landscape" (61), by the same artist, illustrates how these Dutchmen had pictorial properties in common; the solid earth might have been painted with the shadowy brush of Rembrandt, while the aerial sky across which light clouds sail recalls the marine painters whose clouds are buoyant as balloons or as vapours exhaled from ocean. Also eminently characteristic of place, time, and style, are two landscapes (147, 165) by Philip de Koning, severally contributed by the Duke of Sutherland and Mr. Cowper Temple. Likewise, showing how the Dutch masters of the seventeenth century did not steal, but merely borrowed, from each other, because they returned what they stole with interest, may be quoted pictures by Hobbema and Van der Heyden. Hobbema's "View of a Dutch Town and Canal" (149), consummate in architectural structure and masonlike manipulation, has little in common with the gnarled trees and broken foregrounds of the master. Closely analogous in subject and style is a choice example of Van der Heyden, "View of a Dutch Canal" (217), lent by the Marquess of Lansdowne. Van der Heyden, whom we have found rather a rare master in Continental Galleries, abounds in English collections. Here in the Academy from year to year, and also in the collection of Sir Richard Wallace, the realistic solidity of this master has found all but exhaustive manifestation. In conclusion, we direct special attention to an "Interior of a Church, with Figures" (207), said to be by Emanuel de Witte. There seems to be some doubt as to the Christian name and the orthography of the surname. But Kugler gives under "Jacob de Wit" a description which tallies literally with this masterpiece. "This painter," he says, "attained a marvellous excellence in the imitation of sculpture in all kinds of materials, bronze, wood, plaster, and particularly white marble." He had a happy gift of invention and was a good draughtsman.

In this and two preceding articles one object has been to disabuse the public mind of false faith in spurious works of the Old Masters. Criticism has never yet been brought to bear on our English collections so as to divide the chaff from the wheat. Academicians, like people dwelling in glass houses, discourage the throwing of stones at the dead, because a chance shot might hit the living. At any rate, in an easygoing way they give their sanction to works which desecrate great reputations.

REVIEWS.

SMITH'S CHALDEAN ACCOUNT OF GENESIS.*

THE candour and modesty of Mr. George Smith are apparent in his description of his recent publication as nothing more than a provisional work. He is evidently conscious of the imperfect state in which the records of Babylonian history are at present alone available, and of the tentative and rudimentary stage which our knowledge of the language has hitherto attained. Compared with the masses of literary material lying buried under the mounds of Kouyunjik, or in perhaps more boundless wealth under the ruined pile of Birs Nimroud, it is only as a mere sample that we can look upon the few scattered and chance-chosen cylinders or tablets which have as yet come within the ken of Assyrian scholars. A glance at the specimens in the Museum, or at Mr. Smith's illustration of the Deluge tablet in the volume before us, will show in how sadly mutilated and fragmentary a state these records are. The higher in consequence should be our estimate of the patient labour and the skill, amounting at times almost to divination, which have brought even our present measure of light out of so unpromising a chaos. Yet at the same time the greater is the need of caution in handling fragments of history so loose and disjointed, and of reserve in announcing as clear and full discoveries what may often be little more than guesses. The fact is that the themes of these legendary records lie too near the heart of the English public, from their bearing upon cherished theological or historical beliefs, for them to be easily treated in a dispassionately critical temper. And experience has shown with what impatient haste, at the outset of this wonderful revelation of the long-buried past, it was sought to identify Biblical names and incidents. A calmer and more judicial spirit has of late prevailed, and Mr. George Smith must be counted amongst those who have laboured to maintain a cautious and critical attitude under the strain of exciting influences.

There is abundant proof, even from the cuneiform tablets themselves, that the bulk of these records were Assyrian copies or editions of originals in the more ancient Accadian tongue, which had ceased to be spoken long before the library of which they formed part was mainly founded by Shalmaneser, son of Assur-nazirpal, about 860 B.C., and enriched to its full extent by Assur-banipal. The King's scribe, or librarian, moreover expressly states that where the primary documents in any department were wanting, he made it his care to procure copies from the most distant regions of the country, so that the collection had attained a remarkable completeness. The remains which were disinterred and deciphered relate—as Mr. Smith enumerates the subjects towards the close of his book—not only to history and theology, but to astronomy or astrology, medicine or medicinal charms, mathematics and mensuration, the geography, the animal, and the vegetable products of Assyria and Chaldæa. The whole series is calculated to have extended to 10,000 inscribed tablets, or, as some believe, to even double that number. As the patient toil of scholars gradually lays open to ordinary eyes the contents of these long-lost memorials, we may expect a flood of new light to illuminate the whole world of Assyrian life and thought. Few discoveries, however, can be expected to surpass in value or interest those which Mr. Smith has here brought forward to illustrate the history of the Book of Genesis. The story of the Creation is here told in a series of tablets, fragmentary indeed, but fairly consecutive, showing traces of having once contained a much wider extent of matter. The tablets are twelve in number, indicating a connexion, in the eyes of most scholars, with the path of the sun through the Zodiac, though Mr. Smith is chary of recognizing any solar foundation for the Babylonian myths or legends in general. The sea was, in the ancient Chaldæan belief, the origin of all things, in accordance with Genesis i. 2, where the chaotic waters are called the deep. The Assyrian word for chaos, *mummu*, seems connected with the Hebrew name for confusion. Of motion or production there are both male and female personifications; Lahma and Lahama, the upper and lower expanse or firmament, being named Sar or Ilsar, and Kisar, the former name passing in later times into the hero deity Assur. The mutilated state of the tablets makes it impossible to follow up the generation of the whole series of minor gods. The creation of the heavenly orbs comes in some respects closer to the account of Genesis, though the whole host is described as arranged in the semblance of animals, the germ of what has since become the system of the constellations. There are, we find, already the twelve groups or signs of the Zodiac. The signs of the planets seem less clearly distinguishable. One of these Mr. Smith transcribes Nibir, but he admits that this is not the usual word for planet, there being also a star named Nibir near the junction of the equator and the ecliptic. The moon is created before the sun in the Babylonian account, being evidently considered the principal body; but full details of the starry creation are unhappily lost, owing to the extreme mutilation of the tablets. One of the strangest conceits of the Babylonian fancy is that the world, which was drawn together out of the waters, rested upon a vast abyss of chaotic ocean, shut in by gigantic gates and strong fastenings, which prevented the floods from overwhelming the earth. When the Deity decided to create the moon, he is represented as drawing aside the gates of this abyss, and creating a whirling motion like boiling in the dark ocean below. Then, at his bidding, from this turmoil arose the moon, like a giant bubble, and, passing through the open gates, mounted on its destined path across the vault of heaven. The motions of the moon were observed and recorded from early times with a surprising degree of exactitude, and its phases described. In fact, if a recent reading of one astronomical tablet be correct, which is taken to indicate an observation of the phases of Venus, telescopic apparatus of some kind must have been in use in ancient Babylonia. It appears to us, however, far more probable that the passage merely refers to the waxing and waning of the planet's disc as she approaches towards or recedes from the earth, which would be quite appreciable to the unassisted eye.

A remarkable fragment, too short to be entirely intelligible, contains a speech of Hea, the moon, referring to the revolt of the Karkartiamat, or dragon of the sea. Another gives the curse after the Fall, mankind being spoken of as the *salmat-qaqadi*, or dark race; also as Admi or Adami, as in Genesis—not indeed as a proper name, but in a collective sense for the whole race. Sir H. Rawlinson had pointed out long ago the distinction of two principal races among the Babylonians—the Adamu, or dark race, and the Sarku, or fair race, corresponding possibly to the Biblical sons of Adam and sons of God who intermarried with evil results. So, again, the legends of the Fall bring in the dragon Tiamat, who in another phase is the principle of chaos and disorder—a spirit opposed in principle to the God self-existent and eternal, older even than the gods, the birth and separation of the deities out of this chaos being the first step in the creation of the world. This dragon, or winged genius, is figured with tremendous power and expressiveness in the fine slab from Nineveh, now in the British Museum, which Mr. Smith has chosen for the cover of his book. In other tablets the sacred tree, often accompanied by the serpent in true snake-like form, is

* *The Chaldean Account of Genesis, &c., from the Cuneiform Inscriptions.* By George Smith, of the Department of Antiquities, British Museum, &c. With Illustrations. London: Sampson Low & Co. 1876.

seem; in some unaccountable human figures paying homage and bringing offerings. In another group upon a cylinder from Babylon, Bel is known encountering the dragon, in shape a griffin; and in one from Assyria Merodach, or Bel, armed with bow and arrow for conflict with the dragon. Nothing in the way of Eastern art is more expressive than the eagle-headed figure from Nimroud, or the conflict of Izdubar or Nimrod with the lion, which forms the frontispiece. This dragon is the Rahab of the prophet Isaiah, and is referred to in an Accadian Liturgy translated by Mr. Sayce, and seems to find an echo in the defeat by Michael of the great dragon, that old serpent called the Devil and Satan, which deceiveth the whole world. A singular point in the serpent legend is his being accompanied by four divine dogs. The curious myth of the seven evil spirits, or storm-clouds, at war against the moon, appears to be a variant of the same contest, connecting itself strangely with the Chinese belief in a dragon devouring the moon as the cause of an eclipse. As it happens, we have the Accadian text of this very myth, which makes it clear that the "trouble" of the moon mentioned in Mr. Smith's text was really an eclipse. Coincidences like these greatly strengthen the hands of those scholars who seek for mythology generally a basis in the phenomena of the heavens.

A companion story to the accounts of Creation and the Deluge is the legend of the sin committed by the god Zu, the Babylonian Prometheus. We are indebted to Mr. Sayce for the clearing up of the true nature of the offence, the word *um-sim-i*, or, as he prefers to read it, *dup-sim* (left untranslated by Mr. Smith), being deciphered by him to mean the "tablet of destiny" stolen by Zu, who was changed thereupon into a Zu bird or vulture, if the reading of the fragmentary tablet is to be relied on. A number of curious fables follow, in which the eagle, the serpent, the fox, horse, and ox, and other animals converse together in the style with which the later literature of the East has made us familiar. The eagle tells the serpent a story of the building of a great city and tower, which can hardly be other than that of Babel, the builder's name, however, being Etana. It is destroyed by night, apparently by a whirlwind, and "the counsel of the builders is confused"—a manifest allusion to the dispersion and confusion of tongues. The whole account of Babel is, however, among the most fragmentary and vague of the series. Far more definite and systematic is the scheme of the Izdubar group of legends, the hero of which has been conclusively identified by Mr. Smith with the Biblical Nimrod; the twelve adventures of the hero presenting, by their similarity to the Labours of Hercules, points of contact with the Greek and Indian mythology. In the mighty hunter of Scripture we have many attributes which mingle in the representation which primarily belongs to the all-powerful and conquering Sun-god, allied with which is that of the other mysterious personage Merodach, the "brilliance of the sun," originally, it may be thought, only another form of Izdubar himself. The birthplace of Izdubar is traced by Mr. Smith to the city of Amarda, or Marad, obviously suggesting, as Mr. Sayce goes on to argue, the derivation of the Biblical name of the hero.

When we come to the subject of chronology in dealing with these legendary and unearthly personages and events, we are treading on very shaky ground indeed. Mr. Smith thinks he sees his way to an approximate scheme, which in round numbers gives a date to Izdubar, or Nimrod, about 2250 B.C., at which time the hero slays Humbaba, who represents the intrusive Elamite power, and restores the Chaldæan sway, the Elamites having some two centuries and a half earlier overrun Babylonia, and their king Kudur-nanhundi having ravaged Erech, the well-known Biblical capital of the old monarchy. The notices which have come down to us through Greek channels point to a period very near this as that at which Nimrod united Babylonia into one kingdom and founded Nineveh in Assyria, in full accordance with the Biblical history of his going "out of that land" (into Assyria, *marg.*), of which the early cities were Babel and Erech and Accad and Calneh, in the land of Shinar, and building Nineveh. Mr. Smith, as we have noted before, is wont to discern human and historical personality where scholars of a different order of thought see little more than phases of solar mythology. We certainly think that, before making any attempt to assign a chronological basis to legends so inextricably mixed up with heaven and hell, light and darkness, life and death, storms, clouds, and diabolical monsters, he has to square accounts more definitely with critics who can point to so many elements of an utterly unhistoric character. Another, and scarcely less perilous, pitfall for the Assyriologist, as well as for his brother-worker in the field of Egyptology, is found in the temptation to rash and premature recognition of Bible names under the veil of Assyrian or Accadian forms. Mr. Smith is not in general to be charged with falling into this snare, and it must be allowed that in many of his etymological ventures at identification he has made safe and permanent additions to our stock of facts and allusions common to Biblical and independent history. That the name of Adam, used in a general sense for mankind, is traceable in the Creation legend we have already seen. Far less certain is the correspondence of other patriarchal names, such as Cain with *gina* or *kinu*, to "stand upright," or to "be right"; or Canaan with the name of a Babylonian town, Kannan, "flah-canal," its people being called Kanunai or Cananites. Enoch cannot possibly be the same as *Enuk*, "wise," which no one but Mr. Smith has found in the form *Enuk*; nor can Tubal Cain be brought out of *Bil-kan*, Vulcan, the fire-god, *bil* indeed being Accadian, but *kan* or *kanu* Semitic, and in no case meaning

Lamech, found in the cuneiform texts as Dannga and Lamga—two forms of a name for the moon—comes nearest to the deified Phœnician patriarch Binnish, and not a few of the names of patriarchs after the Flood may be recognised as names of towns, not indeed in Babylonia, but in Syria, as Reu or Ragu, Serug, and Haran. In later and more historic times Hebrew names are plentifully met with, as Pekah, Hoshea, and several compounded with the two divine names Elohim and Jehovah. The name of Abraham, taken no doubt from that of the father of the faithful, is found in Assyrian inscriptions of the time of Esarhaddon; as is also that of Ishmael in a monument of the time of Hammurabi, King of Babylonia about B.C. 1550, one of the witnesses to some transactions at Larsa being a certain Abuha, son of Ishmael. A curious instance of parallelism with Bible history is found in the story of Sargina or Sargon I., a Babylonian monarch reigning at Accad about 1600 B.C. This prince, whose name may be read as the "true, right, or legitimate king," tells of his having been exposed by his mother, a princess of the city Azupiranu, on the Euphrates, in an ark of rushes sealed with bitumen, and borne by the river to Akki, the water-carrier, by whom he was brought up, his father, he tells us, being unknown. There is no foretelling what treasures may reward the diligence of explorers and decipherers among the buried hoards of Assyria and Babylonia, illustrating the Hebrew records and enlarging our knowledge of early Oriental history. All lovers of learning must long to hear that the difficulties which have been thrown in the way of Mr. Smith's third mission to the East have been satisfactorily overcome, and that we may hail in due time his return among us with additions to Assyrian lore as plentiful and as valuable as those for which we have already to thank him.

VICTOR HUGO IN EXILE.*

THE genius of M. Victor Hugo, which has been for some years past dangerously balancing itself on the thin partition which divides sanity from insanity, would seem to have now fairly toppled over on the wrong side. It is impossible to consider this collection of miscellaneous writings as the work of a perfectly sane mind. There are many passages, and even whole pages, which to all appearance have been produced by a reasonable creature; but there are many others which remind one of a form of mental derangement perfectly familiar to the keepers of lunatic asylums. The special infirmity with which M. Victor Hugo is afflicted is the hypertrophy of self-esteem. He does not, like so many of his brother sufferers, imagine himself to be a king; he is probably preserved from this delusion by the intensity of his Republican principles; but his vanity does not flourish the less luxuriantly for this restriction, as he believes himself to be something far greater than "le vulgaire des rois." In his own opinion he is evidently what he would himself call an *homme-lumière*, set up to guide mankind through the *ténèbres* of the abyss. His voice admonishes the nations; from the rock of his exile he launches the thunderbolts of his anger, and the thrones of the "univers" are shaken. It is true that he does not claim any remarkable or extravagant title, but calls himself only an "atom." Let not, however, the unwary reader imagine that, even in this choice of a title, M. Hugo's vanity cannot find its own sweet gratifications. The Atom is big enough to plague the very biggest people on the earth; the Atom has a voice; the Atom has a pen; the Atom is a fearless, far-seeing, unpleasantly prophetic Atom, which, if men venture to despise, it will be at their own peril. On the other hand, the Atom has his own august society. He fraternizes with that power, the Abyss; he watches the Infinite; he listens to the Unknown. The great dark voice speaks to him; he has before him the gusts and the eagles; he sees that his destiny is thundering and black, like the clouds: that his persecutors are vain as the wind gusts, and his soul free as the eagles. The Atom, on his rock, holds out his hand to the Future. Although but an atom M. Hugo is also a reed; a reed which not only thinks but meditates, a reed whose black hair (the metaphor gets rather confused here, but we cannot help it) becomes first grey and then white in solitude; a man who feels himself becoming every day more and more a shadow, than all which, we are informed, there is nothing more to be dreaded by crowned malefactors. And yet, terrible as he feels himself to be, the Exile tells us that he has accustomed those around him to hear him say that if ever, the day after a revolution, Bonaparte in his flight came to knock at the exile's door, not a hair should fall from his head. We are quite willing to believe that no bodily harm would have been offered to Louis Napoleon if he had called at Hauteville House; but the idea of his ever calling there is so extremely unlikely that it never before occurred to us. We are happy to learn, too, that M. Victor Hugo, as a literary man, so generously appreciated the literary merits of the late Emperor that, when he was expected to be a candidate for a seat in the French Academy, the author of *Les Châtiments* made out a voting-paper beforehand, as follows:—"I vote for the admission of M. Louis Bonaparte to the Academy and a convict's prison." This was intended to recognize at once the merits of the *Life of Cæsar* and of the *coup d'état*, and is a beautiful example of even-handed justice.

When M. Victor Hugo has to tell plain facts he is often simple and interesting. He publishes all about his money matters in a

* *Pendant l'Exil, Actes et Paroles*, 1852–1870. Paris: Lévy Frères.

plain and straightforward way which we rather like. At the time of the establishment of the Empire his plays were bringing him in 2400*l.* a year; but this source of income was entirely cut off when the Imperial Government refused to allow them to be acted. He had not saved much—so little indeed that the whole of his private income, independently of daily labour, only amounted to 300*l.* a year. This small income would have been comfort for a bachelor, but M. Victor Hugo had nine people to keep. A hurried sale of his furniture at Paris had supplied about 500*l.* of ready money. With these limited means he had to move his little colony from one place to another, bearing the expenses of removals and all the unforeseen contingencies of an unsettled life. It became necessary, therefore, to write for money without delay; but M. Victor Hugo's prospects as a professional author were not bright by any means, for the French market was closed to his publications, and his Belgian and English publishers did not at that time give him any share of their profits. The *Châtiments* cost the author a hundred pounds, which sum was advanced by him to his publisher Samuel, and never repaid. All the profits of this little work, which had a large sale in foreign countries, were for eighteen years divided amongst the publishers of its different editions. M. Victor Hugo seems to be under the impression that there is no copyright for any author in England, for he mentions Chatterton as a case in point, Chatterton not being a foreigner, and yet committing suicide through hunger. We wonder for what reason, except international ill-nature, he goes so far back as a hundred years. Contemporary English authors find copyright a useful institution, and many of them live comfortably by the pen. We should be glad if international copyright were established on a more satisfactory footing, and we quite sympathize with the author of *Les Châtiments* when he tells us that the English publisher gave him no share of the profits, and that he received no profits either for *Ruy Blas*, of which there were more than two hundred representations on the English stage.

It was certainly a dark look-out for M. Victor Hugo when Louis Napoleon became Emperor, and it is much to his honour that he never hesitated an instant between material prosperity and fidelity to his political principles. But here, again, we are checked in the expression of our admiration by the intolerable quantity of self-praise which this virtuous man is constantly offering as incense to his own nostrils. It is well to be honest and brave, but it is not well to be always thinking "How honest I am!" "How brave I am!" and uttering the self-praise in print. Of course, the Exile is always saying that he is *peu de chose*, and that what he does is not much, but we appreciate these modest expressions at their true value. Real modesty does not depreciate its own merits, but is silent concerning them. This exile is always ready to burst forth into announcements of his own importance. He tells us that the unhappy came to him, the shipwrecked asked help from him; that not only individuals but peoples, not only peoples but consciences, not only consciences but truths, all came to him in his solitude. It was given to him, he tells us, to hold out a hand from the height of his rock to the Ideal fallen into the gulf, and it seemed to him as if the Future, in distress, tried to land upon his rock. He tells us that he was a Living Effort, that he was invincible, indomitable in his weakness, having reality on his side. Exile, he says, is the nakedness of the Right. We scarcely needed to be informed, with the candour which distinguishes M. Victor Hugo, that he is satisfied with himself and saddened by his reflections upon others, for his self-satisfaction bursts out in every sentence.

There are some wonderful pages about Paris towards the close of the introductory chapter. Paris, he says, is the frontier of the future, the visible frontier of the unknown, all the quantity of To-morrow which may be visible in To-day. Whoso seeks for Progress with his eyes shall behold Paris. There are black cities; Paris is the City of Light. It is impossible to get out of Paris; for every living man, though he knoweth it not, hath Paris in the depths of his being. The four hurricanes, the winds, the tempests, the squalls, cannot carry away the sister-towers, cannot disperse the arch of triumph, the Gothic belfry of tocsins, and the high colonnade which is wound about the sovereign dome; and behind the last distances of the abyss, above the shattering of ships and foams, in the midst of the rays, of the storm-clouds, and the gusts, may be seen in the dim distance of the mists the immense phantom of the city which never moves. Paris is an august apparition. Paris has ubiquity. Paris is an idea as much as a city. Paris may be breathed. It is a gleam below the horizon piercing the thick shades. The sublime peace of the starry heaven sufficeth not to dissolve in the depths of the mind this grand figure of the supreme city. Her women are goddesses; her children are heroes; her revolutions begin in wrath and end in masterpieces; she has the sacred omnipotence of a whirlwind of intelligences. All this, and more, is present in the soul of the absent—yea, even for the man plunged in shadow who passes his nights in contemplation before the eternal serenity, and hath in his soul the profound stupor of the stars.

We feel deeply impressed by the grandeur of all this, for we are quite convinced that it must be very grand, since the author puts together so many things which are generally considered to be sublime. It may be doubted whether any English writer could tune his style up to this pitch. Mr. Ruskin comes nearest it, perhaps, when in wrath against the wickedness of the age; but even Mr. Ruskin, tilting against steam-engines and political economists, is not so fine an example of crazy genius as Victor Hugo. It is remarkable that the inspired Frenchman remains comparatively sober when he speaks to an audience that he can see with his eyes; the sight of human faces appears to keep him within bounds. Some of the speeches contain passages of strong well-governed eloquence which remind us rather of the orators of antiquity than of the speaker's own countrymen at Versailles. In 1852, when in Brussels, he was expelled by Faider's law, which was made on purpose for the occasion, because he had written *Napoléon le Petit*. On the 1st of August he embarked at Antwerp for England, and was accompanied to the steamer by the French exiles and a good many Belgian Liberals. Just before going on board he made them a speech, of which the following passage is an extract, and a very fine passage it unquestionably is. Some people having said that the Republic was dead, the orator takes up the assertion and deals with it as follows:—

> Proscrits, si la République est morte, veillons le cadavre! allumons nos fines, et laissons-les se consumer comme des cierges autour du cercueil; restons inclinés devant l'idée morte, et, après avoir été ses soldats pour la défendre, soyons ses prêtres pour l'ensevelir.
>
> Mais non, la République n'est pas morte!
>
> Citoyens, je le déclare, elle n'a jamais été plus vivante! Elle est dans les catacombes, ce qui est bon. Ceux-là seuls la croient morte qui prennent les catacombes pour le tombeau. Amis, les catacombes ne sont pas le sépulcre, les catacombes sont le berceau. Le christianisme en est sorti la tiare en tête; la République en sortira l'auréole au front. La République morte, grand Dieu! mais elle est immortelle! Mais à quel moment dit-on cela? au moment où elle a, en France seulement, deux mille massacrés, douze cents suppliciés, dix mille déportés, quarante mille proscrits! La République morte! mais regardez donc autour de vous. La terre d'exil, les pontons, les bagnes, Belleisle, Mazas, l'Afrique, Cayenne, les fossés du Champ-de-Mars, le cimetière Montmartre, sont pleins de sa vie! Citoyens, la Démocratie, la Liberté, la République, est notre religion à nous. Eh bien, passez-moi l'expression, les martyrs sont le combustible des religions. Plus il y en a dans le brasier, plus la flamme monte, plus l'idée grandit, plus la vérité illumine. A cette heure, proscrits, je le répète, la République est plus vivante et plus éblouissante que jamais, ayant pour splendeur toutes vos misères.

Some of the best of the exile's speeches are his funeral orations over the graves of fellow-refugees. Though full of strong feeling about the bitterness of exile, they are also marked by great firmness and courage. The one on the tomb of Jean Bousquet, a refugee in Jersey, is good all through, as oratory, though it is necessary to remember that it was spoken, and to imagine the oratorical effect. Here is a powerful bit of invective:—

> Citoyens! aujourd'hui, en France, les apostasies sont en joie. La vieille terre du 14 juillet et du 10 août assiste à l'épanouissement hideux des turpitudes et à la marche triomphale des traîtres. Pas une indignité qui ne reçoive immédiatement une récompense. Ce maire a violé la loi: on le fait préfet; ce soldat a déshonoré le drapeau: on le fait général; ce prêtre a vendu la religion: on le fait évêque; ce juge a prostitué la justice: on le fait sénateur; cet aventurier, ce prince, a commis tous les crimes, depuis les vilenies devant lesquelles reculerait un filou jusqu'aux horreurs devant lesquelles reculerait un assassin: il passe empereur. Autour de ces hommes, tout est fanfares, banquets, danses, harangues, applaudissements, génuflexions. Les servilités viennent féliciter les ignominies. Citoyens, ces hommes ont leurs fêtes; eh bien! nous aussi nous avons les nôtres. Quand un de nos compagnons de bannissement, dévoré par la nostalgie, épuisé par la fièvre lente des habitudes rompues et des affections brisées, après avoir bu jusqu'à la lie toutes les agonies de la proscription, succombe enfin et meurt, nous suivons sa bière couverte d'un drap noir; nous venons au bord de la fosse; nous nous mettons à genoux, nous aussi, non devant le succès mais devant le tombeau; nous nous penchons sur notre frère enseveli et nous lui disons: "Ami! nous te félicitons d'avoir été vaillant, nous te félicitons d'avoir été généreux et intrépide, nous te félicitons d'avoir été fidèle, nous te félicitons d'avoir donné à ta foi jusqu'au dernier souffle de ta bouche, jusqu'au dernier battement de ton cœur, nous te félicitons d'avoir souffert, nous te félicitons d'être mort!" Puis nous relevons la tête, et nous nous en allons le cœur plein d'une sombre joie. Ce sont là les fêtes de l'exil.
>
> Telle est la pensée austère et sereine qui est au fond de toutes nos âmes; et devant ce sépulcre, devant ce gouffre où il semble que l'homme s'engloutit, devant cette sinistre apparence du néant, nous nous sentons consolidés dans nos principes et dans nos certitudes.

The funeral orations begin with a simple statement of facts concerning the dead person; the eloquent passages come later. The beginning of the oration on the tomb of Louise Julien is an interesting, though painful, history in itself. She had been a great friend of the poor, and greatly loved by the lower classes in Paris. She had worked for her own living and kept her old mother ten years. In times of revolution she had devoted herself to the care of the wounded. Being a woman of superior abilities, she had composed patriotic songs which were popular, and had some influence with the Parisian democracy. In various ways she had become important enough to be an object of dislike to the Government of Louis Napoleon, which first imprisoned and then exiled her. The hardships of imprisonment and exile to a woman in absolute poverty and in very delicate health brought on consumption and death:—

> Le 21 janvier dernier une femme fut arrêtée chez elle par le sieur Boudrot, commissaire de police à Paris. Cette femme, jeune encore (elle avait trente-cinq ans), mais estropiée et infirme, fut envoyée à la préfecture et enfermée dans la cellule No. 1, dite cellule d'essai. Cette cellule, sorte de cage de sept à huit pieds carrés à peu près, sans air et sans jour, la malheureuse prisonnière l'a peinte d'un mot; elle l'appelle *cellule-tombeau*; elle dit (je cite ses propres paroles): "C'est dans cette cellule-tombeau, qu'estropiée, malade, j'ai passé vingt-et-un jours, collant mes lèvres d'heure en heure contre le treillage pour aspirer un peu d'air vital et ne pas mourir." Au bout de ces vingt-et-un jours, le 14 février, le gouvernement de décembre mit cette femme dehors et l'expulsa. Il la jeta à la fois hors de la prison et hors de la patrie. La proscrite sortait du cachot d'essai avec les germes de la phthisie. Elle quitta la France et gagna la Belgique. Le dénûment la força de voyager, toussant, crachant le sang, les poumons malades, en plein hiver, dans le nord, sous la pluie et la neige, dans ces affreux wagons découverts qui déshonorent les riches entreprises des chemins de fer. Elle arriva à Ostende; elle était chassée de France, la Belgique la chassa. Elle passa en Angleterre. A peine débarquée à Londres elle se mit au lit. La maladie contractée dans le cachot, aggravée

par le voyage forcé de l'exil, était devenue menaçante. La proscrite—je devrais dire, la condamnée à mort—resta gisante deux mois et demi. Puis, espérant un peu de printemps et de soleil, elle vint à Jersey. On se souvient encore de l'y avoir vu arriver par une froide matinée pluvieuse, à travers les brumes de la mer, râlant et grelottant sous sa pauvre robe de toile, toute mouillée. Peu de jours après son arrivée elle se coucha; elle ne s'est plus relevée.

All this is very well and simply told, and when in the same oration the speaker allows himself to be eloquent, the eloquence is strong and pure, and animated by earnest emotion. If the reader will imagine himself by the open tomb at Jersey with the coffin in it, and the stalwart grey-headed poet speaking by the side of it, the following sentences will recover something of that power which oratory always loses when presented in mere print:—

Pitié! . . . ce mot que je viens de prononcer, il a jailli du plus profond de mes entrailles devant ce cercueil, cercueil d'une femme, cercueil d'une sœur, cercueil d'une martyre! Pauline Roland en Afrique, Louise Julien à Jersey, Francesca Maderspach à Temeswar, Blanca Téléki à Pesth, tant d'autres, Rosalie Gobert, Eugénie Guillemot, Augustine Péan, Blanche Clouart, Joséphine Prabell, Élisabeth Parlès, Marie Reviel, Claudine Hibruit, Anne Sangla, veuve Combescure, Armantine Huet, et tant d'autres encore, sœurs, mères, filles, épouses, proscrites, exilées, transportées, torturées, suppliciées, crucifiées, ô pauvres femmes! Oh! quel sujet de larmes profondes et d'inexprimables attendrissements. Faibles, souffrantes, malades, arrachées à leurs familles, à leurs maris, à leurs parents, à leurs soutiens, vieillies quelquefois et brisées par l'âge, toutes ont été des héroïnes, plusieurs ont été des héros! Oh, ma pensée en ce moment se précipite dans ce sépulcre et baise les pieds froids de cette morte dans son cercueil! Ce n'est pas une femme que je vénère dans Louise Julien, c'est la femme; la femme de nos jours, la femme digne de devenir citoyenne; la femme telle que nous la voyons autour de nous, dans tout son dévouement, dans toute sa douceur, dans tout son sacrifice, dans toute sa majesté!

RALPH OF COGGESHALE.*

RALPH of Coggeshale is a writer whom many who have seen him quoted by writers on the history of the later years of the twelfth century and the earlier years of the thirteenth must have often wished to see and handle for themselves. Up to this time they have had but little chance of so doing. He has always been to be had in a fragmentary state in the French collection of Bouquet, and it is said that there is also an edition published in England. But a perfect set of Bouquet costs 2,500 francs, and, when you have got him, you have not got the complete consecutive text of his authors. And the edition by Mr. Dunkin is said by the few people who have seen it to consist of twenty-five copies. Abbot Ralph has therefore up to this time been to students in general in very much the same case as if he had never been printed at all. It was well then that his Chronicle, whose value was so well known, but of which so few people could make any use, should be brought within the reach of ordinary students by an edition in the series of Chronicles and Memorials. And so we thank Mr. Stevenson for the volume before us, a volume which, if it be not on a level—what can be on a level?—with the best members of the series, gives us all that we absolutely want. We should have liked to hear a little more about Abbot Ralph and the grounds for setting down the Chronicle as his personal work. Still we have the text, and Mr. Stevenson, in his Preface, points out fairly enough the leading characteristics of the work. It is a book of annals from 1066 to 1221, in which annalistic entries of the most meagre kind alternate with full accounts of particular facts. As the work goes on, these special insertions come in oftener and oftener, and become longer and longer, till the latter part practically becomes a contemporary history, only with entries of the old annalistic kind peeping out here and there. The book is like a small house which has been enlarged into a great one, but where some of the old small rooms and offices still hang about it.

The period during which the special entries thus swell into a history begins with the later years of Henry the Second and ends with the early years of Henry the Third. During this time the Chronicle contains a great number of important details which are not to be found elsewhere, and for which the writer often personally quotes his authorities. Thus the account of Richard the First's return is given on the authority of one of Richard's companions, "Anselmus capellanus, qui hæc omnia nobis, ut vidit et audivit, retulit." And it might not be safe to say at Trieste or at Ragusa that Anselm's version was that they took ship at Corfu (Cóvreſó insula) and landed at Zara. ("In partes Sclavoniæ ad quamdam villam nomine Gazaram applicuerunt.") It may be, as Mr. Stevenson suggests, from the same authority that the Coggeshale writer got his account of Richard's death and the estimate of his character. Anyhow, it is a very grave, impartial, and high-toned piece of writing, which does great credit to the author, whoever he might be. As a piece of history, strictly so called, perhaps the most valuable bit is that which sets before us Archbishop Hubert, the great minister of the Poitevin knight-errant, doing all that he could to lessen the oppression which the rapacity of his absent master brought upon the kingdom for which he cared not.

So during Richard's campaign in the East some of the military details are given on the authority of an eye-witness, Hugh Neville. We have not, however, the name of any eye-witness quoted for the statement that Richard caused a certain Robertus Brito to be starved to death—a deed which, with all Richard's evil doings seems more in the line of his brother John. In another place we are told, which German historians must look to, that Richard received some votes at the election of a King of the Romans on the death of Henry the Sixth. And, like most writers of his time, the critical William of Newburgh not excepted, Ralph has tales to tell us about marvels and prodigies. The giants' bones found in Essex would no doubt be of interest to palæontologists, and we are attracted to the fantastic spirit in Suffolk who spoke with the voice of a child a year old, and called himself Malekin, because in his discourses on various matters, including discussions on Scripture with the chaplain of a neighbouring knight, "loquebatur Anglice secundum idioma regionis illius, interdum etiam Latine." Malekin himself, though often heard and felt, was never seen but once, in answer to the earnest prayers of a certain maid, and then he appeared "in specie parvissimi infantis, quæ induebatur quadam alba tunica." But in any case the fantastic spirit has a philological value, because the description of his dialect shows that those who told his tale marked a distinction between the Anglian of Suffolk and the Saxon of Essex. All this too was heard from the chaplain with whom Malekin held the disputations, and the account of the heresy of the Publicans which follows is given on the authority of the more famous Gervase of Tilbury, whose own part in the story is not much to his credit. Here we get the Coggeshale writer's views on the punishment of heretics, and his approval of their treatment by Count Philip of Flanders, "qui justa crudelitate eos immisericorditer puniebat."

During the reign of John the Chronicle sways to and fro between full accounts at the beginning and ending and meagre entries under the central years of the reign. We are led into Byzantine geography by the fact that Boniface of Montferrat, when he was established in the East, wished to set to work to found seven Cistercian monasteries—Coggeshale was a Cistercian house—in his new kingdom. This gives occasion to the remark, which shows how the New Rome impressed men's minds even in the days of its decline, "Dicunt nonnulli quod imperium Græcorum majus sit et latius quam tota Gallia, Hispania, Hibernia, cum tota Anglia." And it should specially be noticed that it is from our author that the best known version of the fate of Arthur of Britanny, that which has been made famous by the poetry of Shakspeare, originally comes. A very important passage, at an earlier time, is the portrait of Henry the Second, which should be compared with the portraits drawn by Giraldus, Peter of Blois, and Ralph the Black, as they have been compared by a master hand. What Henry's enemies called his oppression of the nobility was looked at in quite another light by our Cistercian Abbot:—"Semper paci civium pauperum atque mediocrum studens, nobilium ac potentum arrogantiam atque tyrannidem potenter reprimens, fures, reos, atque criminosos immisericorditer puniens."

Mr. Stevenson's volume, however, does not contain only the Chronicle of Coggeshale. He has added to it several other pieces bearing on the same period of history. The first is "De expugnatione terræ sanctæ per Saladinum libellus," which had been attributed, though on weak grounds, to the same writer as the Coggeshale Chronicle. In this one is amused by the pains which the writer takes to speak of the Mahometan enemy by the names of every earlier Eastern nation that he had ever heard of. It is most likely half metaphor when he calls them "filii Babylonis et Sodomorum" and "filii Edom"; but "progenies Ismael" and "hæredes Canaam" express facts, or some shadow of them. Saladin also is "rex Syriæ"; presently his subjects are in the same page, first in plain prose "Turci," and then, by a figure, "filii Esau." Then they are "Babylonii," "Ægyptii," "Chaldæi," and "filii Sodomorum" again. Then comes a most curious piece:—"Magistri Thomæ Agnelli Wellensis Archidiaconi sermo de morte et sepultura Henrici regis junioris." In reading the reign of Henry the Second, we are sometimes a little startled by the good character which several writers give to his rebellious eldest son, and we are still more amazed when we come to the fact, recorded with a fitting rebuke by the grave William of Newburgh, that some people believed that miracles were wrought by him after his death. Here we have the Archdeacon of Wells fully believing in him, counting him for a saint and martyr, describing his holy end and the wonders wrought by his relics, as though he had been Waltheof or Simon or Thomas of Lancaster. Lastly, he appears in a dream to his mother, from whom the Archdeacon heard the story, having on his head two golden crowns, one dull and the other bright, the dull one typifying the crown which he wore on earth, and the bright one that which he had now won in heaven. Then comes the romance of Fulk Fitz-Warin, which was printed twenty-one years ago by Mr. Thomas Wright for the Warton Club. But being printed for the Warton Club was much the same as being printed in twenty-five copies by Mr. Dunkin. It is not wonderful therefore that Mr. Stevenson does not seem to have heard of Mr. Wright's edition or preface. In both cases the French text is accompanied by an English translation, according to the law of the Chronicles and Memorials, a law which seems so queer but which is not without practical wisdom, which assumes that readers will understand Latin, but will not understand English or French. Mr. Wright, however, has added some useful notes, which have nothing to answer to them in Mr. Stevenson's edition; and Mr. Wright has gone with some care into the local geography of the country. Mr. Wright too has gone largely into the documents and other historical notices bearing on the persons spoken of in the romance. The story is, as Mr. Wright truly says, a piece of family romance. Fulk Fitz-Warin is a real man of the reign of John, whose outlaw and pardon

* *Radulphi de Coggeshale Chronicon Anglicanum, &c. &c.* Ex codicis manuscriptis edidit Josephus Stevenson. London: Longmans & Co. 1875.

appear in genuine documents, but those genuine documents have naturally nothing to say about his going to kill dragons at Carthage, and other exploits of the same kind which do appear in the romance. As a specimen of one of the ways in which fictitious stories gather round real people, the tale, wild as it is, is worth reading and comparing with the notices which we have of the persons mentioned in the story. In this way Mr. Stevenson certainly does something for us, but Mr. Wright had before him done a good deal more. One point we may note that we hear of a Payn Peverel, a follower of the Conqueror, who was succeeded in his Castle of the Peak by his sister's son William Peverel. His story is utterly mythical, but it is of importance as showing that the writer of this story had never heard of the impossible scandal which makes William Peverel a son of the Conqueror. If any defender of the herald's figment should catch at such a straw as the description of William Peverel by his mother without the name of his father, it is enough to answer that the sister of any Payn Peverel could not be the daughter of the Englishman Engelric, the alleged father of William Peverel's mother. But Payn Peverel seems to be altogether mythical. Domesday knows of that name "Willelmus" and "Ranulfus," but no "Paganus."

Lastly, Mr. Stevenson gives us some extracts from the *Otia Imperialia* of Ralph of Coggeshale's friend and neighbour, Gervase of Tilbury. These were addressed to the Emperor, Otto the Fourth, whose close alliance with his uncles Richard and John were so constantly brought out. Mr. Stevenson's extracts contain Gervase's British and Early English History, in which we get his version of the Arthur fables, and then leap from Cadwallader to Cnut, to get that most astounding of all stories, Gervase's fable, wherever he found it, of the early relations between Harold and William. We see the growth of new notions in his account of Henry the First and Stephen. Henry's election, like that of Harold, is branded by the Domesday phrase "invasit"; and Henry is said to have made a will by which the Crown was left to Matilda and her son; but as neither a woman nor a child was capable of exercising the royal authority, Stephen was to be king, perhaps for life, at any rate, until young Henry came of age. But when Stephen tries to set aside the right heirs and to get the succession for his own son Eustace, then, and not till then, the barons revolt against him. These perversions of early contemporary history are very strange. When he gets to his own times, it is singular that he has nothing to tell his Imperial patron in praise of his grandfather Henry, who sheltered his parents in their banishment, while he glorifies all Otto's three uncles, among whom Geoffrey might almost be taken for his own son:—

Successit proles tertia, comes, aut potius dux Britonum, *Arcturo* fabuloso animali virtute non inferior; strenuus, militia pollens, liberalitate excellens, probitate et magnanimitate incomparabilis, exactis patris in virtute innumeris annis abiit.

Then he has to praise John, which he seems to find a little hard:—

Adjungitur quartus illustris rex Johannes, cujus incrementum ac laudes præsentiali inspectioni commendo, ne videar aut ex insufficientia mea minus dixisse de eo quam est; aut adulationi deservire in eo quod dixero aliquid quod est.

and so he ends by singing the praises of the Emperor himself and his mother and aunts.

KAYE'S SEPOY WAR.—VOL. III.*

(Second Notice.)

TIME has brought most people nowadays to the opinion that the great Mutiny was in a great measure the result of a vicious system, maintained for years, by which India was held as an appanage of the Civil Service. The immigration into India of independent Europeans, who would, if admitted, have taken root in the country, and who might even by mere numbers have prevented the rising, was discouraged and almost prohibited. The result was that the governing class—the Covenanted Civil Service—formed the only avenue to anything like power or distinction; it gradually absorbed the control of the army as well as the civil administration of the country, and it broke down at once and utterly in the time of trial. We are not speaking of individuals. If we were, the names of Sir John Lawrence, Sir Henry Lawrence, Edwards, Sleeman, and a crowd of others, would rise at once to confute us; we speak of the system. But how does Sir John Kaye deal with it? You may read his book through, and not gather from it that a word had ever been breathed against the Civil Service. He has, as we willingly believe, striven to be impartial; he has certainly sometimes blamed particular individuals. But, like Bottom, he roars you as gently as a sucking dove; his blame sounds strangely like skilfully veiled compliment, and when he praises, his praise is like the unanimity of the people on the stage in the *Critic*. How differently would he have written of the occurrences of a hundred years ago, and how can he venture, having written what he has written, to say, as he does say, that "to the historian all men are dead"? Another great cause of the Mutiny was Lord Dalhousie's craze for increase of territory; that policy came to its climax in the annexation of Oude. Of all the native States Oude was the only one with which we had come in contact that had preserved its nominal independence; from it half our army was recruited; it had been staunch to us in our day of trial; it had lent us money and men during the Afghan war. The annexation was a blunder, if it was not also a crime. Sir John Kaye, to be sure, does not approve of it, but his mild disapproval is totally inadequate to the occasion, and is altogether hidden behind the cloud of incense which he is pleased to burn to Lord Dalhousie. The annexation was conducted in a manner the most irritating to the Mahommedan population of India, and the most fatal to our own character for truth and honour. The manner of the deed no less than the execution alienated altogether the affections of the Bengal army. The deposed Royal family was much more powerful than it had been when nominally on the throne, for its jurisdiction was over the minds and memories of men. It could no longer oppress and outrage as in old time; it was itself a monument of the oppression of an alien race. The last and proximate cause of the Mutiny was the issue of greased cartridges. With this subject, too, Sir John Kaye deals in an inadequate manner. It must be remembered that the accusation of the Sepoy on this subject was a true accusation. The cow is the sacred animal of the Hindoo, and to touch its flesh is to lose caste; which, in his estimation, is tantamount to incurring eternal punishment. The cartridges issued to the Sepoys were really lubricated with the fat of cows and pigs. This was of itself sufficient to ensure a revolt, but the error was committed by Colonel Birch, Secretary to the Government of India in the military department. So gross a blunder was unpardonable; yet, though the manufacture of the greased cartridges was stopped, for various reasons no intimation of the fact was conveyed to the troops, which for four months were allowed to continue under the misapprehension that the Government intended to destroy their caste. It was not till after the outbreak at Meerut that any soothing announcement was made, and by that time it was too late. The idea had obtained possession of the mind of every Sepoy in India. The disavowal after the Meerut mutiny was only looked upon as an intimation that the Government, foiled in their attempt, withdrew from it till a more convenient season out of fear. Sir John Kaye enters fully on this point, but we cannot, on reading his exhaustive and very able statement, resist the conclusion that he has dealt with more tenderness than justice with men whose official incompetence or supineness it was his duty, as an impartial historian, to denounce much more strongly than he has done.

But the greatest error, in our opinion, of Sir John Kaye's book has still to be mentioned. In an evil hour for the truth of history, the friends of Lord Canning determined to entrust all his papers to Sir John Kaye. The whole book is an elaborate attempt on the part of Sir John Kaye to justify the confidence reposed in him, and to "write up" Lord Canning. The truth seems to be that Lord Canning was an amiable man, of undoubted personal courage, but weak and untenacious of purpose. He was as wax in the hands of those around him. He did not originate, he did not encourage those who did. He was never in time. Measures were pressed upon him which might have averted the Mutiny. He coldly rejected them; enthusiastic applause from Sir John Kaye. Anon the Mutiny is at its height, and those same measures which were rejected before are, all too late, adopted by Lord Canning; again enthusiastic applause from Sir John Kaye. We have no desire to run down Lord Canning. If he had been surrounded at the time of the crisis by such men as the two Lawrences, he would have taken his tone from them, and events might have been very different. Canning the ruler as heaven and events made him was very different from the heroic figure set up by Sir John Kaye; and we cannot think that the cause of truth is served by the author's overdone praise.

On one point, however, we are especially anxious not to be misunderstood. We have no sympathy with the indiscriminate severity with which men, women, and children were included in one common vengeance by the Europeans after the Mutiny. It is easy to understand that men who had seen their nearest and dearest shot down and massacred should take a terrible vengeance. But, though natural, it was horrible, and moreover the vengeance fell in great measure on the wrong people. The cowardly Sepoys who murdered the white men were the first to fly when the white men attacked them in arms. Those who were caught were often comparatively innocent—villagers who had joined the Sepoys through fear. It was inevitable that they should be shot when they were taken red-handed; but those who were on the spot, and who saw women and girls shot to death, and could not save them because, to tell the truth, they could not get their orders of mercy obeyed by the infuriated soldiers—those men knew that it was horrible, and that it was wrong. They knew, moreover, that a continuance of such indiscriminate vengeance was not the way to pacify the country. Lord Canning's "clemency," which earned for him a contemptuous title, was distinctly to be admired. What we find fault with is not his clemency, but his unreadiness. He would not believe that the Mutiny was more than a partial outbreak at a time when half the North-West was in actual revolt. The Meerut outbreak was known in Calcutta on the 14th of May. On the 17th Lord Elphinstone telegraphed from Bombay that he could despatch a steamer to Suez which would catch the mail of the 9th of June at Alexandria. The Governor-General "was not desirous of sending to England by an earlier opportunity than the 18th of May from Calcutta." Lord Canning remained blind to the magnitude of the crisis, though the two Lawrences, Colvin, and even the members of his own Council, urged energetic measures upon him. It is all very well to say that a man only a year and a half in India must

* *History of the Sepoy War*, 1857-8. By John William Kaye, F.R.S. Vol. III. London: Allen & Co. 1876.

see through the eyes of those around him. The plea might be admitted in mitigation of a severely hostile sentence. But the question is, would others have been so deceived? As a matter of fact, was Sir Henry Lawrence so deceived? If the answer be in the negative, what becomes of Sir John Kaye's attempt to make out that Lord Canning was the best possible man for the crisis?

We promised to say what part of the narrative is comprised in Sir John Kaye's third volume. Each volume has contained three books, and each book about five chapters. Sir John Kaye has kept to his intention of minute subdivision, but the connecting links of general history which were to form a setting to these scattered gems of history is not forthcoming. We are irresistibly reminded of Sir Walter Scott's story of the Scotch sermon, which, as the minister announced, would, God willing, be dealt with in three great divisions, each division being treated of under sixteen heads, and each head garnished with seven supplementary heads. The first volume told us of the revolt at Meerut and the seizure of Delhi. The second described the earlier incidents of the Mutiny at Benares and Allahabad, and certain stations in the Punjab, and narrated the two series of operations—one undertaken by troops collected in Madras from Pegu and from Lower Bengal; the other by troops from the hill stations of the North-West and from the Punjab. Pursuing his plan of episodical treatment, Sir John Kaye gave us an account—and a most interesting one it was—of the policy of Sir John Lawrence, the first conflicts in the Punjab, and the state of affairs in Peshawur and at Rawul Pindee. He described the first march of the Guides, the advanced guard of the relieving army, under Daly, in the early days of June, on the Mogul capital, and then, in obedience to his exasperating system, goes back once more to Calcutta at the beginning of May. At length we reach the siege of Delhi. It is admirably told—in a style full, strong, and nervous. We get on till the middle of July, and are at the height of the interest of the story, when the pen is thrown down; we are led back chafing to the beginning of May again, and, after a long chapter which brings Brigadier John Nicholson, at the head of his movable column, within sight of Delhi, the volume closes, and Sir John Kaye keeps silence for six years. The third volume opens with an account of the state of affairs in Calcutta during the month of June. Havelock and Neill were during that month pushing on from the South to the relief of Cawnpore and Lucknow, and Sir John Lawrence was pouring down from the North all his available military strength on Delhi, and, as we have seen, all the North-West was rising. Sir John Kaye gives us an account of the mutiny in Shahabad, the outbreak of Dinapore, and the defence and relief of Arrah. This brings us to the month of August, and chronicles the arrival of Lord Elgin with the China troops, and the formation of the Naval Brigade. But we are doomed once more to go back to the month of May, and to hear the fate of Agra. Without index or table of contents to help us, it is utterly impossible to follow this powerfully written but most ill-arranged History. It must be slowly studied and collated, but the author is bound to give us what assistance he can by a copious index and chronological table of contents. We confess that, with the best good will in the world, we are unable to guide our readers through the maze. Each succeeding episode is of the deepest interest; but each breaks off just when we are becoming accustomed to the names and places of which we are reading, and a new subject is taken up. One subject only is in this volume happily brought to a close. The siege of Delhi, which we left in full swing at the end of the second volume, is finished in the last chapter of this.

In dealing with a book where there is neither cohesion, arrangement, nor visible plan, it is useless to attempt analysis. We must be content to wait till the appearance of the next volume enables us to take something like a general view. Sir John Kaye writes as good English as ever, which is saying a great deal; but he has not got rid of certain tricks which, as we thought, disfigured his earlier volumes. One of these is a tendency to incongruous metaphor; and indeed the same metaphor does duty very often; take, for instance, the rather absurd idea of "shuddering"—everybody throughout the book shudders when things go wrong with him. The King of Delhi "shuddered at the thought of removal, and the shudder ran through his family from the oldest to the youngest, male and female, relatives and dependents." That was in the last volume (p. 6). We suggested that we had heard it sung of the inhabitants of the Palace of Delhi

> We are all nodding
> Around the great Mogul;

but here is material for a conjectural emendation of the lyric. We hoped that we should have no more shuddering, but it comes on in the present volume worse than ever. In Calcutta, on a certain day (p. 30), "a great shudder ran through the capital." We are also told, on a solemn occasion which we are sorry to see associated with any ludicrous image—and by the recurrence of this absurd figure of speech it is so associated—of a dying general shuddering as he thought of the possible fate of his army. To take another extraordinary figure of speech which also recurs more than once, we hear (p. 33) of some mischief which was being hatched in the Oude colony at Garden Reach, but "the promptitude of the Government strangled it in the womb." This, however grotesque, is no mere slip of the pen, for further on another danger menaces the British Empire, and this time "Providence strangles it in the womb." We have heard of creatures strangled in the birth, but Sir John Kaye surely pushes the motto "principiis obsta" to a somewhat undue extent. These, after all, are trifles. The narrative is well told; but no words are strong enough to describe the chaotic nature of the arrangement.

LITERARY REMAINS OF OLIVER MADOX-BROWN.*

IF anything could dispose one to look severely on the promising works of a young author who now unhappily cannot fulfil the promise which they gave, it would be such unwise praise as that found in the Memoir prefixed to these two volumes, for which Messrs. W. M. Rossetti and F. Hueffer appear to be responsible. Here we are told that "this tale" (the *Black Swan*) is "possibly, when viewed in all its relations, the most remarkable prose story ever penned by a youth not older than from sixteen to seventeen. This we may say, without forgetting even Victor Hugo's *Bug Jargal*, written at the age of fifteen or sixteen; which, if slightly ahead of the *Black Swan* in respect of juvenile precocity, must be pronounced inferior to it as a sustained invention or piece of art." The *Black Swan* may be remembered by the title of *Gabriel Denver*, under which name, and in a form differing from its present one, it was published three years ago. Then it was pointed out in these columns that the work contained evidences of talent in spite of its many and manifest absurdities; and that its errors were those of youth and want of cultivation. To speak of it as a sustained piece of art is extravagant; the faculty which it most obviously wanted was the art which can sustain interest in improbable and abnormal things. To take one instance—it is clear that the author intended to make his hero Gabriel Denver both pitied and liked by his readers; but this object he defeated by laying on his colours too zealously. In his anxiety to bring out the repulsion with which Deborah inspired Gabriel, he seemed not to observe that the utter brutality and selfishness of Gabriel's conduct must certainly arouse disgust at him, and very probably compassion for Deborah.

In *Gabriel Denver*, the hero, who is left an orphan in Tasmania, has been brought up with his cousin, Miss Deborah Mallinson, who after the death of his parents makes a proposal to him, which he unwillingly, and with much protestation that he cannot love her, accepts. Immediately afterwards he is called back to England, and Deborah prudently arranges to cross in the same ship with him. Unfortunately, just before they start he falls madly in love with a beautiful girl named Laura, who is also going to cross in the *Black Swan*. Hence result various disagreeable and appalling incidents, which are concluded by Deborah in her insane jealousy setting fire to the ship; from which only Gabriel and the two women escape in an open boat without any kind of provisions. In the end, according to the present version, they were rescued, but not till Deborah was dead, and the other two very soon died also. This was a wild story enough, and not an agreeable one. The editors of the two volumes now published have made it revolting by restoring it, with a strange want of discretion, to its original form, in which Deborah is not only engaged to Gabriel, but has been actually married to him for some time before they embark on the *Black Swan*. Thus by Gabriel's absolute neglect of his wife and absolute devotion to Laura, which go so far that when he is collecting rain-water to assuage their thirst he never thinks of giving a drop to Deborah, all possible interest either in him or the girl whom he loves, and who quietly accepts his love, is destroyed. It was quite natural that, at the age when the author wrote his story, it should appear to him that the more his characters set all accustomed rules at naught the greater his work would be. It was also quite natural that a discreet and experienced publisher should desire the ugliest part of the tale to be softened down. It was not at all natural that his editors should now think it good to present the story to the public in its first and crudest form. The characters of this erratic but undoubtedly clever production, as was said in our review at the time of its first publication, were not its best point. The drawing of character and the power of construction, indeed, are the provinces of art which come latest to the writer of fiction, and we can at this moment call to mind no very early work in which these conditions are fulfilled, except Beckford's *Vathek*. That was an astounding performance; and its author was two or three years older than was Mr. Madox-Brown when he wrote the *Black Swan*. In this, as might well be expected, the personages resemble the figures labelled with some particular vice or passion in the old moralities; they have no light and shade, no individuality beyond the one feeling by which each is possessed at starting. Their actions and relative positions recall at one moment the works of Miss Brontë, at another those of Mr. Charles Reade. Beyond this there are various tricks of style which we may readily believe the author would have learned to cast off; but, as the work stands, these alone are enough to prevent it from being a sustained piece of art. One of these, common to many writers, is the habit of prefacing a sentence with the words "I think," which, except when used with rare skill, serves only to destroy instead of helping the illusion. Another, which seems caught from Hawthorne, and is found frequently throughout Mr. Madox-Brown's works, is the trick of introducing a statement with some such phrase as this—"It was a remarkable and suggestive thing." This was all very well when Hawthorne used it to draw

* *The Dwale Bluth, Hebditch's Legacy, and other Literary Remains of Oliver Madox-Brown, Author of "Gabriel Denver."* Edited by William M. Rossetti and F. Hueffer. With a Memoir and Two Portraits. 2 vols. London: Tinsley Brothers. 1876.

attention to what was really significant; but, when applied to natural and expected things, it becomes superfluous. Elsewhere one comes upon reminiscences of Victor Hugo; but, in spite of all faults, the absence of which would be far more surprising than their presence, the story of the *Black Swan* contains various passages, especially of description, which lead one to think its author had the capacity for good work in him. Here is a description of the ship with which the story opens, that strikes us as true and well told:—

The cabin lights were extinguished, and all on board the becalmed vessel seemed enveloped in silence and sleep. Her brown wind-worn sails were all furled in the breathless air; there was no sign or signal of any watch kept over the decks. The torpid ship seemed left entirely to her own control; even the steersman was slumbering, his hand attached by a string to the wheel, in case of any unexpected movement in the rudder, or sudden rising of the wind. The breeze which had borne the big ship out so far into the ocean had long before nightfall entirely died away from the face of the water, though high overhead, strange to say, it still lasted, so that the few stars seen from the ship, lost in the darkness below, appeared as though slowly drifting past the apertures in the sultry, overhanging, yet unseen clouds. The sea still heaved slightly round the great black hull, agglomerated into the obscurity surrounding it, save where a faint line of light was emitted by the water rippling and splashing round its sides.

At times some unlooked-for lurching of the vessel would cause a wave to dash up over the water-line; showering back inflamed into a livid cauldron of glowing phosphoric fire, spreading round in circles of luminous foam, reflected brilliantly in the wet hull, and gleaming in the cabin-windows and on the heavy anchors at the prow; and even, in the utter darkness, playing with a weird flickering reflection on the under sides of the great projecting yards, and the cross-masts, and rigging otherwise indiscernible up aloft.

Indeed the sultry tropical water seemed in an unusually excitable phosphoric condition. Every few minutes the water to a distance round the entire hull would be suffused with a pale quivering flame which at times lit up its clear green depths beneath the surface. The spot where floated a piece of drift-timber, dropped overboard during the calm, was shown in the darkness by constantly recurring flashes of light; but where the calm hardly-perceptible swell of the subsiding waves met with no obstruction, they were enveloped in the deepest obscurity.

However, the *Dwale Bluth*, the first story in the series now published, gives to our thinking a much clearer indication that the author possessed a gift for romance than does the *Black Swan*. It is far less extravagant; it has several touches of unforced humour; its descriptions are, on the whole, truer, as the writer was dealing with what he knew, and there is at least one well-drawn and consistent character in it. Oliver Serpleton is in his way quite as eccentric as any of the people in the *Black Swan*; but his way happens to be one which we recognize as in the main true to nature. This was the more to the writer's credit as the figure of an absent awkward man half lost in books, but especially tender-hearted, has often been presented before, and it was therefore difficult to produce it in an original form, as Mr. Madox-Brown has done. Oliver's interview with his brother, who has come to entrust him with the care of his little daughter, is particularly good. The meeting takes place in a lane near Oliver's house:—

All the pathos and beauty of the scene, vaguely defined as it was, had been wasted on the absent-minded Oliver, who was standing with his eyes fixed upon the depths of the windy sky, as though he was speculating as to whether it could be that the stars were drifting past behind the clouds, or the clouds were drifting by in front of the stars.

But he was at last recalled to himself by a distant voice which shouted, "Don't you think you had better go home, Nolly? The night-mist's rising and you might catch cold in it."

"Now I think of it," said Oliver hurriedly, for he was evidently perturbed in mind by some painful reminiscence which this advice awakened, "I think I had. Good-bye to you . . . my dear brother Jeffrey—have no care for the well-being . . . of your offspring." This reassuring speech was pronounced in a hurried nervous whisper, that seemed by no means calculated to reach the ear of the person for whom Mr. Serpleton intended it. "By the way, I remember now," he continued in the same modulated key, "what I have been desirous of saying to you, Jeffrey. Father *is not* spelt with an *r*. You were sadly in the habit of neglecting . . ."

But at this juncture, some mysterious instinct made him aware that his illiterate brother was no longer beside him, and was consequently incapable of profiting by his instruction. "Dear, dear me!" he exclaimed, stopping short and gazing blankly into the night.

The story of the *Dwale Bluth* is ill constructed, or rather it is not constructed at all; the pages are overburdened with dialect which constantly requires the interpretation of a foot-note; and the influence of Hawthorne is again evident in the character of the girl who is its central figure. Where the author shook himself free from extravagances and imitation—and that is not seldom—his writing has a freshness and truth which make this romance by far the most valuable and suggestive of his literary remains. Helen Serpleton, the child who is left in Oliver's care, inherits the wildness of the Romnany tribe from her mother, and is singularly out of place in the household of which she forms a part. On one occasion she is out in a storm on the moor, accompanied only by her favourite cat:—

An enormous impenetrable rain-cloud had drifted over the face of the sun; it was all black and lowering, but its large transparent rims, contantly writhing and changing shape before the wind, were fringed as though with bright flames: it was the largest in the sky. The remainder of the firmament was all obscurely occupied by wildly empurpled fragments of sombre vapour, diversified now and then with a blacker and heavier mass than usual—some with torn and shattered edges, others dense and solid. A most wild and tumultuous embattlement seemed perpetually going on among them—a struggle for existence as it were, while the larger and more magnetic clouds sucked in and absorbed the less predominant or powerful ones.

Once or twice an unhindered ray of the sun pierced through some forgotten crevice, striking one of the sombre hills with a sudden flash of light; but this did not recur.

The cloud-rack at last grew dim and blind all over, and the sunlight died out from the edges of the cloud which principally obscured it. At last a brilliant flash of white sinister light leapt out and flickered blindingly round the zenith from cloud to cloud, and for less than an instant the pelting rain seemed turned into a bright swift shower of pallid flame; then the shadow and sombreness predominated again, and an ominous hush fell everywhere. But just in the intense silence, the child's irrepressible song,

La bastarda brohjugi
Di bro—"

was interrupted by the booming vibration of an answering peal of thunder, which slowly gathered in force seemed to cause the whole of the solid atmosphere of the heavens to shake with anticipation.

Soon after this she poisons herself with the berries of the Dwale Bluth, or Atropa belladonna; and there is a ghastly description of her delirious fancies before she is restored to health. Mr. Madox-Brown seems to have had a curious attraction towards such subjects as this, which indeed often have for artistic and impressionable minds a fascination which experience teaches them to resist. The dwelling upon the influence which the berries of the nightshade plant ever afterwards had upon Helen conveys the idea that Wendell Holmes's Elsie Venner may have been present in the author's mind, very likely without his consciousness, when he wrote the *Dwale Bluth*. Helen's story is taken up rather like a broken thread a long time after her adventure with the deadly berries. Since then she has married a certain Mr. Thurlstone, who, she has reason to believe, has been lost at sea; in this belief she has fallen in love with a blind poet, who has always loved her, and the two are employed in love-making when Thurlstone inconveniently returns. The description of the spot through which he passes before he comes upon them is one of the best things in the author's work:—

The moon must by now have been rising over the inland hills, but its light in no way reached Thurlstone. He stood there quite still, for a moment looking down the passage where the children had disappeared as if uncertain what to do; then he turned and still proceeded rapidly along. He must have known the way well, or else have been sustained by nervous excitement, for it was so obscure that he could hardly see his feet. Right in front of him, however, as he came round a sudden turning, he saw the path winding up and down in a serpentine fashion, for, the reflection of the mist not being able to reach it, it stood out like a dark line on the face of the precipice. The faint stars grew brighter and brighter overhead, and he could hear the weltering and seething of the waves far down the side, as he still strode hurriedly along without caution. Once his heavy footsteps detached a fragment of rock which sank with a prolonged rattling into the abyss of vapour below, and created strange muffled echoes in its descent. All under the cliff-side till far out towards the horizon was deep in shadow now; beyond this the blanched light of the moon was dispersed from over the high upper crags.

At last he came in sight of the gloomy detached mass of the Castle-Rock standing by itself on the edge of the furze-covered plateau. The hollows and indentations of the here visible valley are very deep about this place; no light reached it; it was profoundly dark. The rock itself was in the shadow of the hills behind; its base, with the fern-covered sterile land it rose from, was in the deepest obscurity. On one side which faced seawards a faint reflection was derived from the clouds of white fog.

Against the pale solemn light still lingering in the sky beyond, its solitary outline rose: the jagged prominent masses of stone being blurred here and there by thin fringe of ferns and thistles. In one place the picturesque outline of a gnarled old blackthorn was visible, grown all aslant in the direction from which the sea-wind perpetually blew: in the gloom that concealed the side that was nearest to him, faint white traces like those of a winding path seemed indicated. The great cloven rocks, piled one on another as though by human agency, which crowned its summit, were white with the soft liquid moonlight which now began to fall on them.

The meeting which follows is not so good. Thurlstone threatens, if Helen does not come back with him, as indeed she ought, to throw the blind man into the sea; she puts up her "gracile hands," threatens to strangle him with her hair, an unpleasant threat which the writer's heroines rather affected; and, finally, goes away with him. Here the story ended abruptly; but a conclusion, which does not greatly recommend itself, has been made, from conversations with the author, by his editors. The other of the larger stories in these volumes is more tricky, more exaggerated, and fuller of unhealthy fancies, than the two of which we have spoken; but in this also there are traces of a talent for fiction which, cultivated and matured, might have been considerable. Whether it was wise to add to these three tales the fragments of prose and verse found after them may be an open question; it is certain that it was not necessary to print again by themselves the songs which had already appeared in other parts of the volumes.

We could wish that such oversights as these, or the use in the memoir of such phrases as "the facility which is the appanage of a painter," and "a restive idiosyncrasy of his own which urged him rather to follow a new path than to tread the paternal vestiges," were the gravest faults we had to find with Messrs. W. M. Rossetti and F. Hueffer. It is impossible, however, to leave unnoticed the fact that fully three pages of the memoir are occupied with a description, as elaborate as it is affected, of the various phases of delirium through which Mr. Madox-Brown passed on his death-bed. It is enough to inform our readers of this, and to add to our sorrow for the loss of a promising writer our regret that the task of presenting his works to the public should have been performed as it is by their editors.

BANCROFT'S NATIVE RACES OF NORTH AMERICA. VOL. III.*

THE task of the pioneer is useful and necessary, and the work-man who keeps within the limits assigned to him is worthy

* *The Native Races of the Pacific States of North America.* By Hubert Howe Bancroft. Vol. III.—Myths and Languages. London: Longmans & Co

of all honour. Nor can a more important enterprise be undertaken by any explorer than the examination of the social, moral, intellectual, religious, and political condition of the tribes which the Spanish conquerors of the New World found in possession of the vast regions of Central America. Of the great questions connected with the origin of their civilization, the affiliation of their languages, the relations of their beliefs to those of other races, scarcely one perhaps has as yet been satisfactorily answered; and it is quite possible that at present the duty of the explorer is to amass materials rather than to apply them to the solution of these problems. This is the view taken by Mr. Bancroft in the encyclopædic work, on the first two volumes of which we have already made some remarks.* In his third volume Mr. Bancroft devotes himself to the examination of the myths and dialects of the Central American tribes; and if we look to the amount of material brought together, the execution of his task is worthy of all praise. Nor need we seriously qualify this judgment when we turn to consider the quality of the information here given. The writer deserves credit for diligence, conscientiousness, and discernment. The scrupulous avoidance of all speculation, of which he makes, we doubt not, a perfectly sincere profession, is in an explorer a merit of the highest kind; nor can the reader complain if, when the value of the evidence is the very point to be ascertained, the author patiently goes through the testimony of all the witnesses whose words seem to be in any way worth noting. This method must necessarily involve a certain amount of repetition, nor is it easy to see that any other method could be safely followed. Still the convenience, if not the comfort, of those who have to work on the materials brought together should not be lost sight of; and wherever it may be possible to avoid repetition by reference to other portions of the work, the toil involved in doing so ought not to be grudged. Unfortunately Mr. Bancroft has either grudged this toil or has thought himself not called upon to undergo it; nor has he avoided the perils of speculation so completely as he fancies. It is not easy, perhaps not possible, to examine the myths of a people without examining their religion; it is most of all difficult in the case of tribes to whose isolated and unconnected traditions or stories the name of a mythology cannot in strictness of speech be given. But Mr. Bancroft has already examined elaborately the religious systems of the Nahua and Maya races in his second volume; and if the scrutiny of their myths, such as they are, seemed to lay him under the temptation of transcribing much of what he has said before, he should, at the cost even of some trouble, have striven to resist it. In such undertakings as these it is manifestly easier to write a big book than a small one; and Mr. Bancroft has chosen the less difficult course. In his second volume we were told that at the feast of Xiuhtecutli, the god of fire,

> each naked and bound captive was borne upon the shoulder of a priest up to the summit of the temple, where smouldered a great heap of glowing coal. Into this the bearers cast their living burdens, and when the cloud of dust was blown off, the dull-red mass could be seen to heave, human forms could be seen writhing and twisting in agony, the crackling of flesh could be distinctly heard. But the victims were not to die by fire; in a few moments, and before life was extinct, the blackened and blistered wretches were raked out by the watching priests, cast one after another upon the stone of sacrifice, and in a few moments all that remained upon the summit of the temple was a heap of human hearts smoking at the feet of the god of fire.

In the present volume the worship of the fire-god is described with more full detail, and here we read that

> each captive was bound hand and foot, and so carried up to the top of the cu, where smouldered a huge heap of live coal. The carriers heaved their living burdens in; and the old narrative gives minute details about the great hole made in the sparkling embers by each slave, and how the ashy dust rose in a cloud as he fell. As the dust settled, the bound bodies could be seen writhing and jerking themselves about in torment on their soft dull-red bed, and their flesh could be heard crackling and roasting. Now came a part of the ceremony requiring much experience and judgment; the wild-eyed priests stood, grappling-hook in hand, biding their time. The victims were not to die in the fire; the instant the great blisters began to rise handsomely over their scorched skins it was enough, they were raked out. The poor blackened bodies were then flung on the "tajon," and the agonized soul dismissed by the sacrificial breast-cut (from nipple to nipple, or a little lower); the heart was then torn out and cast at the feet of Xiuhtecutli, the god of fire.—P. 388.

It is obvious that with repetitions on this scale a thousand pages may easily become three thousand without adding materially to the knowledge of the reader, whose labour in sorting the materials laid before him is in proportion increased. The conscientious anxiety of the author to adduce the evidence of all his witnesses produces the same unlucky result. The myths of the god Quetzalcoatl are substantially, in Mr. Tylor's belief, the myth of the Delian Phoibos, who, having journeyed westward, is seized by an irresistible longing to return to the home whence he set out in the East. The story describes the magnificence of his palace in the West—a palace gleaming with the golden glory which rests on the abodes of Tantalos and Alkinoös; but it depicts the god, although sick unto death, as heartily contented with the splendour which surrounds him; and the yearning for the eastward journey is inspired by a potion administered to him by the god Tezcatlipoca, in whom Mr. Tylor sees the young sun of the morrow. The great task of the latter is to overcome his reluctance to taste the strange drink offered to him; but drink it and go he must. "How is thy body and how art thou in health?" asks the god, who comes in the guise of a sorcerer:—

> "I am exceedingly sick," said Quetzalcoatl; "all my body is in pain; I cannot move my hands nor my feet." Then answered Tezcatlipoca, "Behold this medicine that I have; it is good and wholesome and intoxicating; if thou wilt drink it, then shalt thou be intoxicated and healed and eased at the heart, and thou shalt have in mind the toils and fatigues of death and of thy departure." "Where," cried Quetzalcoatl, "have I to go?" "To Tullantlapallan," replied Tezcatlipoca, "where there is another old man waiting for thee: he and thou shalt talk together, and on thy return thence thou shalt be as a youth, yea, as a boy." And Quetzalcoatl hearing these words, his heart was moved, while the old sorcerer, insisting more and more, said, "Sir, drink this medicine." But the King did not wish to drink it. The sorcerer, however, insisted. "Drink my lord, or thou wilt be sorry for it hereafter; at least rub a little on thy brow and taste a sip." Quetzalcoatl tried, and tasted it, and drank, saying, "What is this? It seems to be a thing very good and savoury; already I feel myself healed and quit of my infirmity; already I am well." Then the old sorcerer said again, "Drink once more, my lord, since it is good; so shalt thou be the more perfectly healed." And Quetzalcoatl drank again, he made himself drunk, he began to weep sadly, his heart was eased and moved to depart, he could not rid himself of the thought that he must go; for this was the snare and deceit of Tezcatlipoca.—P. 243.

Such is the account given by the Spanish Franciscan Sahagun, one of the first preachers sent to Mexico; but, in addition to this version, Mr. Bancroft gives us those of Clavigero, Torquemada, J. G. Müller, and others. All of these have their characteristic features, which are well worth noting, the reluctance of Quetzalcoatl to drink in one story giving place to extreme eagerness in another. Still, without injury to the plan of the work, there is little doubt that all these legends might have been analysed much more briefly and with equal effect. There is less need, and therefore less excuse, for repetitions of the loathsome details of the Nahua human sacrifices. The account of the victim, first pampered and then slain, in honour of the god Toxcatl, given in the third volume (p. 424), has already been given in the second. Nevertheless here we have all the details again—the honours paid to the victim, his marriage to the four maidens, his ascent of the hill, breaking his flutes as he goes along, until he reaches the summit, when Mr. Bancroft breaks off. "By sickening repetition we have learned to know the rest," he says; but in the same way we had learnt much, if not all, that went before; and surely it might suffice to give once only the horrid details of the immolation of women, whose skin, flayed off the instant after their hearts have been torn out, is put on by one of the priests, who draws it upon him like a glove, while another priest veils his face with the skin of the thighs. It is perhaps necessary that these horrors should be recorded; nor can we press in such cases the precept that Medea should not slaughter her children on the stage. But, the account once given, a reference should, wherever possible, take the place of repetition, and in this volume it might do so very often indeed.

In some, perhaps in many, respects Mr. Bancroft's fate is a hard one. He has taken up a subject of singular intricacy, involving the examination of an enormous mass of unassorted material; and, instead of having this task lightened by the exquisite beauty which charms us in the hymns of the Rig Veda or the creations of Greek poets, he has to wade through an ocean of horrors, seeing everywhere the awful signs of the most bloodthirsty religion that has ever defiled the world, the hideous life of a people in whom all sense of beauty seems to have been dead, and in whom the horror of their religious system is relieved only by the long sermons which take the form of prayers. Some of these, at least in parts, are edifying enough; but they are wonderfully like each other, and, after reading two or three specimens, the monotony becomes wearisome. Unfortunately this is not all. If we could but be sure that we have before us the genuine documents of old Mexican liturgies, we should take the tedious repetition with such patience as we may command; but Mr. Bancroft candidly acknowledges that we cannot have this assurance; nor can we doubt that Father Sahagun and others have in their versions thrown over them a colouring borrowed from the Old Testament and the New.

Lastly, we must again remark that Mr. Bancroft's profession of avoiding all speculation is not altogether borne out by his practice. It would be hard indeed to hold him to the strict letter of his bond. Not only, however, do we come across a good deal of speculation, but some of this speculation seems to be contradictory. The Abbé Domenech, like the Abbé de Brasseur, sees in Quetzalcoatl simply a human ruler, or a series of human rulers, who in process of time have been deified. To this euemerism, which has been ridden to death in the regions of Greek and Roman tradition, Mr. Bancroft replies by asserting that—

> Quetzalcoatl cannot be a representative and a national god of the Toltecs, without having an original nature-basis for his existence as a god. It is everywhere the case among savages with their national god, that the latter is a nature-deity, who becomes gradually transformed into a national god, then into a national king, high-priest, founder of a religion, and at last ends in being considered a human being.—P. 279.

This is probably true; but it is not easy to reconcile it with the statement in the second volume (p. 29) that, among these tribes "a successful leader is first feared as a man, then reverenced as a supernatural being, and, finally, himself, or his descendant, in the flesh or in tradition, is worshipped as a god."

We might find questionable speculation in other statements, as, for instance, that mythology generally describes "the present inhabitants of the world as descended from some nobler race," whereas the myth of Prometheus is at least as significant as that of the Hesiodic ages. It is also a perilous thing to assert that the phallic cultus, starting with purity, degenerated into beastliness amongst Greeks and Romans as they became "more sophisticated" (p. 508). But it would be ungracious and invidious to multiply such objections. We have spoken plainly of the faults

* *Saturday Review*, March 6 and September 11, 1875.

which are common to this volume with those which have preceded it. We add with pleasure the expression of our gratitude to Mr. Bancroft for the conscientious toil which he has bestowed upon a work which has evidently been to him a labour of love, and which will do wonders towards smoothing the way for future inquirers.

GENERAL DUCROT ON SKIRMISHING.*

IN England, if a general officer wishes any part of the army drill to be reformed, he prepares his proposed instructions carefully, and then submits them for Horse Guards' approval before they can be, as in the recent instance of General Lysons's work on Piquets, even "provisionally" approved for trial with the troops. In France the process appears at present to be much more summary and direct. A general commanding an army corps thinks that a part of the drill-book may be advantageously modified. He modifies it accordingly, and then, having added a preface addressed to the officers under him, recommending it and explaining its merits, he forthwith issues it as their standing guide. This system may seem at first sight to have the advantage of simplicity, but in truth it is really the reverse. There are eighteen of these army corps commands in France; and if each general at the head of one who happens to be an active man is to deal just as he pleases with the details of tactics, the result cannot fail to be confusing, and may possibly turn out very damaging when the army of which these corps are, after all, but large units, is suddenly brought together for common action.

If it be asked how such an evident mistake has arisen, the answer is simple enough. The existing French Constitution, or what does duty as a Constitution, although it has a soldier for President and another soldier under him for Minister of War, has yet provided no real substitute for the deposed Imperial authority over the military part of the nation. General de Cissey is a War Minister, much as we understand the word, only with rather more disciplinary power and right of interference than a civilian administrator could well possess. But he is not a Commander-in-Chief in the technical sense. He does not possess the full executive power over details wisely delegated by our War Office to that functionary, nor even the somewhat analogous but less strict right of control exercised in Austria by the Archduke Albert in his newly-created post of Inspector-General. Of course far less can he have the summary and complete jurisdiction of a Minister who is the direct agent of a sovereign of active mind and large professional knowledge, trained himself as a soldier; as is the case with General Kameke at Berlin, or General Miletin at St. Petersburg, whose orders are received simply as those of their respective Emperors issued through the proper official channel. And from the gap thus left in the military hierarchy of France, which Marshal MacMahon—for sufficient reasons, no doubt—does not care to fill, it follows that the generals of corps have each in peace time come in a manner to be commanders-in-chief within their own spheres; a result encouraging enough to individuality no doubt, but likely to be very hurtful to the unity of action which is not less necessary. Those among us who raise theoretical objections to Horse Guards influence and Horse Guards authority as though they were things blamable of themselves, should be careful how they condemn that in the abstract which is a primary condition of good order and discipline in a large standing army which the Sovereign does not personally superintend. The highest point of praise awarded to us in Colonel Bronsart's recent survey of the various European military systems is for the practical nature of our administration, which, by the simple contrivance of a Commander-in-Chief subordinate to, and yet in professional details independent of, the Secretary of State, gets over the apparent difficulty of subjecting the whole military force, with its complicated machinery, to a civilian Minister himself responsible to Parliament. That the abolition of the office would lead either to lamentable confusion for want of a head to control, or to still more lamentable indifference for want of a hand to stimulate, we have proof palpable in the work before us, and in the manner in which it comes before the public. If there happened to be an energetic man like General Ducrot in command of every one of the French Corps, we might have eighteen such handbooks, each enforced on one section of the army, and each thrusting its system on a confused public which could have no better means of judging of their worth than the reputation of the different writers. Something of this kind is going on indeed at present; but our author's name stands so much above that of his comrades that his volume was at once treated rather as a national work than as the mere official guide to the 8th Corps, which is all that it assumes to be.

Those who have thoroughly studied the history of modern skirmishers—their rise in the American revolutionary war, when the Provincial levies became models in this respect for their allies from Europe; their progress into formidable consistency, as they covered the advance of those scattered columns which, under Jourdan, Pichegru, and Moreau, replaced the old line tactics; their dash and energy when developed fully, so far as the imperfect arms of the day allowed it, under such tacticians as Ney and Lannes; and, finally, the great extension of power gained for them by the rifle, as first illustrated on the open grassy slopes round the hill of Solferino—must not expect to gain from what General Ducrot writes for his men any startling reforms or novel theories. The chief surprise the intelligent reader will feel is at finding how simple, and withal how generally understood already, are the principles here so earnestly laid down. But then they are generally understood just because the world has been anxious to discover the secret of the extraordinary military successes which have created the German Empire, and because sensible men, not to speak of experts, are well aware that such victories as we have watched with astonishment—victories so thoroughly won, so often repeated—are due above all to the quality and training of the infantry. Brave and active cavalry, bold and dashing gunners, ready and skilful engineers, efficient trains, an intelligent staff—these are all essential parts of that mighty machine, the modern army. But without a numerous and efficient infantry to fight the real battle, the other arms, however excellent, would be all but useless. For their benefit as regards humility they may be reminded that the infallible test of real usefulness, the proportion of losses inflicted and suffered, is invariably on the side of that arm which they are apt to regard as an inferior part of the service. Modern improvements in war have done nothing to shake this truth, which is founded on statistics more trustworthy than the finest theories of the sabreur or artillerist. And General Ducrot, in the capacity of tactical reformer, is strictly in the right in addressing himself in the first place to the improvement of his infantry.

The whole moral of the handbook lies in the extract from Napoleon's Correspondence which serves for its motto, and which closes with the prophetic words, "I do not see why I should not prefer a corps of skirmishers, regularly organized, to one which becomes such merely by the force of circumstances"; this remark being deduced directly from his own observation that in modern battles the fire of infantry has an invariable tendency to degenerate into skirmishing. Writing thus towards the close of his career of warfare, the Emperor in reality saw no further than the Prussian Bülow had done many years before, when he brought back to his own country the experience of the American War of Independence, and declared, with the foresight of genius, that battles would have to be fought and won by skirmishers. And Napoleon, as is now perfectly understood, never gave himself time to work out the tactical reforms which floated through his brain. He made no such change as his own deduction should have led him to. What his infantry were in their training at Austerlitz, that they remained until Waterloo put an end to all his opportunities. Nor did any one follow up boldly the indications he had left of what true progress in tactics should be, until May was enabled, by watching the events of 1866, to revive and carry it on. The *Retrospect* at once gave the form of reality to the vision conceived by his countryman Bülow, three-quarters of a century earlier. Combated, defended, criticized, and expounded by turns, the famous Essay did such a work of reform as no other professional pamphlet of the age has accomplished; and Ducrot's *Instructions* are but a new testimony that all tacticians who hope for success are following on the same lines laid down eight years since by the unknown captain of Prussian infantry, and the opinions which drew on him so much censure from his comrades that he dared not avow his authorship.

This is apparent in every one of the hundred and sixty pages of the little book before us; nowhere perhaps more than in its opening paragraph, which says:—

> The long range of artillery, the rapidity with which the modern infantry weapon is loaded, the accuracy of fire, have produced as a consequence the dispersed order of fighting. This order, which has now become the chief, is in fact the only one that enables the crushing fire of the enemy to be lessened in its effects, whilst allowing one's own, by a judicious use of frequent volley firing, the utmost possible power and precision. Moreover, it gives the means of acting against the points fixed on by successive attacks pushed on more and more up to the decisive part of the struggle, by turning to advantage the nature of the ground and the shelter found on its surface.

And the author goes on to deduce from these well-known considerations five broad rules which he deems essential. They are chiefly as follows:—The skirmishing order of battle must be subject to forms of a simple general character, easily modified in their application according to the ground, without affecting the system as a whole. Each man must be accustomed to act independently in his own sphere, whilst helping towards the common end. Volley and position firing are to be used as far as possible to save the waste of ammunition. Commands are to be so arranged that, so far as it is feasible, every officer may find in his own the supports that he requires. And, in short, the disorder inherent in a dispersed system of fighting must be regulated with care so as to attain the maximum of useful action.

The sting is evidently plainly in the tail. But if we except the weight attached by General Ducrot to volley firing, there is plainly nothing original in his recommendations. And if he deviates from May's teaching in attaching such importance to the retention of skirmishers under their proper chief, he does so in very good company. For many of the best of the German tacticians are notoriously of opinion that their leading reformer went too far in his belief that the time had arrived when men and officers in action could no longer hope to retain the bonds of company or regimental union, and must be prepared to lead or follow the nearest of the "horde" of skirmishers without regard to anything but setting forward.

General Ducrot proceeds to follow his theory into practice through the different parade-ground schools of the group or section, the company, and the battalion. In a fourth and fifth chapter he shows how this teaching is to be further practically carried out on

* *Instruction des Tirailleurs; Théorie-pratique; pour le 8e Corps d'Armée.* Par le Général Ducrot. Paris: Berger-Levrault.

broken ground, by the paloton and the battalion; taking pains, by the way, to instil into those he addresses the same sort of respect for private property that makes it necessary with us to legalise autumn manœuvres by special Act of Parliament, and reminding them that they can seldom have the opportunity of this exercise until the harvest is off the ground. In his "paloton," or fighting unit, to be formed for the practice of two or even three of the weak companies of a French regiment on its peace footing, since "instruction with less than a hundred men is without analogy to what goes on in war," we recognise of course a rough substitute for the strong company of the German army which is now avowedly the universal model. Should any doubt remain as to where this distinguished French general looks for his principles, his own advice to his officers to study the works of Vardy, Scherff, and Boguslawski must dissipate it. And if it is impossible to praise the system which is allowing all this labour to be spent, so far as its official use goes, on a mere fraction of the service which General Ducrot desires to elevate, it can at least be permitted us for another purpose to point to the attention which the handbook finds with his countrymen. There is a lesson that should come home to a certain school in our own army in the striking proof which this handbook and its reception afford, that to study the best foreign model, and seek to apply the lessons of its success in the field, does not, in the changed state of feeling in France, throw on an officer the unmerited reproach of running after novelties, and doing discredit to the traditions under which his country won honour in the field in days gone by.

THE FOOL OF THE FAMILY.*

THERE is an air of freshness in some of these stories which lifts them out of the common run of the minor tales generally contributed to a magazine. Shrewdness, good temper, and that subtle tone which marks the man of good society, lend their several influences to make most of these *historiettes* bright and pleasant; and the reader's interest is not often suffered to flag because of the author's dulness, or by reason of those dreary wastes of words, without ideas which are generically known as padding. Indeed the first story of the collection, "The Fool of the Family," is remarkable for its many touches of good sense and keen observation. It is a little bit of real life as known to more than one young prophet whose native village does not honour him, and whose enemies are those of his own household; but who manages nevertheless to climb the slippery ladder of success by his unaided efforts, and gets before it is too late an attentive hearing for his once despised and interrupted utterances. Between the ugly ducks who are in point of fact fledgeling swans, and the so-called swans that are nothing but cackling geese, genius on the one hand, and the hopes of friends on the other, often come to grief; but time generally puts the mistake right before it is too late, and "the fool of the family" gets his innings like the petted genius before him. This, at least, is the doctrine preached by Mr. Dangerfield in the bright little apologue of real life which heads the collection.

The characters of this short story are well drawn and cleverly sustained. Edward Wynter himself is a happy sketch. Not brilliant, but plodding; not handsome to a ridiculous excess, but sufficiently good-looking to be assumed to be a fool in consequence; alone in London with ten pounds in his purse, and not a friend to help him to make his crown a pound before it was all gone; the consciousness of something in him, if he could only find the right method of bringing it out in serviceable form, but his normal habit of mind depression, and want of self-confidence, as a set-off against the overweening vanity of his early boyhood; dedicating himself to literature, but, "fool as he had been accounted, not enough one to think the literary citadel was going to be taken by storm by the crude fancies of a boy"; guessing "what not every one of his experience has discovered, that authorship is a knack, a trade, a thing to be slowly learnt, an art as much as painting a picture or forming a statue"—such as he is, we see him like a photograph before us; and we fancy that we can detect certain touches which prove the picture to have been taken from the life. We will not betray the secret of his career. Whether his honesty in refusing to write against his political convictions brought him bane or blessing, whether he discovered the heartlessness of Amy Dashwood for the second time before it was too late, or was taken in for life, and whether he understood pretty Lily Fontaine in time for their mutual happiness, or let her sweetness fade ungathered, the reader must find out for himself. The story has already been seen by many, having with the rest of the series appeared in the *New Quarterly Magazine*: but we suppose that its present form will find a new circle of readers, and, we venture to add, of admirers.

The next tale, "Splendide Mendax," deals with a bolder theme and strikes a stronger chord. While the "Fool of the Family" dealt with character, this owes its interest rather to scenery and situation. The wild grandeur of the Shetland Islands, and the strangely beautiful and as strangely cultivated girls, daughters of the blind old minister of Northray, are put before us with remarkable vividness. There is some unavoidable talk about Vikings and the like; but who could have foregone the temptation? Given a young lady steering a small boat on a stormy sea, a young lady with yellow hair, and wearing a small felt hat in which is a single feather of the sea eagle, whose touch on the tiller, as the Captain says, "is as light as a feather, and as true and as strong as steel," and we must of necessity submit to the old Norseman and their maidens:—

> To Eric Ericsson, still stirred with his fancies of the Northmen, the somewhat matter-of-fact praises of the captain sounded not incongruously. It was fit that a daughter of the sea-loving Vikings should herself be fearless and skilful on her native element. And, in truth, the tall, fair girl, with eyes which seemed to reflect the vivid blue of the sea, with her hair repeating the tone of the golden beach, and her complexion, which was like nothing so much as the pale, rosy lining of sea-shells, had in her, to his idea, some vague repetition and reflection of sea-tints and sea-tones, and she got to seem to him, somehow, herself sea-born and sea-belonging. Such a form and face as hers, he thought, must Hilda the sea-maiden have had, for whom the Knight of Lofoden won the golden bowl—Hilda, the fair-haired daughter of the Sea-king, who, when she lost her knight's love, made no complaint, but plunged into the whirling sea-pool bearing the guerdon with her, and was seen no more by men.

To this young lady belongs a sister of even greater beauty and richer colouring. They are first-rate classical scholars, and read Greek and Latin as other girls might read French and German. Their whole literature, indeed, seems to be comprised in the classics; and when they speak of novels they give "Theagenes and Chariclein" and "The Doris and Chloe of Longus" as their favourites. We have already seen what one of them is on the sea, and both are as bold and fearless as moral innocence and bodily hardihood can make them. As the cousin who has come to visit them, one Eric Ericsen, a "young man of three- or four-and-twenty, fresh from hard-won honours at an English University," is also handsome, bold, and cultivated, the inevitable result takes place; and both the girls fall in love with him, while he loves one secretly, and admires the other with a frank intensity that misleads both. It is his first friend Ruth whom he loves, but her sister Miriam whom he admires with such delusive frankness; so delusive, indeed, that Ruth, who loves him, gives him up to her sister, while Miriam accepts him as the captive of her charms, without a doubt as to the reality of her conquest. So sure is she that their cousin prefers her to her sister, that she does not scruple to win a promise from this last not to take him from her, as she had taken a former admirer, also a cousin, one Eric Sindal. And the main passion of Ruth's life is devotion to her sister, she gives the promise, and repents in the orthodox way. All things come right, however, by the return of Eric Sindal, and his resumption of devotion to Miriam; making the *splendide mendax* of Ruth of no avail when she looked calmly into Eric Ericsen's face and said, "Eric, my dear cousin, I have promised to marry Count Sindal." But if this story fails in the delicacy of touch and treatment which makes the charm of the "Fool of the Family," it has more vividness of colour, more movement and fresh air, more passion and dramatic strength, and thus wins its way on other grounds and for other merits. One thing only we would object to in it, the character and personality of Count Sindal, which reads strangely inharmoniously to the time, place, and conditions of the story, making the action of his arrival and Miriam's betrothal more like the artificial interference of a *deus ex machinâ*, called in at the last moment to get the actors of a drama out of a muddle, than like the natural result of natural circumstances. We have no doubt that Norwegians are to be found like this mincing and affected young gentleman, but they are not typical, and the Miriams of the Shetland Isles would not marry them, still less love them. In short stories we want fidelity to recognized types; if any ethnological character is to be introduced at all; and we feel it to be a mistake in art when a Norwegian is drawn as a French exquisite. This is the most glaring bit of false colouring of which our author has been guilty, but it is very false, and no special pleading could make it otherwise.

In "Beechwood Revel" and "Giulio Vescona, Poet and Painter," we have a curious reduplication, and at the same time variation, of the same figures. In the former, Stephen Goodlake, the "strong" man, is a ruffian, while Lord Vereker, slighter, fairer, more refined, is the better man of the two even in the matter of fisticuffs and throttling. There is also one girl between them, whom both love and to both of whom she has given—or fancied she has given—her heart. But in "Beechwood Revel" it is Stephen Goodlake who is the fancy, Lord Vereker the fact; while in "Giulio Vescona" it is Giulio, the slight, refined, young poet, painter, musician, lover, who is the fancy, and Norlano, the brave Free Lance, who is the fact. As the two stories are consecutive, the repetition of *motif* comes curiously; and not even the ingenious variation made in it prevents one from feeling the sameness of idea as a confession of barrenness of invention in the matter of characters. The accessories and local colour are of course widely different, and the stories are spirited and pleasant; but change of draperies is not the same thing as novelty in creation; and Mr. Dangerfield has only changed the dress and background of his puppets, while they themselves are made to do double duty. Also, how came he to lay himself open to such a comparison as he has done, when he says, at the end of the chapter detailing Guilio's love-making to Olympia, "the lute was played on no more that day"? The idea is too manifestly a version of the famous line, "Quel giorno più non vi leggemmo avante," to be overlooked, and the likeness is not to Mr. Dangerfield's advantage.

Of the last two stories which make up the collection, "Miss Olivia's Tempest" is a bright and lively farce, better adapted for the stage, for which indeed it seems to have been written, or from which taken, than for a narrative. All the lines are as old as the hills, and we know from the first that the strange lady whom

* *The Fool of the Family, and other Tales.* By John Dangerfield, Author of "Grace Talmar," &c. 2 vols. London: Sampson Low & Co. 1876.

Colonel Standish rescues from the footpads is no other than that West Indian heiress, "with the manners and breeding of a Jamaica negress, whose conversation is probably of nothing but sugar hogsheads and puncheons of rum, whose skin is black and her nose flat," whom he had refused his father so peremptorily to marry. Of course he never heard her named, nor cared to verify for himself whether his not too flattering suspicions were true or not. This stock absurdity of the stage, rendered necessary by the brevity of the piece, is more than absurd in a story, and from the beginning strikes the false note which makes the whole thing discordant. But "Miss Olivia Tempest" would go well on the stage; and, if wanting in originality of construction, being indeed but a repetition of a dozen previous copies, would bring the house down by its sprightly dialogue and telling situations, besides affording opportunities for pretty dress and effective manners. In the last story of all, "A Tragedy Queen," we come to a graver theme, more passionate emotion, and a decidedly original catastrophe; but we miss even here the freshness and vitality of the earlier stories. The vein has been worked a little thin, and we should say that Mr. Dangerfield's powers of invention need rest for a time. His gifts are so many, and his manner so pleasant, that it would be a pity were he to over-write himself or exhaust in the least his fund of fancy and originality. Good-tempered, bright, refined, and lively he must always be; but more is needed for the success of a writer of fiction than even these desirable qualities; and we should be sorry to see Mr. Dangerfield repeat the common mistake of novelists—writing below himself because writing too fast and too much.

JAPANESE ART.*

JAPANESE art was practically unknown in this country before 1867. In that year for the first time its separate existence was revealed to the Western world, and a mighty revolution was effected. Naturally revolutions are of French growth, and it was at Paris in the *Exposition* that Japan asserted her artistic individuality. A mysterious personage, the Shôgun, or hereditary Prime Minister (vulgarly known as the Tycoon), whose office has been abolished, again emerged from the obscurity which had enveloped him before European Powers began heaping embassies and presents on him, under the delusion that he was the genuine Emperor, and sent over a Commission with objects of Japanese manufacture. These objects may literally be said to have burst upon the sight of European collectors. It is true that several great collections had long before secured fine examples of Japanese work. One museum, the first in Europe, was formed so long ago as the beginning of the eighteenth century at Dresden, by Augustus the Strong; and the museum in Prince Maurice's Palace at the Hague may date from the same period, while there has long been a Japanese collection at Leyden. But the world at large knew little of them, and our knowledge, if we had any, was chiefly derived from the reports of a few travellers, whose tales, wonderful as they were, by no means came up to the reality. Since the dispersal by sale of this exhibited collection, a great amount of interest has been excited in Japanese art, and many of our artists are forced to confess that in several important respects it excels our own. In hitting the happy medium between nature and conventionality the Englishman has much to learn from the Japanese painter. In colour, again, his instinct is marvellous. In manual dexterity, and what some of our painters think more of than it is worth—namely, execution—he also may claim to be our teacher. In short, he has the patience and exactness of the Chinese, the fancy of the French, and a natural ease and humour that are all his own. Messrs. Audsley and Bowes observe an absence of four-footed beasts, except horses, from Japanese pictures; but even here, those who remember a tiger painted on paper which used to be at South Kensington will know that a Japanese artist could succeed where Landseer himself might have failed; and though the Japanese collection at Brompton is not what it might have been, and the authorities did not profit by the sale in 1867, while this particular picture was hung in a dark corner, it is but just to say that many Englishmen learnt there for the first time what were the glories of Japanese art. Messrs. Audsley and Bowes, speaking of the animal paintings which do occur, mention one feat so characteristic of the Oriental mind, and so illustrative of the manual dexterity to which we have referred, that we must quote it. It would appear to be a test of artistic skill to depict the *yema*, or horse, as rapidly and in as few strokes as possible; and we are told of an artist wielding two brushes, held at an angle and wide apart, but in the same hand, and using both together continuously to draw a horse, while, as if to increase the difficulty, he depicted it upside down.

So far as it has been published, the work of Messrs. Audsley and Bowes has a dual character. It treats in a kind of preface of the art of Japan generally; and in a separate treatise of "Keramics" specially. The object of the book, it is true, is to illustrate the Keramics only; but the authors are well advised in giving their readers some information on the larger aspect of Japanese ornamentation. The whole subject is novel as well as important, and the impartial student will be struck with many interesting facts, and with none more than this—he will see in Europe and Japan two wholly distinct styles, working on different principles, and yet attaining the same great end of high art. To the Western mind art is not a necessity or an instinct as it is to the Oriental. It was Mr. Ruskin, if we mistake not, who first showed in words the true principle on which foliage should be painted. The Japanese artists had worked on the same principle for centuries. It is, in fact, interesting to compare a spray of leafage from one of Mr. Ruskin's drawings, and a spray from the cover of a lacquer box or the side of a Hizen jar. But no comparison of our art with that of Japan can be carried very far. Compared with Chinese and Japanese painters, ours may be said to know nothing of colour. When an artist in Europe can be called a colourist it seems to be taken as a matter of course that he is not a draughtsman. Honourable exceptions occur, though at this moment it would be difficult to recall one. But the painter of a common hand-screen, or the designer of a pattern for a sixpenny cigar-case, shows such taste, such eye, and, what is more important by far, such cultivated knowledge of harmony in colouring, as even Mulready never attained. This is really the point which astonishes European students of Japanese art. The skill in drawing may possibly be acquired, and the colour may be imitated, but it seems to be denied to our race to have it by nature. Another remarkable point is well brought out by Messrs. Audsley and Bowes—the love of irregularity in ornamentation. The "method of dividing a surface into unsymmetrical angular spaces, and filling them with different designs, appears," we are told, "to be peculiar to the artists of Japan, and has, no doubt, arisen out of their dislike to diametrical division, and their restless love of variety." The authors give many beautiful examples of combinations of geometrical patterns with the irregularity here indicated, and some specimens of surface ornamentation from wall papers which are marvellous from the skill displayed in breaking up the diapers. Ornaments powdered or distributed at intervals over a surface are always treated regularly and formally here. In Japan the artist distributes his powdering irregularly, but with "unerring judgment and unvarying success." Our authors conclude with regard to them, in a kind of despair of home art, "We are strongly inclined to think that they depend entirely upon that inborn taste and accuracy of eye which appear to serve them at all turns, far better indeed than all the teaching of the schools assists us on similar occasions." Perhaps the most charming examples of this characteristic irregularity are given by the authors in the ceremonial bouquets represented on plate "G." They say:—

> Two rolls are in our possession, each of which is of considerable length, and entirely filled with representations of these bouquets, all different in arrangement and design, and having descriptions attached to them. . . . In the formation of the bouquets dwarf trees and clusters of giant flowers are associated together without the slightest attempt at ceremonial arrangement; indeed anything like uniformity or balance of parts appears to be studiously avoided in these groupings. A piece of bamboo sometimes rises vertically from the vase, amidst the flowers, with a stray leaf or two of its own; a delicate creeper twining round it, or a slender branch of some choice plant stuck through a hole in its side, and deriving moisture from water or soil contained within; or, when the bamboo is of considerable dimensions, with a perfect miniature fir or oak tree planted in soil contained in the top joint, and flourishing as luxuriantly in its vase as its more favoured friends on the mountain side.

All these characteristics come out strongly in the keramic manufactures. The form, the colour, the love of irregularity, all are equally illustrated. Messrs. Audsley and Bowes have endeavoured to give us some account of the different schools of the manufacture, such as the potteries of Satsuma, and Kaga, and Kioto, formerly called Miaco. The subject is a difficult one. The utmost secrecy has been preserved as to the methods and processes of the art, and our authors record the name of a martyr to the spread of knowledge among the Western barbarians. "We were informed by an intelligent Japanese Commissioner of, the Keramic department at the Vienna Exhibition that about two hundred years ago a manufacturer of porcelain in Hizen made what we know by the name of 'Old Japan,' and traded with foreign nations in contravention of the existing law. On this being discovered by the Government, the manufacturer, Tomimura Kanyemon, was compelled to commit the Hari Kari." Some of poor Tomimura's smuggled ware is to be seen at Dresden, according to our authors, and one cannot help wishing that the maker of such things of beauty had met a better fate. Messrs. Audsley and Bowes note that no Kaga ware is to be found in old European collections. They make no mention of the collection at the Hague, but can hardly have overlooked it. At the present time Kaga produces large quantities for the Japanese markets, and considerable exports of it have also been made from Yokohama. Yet until the Paris Exhibition its beautiful red, gold, and soft white ground were unknown here, so carefully had one of the principal manufactures been secluded from the foreigner. There is an interesting account of the Kioto potteries. The authors are of opinion that here the earliest were established. This is, of course, likely, as Miaco was for centuries the residence of the Court, and the centre and seat of the arts. There dwelt the Emperor in an invisible glory, surrounded with a wealthy and ostentatious Court, all the members of which vied with each other in refinement and luxury. It was for their pleasure that many of the greatest triumphs of lacquer-work and ivory carving were produced, and no doubt it was for them also that the more delicate and minute kinds of porcelain would be designed and ornamented. Many of the particulars given by Mr. Audsley and his able coadjutor will be new to English readers. Their researches have been carefully conducted, and, while they tell us more than ever was told before, they are not afraid to say that they do not know when they do not.

* *Keramic Art of Japan.* By G. A. Audsley and J. L. Bowes. Parts I. and II. Liverpool. For Subscribers.

Two parts of the work are now before us; but it is to be continued until seven parts, forming two volumes, are completed, and to be illustrated by thirty-five coloured plates, as well as autotypes and woodcuts. The plates so far are extremely good, the colours delicate, and the printing exact. They are by MM. Firmin Didot, of Paris. A blue plaque, Plate XLV., is a marvel of printing in colour. The type, the paper, in fact, everything concerned in the production of the book, is most creditable to its authors. A limited number of copies only are to be issued; but the public will, it must be hoped, do what they can to encourage the authors in their costly and magnificent undertaking.

AMERICAN LITERATURE.

THE record of the corps once known as the Second Dragoons—now a regiment of ordinary cavalry, like our own similarly named troops, but always retaining, like the rest of the United States cavalry regiments, more of the old character of the proper dragoons, or what are now called mounted rifles—is in miniature a record of the services and fortunes of the Federal army. Raised in a great hurry for a particular service; learning the rudiments of soldiership in the field, and acquiring real military discipline and efficiency by the time the special need is over; then forthwith disbanded or "converted," by the paltry economy of a Congress which had so little excuse for parsimony that it actually found a difficulty in disposing of the revenues it raised by a tariff devised chiefly for the sake of Protection; employed constantly on hard and tedious duty, so unsatisfactory and yet so perilous that the outbreak of a real war was not merely a gratification to soldierly pride and ambition, but a relief from the fatigues and anxieties of ordinary peace-service; always, whether on police duty upon the Indian frontiers or engaged in open hostilities with a civilized enemy, opposed to forces so inferior in material advantages, and generally in numbers, that nothing but extraordinary advantage of position and skill in their use could have made them formidable—the American army has had experiences as unlike as possible to those of the British. In the first war in which the Second Dragoons were engaged, as in their recent Indian campaigns, they were confronted by savages far inferior in numbers, in equipment, and in warlike quality to the Maoris, the Malays, and the mountaineers of India. The followers of Osceola were outnumbered almost as much as overmatched in resources by their white antagonists; but, on the whole, they contrived to beat, worry, and baffle them to such a degree that, but for starvation, the savages would probably have remained masters of the field; just as a few years ago some sixty Modocs contrived to hold out for eight months against the entire available power of the Union. It can hardly be said that the plains of the Far West or the swamps of Florida are more difficult ground than the bush of Ashantee or New Zealand, or the jungles of Burmah and Malacca, where our troops have never failed to defeat enemies outnumbering them by ten to one, nor failed, save in the case of the Maoris, to convert victory into conquest wherever the climate allowed them to remain. There is, therefore, a certain antecedent feeling of contempt in the British mind for American soldiership—a feeling greatly strengthened by the boastful tone in which American writers speak of such exploits as the conquest of Mexico, where troops of English race, far outnumbering those that subdued India, were opposed to an enemy decidedly inferior to the Mahrattas, and in no wise comparable to the Sikhs or the people of Scinde; of the Confederate war, where the Federals were always two or three to one, yet were beaten in three-fourths of the pitched battles on which they ventured, and conquered at last by sheer force of numbers and of naval ascendency, the rivers enabling them everywhere to penetrate the enemy's country without first fighting his armies; or of successes achieved against ourselves, when we could devote but the leavings of our strength to the purpose, by troops which never showed themselves in an open field. The impression is just only in so far as relates to the extravagant boasts so repugnant to English taste. In nearly every individual fight of which American soldiers—we say nothing of Fourth of July orators—are proud, the immediate danger and difficulty were great, with perhaps the exception of Bunker's Hill, where the colonists fled as soon as their entrenchments were reached, and of New Orleans, where they never moved from under a cover so complete that there was no danger in holding it, and no chance of being driven from it. In the Indian wars the peril is small when the troops are well guided and well led; but the fatigue of hunting the foe through interminable tangles of trees and strong creepers, knee-deep in endless swamps, or of chasing him over illimitable plains, is exceedingly severe. These campaigns, of which the doings of the Second Dragoons in Florida and in Montana are fair examples, cannot be called in any sense glorious, but their ill success is in no way discreditable. In the Mexican war the enemy made up for inferior quality by their numbers and by the efficiency of their irregular cavalry; and though they were certainly not better soldiers than we have met in India, they were not oppressed by that sense of inferiority, that awe of the enemy, which all our enemies in Hindustan, except the Sikhs, have felt for English troops ever since Plassy. The intolerable falsehoods told about the Confederate war serve to conceal the real merit of the victors; as when one of the authors of the volume before us boasts of six successive "routs" of Early's army, and yet shows that it was always ready to fight as hard as ever (and that without reinforcements), and able in the sixth battle to resume the strong position in which it had fought the first. If Northern writers would admit that they had nothing to brag of as regards the result of the war, and that the Confederates showed themselves superior in individual soldiership on nearly every battle-field, the reader would estimate fairly the disadvantage at which the Federal troops stood from being the assailants, and very generally assailants of effective, though very slight entrenchments, the splendid, though wasted, heroism that was displayed at Fredericksburg, and the steadiness and discipline which saved M'Clellan's troops from annihilation on the Chickahominy. But in the face of a few main facts which cannot be concealed—such as the defeat of Hooker at Chancellorsville, the almost unmolested retreat from Gettysburg, the failure of every attack on Richmond, including Grant's, and the extraordinary fact that Lee held a line of earthen mounds thirty miles long for six months with a dwindling army of 45,000 men against the entire force that Grant could dispose of, a force certainly exceeding 150,000—it is simply suicidal for Federal writers to speak of "glorious victories," or to misrepresent the comparative strength and quality of the two armies. This fault runs through nearly every part of the volume*, the work, as it is, of several distinct writers, and spoils the whole. The story of the Mexican campaigns is perhaps the best and most modestly told; and the historian of the Florida war actually seems alive to the ridiculous aspect of the regimental achievements, and is content to suggest, with perfect truth, that it was not the soldier's fault if dragoons were sent into impassable swamps and jungles, or if, in places where Indians could lie hid for hours while half a regiment was beating all around, and actually now and then riding over their lurking-place, they could not catch the enemy. We are very sure that any leader of English troops would prefer half-a-dozen pitched battles ending in a forced retreat to such a trial of their temper and discipline, prolonged for weeks; and we are equally sure that the United States Second Dragoons would rather have faced a regiment of Prussian Cuirassiers or joined in the charge of the Light Brigade.

Mr. S. P. Bates's history of the Battle of Gettysburg† seems on the whole a mistake. It is not written with that keen and clear knowledge of military matters, that full perception of every detail of the three days' fighting, and of its bearing on the result, combined with a just appreciation and sound judgment of the whole from a strategical and tactical point of view, which would render a book of this size valuable as a complete record of a great lesson in the military art. It represents the Confederates as superior in numbers, which, besides being palpably absurd (Lee had not 60,000 men at Chancellorsville, and can hardly have brought so many into Pennsylvania, while he was deserted by his cavalry in the actual battle, and Meade had fully 100,000), falsifies the entire meaning of the story. It is true that the battle had an important bearing on the course of the war, though infinitely less than the contemporaneous fall of Vicksburg; but this is no reason for relating at extreme length the mere details of a desperate hand-to-hand combat—a "soldiers' battle," on the Southern side at least, if ever there was one. What Gettysburg did was to show the Northern army that they need not necessarily be beaten by the Army of Virginia, at whatever odds of numbers and position; to show that even the best-trained veterans of the Confederacy could not be sure of storming steep heights held by twice their number; to teach their generals that they could not effectively invade the North, though they might, if they chose, revenge the devastation of Virginia on the south-western districts of Pennsylvania; and to deprive Lee of many thousands of "that incomparable Southern infantry" of which a Northern historian of a temper different from Mr. Bates's cannot speak without a word of generous admiration and chivalrous sympathy. But the blow that broke the power and the heart of the South was dealt in Mississippi, and not in Pennsylvania, on the 3rd July, 1863.

General Sherman is in hot water, and nobody seems disposed to pity him if he should get severely scalded. Good fortune and the personal favour of Grant, rather than his own proved merits, considerable as these were, placed him over the head of half-a-dozen rivals in distinction and ability, in command of the second army of the Union. The fatal error of Mr. Davis completed his good luck by removing the General who had baffled and beaten him, and who was preparing for him a dangerous encounter in front of Atlanta, and by taking the Confederate army also out of his way. This laid Georgia and South Carolina at Sherman's feet, and when he had wasted and burnt defenceless districts to his heart's content, made him second to Grant in the list of Federal Generals. Grant's elevation made him General of the Army—in our phrase, Commander-in-Chief. In this position he chose to write a history of his share in the war, and, writing from such a position of vantage, he was bound to be considerate, careful, and reserved, especially towards subordinate officers and dead enemies. It is certain that he has not been reserved, and the general opinion of Americans qualified to judge pronounces that he has not been just or candid.

* *From Everglade to Cañon with the Second Dragoons (Second United States Cavalry): an authentic Account of Service in Florida, Mexico, Virginia, and the Indian Country, including the Personal Recollections of prominent Officers.* With an Appendix, containing Orders, Reports and Correspondence, Military Records, &c. 1836–1875. Compiled by Theo. F. Rodenbough, Colonel and Brevet Brigadier-General United States Army (late Captain Second Cavalry). Illustrated. New York: D. van Nostrand. London: Sampson Low & Co. 1875.

† *The Battle of Gettysburg.* By Samuel P. Bates. Philadelphia: Davis & Co. London: Sampson Low & Co. 1875.

The author of *Sherman's Historical Raid* * undertakes to refute his narrative upon half-a-dozen points of great military or historical interest, involving as many considerable reputations; and to do this by the evidence of documents written at the time (several of them by Sherman himself) and preserved in the military archives of the Union. He has called forth a pamphlet by Mr. C. W. Moulton †, who endeavours to show "that the documents published in the Review are, almost alone, sufficient for the refutation of the graver charges against General Sherman." We shall not attempt to decide between the controversialists; the mere fact that a man in General Sherman's position has provoked and indeed challenged such a dispute — and this no reader of his book can doubt — is a clear proof of his want of taste and judgment. General Lee, though the world would have welcomed a history of his campaigns from his own hand, steadily refused to write what must involve more or less of criticism on the conduct of others. General Sherman, who was by no means urgently pressed to write, has scattered pungent censures right and left so lavishly that men of every rank concerned as prominent actors in the war, from the then President and Ministers to Colonels and Brigadiers, are stung and aggrieved in their own persons or in those of their surviving friends.

The coasts of the United States have not, as a rule, that variety and striking character of beauty which is to be found in so many parts of Northern Europe. The course of ocean currents, and the absence of those vast glaciers-streams which have in countless ages carved the rugged tableland of Scandinavia into its actual wonderful forms, presenting such a multitude of different shapes of grandeur and glory, account for the difference, when we remember that the Northern Atlantic States all lie south of the latitude of the Alps and of Bordeaux, and that the coasts opposite to those of Great Britain and Scandinavia are still in the Glacial age. Nevertheless, the Nooks and Corners of the New England Coast ‡ possess beauties of their own, not the less worth studying that they do not resemble those with which we are familiar: and the volume in which they are lovingly portrayed may not only serve to guide the native explorer or the fortunate foreign visitor who has leisure for such research, but will prove a source of real enjoyment to those who cannot well hope to see the original. America, as a Western man remarked to a tourist with limited time at his disposal, takes a great deal of seeing. Its distances are so vast, its natural marvels so many and so impossible to neglect, its local varieties of scenery and climate so great and so well worth knowing, that unless a traveller has years to devote to the United States alone, he can hardly hope to do more than skim the cream of their attractions. Boston is the chief "sight" of New England, and after a visit to that famous and self-conceited city, there is hardly one of the thirty other States that does not seem better worth a minute visitation than the six bleak and comparatively barren colonies which trace their origin to the only class of emigrants who would have found that part of the continent congenial to their taste and temper. There is nothing in New England to rival the wonders of California, the eccentricities of Colorado, the splendour of the South, or the vastness of the West; even Virginia and Maryland in summer, or Pennsylvania in autumn, have claims which take precedence of all that are here preferred. Florida § is in climate and character, as in geographical position, the very antithesis of New England. The low part of the country, it would seem, reclaimed from the ocean, a sort of bank thrown up by the Gulf Stream between the Atlantic and the Caribbean Sea—a bank which is prolonged by the Antilles till it gives to the Gulf of Mexico, on the map, almost the appearance of a Western Mediterranean—Florida is nevertheless one of the richest, in soil and climate, of the semi-tropical States of the Cotton Belt. The water which penetrates her territory in every direction, and gives easy access to her inmost recesses by the light river steamers of America, is too widely spread over her plains and amid the roots of her vast and still living forests for the well-being of the settler; and even now the State is very thinly peopled in proportion to her resources—the least populous, in that sense, as the Puritan States are the most densely peopled in the Union. But she has enough of the resources of civilization not to repel the ordinary traveller by the fear of more than endurable discomforts; her mosquitoes are not more savagely greedy, and her malarial fevers, though more frequent, are said to be less dangerous than those of the Mississippian delta, or than the terrible "country fever" of the cultivated portions of South Carolina. The volume before us is a modest description of her charms; very simple and humble in comparison with its predecessor, as the present condition and aspirations of the State are humble when compared with those of her wintry but vigorous sisters.

The Literature of Kissing * is the title of one of those works which must be so troublesome to compile, and are so very tedious to read, that it is difficult to comprehend their existence—works a collection of which might serve as a sort of concordance of literature in general, each comprising all the quotations that can be brought by real or formal identity of topic under a single head. Here, for example, we have a solid book on Kissing, not didactic, historic, or physiological, but simply referential; quoting every notable or indifferent song, saying, couplet, verse, or sentiment on this most familiar theme that the compiler can find or remember in the course of perhaps half a lifetime's reading more or less directed thereto; or, it may be, simply collected by means of indexes, dictionaries, and concordances. Such a work might be serviceable enough mischievous were it now, as it once was, usual to read three or four pages of every book once begun; for any reader, however deluded by deceitful scenes and pretty sentiments in a half-hour's skimming of the pages, would be utterly sick of the very idea before he had read two or three hundred such, and long ere he had completed the task would have been seized with a disgust which might probably take the form of a solemn pledge never to be guilty again of an act associated with such painful remembrance. Happily nobody is obliged to read the book through; and we venture to say that not the most romantic schoolgirl in England will ever do so.

Mr. Shedd's *Famous Painters* † and Mr. Perkins's *Sketch of the Life and Works of Copley* ‡ are both works of artistic rather than personal interest. Both are sufficiently technical to be rather dry reading for the many who think it needful to affect a knowledge of the principles and details of art which they do not possess; and probably to be dropped by the few who honestly avow that, though they enjoy and delight in certain pictures or classes of pictures, they are neither artists, art critics, nor even amateurs in art or criticism, nor ever expect to have leisure to acquire a mastery of the latter any more than of the former. But outside of these classes are the people who do understand art and care about it; and to them both works, but especially the latter, may safely be commended. The former appears to be written for people with no great knowledge of the subject; and, if so intended, should have given them an occasional explanation which they will commonly be too vain to ask.

Mark Twain's *Sketches, New and Old* §, are nearly all capital, and all of them worthy of the author; short and lively, for the most part free from vulgarity and offence, and raising a smile more often than provoking a roar of laughter, but always amusing. This is the kind of book to take up while a patient is waiting for a dentist, a passenger for a railway-train, a client for his patron, or a man for a wife or sister who promised to be dressed in five minutes; and it is good enough to make all of them forget the vexation, and (all but the last) even to forgive it.

We have a long list of average novels—*Theodora* ‖, larded with doctrine and morals; *Hester Howard's Temptation* ¶, dubious on both points, *Her Waiting Heart* **, sentimental, tinged with silliness; *Clayton's Rangers* ††, patriotic-boastful, a tale of the Revolutionary war; *The Detective and the Somnambulist* ‡‡, police-sensational; and *Roderick Hudson* §§, which, compared with the rest, may be called a novel proper. *Centennial Skyrockets* ‖‖ are well named; the book is a splutter of poor ideas, bursting from an excited brain in all directions except the right one—above snatches of everything save common sense. We have also a collection of verse, including Ray Palmer's Poetical Works ¶¶, not bad, but not good enough to make us wonder that we never heard of them before; a charming *édition de luxe*, beautifully

THE SATURDAY REVIEW

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

Price 6d.

CONTENTS OF No. 1,057, JANUARY 29, 1876:

Armed Peace. Mr. Bright on Land. Spain.
Parliament Out of Session. M. Gambetta and the Senate
Protection and Free-Trade in the Colonies. The Great Northern Collision.
Elementary Teachers in Ireland.

Flattery.
The End of the "Reverend" Controversy. Governors and Consuls.
An Apparition *in Nubibus*. Montalembert and his Critics. The Soldier's Waste.
The Whisky War. The Old Masters at the Royal Academy—III.

Smith's Chaldean Account of Genesis.
Victor Hugo in Exile. Ralph of Coggeshale.
Kaye's Sepoy War—Vol. III. Literary Remains of Oliver Madox-Brown.
Bancroft's Native Races of North America—Vol. III.
General Ducrot on Skirmishing. The Fool of the Family.
Japanese Art. American Literature.

CONTENTS OF No. 1,056, JANUARY 22, 1876:

England and the Austrian Note—The *Edinburgh Review* on the Suez Canal Purchase—Pending Elections—The French Senate—Parliament and the Public Accounts—The American Amnesty Debate—A Trap for Politicians—Railways and Scenery.

Men of the World—Science and Morality—Public Speaking—Trail-Ultramontane Superstitions in France—A Friendly Political Correspondence—Piecework—Fashions in Bad Language—Cretan Embroideries at South Kensington.

Letters of Sarah Duchess of Marlborough—Kaye's Sepoy War. Vol. III.—Round My House—Fisher's History of Landholding in England—Fogg's Arabistan—Le Dernier des Napoléon—Story's Nero—Ten Years of My Life—Conifers and Peat-Soil Shrubs—The Squire's Legacy.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

THE SOCIETY of PAINTERS in WATER COLOURS.—The FOURTEENTH WINTER EXHIBITION of SKETCHES and STUDIES is NOW OPEN, 5 Pall Mall East. Ten till Five. Admission 1s.
ALFRED D. FRIPP, *Secretary.*

CRYSTAL PALACE.—NOTICE to ARTISTS.—The results of the Exhibition and Sales of this Season have been so gratifying that the Directors will again offer MEDALS for the BEST PICTURES and DRAWINGS EXHIBITED for 1876-7. Receiving days February 21st and 22nd, at St. George's Hall, Langham Place.—For conditions apply to Mr. G. W. WASS, Picture Gallery, Crystal Palace.

DORÉ'S GREAT PICTURE of "CHRIST LEAVING the PRAETORIUM," with "Dream of Pilate's Wife," "The Night of the Crucifixion," "La Vigne," "Soldiers of the Cross," "Christian Martyrs," "Gaming Table," &c.—DORÉ GALLERY, 35 New Bond Street. Ten to Six. Admission, 1s.

ELIJAH WALTON.—WINTER EXHIBITION now OPEN. A Large Collection of Fine Water-Colour Drawings on VIEW, and for SALE. Burlington Gallery, 191 Piccadilly. Ten till Dusk. Admission and Catalogue.

QUEEN'S COLLEGES, Ireland.—The PROFESSORSHIP of MIDWIFERY in the Queen's College Galway, being now VACANT, Candidates for the same are requested to forward their Testimonials to the UNDER-SECRETARY, Dublin Castle, on or before the 24th proximo, in order that the same may be submitted to his Grace the Lord Lieutenant.
The Candidate who may be selected for the above Professorship will have to enter upon his duties on the 1st day of October next.
John Lucie, Dublin Castle, January 22, 1876.

CLIFTON COLLEGE SCHOLARSHIPS. EIGHT or more will be open to COMPETITION at Midsummer, 1876, value from £20 to £80 a year, and to £50 a year for the SECRETARY.

PUBLIC SPEAKING.—The Rev. ALEX. J. D. D'ORSEY, B.D., Corpus Christi College, Cambridge, Lecturer on Public Reading and Speaking, K.C.L., PRIVATE LESSONS to Members of Parliament in Composition and Delivery at 19 Pall Mall.

ALDENHAM GRAMMAR SCHOOL (near Watford).
Founded A.D. 1597.
Under the New Scheme, Nine Exhibitions are founded, of the value of £51 per annum for Three Years.
Also, Ten Junior and Ten Senior Platt Scholarships are to be established, the first to defray about one-half the latter nearly the whole, of the expense of maintenance and education in the School.
Further information will be given on application to the Rev. ALFRED LEWIS, Head-Master.

TOR CREST HALL, Warberry Hill, TORQUAY.—PREPARATION for the PUBLIC SCHOOLS and UNIVERSITIES, under the Rev. T. E. R. STEBBING, M.A., sometime Fellow and Tutor of Worcester College, Oxford, First and Second Class Classics, First Class in Law and Modern History, and formerly Tutor and Assistant Master at Wellington College. The situation is lofty and salubrious. The Pupils are treated as members of the Family. Fees under Fourteen, 150 Guineas; over Fourteen, 200 Guineas.

HURSLEY, WINCHESTER.—A. M. HEATHCOTE, B.A., Oxford, prepares BOYS, between Seven and Twelve, for Public Schools. Terms, 100 and 120 Guineas. Holidays: Winchester College. After Easter he can receive Two or Three Boys. Address, The Close, Hursley, Winchester.

HANOVER.—PRIVATE TUITION.—The ENGLISH CHAPLAIN to Cambridge, M.A., with Mathematical Honours, who undertakes the and Education of PUPILS, has VACANCIES. A Gentleman's Residence in Bahnhof Strasse.

FOLKESTONE.—Mr. W. J. JEAFFRESON, M.A. (Scholar) Oxon, assisted by a Cambridge Honourman and a competent staff of Teachers, prepares a successful at the last Nine

PRIVATE TUITION and COMFORTABLE HOME.—The RECTOR (Married) of a small Country Parish, an old Rugbeian and Graduate of Trinity College, Cambridge, who takes FIVE PUPILS, has Vacancies. Classics, Mathematics, French, and Thorough Ground. Ladies' and out of country lots and pupils. Shooting, fishing, &c., if desired. Terms (including &c.), 180 to 200 Guineas.—Address, Rev. H. B. L., Hadlow Rectory, Much Wenlock, Salop.

PRIVATE TUITION.—The Rev. F. W. YOUNG, M.A., Oxon, Scholar of his College, three of whose Pupils (13, 13, and 15 years) have recently gained Pupils' School Scholarships. Recent [illegible] assisted by an Eighth Wrangler, an Oxford Honour-man and other Masters, are in residence for the Modern Languages and musical advantages to Boys and Boys. Reference to Parents of Pupils. Inclusive terms, 100 Guineas.

PRIVATE TUITION.—MILITIA OFFICERS, CANDIDATES for Direct Appointments and other Competitive Examinations are prepared by a HEREFORDSHIRE INCUMBENT, of great experience and success, late Fellow and Scholar of Cambridge University. Number limited to Four. Good Shooting and Riding.—Address, F. P. S., London Institution, Finsbury Circus, E.C.

TO MILITIA OFFICERS and CANDIDATES for COMPETITIVE EXAMINATIONS.—Captain CHAWNER, late 57th Regiment, will have THREE VACANCIES after the December Examinations. For terms and references, The Manor House, Newton Valence, Alton, Hants.

EDUCATION (Thorough and Scriptural).—A BENEFICED CLERGYMAN earnestly desires to recommend a First-Class LADIES' SCHOOL. The Mansion is enclosed in its own grounds of several acres, in a beautiful and healthy situation near London. Professors and Lecturers. Advertiser's only motive in thus soliciting patronage, having had peculiar facilities for learning the Teacher's Code and personal Moral Power of the Principal over youth, so that he thankfully commends this Establishment to Parents as a Training School for Girls that he knows he can, and a duty to Parents desiring for their Daughters Education thorough and safe, based upon the Bible.—Address, VERAX, Messrs. Hurd, Stapleford.

CHELSEA HIGH SCHOOL for GIRLS.—A BOARDING-HOUSE for PUPILS from a distance attending the School of the GIRLS' PUBLIC DAY SCHOOL COMPANY, has been opened at 7 Durham Place, Chelsea, close to the School, under the Superintendence of Miss C. SMITH, to whom applications for terms and other particulars should be addressed.

A GENTLEWOMAN, with good references and much experience in Tuition, seeks an engagement as RESIDENT GOVERNESS, within a short distance of London. Subjects: English, French, Italian, Music, and the rudiments of German.—Address, "C.," Bickerdy's Printing Office, 4a Wallbrook, E.C.

THE PRESS.—ADVERTISER, who is a facile Leader and descriptive Writer, a competent Fine Art Critic and Reviewer of general Literature, desires a RE-ENGAGEMENT. Would be willing to represent a high-class Journal at the approaching Philadelphia Centennial Exhibition. Has had Fourteen Years' Editorial Experience in London and the provinces, and can give the best references.—Address, X., care of Messrs. Street Brothers, Serle Street, Lincoln's Inn Fields, W.C.

GERMAN CLERGY RELIEF FUND.—By the operation of the recent Ecclesiastical Legislation in Germany, over Ten Thousand Priests have lost their means of subsistence, either wholly or in part. Some of them are reduced to absolute destitution in their own country; others are in exile. The only crime alleged against these Ecclesiastics is their refusal to obey the dictation of the State in matters of conscience. The only means by which they can recover their livelihood is Apostacy.
A Committee, composed of the Duke of Norfolk, Lord Petre, Lord Arundell of Wardour, Lord Howard of Glossop, Lord Emly, Monsignor Patterson, the Rev. H. J. Coleridge, Mr. T. W. Allies, Mr. John Young, Junr., Mr. T. H. Pollen, and Mr. W. S. Lilly, has been engaged in considering how British sympathy might best be displayed on behalf of these sufferers for conscience sake.
It has been decided to raise a PUBLIC SUBSCRIPTION, towards which a sum of about £2,500 has been already privately promised.
CONTRIBUTIONS will be received by the Duke of Norfolk, Norfolk House, St. James's Square, S.W.; by the Lord Petre, 35 Portland Place, W.; by W. S. Lilly, Esq., 10 Duke Street, St. James's, S.W.; or at the London Joint-Stock Bank (Pall Mall Branch).

HYDROPATHY.—SUDBROOK PARK, Richmond Hill. *Physician*—Dr. EDWARD LANE, M.A., M.D. Edin. For Invalids and those requiring rest and change. Turkish Bath on the premises. Private entrance to Richmond Park.

OVERLAND ROUTE and SUEZ CANAL.—Under Contract for the conveyance of the Mails to the Mediterranean, India, China, Japan, and Australia. The Peninsular and Oriental Steam Navigation Company despatch their Steamers from Southampton, *viâ* the Suez Canal, every Thursday, from Venice every Friday, and from Brindisi, with the Overland Mails, every Monday. Offices, 122 Leadenhall Street, E.C., and 25 Cockspur Street, S.W.

BRIGHTON.—BEDFORD HOTEL.—Facing Sea and Esplanade. Near the West Pier. Central and quiet. Long established. Suite of Rooms. Spacious Coffee-room for Ladies and Gentlemen. Sea-Water Served to the Hotel.
P. O. RICKARDS, *Manager.*

THE

LANGHAM SKATING RINK COMPANY, LIMITED.

Incorporated under the Companies' Acts 1862 and 1867.

CAPITAL, £75,000, IN 15,000 SHARES OF £5 EACH.

Payable as follows: £1 on Application; £2 on Allotment: Balance by Calls of £1, at intervals of not less than Two Months.

COUNCIL OF THE LANGHAM RINK CLUB:

Colonel J. JURA ALMONTE, 39 Gloucester Place Portman Square.
VINCENT AMBLER, Esq., M.D., Colville House, Colville Square.
MICHAEL ANGELO, Esq., 36 Great George Street, Westminster.
WILLIAM AUCKETILL, Esq., D.L., Raleigh Club.

CHARLES JAMES BASTARD, Esq., Ardeley Castle, Herts.
General Sir GEORGE BELL, K.C.B., Junior United Service Club, Charles Street.
Captain H. A. BENNETT, Brasenose Club, Manchester.
S. GORE BROWNE, Esq., Wanderers' Club, Pall Mall
GRAHAM BROWNE, Esq., Union Club, Trafalgar Square.
Captain J. BROWNE, Junior United Service Club, Charles Street.
F. BUDD, Esq., Junior Athenæum Club, Piccadilly.
Signor CARAVOGLIA, 29 Colville Square, Kensington.
E. PAYTON CLENCH, Esq., St. Stephen's Club, Westminster.
Major SHADWELL CLERKE, Army and Navy Club, Pall Mall.
EDWARD COLEGRAVE, Esq., Wanderers' Club, Pall Mall.
FRANCIS C. COMPTON, Esq., Wanderers' Club, Pall Mall.
EDWARD CUTLER, Esq., Junior Carlton Club, Pall Mall.
Captain DAUBENEY, Junior United Service Club, Charles Street.
Baron DE LA TAILLE DES ESSARTS, 2a Pall Mall, S.W.
Major DE WINTON, South Norwood.
JOHN V. DICK, Esq., St. Stephen's Club, Westminster.
JOHN DUNBAR, Esq., M.P., Garrick Club.
JAMES EDMUNDS, Esq., M.D., 5 Savile Row.
The Right Hon. Lord ELIBANK, Naval and Military Club, Piccadilly.
Captain J. H. EVENS, 4 Fitzroy Square.
Major S. FAIRTLOUGH, Army and Navy Club, Pall Mall.
Lieutenant-Colonel FALQUHARSON, Berkeley Square.
Major L. W. FISHER, Army and Navy Club, Pall Mall.
Captain KINGSLEY FOSTER, Wanderers' Club, Pall Mall.
GRAHAM GILMOUR, Esq., Conservative Club, St. James's Street.
A. GOULD, Esq., New Travellers' Club, Hanover Square.
Major R. K. GIBB, Thatched House Club, St. James's Street.
Captain H. F. GIBB, Charles Street, St. James's.
WILLIAM GILL, Esq., Devonshire Club, St. James's Street.
STANDISH GROVE GRADY, Esq., 8 St. George's Square.
Lieutenant-Colonel F. W. GREGORY, Army and Navy Club, Pall Mall.
H. Q. GURNEY, Esq., Verulam Club, St. James's Street.
E. A. HALL, Esq., Verulam Club, St. James's Street.
Major CHARLES HARDING, Universities Club, Jermyn Street.
Captain HUGHES-HALLETT, Charles Street, St. James's Street.
Captain JOHN HARRIS, Wanderers' Club, Pall Mall.
ERNEST HARRIS, Esq., Thatched House Club, St. James's Street.
W. B. HEBERDEN, Esq., Wyndham Club, St. James's Square.
Captain CHARLES C. HOOD, Naval and Military Club, Piccadilly.
Major G. A. F. HOUCHEN, East India United Service Club, St. James's Square
Captain F. HOWLETT, Naval and Military Club, Piccadilly.
Lieutenant-Colonel HUNTE, Junior Naval and Military Club.
W. G. F. HUNT, Esq., R.N., Junior Naval and Military Club; Pall Mall.
J. MOUAT F. HUNT, Esq., St. Stephen's Club, Westminster.
G. HUNT, Esq., Thatched House Club, St. James's Street.
C. VILLIERS IBBETSON, Esq., Naval and Military Club, Piccadilly.
JAMES JEPHSON, Esq., 2 Tanfield Chambers, Temple.
JOHN JUPE, Esq., Devonshire Club, St. James's Street.
Capt. W. J. LORD, Burdwan House, Upper Norwood.
H. G. LORD, Esq., Lee Park, Blackheath.
Capt. LAYCOCK, St. Stephen's Club, Westminster.
Capt. J. ARCHIBALD LAVIES, Junior Naval and Military Club, Pall Mall.
W. D. LEGG, Esq., Thatched House Club, St. James's Street.
ARTHUR A. LEVY, Esq., 10 Westbourne Street, Hyde Park.
Colonel P. W. LUARD, East India United Service Club, St. James's Square.
Lieut.-General J. K. McCAUSLAND, C.B., Melrose Villa, Cheltenham.
Capt. MERCIER, Chatham House, Knightsbridge.
W. METCALFE, Esq., St. Stephen's Club, Westminster.
B. C. MOLLOY, Esq., Raleigh Club, Warloo Place.
Major-General MURRAY, East India United Service Club, St. James's Square.
L. S. MILLER, Esq., Fairy Hill House, Enfield.
SIDNEY NAYLOR, Esq.
Major-General OUSELEY, 8 Gloucester Street, Belgrave Road.
R. B. O'BRIEN, Esq., 3 Dr. Johnson's Buildings, Temple.
The Hon. H. DE VERE FEILY, Dromore Castle, Limerick.
Major PURCELL, Lee, Blackheath.
S. F. PORTER, Esq., Rectory Manor, Walthamstow.
F. C. L. RASCH, Esq., Junior Carlton Club, Pall Mall.
Captain JOSEPH REID, Junior Carlton Club, Pall Mall.
Lieutenant-Colonel J. REAY, East India United Service Club, St. James's Square
S. SAUNDERS, Esq., Conservative Club, St. James's Street.
Major J. E. SEWARD, Glanton Hall, Northumberland.
Captain T. DAVIES SEWELL, Surlstone Villa, Kilburn.
H. SEWILL, Esq., M.R.C.S., 6 Wimpole Street, W.
JOHN SHORTT, Esq., Devonshire Club, St. James's Street.
W. E. SLAUGHTER, Esq., 6 Mansfield Street, Portland Place.
J. A. STRONG, Esq., Grafton Club, Grafton Street.
Captain FITZGERALD STODDART, Army and Navy Club, Pall Mall.
CHARLES ONGLEY TAGART, Esq., 2 The Terrace, Kensington Square, W.
Capt. CHARLES H. TAYLOR, R.N., Cliftonville, Brighton.
Major the Hon. FREDERICK LE POER TRENCH, Garbally, Gallinagbe
JOHN VANCE, Esq., Raleigh Club, Regent Street.
A. VINTRAS, Esq., M.D., Hanover Square Club.
JAMES WADDELL, Esq., 4 West Kensington Gardens, W.
Lieutenant-Colonel J. WARD, Junior Carlton Club Pall Mall.
W. F. A. WILSON, Esq., M.A., New University Club, St. James's Street.

EXECUTIVE COMMITTEE OF THE COMPANY.

Chairman—Major-General MURRAY. | *Deputy-Chairman*—HENRY GIBSON LORD, Esq.
J. V. DICK, Esq. | SIDNEY NAYLOR, Esq.
J. H. EVENS, Esq. | S. F. PORTER, Esq.

L. S. MILLER, Esq.

Bankers—Messrs. RANSOM, BOUVERIE & CO., 1 Pall Mall East.

Architects—Messrs. ARCHER & GREEN, 17 Buckingham Street, Adelphi, W.C.

Director of Music—SIDNEY NAYLOR, Esq.

Secretary—CHARLES GIBB.

TEMPORARY OFFICES—294 REGENT STREET, W.

PROSPECTUS.

The object of this Company is to provide, within easy reach of the Clubs, Parks, and residential quarters of the West End, a Skating Rink, with such accessories, from time to time, as may render the Establishment an attractive and agreeable place of Resort and Recreation.

For this purpose Properties have been purchased consisting a Site, the advantages of which, it is believed, cannot be surpassed, either as regards the ample accommodation which it affords, its proximity to the most fashionable and crowded thoroughfares, and its facilities of access from all parts of the Metropolis.

This Site consists of the well-known Portland Bazaar, in Regent Street, facing the Langham Hotel, and of a large block of property adjoining, which will be pulled down, and on the space thus cleared will be erected a Club House and Skating Rink, in accordance with the accompanying design.

The total Skating Area is about 17,000 square feet, thus forming one of the Largest Skating Rinks in the Metropolis; and the spacious galleries of the Great Hall will be fitted up as a Lounge and Promenade.

Arrangements are in progress for a Licence to use a Skate which is believed to possess advantages and improvements over any of the numerous skates already patented.

The Club House will confer a distinctive and unique character upon the undertaking. It will provide all the accommodation and conveniences usually afforded by a Club of the highest class; and it will, moreover, possess the agreeable feature of communicating with a Large building devoted to the purpose of healthy exercise and entertainment.

The Members of this Club will consist of Ladies and Gentlemen, to be elected by the Council, and will have the right of Free Admission to the Rink upon all occasions, together with such exclusive privileges as may be hereafter announced.

The Rink will be Open to the Public Daily, and in the Evening of every Week-day not set apart exclusively for the Members of the Club. The greatest care will be exercised in providing for the requirements of Visitors, and the Refreshment Department will be modelled upon the most approved Parisian system.

Special attention will be devoted to the question of Music. An Orchestra of the highest character will be engaged, and from time to time Selections of Music of the highest class will be performed. It is also proposed, at intervals during the season, to organize Fancy Dress Fêtes, Illuminated Skating Entertainments, Bazaars, Conversaziones, and other Artistic *réunions*, under the auspices of the Club, acting in concert with the Council of the Rink.

Under these circumstances, it may reasonably be anticipated that the Langham Skating Rink will become one of the most attractive and enjoyable lounges and resorts of the Metropolis; and, looking at its unique character and situation, it cannot fail to prove not only successful from an artistic and popular point of view, but highly remunerative as a commercial enterprise.

It is well known that the Shares of the Skating Rinks already established are now saleable at very high premiums, and the profits derived from their establishment are exceptionally large. In the case of the Langham Skating Rink, while due regard will be had to the privileges and enjoyment of the Members and the Public, the Executive Committee will steadily keep in view the necessity of making such arrangements as will secure a fair profit for the Shareholders.

Subscribers for Shares therefore, may look forward to the receipt of satisfactory dividends whilst they continue to hold their Shares, and to being able to dispose of their interests to advantage should they desire at any time to terminate their investment.

Original Subscribers for ten Shares and upwards will become Life Members of the Rink, and will have the privilege of nominating one additional Life Member for every further ten Shares subscribed, and the subsequent holder of every ten Shares will be entitled to free admission on all occasions during such holding. This privilege will always secure a market value for the Shares, irrespective of the dividends.

The Premises purchased by the Company are held under Crown Leases, and form most valuable properties, independent of their utilization as a Rink and Club House.

The only Contract entered into is dated January 1st, 1876, and is made between Messrs. HALL and OLIVER of the one part, and the Company of the other part, whereby the leases of the premises, the erection of the Club House, and the construction of the Rink, under the superintendence of the Company's Architect, have been secured, and it is anticipated that the Rink will be opened within three months from the allotment of Shares.

A Copy of the Articles of Association and of the above-mentioned Agreement, together with the plans prepared by the Architects, may be inspected at the Office of Messrs. CROOK and SMITH, the Solicitors of the Company, at 173 Fenchurch Street, London, E.C.

The preliminary expenses will be confined to Printing, Law Costs, Architect's Commission, and such other incidental charges as shall [illegible]

Applications for Shares should be made upon the accompanying Form, which, together with the Deposit, should be forwarded to the Bankers, or to the SECRETARY of the Company.

January 22nd, 1876.

THE LANGHAM SKATING RINK COMPANY, LIMITED.

FORM OF APPLICATION FOR SHARES.

TO THE DIRECTORS OF THE "LANGHAM SKATING RINK COMPANY, LIMITED."

GENTLEMEN,—Having paid to your Bankers for the Account of this Company the Sum of £ , being £1 per Share on Shares, I hereby request that number may be allotted to me, and I agree to accept such Shares, or any less number that may be allotted, upon the Terms of the Prospectus issued by you dated January 22, 1876, and I agree to pay the Balance due thereon when required so to do.

Name in full .....
Residence .....
Profession .....
Date .....

THE LANGHAM SKATING RINK COMPANY, LIMITED.—ALLOTMENT of SHARES.—Applications for Shares should be sent in, for London on or before Monday next, and the following day for the Country.

THE

SATURDAY REVIEW

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

No. 1,058, Vol. 41. February 5, 1876. [Registered for Transmission abroad.] Price 6d.

THE COMING SESSION.

IN a few days any curiosity which may prevail on the subject will be gratified both by the list of Ministerial measures for the Session, and by the preliminary indications of tactics to be pursued by the Opposition. It may be conjectured that Bills for sanitary purposes, and perhaps for a more complete system of local government, will be introduced to redeem the pledge which was given by Mr. DISRAELI some years ago in one of the oldest of misquotations. *Sanitas sanitatum*, which means, if it means anything, the superlative perfection of health, is still a remote object of desire. Ideal sanitary arrangements will certainly not result from the exertions of the local governments which Mr. BRIGHT wishes to create in rural districts. Municipal administration in large towns is tolerably efficient, notwithstanding the frequent exclusion from the Town Councils of intelligent inhabitants who have the misfortune to belong to the political minority. Some leading members of a great Corporation are nearly certain to entertain enlightened views, and the permanent paid officers, who exercise great and deserved influence, are almost always on the side of improvement. In country places, the Unions will probably be the administrative districts, and the Guardians, or persons of the same character and similarly elected, will form the governing body. It may well happen that the farmers, who will often be the most powerful section of the constituency, will feel comparatively little interest in the condition of the villages in their neighbourhood. With their own premises they and their landlords are competent to deal, and they are not directly concerned with the drainage and water supply which in country villages are almost always defective. In this matter the public opinion even of the immediate sufferers is seldom favourable to innovation. A country labourer has fresh air enough out of doors, and he utterly dislikes it at home. In many cases he is probably right in preferring warmth to ventilation; but he is unfortunately indifferent to crowding, and uncritical as to the quality of water which is not offensive to sight or taste. Almost the only water which tends to produce disease is that which is drawn from wells in the neighbourhood of dwellings. Rivers, streams, and springs of many different degrees of purity are equally wholesome; but in the majority of cases villagers depend on more or less suspicious wells. The institution of local governing bodies to effect objects which neither they nor their constituents regard as desirable will not justify sanguine expectations of improvement; but, according to Lord DERBY, the public offices are full of Bills waiting for introduction, and those which correspond with popular theories will be likely to receive a preference. In no previous Session for many years has there been less external demand for legislation. It is much to be wished that the evil genius of Governments may not find mischief for idle hands to do.

Mr. DISRAELI need not be alarmed by any expectation that a policy will be proposed by the Opposition. The leaders of the party are not yet unanimous in favour of the extension of household suffrage to counties, though Mr. DISRAELI himself has on more than one occasion encouraged the change in ambiguous phrases. The introduction of Mr. TREVELYAN's annual motion has a tendency to counteract the most formidable schism which threatens the Conservative party. In several counties since the introduction of the Ballot the tenant-farmers have shown a disposition to separate themselves from the landlords, although, as at the present time in North Shropshire, their candidates are still nominally Conservatives. The measure which would summarily deprive both landlord and tenant of electoral power is probably more obnoxious to the occupiers than to the owners, because the farmer comes into immediate contact with the labourer, and understands the risks which may result from rural agitation. No other attempt will be made for the present in the direction of organic or constitutional change. Mr. BRIGHT, indeed, thought that a redistribution of seats might perhaps precede in time even an alteration of the county franchise; but on this question also the Opposition is disunited; and the Conservative majority would in case of need be reinforced by the representatives of constituencies which would be threatened with extinction. In dealing with questions of secondary interest, such as those which will probably occupy the ensuing Session, an Opposition has no opportunity of competing with the Government. Amendments in the Judicature Act, or in the Education Act, must necessarily be proposed, if they are required, by the heads of the proper departments. It may be conjectured that the LORD CHANCELLOR will not renew the proposal for withdrawing appellate jurisdiction from the House of Lords, especially as the leading member of the combination which defeated the measure last year has lately obtained a step in the peerage.

Lord HARTINGTON will in the first instance dispose his field for the purpose of profiting by any miscarriage in the Government innings. It is perhaps unlucky for the Opposition that the Fugitive Slave Circular has been made the pretext for a spurious local agitation. Mr. BRIGHT's significant avoidance of the topic in his speech at Birmingham has since been explained in a manner which proves that his memory was better than Mr. FORSTER's. It is now known that Mr. GLADSTONE's Government issued instructions of a more stringent nature, although it had the good sense not to publish the Circular in the newspapers. The most appropriate comment on the late Ministerial scrape was supplied by Mr. BRIGHT's quotation of Lord MELBOURNE's wise saying, "Why can't you let it alone?" It is true that the first version of the Circular was full of gratuitous blunders both in policy and in international law; but if the substance of the instructions had been confidentially communicated to commanding officers, and if a margin of discretion had been allowed them, little harm would have been done. The second corrected Circular is comparatively unobjectionable, and Mr. GLADSTONE's colleagues will not share the misapprehension of local agitators who fancy that England is pledged to interfere with the institution of slavery wherever it exists. If the doctrines which were preached at Birmingham and elsewhere had been practised twenty years ago, the result would probably have been war with the United States. Demagogues who sneer at international comity are probably at other times agitators in favour of universal peace. The efforts of England to suppress the slave trade sometimes infringed on the rights of independent nations; but Lord PALMERSTON, who carried the principle of philanthropic interference further than his predecessors, never obtained a right to interfere with domestic slavery beyond the limits of the Empire.

On the question of the Suez Canal purchase the Government is strong, if it knows how to profit by its position. It will be prudent to guard, by previous understanding, against any possible difference of tone in the explanations which will be respectively given in the Lords and the Commons. Lord

Derby has on one or two occasions almost played into the hands of his adversaries by depreciating, probably for diplomatic reasons, the gravity of a transaction which can only have been justified by weighty reasons of policy. Mr Disraeli's mysterious eloquence will be better adapted to the defence of a measure which can scarcely at present be explained in all its reasons and probable consequences. If any Opposition speaker exceeds the limits of patriotic reticence, he will lay himself open to just criticism on the part of the Ministers. Mr. Disraeli will know how to make use of the attacks on his policy which have been made by unfriendly commentators in foreign countries. It is not on the ground of injudicious speculation or of irregular stockjobbing that Russian journalists affect to complain of the purchase. That Mr. Disraeli and Lord Derby have been at the same time dupes and profoundly unscrupulous conspirators is a proposition difficult to establish. In defending an act of foreign policy a Minister has almost always the advantage over his adversaries. The country knows that it is pledged by the measures of its confidential agents, and it is unwilling to believe that both are in the wrong. In the particular case public opinion is already favourable to the policy of the Government. Notwithstanding the arguments which are exhaustively urged in the *Edinburgh review*, the country cannot but think that the ownership of half the share capital of the Canal must involve some influence over its management and fortunes.

The most difficult and invidious task of the Session will perhaps be assigned to Mr. Hardy. A proposal to increase the Army Estimates may probably be defensible, but it can scarcely be popular. The object of an augmented expenditure will be open to criticism; and the large number of members who have no opinion on military matters will regard additional charges with distaste. There is no longer any hope of a considerable surplus in the revenue; and the Chancellor of the Exchequer will be disappointed if his plan for reducing the Debt cannot even in the second year begin its operation. If increased Estimates are introduced, the Government will at least be entitled to the credit of conscientious convictions. No party advantage can result from a measure which nevertheless may be required by the public interest.

MR. CAVE'S MISSION.

ALTHOUGH it is improbable that the precise results of Mr. Cave's mission to Egypt will be known, even to the Cabinet, before the meeting of Parliament, yet it may be expected that he will have had time to collect and transmit home the general facts on which a correct view of the financial position of Egypt must depend. Enough will be known to enable the Ministry not to make any very great mistake when they defend or describe the operation by which they have risked four millions on behalf of the nation. At any rate they will be in a position to explain what it was that Mr. Cave went to do. It was supposed that he was sent to help the Viceroy, to show that embarrassed potentate how much he owed and how he could best or most nearly pay it. For a system of Egyptian finance a system of English finance was to be substituted. The Viceroy was to be made to understand that people who spend more than they have got are apt to become insolvent, and that those who are nearly insolvent must retrench in a bold and manly way if they wish to avoid becoming insolvent altogether. Mr. Cave was to look into the figures, see what the Viceroy owed, what he could do now, and how his affairs could be best administered for the future. Nor would such a process be useful to the Viceroy only. We, with our newly acquired interest in Egypt, might reasonably wish to know on unimpeachable authority what Egypt is worth, what are its present resources, and its capabilities for the future. A large mount of Egyptian bonds also is held in England, and it would be comforting to many Englishmen that Egyptian finance should for the future be under English management. At any rate, whatever there was to come to them would be sure to come; and if Egypt was so governed as to put solvency before everything else, it seemed certain that a great deal would come to them. It was in accordance with this view of Mr. Cave's mission that the statement of the interference of the English Government to prevent the continuance of the Viceroy's war with Abyssinia obtained general credit. If Mr. Cave was to make the Viceroy solvent, he could not allow the Viceroy to tread further on the broad road to insolvency. Under the influence of this conception of Mr. Cave's objects and powers Egyptian bonds went up to a comparatively high price, and it was justly observed by those who gave this colour to Mr. Cave's mission that, even at the highest price which the bonds touched, they were very cheap. But doubts have arisen as to what Mr. Cave was really sent to do. It would seem that the Viceroy cannot have been forbidden to spend the money he borrows with so much difficulty on a new little war, for in point of fact the war is still going on. Mr. Cave may perhaps not have been appointed to help the Viceroy or authorized to guide him. The bondholders are not able to guess with any accuracy what their new position is to be, nor are they sure that they will have any new position at all. The fluctuations of the market have reflected these growing uncertainties, and Egyptian bonds have had a fall, not so remarkable as their rise, but still of a very considerable amount.

It is evident that, although until Ministers have spoken it would be premature to conclude that the fact is so, yet it is very possible that Mr. Cave never went out to help the Viceroy at all, or to see what Egypt is worth, or to improve the position of the bondholders. He may have simply gone to see what our special bargain with the Viceroy was worth, to estimate what the chances are of the Viceroy being able to pay us 200,000*l.* a year, and how far the present condition of the Canal warrants the supposition that it can long earn dividends without much further outlay. Of course Mr. Cave did not go to see whether the bargain should be made, for it was made before he started; nor is it to be supposed that he went to show that the bargain was financially a good one. The Cabinet does not rest for its justification of the purchase on there being a reasonable prospect of our getting a steady five per cent. on four millions of money. Even if the Viceroy does not pay his 200,000*l.*, and even if the English nation, like other shareholders, may be exposed to seeing its dividends cut down hereafter by the necessity of a further outlay of capital, the Government is no doubt prepared to say that to make the purchase was, under the peculiar circumstances attending it, better than not to make it. But Parliament, although it may not much hope for a good bargain, and may not much dread a bad one, may reasonably wish to know what sort of a bargain it actually is that has been made. If the Viceroy does not pay his 200,000*l.* Parliament will equally have to make good the interest on the amount borrowed for the purchase. It may be quite willing to provide the whole of this interest without having any receipts from the Viceroy to set against what it provides; but as there is a chance, or we may say a probability, that the Viceroy will pay what he says he is going to pay us, Parliament will want to know what it is supposed that it is likely to be called on to provide. The object of Mr. Cave's mission may have been simply to furnish the necessary information for this purpose. From this point of view Mr. Cave, except as a friendly adviser, would have nothing to do with the Viceroy or his wars or the bondholders. If the bondholders are only paid in part, we shall only be paid in part, or we may suffer more than they do, so far as they have special securities, which, in contrast to the conduct of his suzerain, the Viceroy may choose to recognize. If they are not paid at all, we shall not be paid at all. Thus we should have no further concern with the Viceroy, except to calculate how much he is likely to pay according as he is pleased to take any one of many courses, all of which he is free, so far as we are concerned, to take. Mr. Cave would have been sent, not to guide him, but to look at him; not to diminish the sum which Parliament may have to provide, but simply to calculate what the amount is likely to be. Neither will our bargain have been made better or worse by Mr. Cave's mission, nor will the position of the Viceroy or the bondholders have been affected by it. He will simply, as a member of the Government, have enabled the Government to describe what it has done. If his report is favourable, the Government and the nation will naturally be pleased. It is always desirable that a pecuniary bargain should show a chance of a fair return for money invested. If his report is unfavourable, neither the Government nor, as the Government supposes, the nation will much mind. Other considerations than those of direct pecuniary profit have determined the purchase of the shares.

in an article in the *Fortnightly Review*. Having no official responsibility, the writer can calmly contemplate all the possibilities on which a Ministerial speaker could not dwell; and, having a great experience of Indian affairs, he can talk with authority of Egypt from an Indian point of view. He discusses whether our mastery of the Canal, if it is assumed that the purchase of the shares gives us, or conduces to give us, in some inexplicable way, such a mastery, would be of any use to us in time of war; and secondly, whether, if we assumed a protectorate over Egypt, and, in the event of a disruption of the Turkish Empire, took such possession of Egypt as it would be possible for us to take, it would answer our purpose to do so. When we speak of a time of war we must suppose that the war contemplated is a war with France, or Russia, or both. In a war with any other Power we should be practically at peace so far as the free use of the Canal and the safety of our Indian possessions were concerned. If we were at war with France or Russia, the long narrow route of the Mediterranean, with a block at the entrance of a narrow canal, would be so dangerous that our mercantile marine would not think of using it. The main use of the Canal would be that we should be able to send our troops to India through it. But the argument of Sir GEORGE CAMPBELL that it would not be worth our while to do so deserves attentive consideration. The enemy, by landing a force in Egypt, could force us to use the troops we were sending to India to turn him out, and if we were beforehand with him, and ourselves occupied Egypt, this would be a severe additional drain on our scanty army. By going through the Canal we should save a month or six weeks in time, but even with this addition of time we could, it is argued, send troops to India by sea faster than Russia could send them by land, and it must not be assumed that India would want any reinforcements except gradually to make good losses. So far as human foresight can go, it may be said that India as it is, without any reinforcements, is quite strong enough to repel any army that could be sent against it. Sir GEORGE CAMPBELL'S discussion of the value of Egypt to us, if in some shape or other we assumed possession of it, is still more interesting. He freely concedes that the Egyptians would probably not object to it; he does not believe much in Mahometan fanaticism; he thinks the natural resources of Egypt itself great; he considers Egypt the best avenue to the interior of Africa, and he sees the vast good which English civilization, religion, capital, and enterprise might do in that neglected but fertile part of the world. He draws, indeed, so flattering a picture of the results of an English occupation of Egypt that the reader expects to find him advocating that the experiment should be made if the opportunity offered itself. But the conclusion of his reasoning is the other way. We are not, he thinks, equal to so great and new a call on us. India takes all our strength to govern, and to add Africa would be to overtask ourselves and weaken our hold on India. Unless the reasonings of Sir GEORGE CAMPBELL can be shaken, he will have done much to clear the way for Parliamentary debate. The controversy will in that case be narrowed, and the issue will simply depend on the political results of our acquisition of the position of shareholders.

CURRENT POLITICS.

THE return of Mr. LEIGHTON for North Shropshire as the nominee of the tenant-farmers shows that, even when no political question of any moment is involved, a spirited contest may be fought on a side issue, and men accustomed to obey may suddenly turn round on their leaders, fight them, and beat them. At first sight it seems difficult to understand how the farmers came to see any great difference involved between the return of Mr. LEIGHTON and that of his opponent. What is there which a Conservative nominee of the farmers would give them that a Conservative nominee of the landlords would not give them? What are the points on which landlords and farmers disagree? There do not appear to be any grievances under which the farmers allege themselves to be suffering which it is in the power of the landlords to remove and which they decline to remove. There is no dispute as to anything done, or to be done, by the Government as to which the two parties in the counties suffer. Neither landlords nor tenants trouble themselves about the loss of the *Vanguard*, or the Slave Circulars, or the Canal purchase. There are, in fact, only two points as to which the remotest shade of disagreement between the landlords and the tenants can be traced. The farmers seem to think that the landlords are not duly anxious to relieve farmers from the burden of local taxation, and the farmers have not the same objection to the Burials Bill that the landlords are supposed to have. The divergence of opinion on the latter head is probably due, not to any difference of theological or ecclesiastical convictions, but to the difference of social position. Farmers, whether Churchmen or Dissenters, are of the same class, and feel as their class feels on social and domestic points. There are no Dissenting landlords, and therefore the landlords look on the matter from the outside. But although the feelings of the farmers are thus more enlisted on the side of the Dissenters than the feelings of the landlords, it is evident that the farmers care too little about the Burials Bill to have fought a contest which must have involved them in much trouble, expense, and annoyance, simply that one kind of service may be read instead of another kind of service in a churchyard. As to local taxation, the farmers feel the immediate pressure of it more than the landlords do; but they might be sure that the landlords would get rid of as much of the burden as they could for their own sakes. The farmers do not complain that too much is laid out for local purposes, but they wish some one else to find the money for it. Why should the landlords object to this? Whatever the farmers saved would either stay in their pockets and make them better able to lay out money on the land, or it would come into the landlords' pockets in the shape of an increased rent. To neither process could the landlords have any possible objection. So far as the landlords are more backward than the farmers in proposing to shift the burden of local taxation, this backwardness arises from their having a keener sense of political possibilities, and from their knowing enough of the country generally to see that, although the farmers would like to shift their burden, those to whom it was shifted would very much dislike the arrangement. The towns would very soon cry out if this shifting was carried on to their obvious detriment, and the Government which both landlords and tenants profess to support cannot afford to quarrel with the towns, and would not itself countenance any proposal it thought unjust. The farmers would find it very difficult to say for what proposal as to local taxation they expect Mr. LEIGHTON to vote for which his opponent would not have voted. As they are discussed these differences of opinion seem to fade more and more away, and we are forced to seek for some less tangible ground of division, which was not easily put into words, but which must have operated with great force, as it led to a contest so seriously fought.

We may turn aside for a moment to study the beautiful language of the ATTORNEY-GENERAL for Ireland. He was entertaining a body of Irish sympathizers with a flow of that oratory which is so natural and so agreeable to Irishmen, and very properly he directed the flow of his oratory in the channel of praise of the Government to which he belonged. Fertile in imagery, he compared the Constitution at once to a fine old tree which wise men like Conservatives cherish, clearing off parasites but never cutting the living roots, and also to a fine old building which the same wise men point afresh as time goes on, but which they never coat with an ugly facing of Roman cement. No wonder that all who heard this eloquence and followed these similitudes—not now perhaps, but for that reason all the easier to understand—were much delighted, and felt as if they were having their best feelings expressed in the most appropriate terms. But it must be owned that language of this kind, apart from the immediate pleasure it gives to an audience, does not do much good. It seems totally unconnected with real life. Men have their own objects to gain, and cannot easily shape them into harmony with theories about trees and buildings, parasites and cement. What could the most attentive study of the ATTORNEY-GENERAL'S language have done for an elector in North Shropshire? He might as well have been advised

to decide for or against Mr. LEIGHTON by being told that "the moon was on the waters." On minds which for any reason are outside particular political struggles arguments from sentiment may tell; but those who feel keenly about something in which they are much interested have no thought to give to them. The farmers of North Shropshire must have been much interested in something, or they would never have carried Mr. LEIGHTON. They must have had some belief by which they were inspired; and it is difficult to see what this belief can have been, except the general belief that the possession of political power confers advantages on its possessors. They may not want to be represented by a different sort of man from the person whom the landlords would choose. In selecting Mr. LEIGHTON they have not gone out of the family circle of proprietors. They merely want that the member returned shall be their member. This is not a new feeling, but it is an old feeling in a new form. In more than one county there have on repeated occasions been members returned because the farmers asked that they should be returned, and the landlords have generally with great good sense agreed to some arrangement satisfactory to the farmers being made. But this old feeling enters on a new phase when it works under the Ballot, and when it takes the form of asserting that the farmers have a right to decide who it is out of the circle of proprietors or their families that shall be returned. The change involves a readjustment, or perhaps subversion, of the old system of county representation. If the farmers begin to choose their man, how is it to be known that their choice will always take the humble and modest form of preferring Mr. LEIGHTON to Mr. MAINWARING, and putting forward such a very small stalking-pony as the Burials Bill?

If figures of speech about fine old trees and fine old buildings do not much affect the minds of Shropshire farmers, it is needless to say that they affect still less the mind of Mr. JACOB BRIGHT. His general view of things is that he simply loathes the Tory party. He wants to fight them, crush them, triumph over them. All the bad things he knows of they have upheld, and all the good things he knows of they have opposed. There would be no lowing of oxen and bleating of sheep to offend Liberal ears if this SAUL was let loose on AGAG and his followers. As Mr. BRIGHT himself said, it was needless for him to explain in detail his political opinions, for he sat for some years in Parliament, and all he thinks and all he has got to say are perfectly well known. One of his supporters said of him that he was a man with a very sensitive mind; and men whose minds are extremely sensitive not only feel, but speak, with warmth. Not that he affects to imitate or rival the eloquence of his eminent brother. On replying to the notification of the Committee appointed to select a Liberal candidate that he had been selected, Mr. BRIGHT exhorted his hearers to wrest the crown of representation, "or "whatever you call it," from their opponents; and this, viewed merely as a piece of oratory, was not perhaps creditable to the family. But, whether he is an orator or not, the Committee unanimously decided on selecting him. He has many crotchets in which many members of the Committee avowed they took no interest, or as to which they entirely disagreed with him; but they took him for all in all, and owned they could not find a better man. In the same way Mr. RYLANDS has been chosen as the Liberal candidate for Burnley, and Mr. RYLANDS is a very decided Liberal. Unmoved by the argument that, as the action of Government becomes more complicated and extensive, and as the prices of everything rise, the cost of governing the country must inevitably become greater, Mr. RYLANDS sees no duty in a Government except that of cutting down the Estimates. The present Government spends more than its predecessor, and therefore there needs nothing more to condemn it. There are many faults to be found with what Mr. BRIGHT says and with what Mr. RYLANDS says; but it is precisely because they are not guarded and wise and moderate that the Liberals of Manchester and Burnley will work hard for them. If they are elected, they will be the followers of Lord HARTINGTON, and Lord HARTINGTON knows perfectly well that he must have such followers if his following is to have any strength. There are seats which can only be won by men of what are called sensitive minds. This is quite as true of one party as of the other. The language of enthusiastic Conservatives at the last general election was quite as far removed from the line pursued by the present Ministry as the language and sentiments of Mr. BRIGHT and Mr. RYLANDS are from the language and sentiments of Lord HARTINGTON.

THE RUSSIAN INDICTMENT AGAINST ENGLAND.

IT is difficult to understand the motives which induce Russian Ministers and statesmen to instigate constant vituperation of England; but the coarse and offensive manner in which their instructions are obeyed is readily intelligible. The old and harsh saying that Russian civilization was rotten before it was ripe is at least true of Russian political literature. Writers who may probably be so far sincere in their national antipathies that they are both ignorant and prejudiced are allowed to indulge for certain purposes in the most reckless licence, while neither they nor their predecessors or colleagues have ever had the smallest experience of liberty. The domestic and foreign policy in which their countrymen are interested is absolutely exempt from independent criticism. Probably no Russian journalist has yet expressed a suspicion that universal liability to military service may involve hardship to the community. The economical miscarriages which travellers and foreign residents have sometimes described as resulting from the emancipation of the serfs cannot be reported, even if the statements were true, in Russian newspapers. It only remains to direct the invective which is the easiest and rudest element in political controversy against foreign States, and especially against England. There is perhaps a still stronger popular feeling against Germany, but abuse of the EMPEROR'S favourite ally is only occasionally permitted. The late annual summary of events in the official *Invalide* indicates extreme animosity against a country and Government which are not at present conscious of any cause of quarrel on the part of Russia. To Western readers it might seem that the attack on English policy is not rendered more effective by inaccuracy which in some cases amounts to deliberate mendacity; but the object of the *Invalide*, or of that section of the Russian Government by which it is inspired, is not to influence European opinion, but to promote national antipathy among Russians, and perhaps to mislead ill-informed Asiatics. It may be hoped that the Chinese are sufficiently astute to distrust the officious sympathy on their behalf which is displayed by a formidable neighbour. The official personages who contrived the murder of Mr. MARGARY will assuredly not believe that it resulted from an English intrigue against China.

It is not true that England is or has been anxious to weaken China; and Russian diplomatists well know the difficulty of inducing the Government of Pekin to observe either the obligations of treaties or the rules of international justice. The complaint that the English Minister demanded the support of an additional naval force, and that he insisted both on the observance of the treaty and on the punishment of the Yunnan murderers, might have formed part of a eulogy on English firmness and vigour. The Russian Government is constantly and rightly in the habit of exacting redress from barbarous or partially civilized States which may have done wrong to Russian subjects. Russia is a party to the treaties to which Mr. WADE appealed, having, in common with other Powers, obtained the benefit of concessions which were extorted from the Chinese Government by English arms. "So great," it seems, "is the presumption of the English," that they remonstrated against the courtesies lavished by the King of BURMAH on a Chinese Envoy who was believed to have instigated the murder of Mr. MARGARY. When General KAUFMANN from time to time reproves a ruler of Bokhara or of Khokand, English writers, though they may sometimes attribute to him insidious designs, are not in the habit of charging him with extraordinary presumption. All these dark and subtle proceedings were of course designed for the purpose of opening new markets for opium. The writer in the *Invalide* has perhaps never heard that other commodities besides intoxicating drugs are among the products of England. Woollens, cotton goods, and cutlery might be thought legitimate articles of commerce; although it is a principal object of Russian policy to exclude English manufactures both from the Empire itself and from the vast territories which have been laid open to Russian conquest. No Englishman has the smallest desire or expectation that any part of the

Chinese dominions will be at any time annexed. It is not an immoral object to endeavour to increase the exchange of Manchester goods for tea and silk. The official journalist records with complacency the employment of two or three American officers to devise plans for the defence of the Chinese coasts; but he is for once sufficiently candid to admit that the Chinese army is extremely inefficient.

It might have been thought that the petty and troublesome warfare in the Malay peninsula would have been omitted from the list of English aggressions. Russian statesmen and soldiers fully understand how unprofitable and unavoidable conflicts constantly occur on the frontiers of a civilized Empire which happens to be conterminous with petty native States. Any extension of English territory which may result from the Malay war will be unwelcome, and it can have no bearing, direct or indirect, on the interests of Russia. English opponents of the Suez Canal purchase will be disappointed by learning, on official Russian authority, that the negotiation has been crowned by perfect success. Almost every other statement on the subject of the Canal is utterly false. It is not true that in 1874 the toll was reduced by one-half at the instance of England. On the contrary, it was increased with the consent of the English Commissioners by a considerable percentage. M. DE LESSEPS had in the previous year nearly doubled the charges which had been previously levied; and every maritime State in Europe, with the exception of France and Russia, protested against the augmentation as illegal. The French Government professedly represented the interests of the shareholders; and Russia probably wished to discourage the competition of English trade in the further regions of Asia. It has lately been announced that the Imperial Government proposes to subsidize Russian navigation by entire or partial payment of the toll on the Canal. No foreigner has any ground for remonstrating against a whimsical contrivance for the correction of natural inequality; but the project shows that Russia regards the preponderance of English navigation with envy, if not with ill will. The allegation that the KHEDIVE, as a shareholder, suffered sensibly by the supposed reduction of tolls is made in forgetfulness of his sacrifice of the dividends on his shares for a period which had then twenty years to run. It is not altogether unsatisfactory to find that Russian enemies of England believe, or affect to believe, in the prudence and expediency of the transaction. Another Russian journal some time since asserted that the English Government had purchased a portion of Egyptian territory. The attempt to establish a precedent for the dismemberment of the Ottoman Empire was at least premature.

Even in Arabia the malignant and ubiquitous activity of England has produced results which have not been adequately appreciated. The Imam of MUSCAT has, according to the Russian writer, been succeeded by an English partisan, and the Turks have gained one or two victories. It was not convenient to state that the Turkish aggressions in the neighbourhood of Aden have been actively checked and discountenanced by the English authorities, and that the sovereignty of the SULTAN over the Arab tribes has not been acknowledged. The Indian subjects of the QUEEN will learn with surprise that Lord NORTHBROOK has been dismissed, and that they have themselves been disappointed because the PRINCE of WALES has not assumed the political functions which belong to the Viceroy. The rudiments of constitutional government are perhaps better understood in India than at St. Petersburg. Possibly the most significant part of the indictment against England is an intimation of the designs of Russia. It may be remembered that three years ago a negotiation which had been commenced by Lord CLARENDON was brought to a close by Lord GRANVILLE. Prince GORTCHAKOFF in the most explicit language undertook, on the part of the Russian Government, that it should abstain from any interference in the affairs of Afghanistan. After some further discussion he assented to the English determination of the Northern Afghan frontier, and no dispute has since arisen as to the meaning or purpose of the arrangement. The official writer in the *Invalide* is now instructed to assert that in 1873 the recognition of the Afghan AMEER as ruler of the countries to the north of the Hindoo Koosh was given "orally and very conditionally." In other words, a section of Russian politicians proposes, without even a frivolous pretext, to repudiate a solemn engagement. It is wholly immaterial whether the undertaking was oral. A promise given by a Foreign Minister to an Ambassador for the purpose of communication to his Government is as binding as if it were extended into a dozen despatches. The statement that the engagement was "very conditional" has no foundation, except that it formed a part of a general arrangement which has not been disturbed by any act of the English Government. Unless the official journalist is actuated by a disinterested passion for national perfidy, his discreditable suggestion tends to shake any confidence which may be reposed in the good faith of the Russian Government.

THE SENATORIAL ELECTIONS.

THE Senatorial elections have justified the principles of the Government at the expense of its practice. The Senate will contain a working majority pledged to support the Republican Constitution against the motley army which M. BUFFET has been seeking to array against it. It is, in a sense, a victory for every member of the Cabinet except the PRIME MINISTER. Whatever support M. BUFFET may have received from his colleagues of the Right Centre in his undisguised display of preference for Legitimists or Bonapartists over Republicans, it is a support which has not made itself publicly felt. He has stood out from the rest of the Cabinet with a strongly marked individuality, which, as it has undoubtedly thrown the other Ministers into the shade, may make it easier for them to dissociate themselves from him if he declines to modify his policy to the extent which will be necessary if he is to remain in office. The disappointment inflicted by the elections upon M. BUFFET himself must be the keener in that it is self-provoked. He cannot even console himself by saying that he and the electors want different things. On the contrary, the result has shown that M. BUFFET and the electors really want very much the same things; only the electors have no confidence that they can be got in the way in which M. BUFFET has hitherto proposed to get them. If he had not separated himself from the rest of the Ministers and induced Marshal MACMAHON to make a special appeal to the country for his sole behoof, he might have claimed the return of a Moderate Republican majority as a ratification of the Constitution of February, and, by consequence, of the Ministry which first took office under that Constitution. Instead of this he has in effect asked the country to dismiss all thoughts either of the Constitution or of the Ministry, and to vote for a Conservative list representing every shade of political opinion except the Republican. The profession of faith in which these various parties contrived to unite was simple and provisional:—I acknowledge M. BUFFET as my leader until my schemes for packing off him and his Constitution have been accomplished. When that happy time arrives he must of course give place to a Minister more agreeable to the King or the Emperor. M. BUFFET was better pleased with this temporary allegiance than with any expressions of mere lasting devotion. Apparently he preferred to think of himself in retirement, with the Count of CHAMBORD or Prince LOUIS NAPOLEON on the throne, and the Radicals either silenced or at Cayenne, than to think of himself as in office, with France still governed by a President, and the Radicals playing the part of a Parliamentary Opposition. The Senatorial elections have put an end to M. BUFFET'S visions. They have proved that the country is on the whole content with things as they are, and only dissatisfied with M. BUFFET because he is not willing to accept them as they are. France is not enthusiastic about the Republic, but she has a distinct conviction that she dislikes the idea of further change, and that the *status quo* will be best maintained by men who share this dislike. The experience of the last eleven months has made it clear that, if M. BUFFET dislikes the idea of change at all, it holds a very subordinate place among his distastes. There are things associated with the permanence of the Republican Constitution which he detests very much more. To see the MARSHAL reduced to the humiliating necessity of accepting M. GAMBETTA as a Minister would probably give him a greater shock than to see either the BOURBON or the Bonapartist throne set up again. The issue as submitted to the electors by M. BUFFET was a simple one:—Will you ask before voting for a Conservative candidate whether he is a Conservative Republican, or will you accept the word Republican as one that virtually

contradicts the word Conservative? M. Buffet left no doubt as to the answer he gave to these inquiries, and the electors have made it equally unmistakable what answer they give to them.

In a sense, therefore, it is quite true that the elections have gone in favour of the Conservatives. They have gone, that is, in favour of the Moderate Republicans, of the men who, without attributing any special sanctity to the Republic, accept it in good faith as the form of government that best secures to France the liberty and order which she has sought to no purpose in the opposite extremes of anarchy and despotism. There are already symptoms that the politicians who have hitherto supported M. Buffet in his endeavours to disguise from Frenchmen the true nature of their own preferences are not above learning wisdom at his expense. There is an evident disposition to make the best of the elections, and to accept as genuine Conservatives men to whom down to the moment of election this title would certainly have been denied. Indeed, M. Buffet himself may not be above learning by experience, provided that he can postpone the date at which he will be expected to have mastered his lesson. Supposing that the elections to the Chamber of Deputies go the same way as those to the Senate, it is at least possible that the Minister of the Interior may try if others can forget as readily as he that he ever worked to make them go otherwise. His efforts in this direction will probably be seconded by Marshal MacMahon; and, in the absence of any one clearly marked out to take M. Buffet's place, it is possible that there would be a general acquiescence in the continuance of the Ministry in office. That this arrangement could last long is not likely, inasmuch as the reactionary and the Liberal elements in the Cabinet can hardly agree in the production of a common policy. But for a time the Ministry might rub on without a policy, and in some ways it is to the interest of the Republicans that they should do so. The fewer sudden changes are introduced the more disposed the country will be to associate the Republic with that tranquillity which the Bonapartists have always striven to represent as their own peculiar property. France has not long learned to distinguish between a change of government and a change of institutions, and a too rapid succession even of Ministers might delay the complete recognition of the difference. Undoubtedly, with an honestly Republican majority in both Chambers, M. Buffet would have to choose between resignation and a very considerable modification of the language which he has been accustomed to use in the tribune. But in presence of that unmistakable manifestation of the wish of the nation to live under a Republican Government which will probably be afforded by the elections taken together, he may develop different qualities from any that have yet been apparent in him.

The event has shown that we were right in suggesting that the Bonapartist tendencies of the Mayors appointed or retained by the Duke of Broglie might perhaps have been exaggerated. The pronounced Imperialist faction has sustained a decided defeat. The prospects of the Empire may not be as disastrous as might be inferred from the ill success of its most noisy partisans, because the Empire has always a second string to its bow, and is ready to come back as the residuary legatee of a Government that has failed, if there is no popular current strong enough to bring it in on its own merits. But the expectation entertained by many that the constitutional uncertainty in which France was so long kept would prove to have made the Republic odious has not been realized. The Bonapartists will be stronger in the new Legislature than in the old one, because the circumstances under which the elections of 1871 were held made their strength in the Assembly no real measure of their strength in the country. But there is nothing to indicate that they will be more than a fraction, able occasionally to make its presence felt by some dexterous combination with other fractions, but not possessed of any independent or permanent influence.

still more unexpected result of the elections to the Senate has been the defeat of the Irreconcilable Radicals. An attempt has been made to detract from the significance of this fact by insisting on the Radicalism of the Senators actually returned for Paris. But that Paris would elect Radical Senators was never doubtful. What was doubtful was whether she would not elect Radicals who think the Constitution of February little better than Monarchy in disguise. All through the autumn the issue as between M. Gambetta and M. Louis Blanc had been kept before the eyes of the Paris electors. M. Louis Blanc's own speeches and those of M. Madier Montjau had been diligently reproduced for their benefit by the extreme journals on either side. The *Rappel* and the *Union* had agreed in assuring that here was the only true Republicanism, and in imploring them not to be taken in by the counterfeit article produced by M. Gambetta. It seemed probable that Paris would be true to the tradition of always voting for the most extreme candidate in the field, and the best hope that appeared to be left for M. Gambetta was that the intellectual eminence of two of the Irreconcilable candidates would deprive the result of a part at all events of its meaning. When the day of voting came, it turned out that Paris had ceased to be irreconcilable, and was ready to reject M. Victor Hugo at the first ballot, and M. Louis Blanc altogether, in order to elect the candidates who represented the constitutional Radicalism which is prepared to follow M. Gambetta. The breach in the Left of which so much has been said, and on which so many hopes have been built, has come to nothing. The elections have proved that, Radical as Paris may be, she is not Radical enough to sacrifice the Republic to the indulgence of impracticable passions. The Extreme Left may be divided in the new Legislature, as it was in the old one; but it will be a division representing the eccentricities of individual politicians, not the settled purpose of great constituencies.

BARON DEAK.

FEW statesmen have done so much for any country as the great patriot to whose memory the whole of Hungary is now doing honour. But for the firmness, the moderation, and the wisdom of Baron Deak, it is doubtful whether the long-standing feud between Austria and Hungary could have been closed in the present generation. Many of his earlier political allies from time to time rejected his guidance, with results fatal to their own political reputation, and injurious to their country; but the nation in general proved its aptitude for freedom by habitually following the most honest and sagacious of its leaders. One of Deak's conspicuous merits ought to be more particularly appreciated by Englishmen. He never relied on sentimental or abstract reasoning when he could appeal to legal and hereditary right. A true Conservative, he steadily refused to barter any fragment of ancient privilege for the most specious concessions which could be deduced from modern theories of Liberalism. At one time the Emperor of Austria and his Ministers were perfectly sincere in their desire to concede representative government and an improved system of administration to Hungary; but Deak steadily demanded a full recognition of the Constitution which had been violently abolished before he would consider even the most necessary reforms. Not less admirable was the good faith with which he accepted as sufficient the final satisfaction of the claims of his country. He was not one of the adventurers who hold that the concession of a just demand is a reason for devising new employment for a triumphant party. The solemn celebration of his obsequies was fitly attended not only by the Legislature, and by all ranks of his countrymen, but by representatives of the Sovereign whom he had restored to the enjoyment of his legitimate prerogative by defeating unwise attempts at usurpation. The Emperor is probably sincere in his regret for the loss of a loyal subject who had during the greater part of his career been the steadiest adversary of the Imperial Court. Although the Austro-Hungarian monarchy is still exposed to many difficulties and uncertainties, the solution of a grave complication, which was proposed and mainly effected by Deak, has made the Emperor and King a greater potentate than in the earlier portion of his reign before the exclusion of Austria from Germany and the loss of Italian provinces. Only ten years ago the discontent of Hungary constituted the gravest danger which threatened the Empire. At present Hungary is as well affected as the Archduchy of Austria.

When Deak was young, the Hungarians alone among Continental nations possessed a free, though aristocratic, Constitution. The reigning dynasty had incessantly encroached on their ancient privileges; but from time to time they found opportunities of making the redress of grievances a condition of military aid, as in the celebrated instance when, after a tedious and successful negotiation, the nobility proclaimed their readiness to die *pro rege nostro Maria Theresa*. Joseph II., after the fashion of the reform-

ing despots of his time, attempted to include abuses and ancient franchises in a common suppression; and in a later generation METTERNICH sought to punish the obstinacy of the Magyar aristocracy by closing their frontiers to commerce. The most effectual guarantee for a theoretical acknowledgment of constitutional right was the condition imposed on every King at his accession of being solemnly crowned at Pesth, after taking the coronation oath. In Hungarian estimation even the legitimate successor was either a usurper or a merely provisional ruler until he had complied with the ceremonial condition, which was itself dependent on the oath. The unfortunate FERDINAND who lately died in seclusion at Prague was crowned according to custom; but at the time, and long before, the attempts of Austrian Ministers to extend the Imperial absolutism to Hungary had caused grave discontent. Twenty years intervened between the accession of FRANCIS JOSEPH as *de facto* King and his compliance with the conditions which made his authority legal. It was in the struggle against the encroachments of the Crown that DEAK first attained distinction and popular confidence. When the wave of revolution swept over Europe in 1848 he became a member of the Liberal BATTHYANI Ministry, which in vain endeavoured to avoid the imminent civil war. In the conflict itself DEAK took no active part, and he probably sympathized as little with the Republican violence of KOSSUTH as with the Austrian Government and the Slavonic malcontents whom it enlisted against the dominant Magyars. The exclusive privileges of the aristocracy had been surrendered or modified before the collision with the Government of Vienna. The wise relaxations of the old oligarchical system which had been previously effected by DEAK and his associates undoubtedly stimulated the patriotic enthusiasm which made the Hungarians triumphant in the field. Many of their leaders were with good reason dissatisfied with the revolutionary measures of the Dictator; and the hopes of the Hungarians were at last frustrated by the Russian intervention which ended in the surrender of GÖRGEY at Villajos. During the short struggle KOSSUTH'S foolish proclamation of a Republic had rendered conciliation impossible; and after its conclusion, the Minister who then governed Austria in the name of the young EMPEROR was on his side not less extravagant in his language and conduct than the eloquent demagogue. Prince SCHWARZENBERG propounded the preposterous theory that all the rights of Hungary were abrogated by conquest, and that the EMPEROR was therefore at liberty to dispose of the most important part of his dominions without any limitation of law, of custom, or of private or corporate right.

As long as the despotism lasted DEAK necessarily held aloof from public affairs. While KOSSUTH was making speeches in foreign countries, and forming an alliance with MAZZINI against kings in general, it was evident to a higher and more cultivated intelligence that the position of the Austrian Government was not permanently tenable. The defeat of Hungary had only been accomplished with the aid of Russia, and Prince SCHWARZENBERG was said to have threatened his protector soon afterwards with a future display of splendid ingratitude. The first revival of Hungarian hopes followed the redemption of the Minister's promise by the Austrian occupation of the Danubian Principalities during the Crimean war. From that time it became certain that the Emperor of AUSTRIA would need all the strength which he could derive from the support of all his subjects. As soon as circumstances rendered a renewal of political activity possible, DEAK constantly directed and confined the aspirations of his countrymen to a recovery of the rights which had been suspended from 1848. The French war of 1859 forcibly illustrated the weakness which, notwithstanding the command of imposing armaments, resulted from the internal condition of the Austrian monarchy. After Solferino the Emperor FRANCIS JOSEPH had still a larger army than that of his French and Italian adversaries; he held the almost impregnable position which was known as the Quadrilateral; and Germany was preparing a formidable diversion in favour of Austria on the Rhine. The just disaffection of Hungary explained the apparently pusillanimous surrender of Lombardy; and immediately after the conclusion of peace a new policy of conciliation was tried under the SCHMERLING Ministry. A Constitution common to the whole monarchy was promulgated in 1860 by the authority of the EMPEROR; and for five years the utmost exertions were used to induce the Hungarians to accept the boon. If DEAK would have forwarded the not ungenerous policy of the EMPEROR and his advisers, he might have commanded any reward which he might have preferred; but, at the head of the soundest and most powerful section of the community, he still required that the KING should be crowned with the ordinary conditions, and that Hungary should be represented by a separate and independent Ministry exclusively responsible to the National Diet. NAPOLEON III. had commenced for the benefit of Austria a course of political instruction which was completed by BISMARCK and MOLTKE in 1866. In the following year the Emperor FRANCIS JOSEPH, under the advice of Count BEUST, finally granted all the demands of the Hungarian leader, and DEAK asked no more. From the moment at which the ancient independence of the kingdom was recognized, he used every exertion to promote harmony between the Eastern and Western portions of the monarchy. In foreign affairs, and especially in the adjustment of delicate relations with Russia and with Turkey, the interests of Austria and of Hungary are essentially the same. For some years the Chancellor, who holds the highest office in the Imperial and Royal Government, has been a Hungarian. The prominent part which Austria has taken in the recent negotiations on the Eastern question has only been rendered possible by the unity which survives the political separation of the East and the West. For some time past DEAK had retired from an active share in public business; but he was surrounded by universal respect and esteem. The champion of historic freedom is placed far above the philanthropic projector who devotes himself to the assertion of questionable rights of man.

THE SHIPOWNERS' MEETING.

IT must be admitted that the endeavour to obtain improved legislation in regard to merchant ships has hitherto been somewhat unfortunate in the conditions under which it has had to be carried on. It is obviously impossible that any good results can be expected in this direction unless the willing and hearty co-operation of the great body of respectable shipowners can be secured. Their assistance is indispensable to the efficient working of the law, whatever it may be; and it does not require much consideration to see that any attempt on the part of a Government office to take upon itself the minute, inquisitorial regulation of such a trade by purely coercive means must ultimately break down. If the shipowners think they are being ill used, they will certainly find a way to express their discontent, and to embarrass and circumvent the officials set over them. The shipowners, in fact, are a class of men who may be led, but who cannot be driven; and this has been too much lost sight of in the course of the blatant agitation of the last two years. Mr. PLIMSOLL bears a strong resemblance to some of those improvised generals of the first French Republic who had rhetoric enough to rouse the enthusiasm of their followers, but were apt to lead them into perilous positions when they went into action. It may perhaps be pleaded on his behalf that it was necessary to resort to strong measures in order to awaken an apathetic public; but the danger of all exaggeration is in the reaction which is sure to follow. The plain hard facts of the case, stated in their simplest and most prosaic form, were quite sufficient to have commanded attention without any sensational adornment; and if nothing had been asserted except what could be distinctly proved, the steady movement of public opinion thus produced would have been much more powerful than the jerky and spasmodic efforts which have hitherto been made. What is wanted in such a case is a little common sense and moderation. The shipowners are of course a mixed body, but the majority of them are respectable men, who are anxious to keep their ships in a sound condition, not merely from a sense of duty, but because they are aware that they are thereby, in the long run, promoting their own interests. At the present moment the best sort of shipowners do of their own accord almost all that it has been proposed to compel them to do, and there can be no doubt that they have even stronger reasons than the general public for being anxious to see a check put to the scandals and abuses which are due to the black sheep of the flock. Under these circumstances, it is difficult to imagine a more fatal error than that which has been committed in confounding the different kinds of shipowners in reckless and indiscriminate imputations, and thus alienating the very class which might become the most serviceable ally

of reform. No amount of Government regulation will be of any avail unless a healthy spirit exists in the trade, and nothing is more likely to impair this than a sense of injustice and injury on the part of men who are really doing their best. Any system of supervision which places good and bad on a level is doomed to failure from the beginning. Human nature in such a case cannot be left out of account.

We are glad, therefore, to see that this subject is now being taken up in earnest by the shipowners themselves, who are undoubtedly not less interested in it than any other class of the community, and who must be supposed to have a more close and intimate knowledge of it in its practical details. We do not mean, of course, to say that their views as to what should be done are to be implicitly accepted. They have naturally their own point of view, and they see some sides of the question distinctly enough, while there are other sides of which other people differently situated may have a more correct appreciation. Still it is evident that the Executive will be in a great measure powerless unless it can carry the shipowners with it; and that a measure which falls short of ideal reform, but which has the advantage of the support and cordial co-operation of the persons who have most influence in the matter, is more likely to be practically beneficial than one trying to do what is never likely to be done. The shipowners have held a meeting in London to consider their position in view of "existing and prospective "legislation" regarding merchant shipping, and have passed a series of general resolutions, which are to be laid before the PREMIER by a deputation, and which deserve attentive consideration as a representation of the views of a class who have a good right to be heard on such a question. We cannot say, however, that we have been in all respects very favourably impressed by the tone of the speeches at this meeting. It is difficult to see why Lord ESLINGTON, who is not a shipowner, should have been in the chair; and his speech betrayed prepossessions of the kind which disfigured and rendered worthless the Report of the Royal Commission of which he was a member. Mercantile prosperity is, no doubt, a fine thing in itself, but it is not exactly everything for which a great nation may be supposed to exist; and the way in which the Commissioners clung to the assumption that the extension of trade is the great end of life, and the object to which all considerations of humanity must necessarily be subordinated, proved their blindness to the moral aspects of the question. The sordid narrowness of their Report in this respect is a set-off against the extravagance of Mr. PLIMSOLL'S theatrical displays. It was not desirable that the half-hearted policy recommended by the Commission and adopted by the Board of Trade should be accepted; but it is impossible to imagine a more dangerous line of statesmanship than the precipitate reversal of the settled policy of a Government in deference to supposed public clamour. It may be true that the officials have, on the whole, been cautious in using the powers entrusted to them over an important branch of private property; but such a measure as the Act of last Session could never be tolerated except as a temporary contrivance for extricating the Government from a false position. By its terms it placed the shipping trade at the mercy of the arbitrary authority of petty agents, almost without check or limit. It is known to have been a casual expedient for a critical moment, and this is its only excuse. As a principle of permanent administration it is impossible that it could be endured.

The discreditable manner in which this important subject was treated by the Government last Session makes it the more important that this year it should deal with it in a becoming spirit. Without going into any discussion of details, it may be worth while to indicate the general principles which ought to be followed. The responsibility for the seaworthiness of ships should be fastened distinctly on those who have to do with the equipment or loading of the vessels; and the most effectual method of bringing this responsibility home to those concerned is to secure the most complete information as to the state in which every vessel quits the harbour, and to supply those who have the keenest interest in the safety of ships—the crews—with facilities for submitting their grievances to impartial judicial arbitration. It is an idle dream to fancy that Board of Trade officials can manage the shipping trade of the country better than those who are directly interested in it; but there ought to be a stringent system of police for rotten or overladen ships, as for any other infractions of the criminal law. Let shipowners manage their own business; but let means be taken to make them feel that a reckless disregard of life is likely to be attended with unpleasant consequences. The class which needs this reminder is not a very large one; it has no right to mercy, and the interests alike of respectable owners, of the seamen, and of the public will be promoted by a judicious severity.

THE ARTISANS' DWELLINGS ACT.

THE Metropolitan Board of Works are not altogether easy as to the effect of the Artisans' Dwellings Act. They are beginning to put it into operation, but they are by no means resigned to do their own particular part in the work and to leave the results to take care of themselves. Some of the difficulties raised in the discussion of last week are well worthy of careful consideration, but it does not seem to have occurred to the speakers that the time for going thoroughly into them has not yet come. The duties of the Board under the Act are broken up into several stages, and the stage in which matters are at present resting is the most elementary of all. This or that area has to be marked out as unhealthy, and the cost of clearing the land and bringing it into a state in which it can be let or sold for building purposes has to be estimated. When the way for further operations has thus been prepared, the Board will have to choose between the various offers made to them; or, if only one offer is made, to decide whether it is such as they can usefully accept. The debate of last week would more naturally have been held at a meeting of one of the various Companies which have been started to supply the poor with better houses. Nearly every one who took part in it began by saying that the Metropolitan Board of Works were not going to build on the cleared ground themselves, and then went on immediately to define the duties and responsibilities of those who would have to build on it. As a contribution to a controversy of great importance these expressions of opinion were interesting, and perhaps useful. The only objection to them is that they had remarkably little to do with the matter actually in hand.

Two faults were found with the policy of the Companies which are engaged in building houses for the London poor, and especially with the Company of which Sir SYDNEY WATERLOW is the Chairman. The criticisms offered would have had a more consistent aspect if the authors of them had decided beforehand on which of the faults in question they meant to rest their case. It is quite possible that these Companies may be pauperizing the poor by letting them rooms at less than an adequate rental. It is quite possible that they may be asking a fair rent for their rooms, but that this rent is altogether beyond the means of the class for whom the rooms are presumably intended. But it is hardly probable that the Companies should be making both mistakes at the same time. With the exception of the PEABODY Trustees, all the Associations now engaged in building are, we believe, earning a dividend, and none of them profess to be satisfied with less than that particular figure which many Englishmen seem to believe to be a part of the divine constitution of the world. There is little doubt, however, that if the Artisans' Dwellings Act is carried out on a proper scale, the Companies will one day find themselves confronted by this dilemma:—To let houses to the poor at less than their value is in the long run to pauperize them; to build houses which fall short of a certain minimum standard of decency is to perpetuate the evils which these Companies have been started to cure. Yet, if houses are built as they ought to be built, how are they to be let at prices which the poor can afford to pay? It is impossible to say precisely what answer will ultimately be given to this question. Probably the difficulty will be got over in different ways in different instances. At present, at all events, the directions in which a solution will be found can only be indicated. For example, too much stress is perhaps laid on the necessity of charging the poor the full value of the rooms they occupy, if they are not to be pauperized under the plea of benefiting them. Supposing that two sets of rooms, with the same amount of accommodation, are let at the same rent, but that one, being kept in proper order as regards drainage and necessary repairs, pays nothing to its owner, whereas

the other, being entirely neglected in these respects, pays ten per cent. to its owner, is it so certain that the man who lives in the well-drained and properly repaired room is pauperized by the fact that his landlord prefers to spend the ten per cent. which he might draw from the property in making it healthy and decent? If so, is not a man pauperized by living in rooms which only return five per cent., if by doing nothing to them the landlord might make them yield ten per cent? Where is the line to be drawn? A country gentleman who builds cottages for his workmen, and, in order to make them healthy and decent, contents himself with getting two-and-a-half per cent. on his money, is commonly considered to be doing a public service. Why should not a Company which does the same thing in London be held in equal estimation? The pauperizing element in the transaction must lie, if anywhere, in the supposed temptation held out to the tenant of the rooms to depend upon others rather than upon himself for the supply of his ordinary wants. But in this case he can get his ordinary wants satisfied elsewhere, if he is content to have them satisfied in a less healthy and decent fashion; and experience, unfortunately, seems to show that as yet the appreciation of what may be called the invisible points of superiority of one house over another is seldom keen enough to make a man pay more for them. If these invisible matters were properly attended to by all builders—if, that is, every house were so drained and repaired as to make it in all essential respects fit for human habitation—the case would be different. The average standard of rent would then have to be raised to such a point as would give the ordinary builder an adequate return on the money invested; and, if a Company were to let houses at a lower rate than this, they would, in effect, be making their tenants a money payment. But so long as the advantages given by the Company cannot be expressed in money, and take the form not of lower rents nor of increased accommodation, but simply of healthier and more decent arrangements, the danger of pauperization seems almost infinitesimal; while, if it exists, it is more than outweighed by the greater probability of the tenants not becoming pauperized in other ways.

If, however, the condition of the poor is to be improved on at all a large scale, this universal raising of the quality of houses in the matter of drainage and the like must some day be effected by legislation. The efforts of single Companies will be a mere drop in the ocean unless they are seconded by an Act of Parliament which shall make it unlawful to let unhealthy houses for healthy, just as it is already unlawful to sell unwholesome food for wholesome. When that day comes, the second difficulty raised in the recent discussion will assuredly have to be faced. If the quality of the houses is improved, higher rents must be asked for them, except in cases where the absence of competition has hitherto kept rents above the average level. How are the poor who now pay with difficulty 2*s.* 6*d.* a week for an unwholesome room to pay 4*s.* a week for a wholesome room? A similar question has often been asked with respect to all the commodities of which the price has risen in modern times, and the answer in all cases is substantially the same. When the cost of living increases in the producing class, the increase has somehow to be got out of the consuming class. If there are no more people employed in supplying the wants of London than are needed for the purpose, and these people have to pay more for their houses, they must in the long run ask more for the services they render. If they are already bidding against one another for employment, or if the rise in the price they ask for their services lead to some of them being dispensed with, so that they come to bid against one another, they must find employment elsewhere. The argument that we must not make the houses of the poor healthy because to do so will raise the rent of the houses, would have stood in the way of half the improvements of modern civilization. No doubt changes of this kind will often be attended with much individual suffering; but which is better in the long run, to have London inhabited by a smaller population, living healthy lives in decent houses, paying a comparatively high rent, but earning a comparatively high wage, or to have London inhabited by a larger population, living in houses in which decency is impossible and disease inevitable, and though paying a low rent, earning at the same time a low wage? The forethought and benevolence of private persons may do much to temper the hardships which will have to be borne while the change is in progress, but the object which statesmen and legislatures ought to keep in view is the eventual advance to a higher standard of living.

There is no need to follow the Metropolitan Board of Works into the consideration of the internal distribution of the houses which are to replace those which are not yet pulled down. There will be time enough to consider how many rooms should be arranged for separate letting, and how far the practice of living in one room should be discouraged by letting two rooms together. Two things, however, may be said even at this stage of the question. One is that nothing will be gained by providing single rooms if an equal, or even greater, degree of overcrowding is arrived at by taking in lodgers. Yet to prevent lodgers being taken in will be impossible except in isolated cases, where the vigilance of individual landlords is devoted to this particular point. It is very much easier to improve the arrangements of houses than to supervise the use which the tenants make of them. The other thing to be noted is that it will not always be possible or even desirable to fill the new houses with the same class of tenants as that by which the demolished houses were filled. The natural process will be that the new inhabitants will be recruited from the better portion of the tenants of houses in the surrounding district of the same character as those which have been destroyed, and that the lowest portion of the dispossessed tenants will take their places in the houses that are still left untouched. In course of time it may be hoped that improvement will extend even to these last, but for the present we must not complain if, in helping those who are willing to be raised, we have to leave on one side those who are past raising.

THE THIRLWALL MEMORIALS.

IT would not be amazing if, by a natural reaction, mankind should agree to put a stop to all visible memorials of the dead, and decree that, if departed worthies cannot dwell in the minds of those who ought to remember them, they must even be forgotten altogether. Everybody has a memorial now, as everybody has a biography. Some people have two or three memorials, as indeed some people have two or three biographies. And the worst feature of the memorial system is that half the memorials are not real memorials at all. Some one has some object of his own, often a very good and praiseworthy object, which he wants to carry out, and cannot; so he makes an effort to connect his own scheme with the name of some departed worthy, and asks for help to make a memorial. Not long ago circulars were going about through the land in which a clergyman, whose name we have forgotten, asked help for the restoration of a church, whose name we have also forgotten, on the ground that Bishop Stillingfleet was born in the parish, and that the work in the church was to be a Stillingfleet Memorial. It always strikes us that there is something amiss in these attempts to kill two birds with one stone, to do some work which is desirable on other grounds under cover of doing honour to some particular person. To set up a tomb or a statue or a picture is to make a direct memorial of the person commemorated; to found a prize or a scholarship in his name, to do anything, in short, which attempts something else besides commemoration, is not a memorial in the same direct sense. It is rather improving an occasion, taking advantage of the deceased person's memory to carry out some other object. The practice, too, leads to confusion. An Oxford man, we may suppose, wins the Stanhope prize and the Ireland scholarship early in his career. In a later stage he wins the Arnold prize and the Eldon scholarship. He is tempted to look on Lord Eldon and Lord Stanhope, on Dr. Ireland and Dr. Arnold, as alike personally his benefactors; and Lord Stanhope and Dr. Ireland are so in the strictest sense. They themselves made the foundations which bear their name; but the Arnold prize and the Eldon scholarship were not founded by Lord Eldon and Dr. Arnold, but by other persons in their honour. And when it comes, as it sometimes does come, to building a memorial church—as distinguished from a strictly monumental church—one is tempted to ask whether there is not in this something of a survival of the older practice of putting a church under the "dedication" or "invocation" of an acknowledged saint. We may perhaps mark two stages of the change from the actual dedication to the mere memorial in the church of Charles the Martyr at Plymouth, and Bishop Ryder's church at Birmingham. At Plymouth there was a genuine attempt at a real dedication; only, as no one brought himself to talk about St. Charles, the building is spoken of as "Charles" and its pastor as "Vicar of Charles." At Birmingham we quite forget whether the church was built by Bishop Ryder or was built in honour of him; but in either case it is an example of a church bearing the name of a man who did not come in even for the *quasi* canonization which fell to King Charles at Plymouth, but whose memory was clearly meant to be held in reverence. On so mysterious a description as that of "Laura Chapel" at Bath it may be safer not to risk any suggestion. Still, in all these cases—churches, prizes, scholarships, anything else—there is the same general notion, the

attempt to combine the commemoration of the deceased person with the carrying out of some other object. There is surely too much of this kind of thing about; indeed, the Stillingfleet case may be set down as a *reductio ad absurdum* of it. But we are far from saying that it may not be justifiable in some cases; indeed we have in our eye a case where some such course seems to us justifiable, praiseworthy, and almost necessary, as the only way of redressing a real wrong.

The church and [illegible] of St. David's have, as all the world knows, not long since lost a great prelate, and they have lost him in more senses than one. That Bishop Thirlwall passed away from his church and from the world was in the ordinary course of human events; in that sense he is lost only as all men must be lost sooner or later. But he is also lost to his church and diocese in another way, in a most needless and unworthy way. The last resting-place of such a man should undoubtedly have been in his own church, among the resting-places of so many of his predecessors in his ancient chair, a line of prelates which numbers many great names, and among which his is assuredly one of the greatest. There, in his own place, on his own ground, a fitting memorial might have risen over him; the tomb, the recumbent effigy, the canopy, the inscription eloquent in its simplicity, would all have been in their place had his dust been laid in the place where it ought to have been laid. But so it was not to be; the claims of his own church, his distant and lonely church by the rocks of the western ocean, the church where he had, to say the least, been more at home, been more truly a Bishop, than any of his predecessors for ages, were rudely cast aside. The claims of that venerable spot were not to be listened to when the "metropolitan cathedral," the "national Valhalla," or any other of the strange aliases which disgrace the church of St. Peter at Westminster, had once opened its mouth to ask for a new inhabitant. The leaky snatching passion which reigns in that quarter could not brook denial on the score of what anywhere else would seem the obvious propriety that [illegible] the greatest among the successors of St. David should find his last home in the church of St. David. Another attraction must be added to the exhibition; another thing must be set up for the Dean or the verger to show to the next "party"; another opportunity must be [illegible] on for further disfigurement of the hapless minster; so further fragment of the work of Henry or [illegible] must hewn away to receive some hideous "tablet," some fulsome inscription by [illegible] at scholastic Bishop, [illegible] one from the midst of company as queer as the which surrounds the bust of Sir George Lewis. One might be curious to know whether, in the quarters where these things are decided, there is any very clear knowledge where St. Davids is, and whether, by a not uncommon form of error, St. Davids and Llandaff may not be looked on as one and the same place. At any rate, the claims of so lowly a church, one so cut off from the pale of metropolitan society, so far out of the ken of a "metropolitan Dean," went for nothing. The dust of Thirlwall was sentenced to lie undistinguished in the crowd at Westminster, instead of lying, marked out and honoured, in his own church; the memorial which was actually to mark his grave was to add new disfigurement to the church of St. Peter, instead of new beauties to the church of St. David. The wrong has been done; let those who rejoice in such doings have their triumph. But it can hardly be expected that the glee of the robber should be fully entered into by those who have been robbed.

It was clearly impossible that such a man as Bishop Thirlwall could be allowed to go without a memorial of some kind or other in the diocese and in the church which was his own. The stranger has carried off his body; but the stranger has not been able to wipe out the memory of him from the minds of his own flock. The people of the diocese of St. David's, with their Bishop at their head, have determined that some memorial of the great man who has passed away from among them shall be set up on their own soil. But what kind of memorial are they to set up, now that all possibility of setting up the right kind of memorial has been so cruelly taken from them? There is a scheme, a scheme against which we do not wish to say a word, for commemorating Bishop Thirlwall by the foundation of a scholarship or professorship at Cambridge. But this is a scheme which cannot be supposed to have much interest for the people of the diocese of St. David's. It is a scheme which addresses itself to Cambridge men, and to others who think of Thirlwall mainly in his character as scholar; it does not satisfy the wishes of those who wish to commemorate their own Bishop in his own diocese. But how are they to do it? The right thing cannot be done; a translation to Westminster *per vim, mid unlage*, as our forefathers would have said, has hindered that. All that is left is to do the thing that is least wrong. And in such a case there is a strong temptation to be withstood, which might lead some to do the thing which is most wrong of all. The very worst thing of all would certainly be to set up a sham monument in St. David's Cathedral, a monument of a man who is not there. Yet the public taste on these matters lags so far behind the improvement of the public taste on many kindred matters, men's notions have got so utterly corrupted by the abominations of Westminster and St. Paul's, that it was absolutely certain that a cenotaph, a statue, or some absurdity of the kind, would be proposed. And so it was proposed. Some talked of a standing or sitting figure, some of a sham tomb with a recumbent effigy. A standing or sitting figure might be very well somewhere else, but certainly not under the roof of St. David's Cathedral. To a sham tomb there is the one killing objection that it is a sham. Some one said in an Oxford prize poem,

> No empty cenotaphs their bones enshrine.

But empty cenotaphs, if they are to exist at all, may at least be kept for those whose emptiness they might not badly symbolize. Some other memorial is wanted for the solid learning and wisdom of a Thirlwall. In a meeting lately held at Caermarthen the common sense of the matter was clearly put forth by the Bishop, and it is much to the credit of his hearers that his common sense should have gone down with them as it did. He told them that the sitting or standing figure would be utterly inappropriate in the church of St. David's, and that the recumbent effigy, however appropriate as a matter of art, would sin against laws higher than those of art—namely, the laws of truth. This is the kernel of the whole matter. Bishop Thirlwall is unhappily not buried at St. David's; and, as he is not buried there, St. David's must not make believe that he is. St. David's has suffered a great wrong; but she must bear her wrong as she can, and not try to mend it by an artistic lie. What then is to be done? There really is nothing to be done except to fall back on some of those secondary schemes which we should certainly fight against if there had been any chance of doing what is really the right thing. There is really nothing to do but to fall back on a memorial window, a restoration of some part of the building, or any other of those shifts out of which people must choose when the fault of others leaves them nothing but shifts to choose from. The choice which has been actually made seems to be as good as could be made under the circumstances. It is better, we think, that a memorial which is to be strictly a memorial, a memorial which is to be the nearest substitute for the real monument which cannot be had, should be something which it is good and desirable to have, but which yet is not of direct practical usefulness. Such an object was easily suggested by the present state of the church of St. David's. The west front which forms the end of that wonderful nave is utterly unworthy of the building. An ugly, but solid, composition of Nash, which is a great disfigurement as a matter of art, but which there could be no ground for sweeping away on any merely utilitarian ground. To substitute something better would really seem to be as fitting a memorial of Bishop Thirlwall as can be had, now that the really fitting memorial cannot be had. A west front harmonizing with the rest of the church, stern and simple without, enriched to any amount of gorgeousness within, would be a work worthy of its object. In glass or in sculpture some place would be found for the only form of direct commemoration of the Bishop which is left to his own church. His figure, with his staff in one hand, with the eight books of his History in the other, might well fill a niche over the west door or the west window. Something of this kind has been wisely decided on by the meeting at Caermarthen; but of course no details are fixed. All that has been done is to make choice of the west front of the cathedral church as the subject of improvement or restoration, in some shape or other, in memory of the great deceased. Such a scheme, if worthily carried out, will be the best thing that can be done as matters actually stand. May its promoters go on and prosper.

THE MIGRATIONS OF FASHION.

WE are constantly told that nothing can be more unaccountable than the migrations of London society; and also that its successive removes were made without any reason except caprice. But a moment's thought will show the fallacy of such assertions. A single example to the contrary is fatal to them. St. James's Square was built in 1676, became at once one of the chief centres of fashionable life, and remains the same after the lapse of exactly two hundred years. Two hundred years earlier the Strand was in fashion, and, had there been room, it might have remained so until the present day. Fashion has shown no caprice, and it required nothing short of an Act of Parliament to dislodge the last great noble who inherited one of those riverside palaces. Nor did this dislodgment take place two hundred years ago, when St. James's Square became the fashion, nor a hundred years ago, when Portland Place was built, but last year, when the busy City, having overflowed from Fleet Street, had swallowed up the last of the palaces which formerly bordered the Strand. The process began with Arundel House, and paused for a time at the mansion whose gate at the end of Buckingham Street is actually the only remnant, besides the Savoy Chapel, left to tell of the time when the Thames was the ordinary highway of the citizens, and a house by its bank the fittest residence for a duke. The exigencies of increased population, not the caprices of fashion, have dictated the principal migrations. In Elizabeth's reign the number of people who required accommodation within reach of the House of Lords was only one-eighth or one-seventh of what it is now, and the untitled aristocracy has increased at a still greater rate. The order of country squires who now have houses in Belgravia or Tyburnia did not then exist. When Master Wentworth came up from Lillingston Loyel to make his famous motion as to the Queen's private income and expenditure, he probably occupied lodgings or a room in an inn somewhere in Westminster. When his descendant Sir Charles Dilke, prompted by an ambition which in this case has the excuse of being hereditary, makes a similar motion in the Parliament of Queen Victoria, county members have their houses in St. James's Square,

in Belgravia, along Park Lane and Piccadilly, on the Bayswater Road, and round Kensington Gardens; while the whole fortune of all the sixty or seventy peers who constituted the House of Lords in 1576 would be required to make up the income of a Staffordshire brewer or a Berkshire financier, three hundred years later.

There is a petition among the papers at Knole which, though it is not dated, unquestionably belongs to the later years of the reign of James I. It complains of the great increase in the population of London, and begs the King to take measures for preventing the growth of the town. Proclamations against building fresh houses are said to have been made on more than one occasion, and it was owing rather to the overcrowding which was thus caused than to caprice, that noblemen and others who could afford it removed further and further towards the country. Within a very few years two immense districts covered with fine houses have arisen in Belgravia and Bayswater. Fifty years ago or less the Five Fields extended from Chelsea to Piccadilly, and hardly a house was to be seen between Millbank and Brompton. In those days people of rank and wealth affected two old districts and one new one. Portland Place and the terraces surrounding the Regent's Park, with all the streets between Portman Square and Langham Place, formed the refuge of the movable fashion. A centre which may be placed, according to Sydney Smith, in Grosvenor Square, existed then and exists still. St. James's Square, as we have seen, was what it still is, and the floating part of the fashionable population had begun to desert Bloomsbury and make its first move across the line marked by Regent Street. In 1826 the late Lord Farnborough published anonymously a tract on the improvements then in progress, and some curious and even instructive deductions may be drawn from it. The age was one of change, and the writer remarks that, "if we had been told some years ago that a message could be conveyed from London to Plymouth and an answer returned in ten minutes, that the metropolis would be brilliantly illuminated by the smoke of coal, or that by means of a kettle of boiling water we should obtain a speedy conveyance from Dover to Calais," our credulity would have been put to the test. It is curious to observe on this passage with what wonder the clumsy semaphore erected in 1816 on the top of the Admiralty was regarded by people who lived before railways and the electric telegraph; but this is not to our present purpose, for Lord Farnborough goes on to remark upon many projected improvements, such as the removal of the Exchequer offices from Palace Yard, and of the stables which abutted upon the Banqueting House in Whitehall. But his principal subjects are Buckingham Palace and the National Gallery, and he remarks of the former that, when the foreign princes visited this country in 1814, one of them, "who had received from us very large sums of money for the prosecution of the revolutionary war," spoke contemptuously—perhaps to Lord Farnborough himself—as to our royal palaces. "It was observed," we read, "in answer, that our magnificence was to be seen in our subsidies, not in our palaces." In those days, as from the reign of William III., St. James's Palace was the residence of the Court; and though Buckingham Palace may now be considered to have finally eclipsed St. James's, since Drawing Rooms and Levées are held no longer in the old Palace, yet the residences of the Heir Apparent and other members of the Royal Family are still upon the ancient site, and Marlborough House is rather to be accounted the centre of contemporary fashion than Buckingham Palace.

St. James's Palace and Whitehall are certainly nearer to what were then the fashionable quarters of Soho and Lincoln's Inn Fields than they are to the present suburbs of Kensington or even to Pimlico. Bloomsbury, when Lord Montague built the house which has since become the British Museum, was for the most part open country; but that was fully two hundred years ago, and the Duke of Monmouth and Buccleuch then lived on the other side of the Oxford Road, and Wardour Street had not been built. Even so late as 1734 the anonymous author of a *Critical Review of the Public Buildings* complains that, though Bedford Row is one of the most noble streets London has to boast of, the houses are not sufficiently noble for their situation; and it would seem that a good opportunity was then lost for making a very fine and fashionable quarter where the houses of one or two great nobles, including that of the Dukes of Bedford, still stood. Soho was getting too crowded, and Drury Lane had never recovered the bad name it got in the year of the Great Plague. This is perhaps the first time we find healthiness considered in determining the movements of the London population. But a little later Bow Street, running as it did from the confines of the riverside palaces to the open country by St. Giles's "in the fields," was the place of most fashionable resort. The great Dr. Radcliffe had a house there when he told King William he would not take His Majesty's two legs to have his three kingdoms, and when he offended Queen Anne by saying she had the vapours. It seems a question whether he lived in Bow Street or Great Queen Street when he had his famous passage of wit with Kneller. Walpole says Queen Street, and Cunningham follows him; but Jesse says Bow Street, and adds that the garden was behind Covent Garden Market, on the site of the present Opera House. It was therefore a possible relic of the Abbot's garden which gave its name to the district. But there is no question that in Queen Street the Duke of Newcastle resided when he was Premier, the house, No. 77, being now the depôt of the S.P.C.K., although it narrowly escaped purchase as an official residence for the Lord Chancellor. A greater Duke of Newcastle, with his celebrated Duchess, Margaret Lucas, whose book about her husband has recently been reprinted, lived far to the east even of Lincoln's Inn, at Newcastle House in Clerkenwell, where some dingy streets still preserve this name. He died just two hundred years ago, and Clerkenwell shows little sign now of the prosperous days when not only the Duke, but Lord Northampton, Bishop Burnet, and other great folk had houses within the precincts of the Priory. Monk's widow, the Duchess of Albemarle, was a later tenant of Newcastle House, and one of the many houses said to have belonged to Oliver Cromwell was in the Close. But to chronicle fully the migrations of early fashion, it would be needful to speak of Leicester Square, when the Prince of Wales rented Leicester House; of Aldersgate Street, when the Earls of Thanet had a house there which is still standing and is better known as the residence of the famous Shaftesbury, and when the Duke of Lauderdale and the Bishops of London, and still earlier the Earls of Westmoreland, lived in it; of Bishopsgate, when Crosby Hall was in its glory, and Richard III. plotted there against his nephew; and of many other places within or without the City boundaries which still contain evidence of the favours of the rich and noble.

The modern movements of the fashionable world deserve better the use of the word capricious. None perhaps has been more unaccountable than that which in our own day made Pimlico for a short time the vogue. Before the Great Exhibition of 1851 had discovered the capabilities of Kensington Gore, and while the genius of a Cole still slumbered under a pseudonym, every one who wished to be considered "in society" thought it necessary to have a house in the swamp which Mr. Cubitt had reclaimed. There was some connexion apparently in people's minds between Pimlico and Belgravia; and if the landlords had been wiser and the houses stronger the tale of its prosperity might have been longer. But fragile habitations, built with a maximum allowance of plaster and paint and a minimum thickness of brick, are costly to keep up and unwholesome to live in: some of the streets in that region now look as if nothing short of rebuilding would make them fit for human dwelling-places. Settlers of the better class are now congregating about Kensington, North and South, and it is sad enough to see the provision too commonly made for their reception. Many of the new houses are little better than sieves through which wind and rain readily penetrate, while the drainage need not be mentioned, if indeed any drainage exists. Vast districts of Bayswater are hardly more habitable except for their situation, which for the most part is high; and the proximity of the Park and Kensington Gardens gives to certain streets in Tyburnia an advantage which both doctors and builders seem determined to improve. The course of the Westbourne may be traced at nightfall across the Park by a line of mist, but the hills on either side, Notting Hill and Craven Hill on the west, and the original Tyburn Hill on the east, have been covered with streets and squares within a very few years. The gallows, which only took their final departure from Edgeware Road in 1783, probably prevented the earlier colonization of Bayswater. Fashion, indeed, seems to be in some measure returning to the older part of this district, and several handsome mansions have of late been built in St. Marylebone: houses which promise to stand for a century at least, and to be tolerably warm and comfortable even in winter. Possibly the dry sandy soil of the south-western part of the parish may have had some share in recommending it; but the great attraction has no doubt been Hyde Park. Wherever people can see green trees, and at least the semblance of green grass, the house-building speculator is sure of a good return for his outlay, and it is hard to believe that Grosvenor Place, Park Lane, and the Bayswater Road can ever cease to be favourite neighbourhoods for those who can afford to live in them. But it is strange that some of the older places should be deserted by people who have families to house. Rents are lower in Fitzroy Square and the adjoining streets, with their solid, comfortable mansions, than in the wretchedly built and crowded avenues and terraces of Earl's Court or Brompton. A man who has children might, but for the exigencies of fashion, have large and airy rooms, light, and good drainage for less than he pays to be squeezed into a villa at Kensington, where his neighbour's piano, the noise of little feet on the floor above, bad smells, and a standing account with the plumber and the druggist make his life a burden. It is but seldom that a young couple looking for a house think of anything but the rent and the proximity of great folk. The soil, the elevation, the thickness of the walls, even the drainage and the water, are seldom mentioned; and we have yet to see the day when an advertiser with houses to let will think it worth while to mention such considerations. Influenza, bronchitis, the annual epidemic of fever, seem all to be well compensated by living opposite a peer and having one's name in the *Court Guide*.

SIR GEORGE BOWYER ON CHURCH AND STATE.

SIR GEORGE BOWYER has contributed to the current number of the *Contemporary Review* an article on the relations of civil and ecclesiastical power, under the rather mediæval-sounding title of *Concordia Sacerdotii atque Imperii*. We are bound to say, however, that there is nothing scholastic about his paper except its name. He writes of course as a Roman Catholic, and to some extent—the reason of our qualification will appear presently—as an Ultramontane, but he does not, like most of the principal critics of Mr. Gladstone's Vatican pamphlets, write like a schoolman, a special pleader, or a pedant. His essay does not perhaps throw as much light on the general question of

the relations of Church and State as might have been expected, being mainly a plea against any persecution of the former by the latter, suggested by the conflict now going on in Germany, to which allusion is constantly made. And, so far as he pleads for this immunity, we are entirely with him, though in some of its details his argument appears open to criticism. It is remarkable, however, on the whole for its simplicity and directness, and for the frankness of its avowals. Thus, for instance, we find him expressly condemning all religious persecution, "whether Catholic or Protestant," and the Inquisition by name, admitting that writers in former ages have exaggerated the powers of the hierarchy, and that "the authorities of the Roman Catholic Church have overstepped the legitimate boundaries of spiritual and ecclesiastical jurisdiction"—which, by the way, is a condemned proposition of the Syllabus. And, as a necessary consequence of these admissions, we find Papal infallibility restricted hardly less stringently than by Dr. Newman; but on this last point we shall have a word to say presently. The line of argument is always plausible, and often more than plausible; yet the writer somehow manages to pass *currente calamo* over awkward questions on which one would have been glad to hear what explanation he had to offer. But we must now proceed to examine the essay a little more closely. We need hardly remind our readers that it differs from most apologies which have been recently put forward for the Roman Catholic position, as emanating from a layman and a lawyer as well as a man of considerable learning, and not a mere hot-headed partisan.

The writer starts from the fact, which can hardly be denied, that "history shows that the civil power has always been jealous of the spiritual and ecclesiastical," though he does not add, what is also true, that the jealousy has not been all on one side. This naturally leads him to notice the scare created by Mr. Gladstone's pamphlets as to the State all over Europe being in danger from the revived influence of the Church, and suggests the obvious retort that the civil power has an absolute monopoly of physical and material force at its disposal. "It can crush a Church by bitter and continued persecution." And this, it is added, it is doing at present in Germany "under a disguised military despotism," and in Italy "under a vulgar, ignorant, corrupt, and rapacious democracy." As the alleged persecution in Italy is not again dwelt upon, we pass over this reference to it with the remark that the writer has not strengthened his argument by so conspicuously false an analogy. The ecclesiastical policy of the German and Italian Governments is so far from being identical, that their respective methods of dealing with the Church are almost diametrically opposite. But this by the way. To the material resources of the State, the Church, we are reminded, can oppose only the force of opinion. "Roman Catholic opinion is called Vaticanism; yet it is only opinion," and its effect depends wholly on individual opinion. "If Catholics did not believe in Papal infallibility, the decree would be a dead letter . . . a confessor may refuse absolution, but no one can be compelled to go to confession." This is true, in a sense, though it is not so many years since people *were* compelled to go to confession in the Roman States, and, we believe, elsewhere also; but it hardly goes to the root of the matter. Individual opinion, or its outward profession, necessarily depends a good deal on the public opinion of that world, whatever it be, with which the particular individual comes most directly into contact; and it would not be safe to argue, and certainly is not true in fact, that every Roman Catholic who tacitly submits to the Vatican decrees individually approves them. Many reasons short of that may account for their silence, to one of which the writer refers; for although, "if a man believes that the sacraments are unnecessary, the refusal of absolution is nugatory," it does not follow because he believes in absolution that he believes in the infallibility of the Pope. With a good deal of Sir G. Bowyer's strictures on Prince Bismarck's policy we can go along; but it is a mistake, we imagine, to say that he is determined to put down the "doctrine of the infallibility of the Pope." He has certainly always professed not to interfere with doctrine, as such; and while it may be difficult to reconcile all that has taken place with this profession, we are not aware of any attempt having been made to inflict penalties on bishops or priests merely for teaching the Vatican dogmas. We agree, however, with the writer, that if all persecution is hateful, a persecution which is not thorough is a blunder as well as a crime. "There was some sense in the persecutors of former days. Their policy was extermination. We condemn and abhor those persecutors, whether Catholic or Protestant; but we must admit that they knew the object which they had in view, and they understood the means of attaining it. If Prince Bismarck undertook to expel or exterminate the German Catholics, he would have a policy, and he might call himself a statesman." But in an age when such drastic measures are impossible, to legislate against religious opinion is sure to prove as ineffectual as it is unjust. It could only be excused by showing that the civil power is menaced by a real danger from the spiritual; and of this Prince Bismarck has produced no evidence, though he has been repeatedly challenged to do so. If it is a "grave error of judgment to attempt to justify everything that has ever been said, written, or done in the Church"—we do not know how Cardinal Manning will appreciate this frank admission—it is a still more serious mistake to turn against the present Church and its members anything wrong or questionable that can be collected from the enormous mass of ecclesiastical acts and documents during the last eighteen centuries.

So far, if he has advanced nothing very new, Sir G. Bowyer is on pretty safe ground. It is when he comes to grapple with the general question of the due relations of Church and State that the discussion becomes more interesting, but hardly more satisfactory. No objection, of course, can be raised to the broad principle, from which he starts, that as long as men continue to believe in the immortality of the soul and the existence of God, religion must always hold its own, even in some cases against and above temporal laws. Nor is there any difficulty about admitting St. Augustine's interpretation of the words, "My kingdom is not of this world"—namely, that "while in this world, it is founded on principles and intended for purposes different from those of civil and political governments." The real difficulty lies precisely in the circumstance that the spiritual society, however diverse its principles and aims, is and must be in this world, and therefore is inevitably liable to be brought into contact, if not collision, with secular ordinances and powers. And this difficulty is increased rather than diminished, as far as the State is concerned, by the fact on which Sir G. Bowyer insists, that the Roman Catholic Church, being a cosmopolitan, and not merely local society, "its constitution and laws belong legally to the condition of mankind anterior to, or at least apart from, the formation of separate States." In those mixed questions of which both powers take cognizance under different aspects, the two often mutually support each other, but not always. And hence arises a real or apparent conflict. We may dismiss, as practically irrelevant, such extreme cases as those here referred to of Nebuchadnezzar commanding an act of idolatry, or the persecution of the early Christians, where the conscientious duty of disobedience to the law is obvious enough. The writer comes nearer the point when he touches on questions of marriage and education. Let us take his treatment of the former. The law may, if it pleases, make the civil contract valid and sufficient; but the Church has a right to require, as it does wherever the Tridentine decrees are in force, the ecclesiastical solemnity also for a valid marriage. This sounds moderate enough; but what if the Church goes on to treat those who have been married by civil contract only, even when not members of her communion, as under no matrimonial obligations to each other, so that both or either of them may have her sanction for contracting a fresh alliance? Sir G. Bowyer can hardly be ignorant that a scandalous case of the kind has recently occurred in this country, to say nothing of others in Bavaria, and we should have been glad to know his opinion about it. For such cases are clearly not covered by his statement that "it amounts *only to this*, that the Church requires something more than the State, because it looks beyond the mere temporal order of society." On the contrary, the Church required of the persons we refer to a great deal less than was required by the State, not to add by the elementary principles of morality also. In the case of the divorce law we agree with the writer that there need be no collision. If the State permits divorce *a vinculo* for certain causes, and the Church forbids it altogether as a violation of the law of God, her prohibition merely restricts those who recognize her authority in the use of their legal rights, without affecting in any way their legal obligations.

But here, just as we hoped that the writer was proceeding to a more comprehensive treatment of the whole question, he suddenly breaks off on a side issue, and devotes several pages to the dogma of Papal infallibility, only returning at the end to his original subject to lay down what, as he puts it, is little better than a truism—that "the Church is not above the State, nor the State above the Church," but that they are related to each other in human society as the soul to the body in the individual man; whence it follows that, as long as the temporal government confines itself to its proper functions, there can be no collision between the two. Be it so; but this principle is not more serviceable for practical guidance than what the writer denounces as the "false, shallow, and stupid" formula of "a free Church in a free State." Either formula runs smoothly enough, till it comes to be applied. An abundant experience shows that the difficulty arises in fixing the proper boundaries of civil and ecclesiastical rights. No one claims for the State the regulation of sacraments, or for the Church the regulation of the police force. It is on the debatable land between the two that there is danger of collision and need for some clearer and more satisfactory adjudication of conflicting claims than we can gather from these pages. We shall not enter further here on Sir G. Bowyer's ingenious defence of the infallibilist dogma—about which he is a decided "minimizer," though he disclaims the name—than to observe that it is not borne out by any single high authority in his Church, with the exception of Dr. Newman. But Dr. Newman, while he is a very high authority in one sense, is no authority at all as representing the accepted Roman view of things; and his explanation has been elaborately attacked as anti-Catholic in the *Dublin Review*, which does represent Rome. It was scarcely worth while to gibbet the people who argue that, "if the Popes had been infallible, they would have remedied the Roman malaria"; but if it is a "figment and absurdity" to suppose the Syllabus an infallible document, as well as those numerous and solemn Papal decrees which have sanctioned the principle and practice of punishing heretics with imprisonment or death, not only is the Vatican dogma reduced to something very like a dead letter, but all its most authoritative exponents are convicted of fundamental error. As regards the Syllabus, indeed, the *Dublin Review* has pretty conclusively proved that it comes under infallible sanction; and Sir G. Bowyer may remember that, in the Jansenist controversy, the Holy See

expressly claimed infallibility on "questions of fact" (which he repudiates), and excommunicated those who denied it. He broadly hints, indeed, that Papal infallibility means no more than "the infallibility of the Roman Catholic Church." If so, we can only reply that the "absurdity" of misinterpreting the decree recoils on the heads of those who framed and sanctioned it. It seems hardly respectful to a General Council to treat its most solemn pronouncements as "much ado about nothing."

THE DECAY OF RURAL TRADITION.

THE editor of a Worcestershire newspaper has invited co-operation throughout that county in an experiment which is so excellent in its aim that it ought to be a success, and at the same time so late in its beginning that it must prove, it is to be feared, more or less of a failure. It is proposed to collect, under the title of "Old Worcestershire," the floating and unwritten, or at least unpublished, treasures of local traditions, customs, legends, proverbs, rhymes, and miscellaneous fireside memories belonging to the county; and, with a wise forethought, all such matter not belonging to the county is distinctly excluded from the plan. Such a work would stand in the same relation to the ordinary county histories as Mr. Green's *History of the English People* does to the ordinary Histories of England; and, if efficiently executed, it would go far to clothe the dry bones of the antiquary's labours with living flesh and blood. To the average antiquary of a century ago it does not appear to have been matter of much concern whether, if a man had not a coat of arms, he had any sort of coat at all. The only characteristic worthy of notice was a crest; and he who did not exhibit a motto might just as well not belong to the race of articulately speaking men. Exceptions were indeed made in favour of such departed worth as might have attained the parochial beatification of a monument; but then it must be in the church itself, and not in company with "the rude forefathers of the hamlet" in the churchyard.

It is, however, only just to Worcestershire men to say that Dr. Nash, the historian of that county, was an antiquary and an observer of a much higher type. His "collections" are full of interesting detail upon matters quite outside the range of the Heralds' College; and the curious old ballad in praise of Malvern and its waters, with its pious refrain, "O praise the Lord," in every verse, is known best, if not exclusively, through his volumes. His search of ancient records kept in view the man as well as his "coat," as in the case of the first known rector of the important parish of Martley:—"Robertus de Lech, persona de Mertle, per fas et nefas ab adolescentiâ suâ nummorum numerum augmentavit, et ille avarus 4 Id. Aprilis (1299) prædonibus peremptus pecuniam perdidit atque vitam. Defuncti funus non patria, vir dolet unus." The reference for this pleasant obituary notice is to "Ann. Wig." (*i.e. Annales Wigornienses*). But even the county historian of wider aims, such as Dr. Nash, would not have considered it worth his while, or of interest to his readers, to collect the old stories and superstitions of the country side. They probably showed, in the later years of the eighteenth century, no sign of dying out, and no Commission or Department had as yet been invented for the express purpose of making war against them. Learned men might correspond with each other on the subject of amazing derivations for local names; but they did not trouble themselves to know why or whether an anxious mother would come to the parson to beg a "Sacrament shilling" to hang round the baby's neck as "good for fits," or the old grandmother, when a thunderstorm was approaching, go to her chest for the "Letter of Our Saviour to King Abgarus," that she might fasten it up on the wall. If the language of old goodwives and nurses now and then reached the ears of wigged authority, it was probably disposed of after the fashion of Dr. Johnson:—"It is observable that the nurses call sleep *by, by*; *lullaby* is therefore *lull* to *sleep*." Why "the nurses call sleep *by, by*" did not concern our great-grandfathers very much.

Such an inquiry as that which has been lately set on foot in *Berrow's Worcester Journal*, and which has been taken up with some interest in a part of the county, might help to solve several questions of general historical interest. Among others, it would probably throw some curious light upon that chronological puzzle which everybody finds it so easy to answer wrong—the date of the Reformation. Rural England might be found not altogether to have borne out the favourite theory of the short and easy manuals, that the religious life of the people was at a certain fixed time, by order from London, turned upside down and emptied out like a drawer in a house cleaning, and then, after being carefully scrubbed and aired, filled up again with duly authorized contents. There would seem to have remained a good many odds and ends in the corners, suggesting that the contents of the drawer had been subjected to a very different process of change. And not a few shreds and bits of broken material would extend the suggestion to an earlier date, in the change from Pagan to Christian worship, and indicate in various charms and superstitions that the old gods, like the Canaanites, held their ground in many a hill fastness for a long time after the general conquest of their land. But during the last half-century, and especially during the present reign, the process of house-cleaning has been going on throughout the country in a very business-like and unsentimental fashion; and a millennium of English rural life would seem to be approaching, or at least yearned after, in which the old home, swept and purified from the accumulated "rubbish" of ages, with its dear familiar fragrance of rose-leaves and lavender, but qualified, it must be allowed, with some flavour of mildew and old leather, shall shine forth in perfect uniformity of design from Berwick to St. Michael's Mount, radiant in whitewash and odorous with yellow soap.

It is certain that, with our great and advancing social changes, the old memories and traditions have been disappearing fast. Our Sibyl, with her volumes of local history, is repeating the experience of her prophetic predecessor. The reason is not far to seek. Let any one plunge into the depth of even a moderately remote country district, such, for instance, as that which lies beneath him from Malvern to the West and North-west, and, eschewing every highway with a trace of Macadam about it, search out the ancient ways to which old maps or his own eyes may guide him—the main lines of packhorse communication or the cross-roads which led to market. He will probably soon discover, when his path touches some modern road, a wooden receptacle resembling half a Noah's Ark, nailed on a gate-post or hung in a tree; and he will rightly divine that this is meant for a rustic post-office. Let him, after the first inevitable smile at the ways of a primitive people, carry back his thought to their life in the days before this "scent" of the world's "paper-chase" was laid there, and when their only roads were the old tracks which he has been following. The people certainly could not write. For the most part, they could not read either; if they could, the Bible and Prayer-Book, and the broadsheets of carols or of songs from the pack of the infrequent pedlar, made up the bulk of their available literature; while wonderful prescriptions for the cure of rheumatism or of the stone might be found preserved in quaint MS. on a fly-leaf in the singing-gallery. After the day's labour, by the farm kitchen fire, in the summer twilight or the long winter evening, almost their only mental and intellectual resource would lie in telling over the old stories and sayings, and in singing the old ballads and rhymes. Such education as there was current would run in the same grooves. The baby must be sung to sleep; the restless or fractious child must be soothed by a story; the dame would teach the carol which she knew, and the prayer which she herself had once learnt. Thus the traditions remained, and, which is of still more importance, traditionary legends received uncriticizing belief. The parish clerk, a corporation sole, was their ordinary trustee; and the self-elective hierarchy of village singers in the larger parishes kept up the succession of ballads and graver tunes.

Another element in rural life and society had an important influence on the preservation of this unwritten literature. Mr. Hughes was, we think, the first to point out, in *Tom Brown*, that the *vates sacer* of the hall and the rectory had ceased, or is ceasing, to perform his once established function of learning in his boyhood and preserving in his later years the traditions of his home neighbourhood. He had not in the old days become the cosmopolitan that he is now; his early interests were very much confined to the narrow circle of his home; and the stories which he picked up in the nursery and the village were retained in a mind more intelligent than those of nurses and labourers, if not equally credulous. The existing condition of our social system through all its grades is fatal to the maintenance of such a state of things. Oral traditions are dying out, and those which have not already been preserved, or which cannot now be collected, in books must gradually cease to be. It is not within our present purpose to comment on the social or moral aspects of this change, with the causes and progress of which alone we are concerned. It is needless also to do more than refer to the altered conditions and opportunities of popular knowledge, and to the increased mental supplies for even the most uneducated modern labourer, which will have been sufficiently indicated by contrast with the condition already described. As a consequence of these, however, it is plain that the old local legends and traditions are no longer believed. Older people who may have heard them in their childhood are either ashamed of them or do not care to repeat them; and, though they may occasionally be extracted by careful cross-examination, the very process implies that their heads must already have been set down in the questioner's brief.

The school and the clergyman together have done a great deal, partly of deliberate purpose and partly by indirect action, to banish the old carols and the miscellaneous local rhymes or doggrel from the storehouse of childish memory. In a neighbourhood where, not forty years ago, every village child, when asked as to his or her prayers, would reply, "I says 'Our Father,' and 'I believe,' and 'Matthew, Mark, Luke, and John,'" not a single child, in a school specially questioned for the purpose, was found to be acquainted even with the name of the old Angelo-Evangelistic invocation. The combined efforts of two or three educated memories may perhaps recover the whole of the curious "Catharine and Clement" rhymes associated in West Worcestershire with the children's custom of begging for apples in the last week of November; but the legendary fame of St. Catharine has almost entirely died out of remembrance in the Teme-valley district, where fifty years since it continued in undiminished freshness. The tracks of the Saint's "Mare and Colt," and of the iron patten-rings of the "maid" who stole them, may be found still by the curious upon blocks of the Old Red Sandstone lying in the devious course of the brooks (and of their tributary rills as well), down which the animals were led to avoid detection; but probably there is not an inhabitant of the district now living who would not laugh at the belief which was firmly held there in the early part of the

present century. Drainage has disposed of the Will-o'-the-Wisp who was known as a contemporary in the same region; and the rural policeman (*vice* the parson, withdrawn) has effectually laid the ghosts. It is therefore without much anticipation of any large measure of success that we offer a hearty welcome to the proposal lately issued by our Worcester contemporary, and express our hope that all who are able to assist in carrying it out will co-operate in furnishing the materials. Every year will make the work less susceptible of efficient performance. It should be remembered, however, that a record of ancient local customs and traditions is not the same thing as a miscellany of recent "folk-lore" and personal gossip; while, for want of the better material, a host of [illegible] very naturally be looked for. The promoters of [illegible] collect evidence to a certain probability; and the columns published weekly in a [illegible] material, to be used at a future time, [illegible] the ideal publication.

Posterity will no doubt acknowledge the large debt of gratitude which it owes to the Education Department, the Postmaster-General, and perhaps even to the police-force, and the *Daily Telegraph*, for the spread of that higher enlightenment which, from its centres in the towns, has [illegible] districts. At the same time posterity will not forget that the certificated schoolmaster, "abroad" in the country of the penny journalist, and clothed with his high-polite phraseology, is ill-fitted to destroy the old geographical and philological landmarks in his countrymen. It would be convenient to ask of her Majesty's Inspectors that they should require school managers, Boards, and teachers to preserve for future reference a collection of all the local phrases, "vulgarisms," and other forms of speech which they have heard from their scholars throughout the land; but the volume of childishness who would enjoy such a collection of the sweepings cast outside the school premises might well assert themselves with the hope that their labours will not be unrecognized a hundred years hence. The collection even of "old wives' fables," of local superstitions, and of [illegible] would be imperfectly educated [illegible] encouraged to set in the same hope. The legends and traditions of the [illegible] at least of no smaller interest than the old memories of the Hellenic race which gave vivid and abiding an interest to the first volume of Grote's *History of Greece*.

COMPUTING SCHEMES OF [illegible] REFORM.

AS the time approaches for the [illegible] of Parliament, the [illegible] public attention [illegible] questions which more particularly [illegible] are discussed with increased earnestness. Prominent among these questions is [illegible] condition of the English army, with the schemes for its reorganization which have been put forward in every quarter. The assertions hazarded are so startling and the various plans are so numerous and so different in character, that it becomes difficult for an ordinary observer to perceive what at present exists, or what is supposed to be required; and yet, in order to criticize fairly the action of Government in providing for the defence of the country, certain main principles must be kept in view, and certain definite ideas formed in regard to the value of the several propositions.

The first point to be settled is the number of force, divided into the several branches of artillery, cavalry, and infantry, which, in the opinion of those who are best able to estimate the requirements of the country, is necessary for its defence. This force will include not only the troops for the garrison of the United Kingdom, but also the army of India and of the colonies, together with the disposable force which England might find it necessary to despatch to the Continent or elsewhere for the furtherance of her policy. Having, however roughly, estimated the numbers of our army of the future, its composition should next be considered. Under this head must be included the efficiency which it is to attain, and the relative standard of excellence of its component parts. To retain in time of peace an army of a strength sufficient for war is manifestly impossible. Therefore the organization should comprise a first line adapted for ordinary requirements, reserves to fill it up and replenish it in time of war, and a second line as a support when the war has been fully developed. Lastly, the cost of this force must be estimated in relation to the wealth of the country. These are the three main principles on which the organization of an army hinges.

The majority of writers on military reform appear to agree that, if properly maintained, the army which we at present have on paper is numerically sufficient for the purposes required, and that the two hundred thousand men comprised in the regular army, the Militia, the Yeomanry, and the Volunteers, are enough for a country whose first line of defence must always be the navy. The rock on which critics split is the composition of this force, and the best means of raising it, and of keeping it in a due condition of efficiency. A few, of whom Captain Hime may be considered as the exponent, would imitate the example of the military nations of the Continent, and would raise the army by conscription. A larger number, represented by Lord Elcho, would combine conscription to the Militia, inducing men to enlist into the regular army by pay and bounty, and to enter the Volunteers in order to escape the ballot; whilst many writers deprecate any conscription whatever, alleging that so wealthy a country as England should maintain her army by voluntary enlistment, paying a fair price for her soldiers in the open labour market.

The arguments against conscription for the whole of the English army are so numerous and conclusive that it is unnecessary to do more than allude to them. The tax imposed on the wealth and happiness of a country by forcing into the ranks recruits whose labour otherwise employed would contribute in a far greater degree to its true prosperity could only be justified, and, in fact, would only be possible, if danger such as that which habitually menaces Germany impended over England. Its cost can scarcely be calculated, it fosters emigration by driving men across the Atlantic to escape the conscription, and it imposes a burden on a nation from which war, with the hope of future [illegible], might even be welcomed as a means of escape. In Germany its direct money cost cannot even be calculated, as the meagre pay of the soldier is almost necessarily supplemented by help from his relations and friends. In addition to these arguments the necessity of foreign service in peace time for the majority of the English regular army makes conscription out of the question.

The second plan, of putting in force the law which permits conscription by means of the ballot for the Militia, although in some degree open to the same objections, is yet so modified in its operation as to be at least a possible expedient. The period of service would be short, the duty comparatively easy, and the men would not be removed far from their homes; whilst the military tastes that would be engendered, with the hope of good pay, would tend to fill the ranks of the regular army, leaving the Volunteers to be replenished by those who would prefer to serve in the Militia the more severe training necessary to enable them to reach the requisite standard of efficiency. Mr. Hardy, in his speech [illegible] on the 9th May last, thus expressed his opinion of this modified form of conscription:—"The ballot for militia, as a contingency which it may become necessary to draw. I do not think it would be wise to draw upon it unnecessarily; but if necessity should arise, I am sure no Minister with a due sense of his duty would shrink from availing himself of it."

The third plan is to depend entirely on the inducements which can be offered to men to enter the army voluntarily. And among soldiers Militiamen, and even to a certain extent Yeomanry, are here included—in fact, to compete in the labour market for a supply of recruits. As, notwithstanding the many advantages which of late years have been conferred on the soldier, this method does not at present keep either the army or the Militia up to their proper numerical strength (to say nothing of the quality of the recruits), many schemes involving more or less radical changes have been put forward by army reformers. These schemes may be comprised generally under two heads. The first is that which finds a supporter in Earl Grey and an advocate in Mr. Holms, of revolutionizing our present system by sweeping away the Militia and depending entirely on a short-service army and on large reserves. The second is that which has recently been recommended with much force by a writer in the *Edinburgh Review*, and has been frequently advocated by thoughtful men, of making the Militia the recruiting ground and the training school of the regular army, to be followed by short service in the ranks, with voluntary longer service for India, and a fixed period in the Reserves. In regard to the first scheme, Mr. Holms's plans are so crude that it is impossible to reduce them to a practical form; whilst Earl Grey's are tentative, and only possible, even if successful, after many years, as they depend for the formation of Reserves, together with a second line, on the effect of pensions. Both are also open to this objection, that, in place of building on foundations already existing, they pull down in order to reconstruct—a method which is not in accordance with English habits and precedents.

The objections alleged against the Militia scheme are that men will not join the force in sufficient numbers, that commanding officers will dislike to see their regiments made the nursery for another force, and that the Militia is not sufficiently drilled and disciplined to take its place in the field against the trained soldiers of the Continent. In reply, however, it may be fairly said that the supply of men to the Militia will depend on the inducements offered, that the position of colonel of a Militia regiment is so much sought after that the responsibilities attending it can safely be increased, and that the standard of efficiency for the force may, if necessary, be raised. It may also be contended that an emergency which would call for the embodiment of the Militia by threatening direct danger to England could not very well come so suddenly as to allow absolutely no time for preparation; and the experience of 1854 and 1859 shows that, in a comparatively short period, the Militia is capable of attaining very considerable proficiency.

There are thus three schemes before the public, all of them recommended by plausible arguments—namely, an army raised by conscription, an army raised partly by conscription and partly by voluntary service, and an army composed entirely of voluntary recruits; the last scheme being subdivided into two—namely, that which advocates one description of force, formed of men serving in the ranks and men who have passed through the ranks, and who create a Reserve, and the present system, comprising a regular army with its Reserves, and the Militia as a second line. The last two schemes would include the Volunteers as at present constituted; but, according to Lord Elcho's plan, with their standard of efficiency compulsorily raised. Putting aside conscription, and taking for granted that the larger part, if not the whole, of the army must be recruited by voluntary enlistment—acknowledging at the same

time that the results at present obtained are most unsatisfactory, that many branches of the regular army are much below their proper strength, that the recruits are too young and too weak for service in the field or in India, and that the Militia is very far short of its proper numbers—it may be useful to review the several propositions for attaining the desired end which various army reformers have tried their hands at framing.

On more than one occasion Sir Lintorn Simmons, in common with others well qualified to give an opinion, has pointed out the waste of life, and even of money, caused by enlisting for short service lads of seventeen and eighteen, and has shown that, for the regular army at least, men of twenty or twenty-one should alone be taken. This has been acknowledged by the writer of the article in the *Edinburgh Review* already quoted, who proposes as a remedy that the Militia should enlist these lads into their ranks, and after training them for three years pass them on to the regulars, sufficient pay, in whatever shape it may be dispensed, being given to induce their transfer of service. A mutual exchange of soldiers between the Militia and the Line would be much facilitated if the former were raised, as was the case some few years ago, in great measure from the agricultural districts; but, in consequence of the gradual absorption of the surplus rural population into the large towns, and of the increased demand for farm labour, the class of men who enter the Militia, as well as the regular army, has changed in character, and the ranks are now filled from the more migratory population of the towns. On every ground this is to be regretted; for it is as true in our own day as it was when Socrates pointed out the superiority as soldiers of the agricultural class, that the backbone of an army should be formed of the rural population.

Common sense tells us that, in order to obtain an article of value, its proper cost must be paid, and therefore, if the country determines to compete for soldiers in the labour market, it must offer sufficient inducements, remembering that short service, with all its advantages, requires a very much larger annual supply of men than long service, and consequently involves a considerable addition of expense in the item of recruiting. What inducements would be sufficient is a separate question, and one which has led to much variety of opinion. In comparing a soldier's career with that of a labourer or mechanic, it must be acknowledged that it is usually less laborious, and to many young men more attractive; on the other hand, it unfortunately does not find favour with parents, and it also necessitates the surrender of a good deal of the liberty enjoyed by the civilian. Putting the pros and cons against each other, the infantry soldier's pay ought at least to equal that of the best unskilled labour. Owing to the conditions of his life, it would be obviously impossible to give a soldier his entire pay in money. He must be clothed, fed, housed, and tended in sickness; consequently the surplus only will go into his pocket. But it has been found by experience that, to prevent soldiers on leaving the army from falling into destitution owing to previous improvidence, the State must save for them, and consequently that, if long service is resorted to, pensions (merely another form of pay) are desirable. The pocket-money of the soldier is thus very considerably reduced, and the direct attraction to recruits to enter the service is diminished by the means taken for their future well-being. A sum down as bounty on enlistment may attract men more than a pension on discharge (the amounts being the same); but the first has been found to have so demoralizing an effect as to be rejected, unless under exceptional circumstances, although it has the convenience that it can be raised or lowered according to the demand for men. Many valuable suggestions, amongst others those made by Archdeacon Wright, have recently been offered for the benefit of the soldier, but nearly all involve expenditure of money, and the Minister of War is obliged, not only to consider their real value to the soldier, but also whether they will have the effect of inducing recruits to join the ranks. The proposal of deferred pay, to increase according to length of service, has met with much favour, and has been ably advocated by Captain Trench; but although there is much that recommends itself in the scheme, the remarks of Lord Grey, who points out the failure of the plan, tried forty years ago, of paying the discharged soldier a lump sum down, are well worthy of consideration.

Apart from the question of deferred pay as a part of the actual remuneration of the soldier, it has been advocated as a means of inducing men to enter and continue in the Reserves—a matter of considerable difficulty when the migratory condition of the population is considered. This aspect of the case brings under notice one of the most important points connected with the organization of an army. The army that went to the Crimea did its work nobly as long as it lasted; but there were no reserves, and the raw recruits died and disappeared almost as soon as they were landed. Reserves to fill up the ranks to war strength, and to close the gaps caused by death and sickness, are a necessary adjunct to every standing army. The advocates of short service in the ranks very properly put this forward as one of the principal arguments in its favour, and no scheme can be of any value that does not provide for a sufficient supply of duly trained men to enter the ranks on the immediate threat of war. At present the inducements to enrol in the reserved force are not sufficient, and Lord Cardwell's plans in this respect do not appear to have succeeded. His localization scheme, which theoretically promises well, requires a longer period to test its practical value, and, above all things, the nation ought to guard itself against hasty conclusions and a restless desire for change. The question of army reform is not one that should be approached in a narrow or party spirit; the national interests at stake are too serious. Great patience in forming a judgment should be exercised; and due consideration should be given to the difficulty of providing an efficient army without so great a tax on the labour or the money of the country as to provoke the antagonism of the constituencies. In this article no plan is advocated, no scheme proposed. We have merely attempted to lay before those who will have to criticize the coming action of Parliament a short statement of the matter as it at present stands.

THE VESTRIES AND THE SNOW.

THE old question about the *custodes* has just turned up in a very curious way in the Marlborough Street Police Court. The Vestry of St. George's, Hanover Square, exists under the authority of an Act the title of which describes it as intended to provide for "the better local management of the Metropolis," including, among other things, the cleansing of the streets. It is of course as plain as anything can be that the meaning of the Act is that the Vestries should see to keeping the town clean and decent. The Vestry of St. George's, however—and we are afraid it does not stand alone—has chosen to interpret the duties imposed upon it in a very singular manner. Instead of removing nuisances, it has taken upon itself to create them. By the 125th section of the Metropolis Local Management Act, it is enacted that "it shall be lawful for every Vestry, and they are hereby required, to appoint and employ a sufficient number of persons to contract with any company or persons for the sweeping and cleansing of the several streets within their parish or district, and for collecting and removing all dirt, ashes, rubbish, ice, snow, and filth, and for the cleansing out and emptying of cesspools, sewers, and drains." The manner in which St. George's Vestry carries out these duties in regard to snow is, it seems, to employ a contractor to remove the snow from certain streets, and then to pile it up in other streets, and leave it there till a thaw sets in, and the accumulation is gradually dispersed by natural causes. The magistrate remarked that, as the snow was originally mixed with mud and muck, and by its melting became still worse, it well deserves to be considered as filth. It is evident that, if the word "removing" in the Act merely implied transferring a nuisance from one place to another, the same process might be applied to the other kinds of filth mentioned in the Act; and the inhabitants of Grosvenor Square, or any other part of the town, might any day find themselves swamped with the refuse of the cesspools or drains. It is perhaps only a London Vestry that could possibly conceive the idea of carrying out a law in such a manner. The vestrymen of St. George's have perhaps been misled by the saying, immortalized by Lord Palmerston, that dirt is only matter in a wrong place; but the course of reasoning by which they arrived at the conclusion that Grosvenor Square was the right place for dirt is difficult to imagine. It seems to be the idea of the Vestry that the inhabitants of Grosvenor Square are stuck-up people, who think a great deal too much of themselves; but it may be imagined that even unpretending people in Whitechapel or Lambeth might equally resent having huge embankments of damp and fetid filth built up in front of their houses. That it should occur to a Vestry to behave in this barbarous manner, and further, that even after the outrage has been exposed, it should be necessary to appeal to a police magistrate in order to get it driven into the dense heads of the vestrymen that they have no right to act in that way, is certainly a strange illustration of the practical aspects of modern civilization. No doubt it is desirable that much-used thoroughfares should be cleared of refuse which is not only offensive to passers-by but an obstruction to traffic, and if it were deposited in the open spaces of any of the squares merely for a day or so until it could be taken elsewhere, this might be endured. It appears, however, that the dirt was simply transferred from one place to another, and there left without any further thought about it or any attempt to deal with it, and so became much more noxious than when spread over the streets. It is needless to say that a mass of moist dirt steaming up in the air, soaking into the ground, and possibly even into the houses, and spreading dampness and miasma on every side, is not merely an inconvenience, but a positive danger. What is meant by the Act is clearly not that refuse shall be shifted from one place to another where it is equally in the way, but that it shall be removed to some place where it will do no harm.

The summonses in this case were nominally taken out against the contractor, but the real culprit was the Vestry, which justified his conduct. Mr. Livingstone, the surveyor, stated that his orders to the scavengers were to remove snow from the principal thoroughfares and to heap it up in lumps, so that the contractor might have "it carried away as quickly as possible"; but the question turns on what is "as quickly as possible." In this instance the snow was left to accumulate for seven days, and was added to until it attained formidable proportions, as many persons may have seen for themselves. When there is a heavy fall of snow in London there is no doubt a difficulty in immediately disposing of it, just as there is a difficulty in getting rid of other kinds of refuse; but it is absurd to speak of this difficulty as insuperable. Nobody expects everything to be made perfectly comfortable under such circumstances all at once; all that can be asked for is that what can reasonably be done should be done. In this case, it is said, the snow was removed to one of the squares, or to the Park, whichever was nearest to the main road to be cleared; but some

consideration should have been shown in distributing the snow. There might have been room for a moderate quantity for a day, but not for mountains to remain a week or more on the chance of melting. Again, a little trouble or expense in carting the snow further off would have been a small matter compared with the extreme unpleasantness, as well as danger, inflicted on householders who found themselves surrounded by walls of frozen mud. It is not very far from any part of St. George's parish to Hyde Park. The magistrate held that the Vestry was authorized to collect and remove the snow from the streets; but then this refuse could not be left indefinitely in some other place where it was equally a nuisance. There must, he said, be a reasonable user of this power, and when there was a collection, there must be a removal within a reasonable time. In this case he thought the limit of reasonable time had been much exceeded, and many persons besides the residents in Grosvenor Square will think so too. It is all very well to talk of public convenience; but the people in Grosvenor Square, and in other squares which have been similarly treated, are also part of the public, and are entitled to consideration, even though they are not shopkeepers. If the Vestry cannot discover any way of keeping the streets clean except by raising hills of snow in particular squares, they had better let it alone. But, as everybody knows, there is no impossibility in the matter at all. It is only a question of labour and expense. If the Vestry chose to have such work done properly, it could get it done at once. We do not happen to know upon what terms the contractor is paid to do his work, but if he undertakes the bargain, he should be strictly held to it. A writer in the *Times* speaks of the case of "a contractor who, having engaged to keep the streets clean, has allowed himself to be beaten by circumstances, and has chosen rather to pay a limited fine than to incur the unlimited expense of performing what he has undertaken." It would be interesting, however, to know whether the contractors really pay any fines at all, or whether the fines are more than nominal. A man in business who finds that it pays better to submit to a small fine than to do his work thoroughly is exposed to a dangerous temptation. It is obvious that, as regards clearing the streets of snow, a snowstorm or two in the course of the winter is a circumstance which a contractor must reasonably expect, and ought to be prepared for, and it is nonsense to talk of the additional expense of a little more carting being unlimited. It is possible that contractors are at present insufficiently remunerated; but that is another question. They have no right to pocket the money and then shirk the work.

The gross misconduct of St George's Vestry in this instance is unfortunately by no means an exceptional incident. It is only a characteristic example of the shameful way in which the general functions of these bodies are discharged. The cleaning of the streets, as far as the Vestries are concerned, has become simply an organized imposture. In the City the work is done thoroughly and systematically; but elsewhere it seems to be thought enough to make some nominal arrangement with contractors, and then to leave the contractors to do their duty or let it alone, just as suits their own private convenience. At ordinary times there is a show of doing something; but whenever the services of the scavengers are most required, they seem to subside into a purely passive attitude. Like the rustic who waited for the stream to run by, the contractors wait patiently for the bad weather to come to an end. They no doubt argue that it is useless to clean the streets one day when they are sure to be as bad again on the morrow. It is true that this is just what they are paid to do, but then they can always square things with the Vestry. Hence the lakes of mud, the embankments of dirty snow, the slippery filth of the pavement, more perilous than ice, and all that accumulation of mess and misery which makes the finest thoroughfares of the West End such a vile slough of despond after every heavy fall of rain or snow. It is impossible to imagine a more melancholy farce than to see the wretched paupers who are turned out in Piccadilly to make a pretence of sweeping. They seem to be chosen chiefly for their deafness and other physical infirmities, and their chief occupation is to get in the way of cabs and omnibuses. What little is done for the streets in bad weather appears to be ingeniously devised with a view to increase public discomfort. The mud is scraped from the middle of the road into broad ridges on each side, which have to be jumped or forded by any one who wants to cross. Not only in the cleaning, but in the repair, of the streets the convenience of the public is cruelly disregarded. At least the greater part of this sort of work might be done during the hours when the streets are little used; and, if a sufficient number of men were employed, there would be no difficulty about this, as they could work by gas-light as well as in the early morning. But this would not suit the convenience of contractors, who prefer to dawdle over every job as long as possible, and spin it out to the utmost. The consequence is that the traffic of important thoroughfares is continually interrupted during the most valuable period of the day, while a handful of men are pottering over their work. The other day, to the serious inconvenience of a large number of people, Kensington Road was shut up, and traffic had to go a long way round by the Fulham Road and South Kensington. Yet, for some part of the day at least, any one who had the curiosity to see what was doing in the Kensington Road would have found a couple of steam-rollers standing idle, and the attendants fast asleep.

It is amazing that in a rich, luxurious capital like London such a disgraceful state of things should be tamely submitted to. What can be more absurd than to go on ornamenting the town and raising fine buildings, when the elements of common decency are neglected in this manner? There must at last, we suppose, be a limit to human endurance in this respect; and it is much to be wished that householders generally would follow the example of those of Grosvenor Square, and take legal measures for preventing the Vestries from making nuisances instead of removing them. It is significant that the only part of London which is kept respectably clean is that where there are happily no vestrymen.

THE MALAY DESPATCHES

A DESPATCH has been received from General Colborne describing the operations which ended in the capture of Kinta. The force, naval and military, employed on this service moved by water up the Perak river at the rate of only seven or eight miles a day. The labour in poling heavily laden boats against a strong current was severe, and delays were caused by groundings of large boats and intricacies of channel. Advancing in this way, and meeting no opposition, the force reached Blanja on 13th December. At this place, which is forty miles north of the Perak Residency, intelligence was received that the Malay chiefs, Lela and Ismael (supposed to be implicated in the murder of Mr. Birch), had passed through Blanja and taken the road to Kinta, and it was decided to advance without delay from the Perak river through the jungle to the Kinta river, and get possession of the Kinta capital. Accordingly General Colborne, leaving a detachment to occupy Blanja, proceeded with the remainder of the force towards Kinta. The extreme badness of the narrow path, through thick jungle interrupted by fallen trees, with swampy ground and deep mud, rendered progress slow. At a turn in the path, about two or three miles from Blanja, the first opposition was encountered. Fire was opened upon the advanced guard of the 10th Regiment from a stockade, concealed by thick jungle, at thirty yards' distance. Our men placed themselves under cover and returned the fire. One of the guns of the Royal Artillery and the naval rocket tube were brought forward, and the enemy retreated. No casualty occurred on our side except a severe wound received by the Colonial Medical Officer, Dr. Randall. After a further advance of two miles fire was opened from another stockade, which was taken possession of in the same manner. No further resistance was encountered until the force arrived within two miles of Kinta, but extreme labour and difficulty were undergone from the badness of the road. Kinta was taken, after a slight resistance, on 17th December, and thus the road through this dangerous jungle was secured before the Malays had time to obstruct it more effectually than they did. The moral effect of the occupation of Kinta was likely to be beneficial. The chiefs Lela and Ismael were supposed to have fled into the Patani or Lower Siam territory. The health of the force had been good.

A force under General Ross went up the Larut river to Malang, and marched thence to Qualla Kangsa, on the Perak river, above Blanja. After taking Kinta as above described, General Colborne sent a message to General Ross asking for reinforcements to hold Blanja. A detachment of 150 men was sent accordingly, and as the river between Qualla Kangsa and Blanja had not been reported open, news of the arrival of this force at Blanja was anxiously awaited. On 22nd December a small steamer returned to Qualla Kangsa, and reported that this force had reached Blanja safely. But the next item of intelligence was less satisfactory. On 4th January General Ross proceeded to disarm Kota Lama, a village on the Perak river, two miles above Qualla Kangsa, with 100 men of the 3rd Buffs and other troops. The disarmament on the right bank of the river was easily effected, and the officer commanding the troops on the left bank sent word that the village on that bank was deserted. Hereupon General Ross disembarked on the left bank with his staff and a small escort, and Malays with muskets and spears surprised and nearly surrounded this isolated party, and killed an officer and wounded several men before they were beaten off. The next intelligence was an official telegram, dated 20th January, announcing that Governor Sir W. Jervois had returned from Penang to Singapore. At the beginning of the month he had obtained information that Ismael and some followers were in the mountains near the source of the Perak river. He immediately sent a body of armed police and trusted Malays to communicate with a friendly chief and obtain his co-operation in surprising this party. He had just learnt by telegram from Penang that Ismael, with the greater part of his followers, escaped, but Pandak Indut, the actual murderer of Mr. Birch, was killed. A hostile rajah was also killed. It appears from a Reuter's telegram that in this expedition to the interior of Perak "great dangers" were incurred, but a sensible loss was inflicted on the Malays. A telegram from Penang, dated 21st January, announces that our troops had attacked the village of Rathalma with artillery and rockets. The Malays fled, and the place was burnt. There was no loss on our side.

This is all that has been reported up to the present time, and we may be sure that, if anything important had occurred, the telegraph would have announced it within twenty-four hours after it was known at Penang. Facts would have been reported officially, and disquieting rumours, if there were any, would have been promptly forwarded by the Correspondents of the newspapers. But they have added little to the official telegrams. An interesting letter dated the 23rd of Decem-

ber appeared in the *Times* of Tuesday last, and as the Correspondent minutely describes his own journey to Qualla Kangsa, we may infer that larger topics of discussion were not forthcoming. He had heard that General Colborne had asked for reinforcements, and it was surmised, but as we have seen wrongly, that he was unable to get to Kinta. He had also heard—and in this there seems to have been some truth—that the troops at Qualla Kangsa were unable to move for want of transport. He took the opportunity of travelling with the Assistant Quartermaster-General, who was going to Qualla Kangsa with coolies. They steamed along the coast and up the Larut river, observing a man-of-war cruising to maintain the efficient blockade of the coast to which is partly ascribed the slight resistance of the Malays. Some merchant of cosmopolitan sympathy would no doubt have supplied them with rifles and ammunition if a strict blockade had not been established. The party steamed up the Larut river and landed at Tellok Kartang, from which place a good road leads in eighteen miles to Bukeet Gantaing. As the Correspondent was groping his way into this place after dark, he was challenged by a Goorkha sentry and informed that he had arrived at the rearmost station of the Qualla Kangsa force. Next day, travelling on an elephant, he reached Qualla Kangsa. There he found the 3rd Buffs, who before leaving Calcutta had their white clothes and helmets dyed a dirty slate colour, which he thinks a very sensible colour for jungle warfare. He remarked a large number of tins of Australian meat, and was informed that, although the officers liked it much, the men grumbled at it. The British soldier is the same all the world over, and would of course show the prejudice of the class to which he belongs at home. The Correspondent describes Qualla Kangsa as beautifully situated on the high banks of the Perak river. He found the officers of all branches of the service sleeping in a large hut, and messing under a tree by firelight. Each officer was restricted to 40 lbs. of baggage, and similar rations were served out to officers and men. There was no pale ale in camp, but each officer was allowed a glass of rum per day. The health and spirits of the troops were good, and he admired the fine physique and business-like appearance of the men. When he arrived, want of transport, which had been the great difficulty of this expedition, had been overcome. He thinks that coolies should have been brought from Calcutta for land transport, and that pontoons used as rafts would have enabled the force to float down the river to Blanja. However, as we have already seen, enough of boats and rafts were collected to send 150 men to Blanja. The new Resident is said to have adopted a policy of conciliation, which is likely to promote a peaceful settlement; but the Correspondent thinks that it will be necessary for some time to have such a force in hand that the Malays may see that our conciliation is not prompted by conscious weakness. This is only too true, both of the Malays and of other races with whom we are in contact in the East. The failure of the first attack made on the Malays on 7th November, and their surprise of General Ross's escort on 4th January, show that they can be dangerous enemies. The despatches of Lieutenant Abbott, published by the Admiralty, throw much light on the cause of the first failure; and it may interest Mr. Holms to know that, whatever may be the case at home, our Indian army is thought to have too few officers. There were present in that attack 54 Europeans with 4 officers, 20 Malays with 1 officer, and 74 native soldiers with only 1 officer. These soldiers were mostly recruits from the neighbourhood of Lahore, far from perfect in the use of arms, and to a great extent wanting in discipline. When the attack began, the Sepoys and police were huddled together behind a large tree, and proved utterly useless and rather dangerous from their wild firing, which wounded some of the troops. Lieutenant Abbott ascribes the inefficiency of the Sepoys to want of discipline, and to no officer being acquainted with their language; and it would be unreasonable under such circumstances to complain of failure. Captain Innes, who commanded and was killed in this attack, could only make it with such troops as were at hand, and, as we have already said, it is generally better to act promptly, bearing in mind, however, that success cannot always be obtained with imperfect means. If, as a writer in the *Times* represents, the native regiments are so ill supplied with officers that that which happened before this stockade may happen any day on a larger scale, then indeed our supremacy both among the Malays and elsewhere may be in serious danger. If we attempt to build our power in the East on any other foundation than that of our own capacity for war, the edifice will tumble. It may be doubted whether we have enough young active English officers in India, and it is certain that we have plenty of them at home. Sepoys will go anywhere, as they have always done, under proper leaders; but if we expect them to fight, say as our English soldiers fought at Inkermann, we shall be disappointed. It avails little to descant on the treachery of the Malays. "It is their nature to," and they will surprise us whenever we give them the opportunity. It may be hoped that no news is good news, and that this Malay war is done with. But we can easily have another whenever we discontinue the useful practice of sleeping with one eye open.

PICKETING AT ERITH.

THE Erith strike, though it presents no features of actual novelty, furnishes an instructive study to those who wish to understand the ruling principles and practices of the Trade-Unions, inasmuch as it exhibits them in an unusually clear and naked manner, and free from those accidental questions which occasionally disguise and complicate the real issues. During the discussions of last Session on the Labour-laws there was a general tendency to subordinate practical considerations to a rather sentimental view of the alleged grievances of working-men. Attention was concentrated on the supposed necessity of wording the law so that employers and employed should be placed on exactly the same footing—a good object in itself—and the important fact was overlooked, that working-men have ways of their own which are not the ways of any other class of the community, and are, in fact, distinctly defiant of other people's rights. The stand which is now being made against piecework, not only by a few men at Erith, but, as far as moral and pecuniary support goes, by the whole body of operative engineers in the country, and also by other trades, indicates very plainly the main object which the Trade-Unionists have in view; and the process of picketing, which also may be seen at work at Erith, illustrates in an equally unmistakable way the methods to which they are ready to resort in order to accomplish their purpose. It is here not a question whether working-men shall be compelled to work on terms which, rightly or wrongly, they object to, but whether men who are willing to work on the terms offered shall be allowed to do so. Messrs. Easton and Anderson have announced that they have at present as many hands as they want; but there seems to be no doubt of the fact that men have gone to Erith with the intention of seeking work, and that a good many of them have either been persuaded immediately on their arrival to go away again, or, if they accepted employment, have thrown it up at the end of a day or two. Of course, in so far as this result was produced by pure persuasion, there is nothing to be said against it; but whether it is persuasion—in any honest sense of the word—is just the point of doubt.

Anybody who visits Erith expecting to see the signs of the war now going on there openly displayed will certainly be disappointed. There was indeed an exceptional outbreak on the part of the men on Saturday last, and two cases of assault have since occurred; but in an ordinary way nothing can be more quiet and sleepy than the aspect of the town. The clang of work is still heard at Messrs. Easton and Anderson's factory, and there are no crowds of men out of work filling the streets. There is in fact no stir of any kind. The railway station is approached by a short road which is the private property of the Company, and on Saturday this was invaded by a number of strikers, who, ranging themselves on each side, hooted the "knobsticks," or men at work, as they went to the train to spend their Sunday away from Erith in order to be at peace. Since then a policeman has been stationed in the private road to preserve order, and pickets are not admitted. Immediately outside the entrance to the station is an open space, on one side of which the "Wheatly Arms" is conspicuous, and here the first outpost of the pickets is established. There are two sandwich-men carrying printed placards, on which it is "strongly recommended" that turners, fitters, &c., should not seek work on the terms offered by certain employers. These men walk up and down in the open space between the railway entrance and the public-house, and are attended or supported by some three or four other men, smoking pipes, who act as a sort of skirmishing party, keeping a sharp eye on all arrivals by train, and accosting in a friendly way such as seem to be in search of work. There is certainly nothing up to this point in the conduct of the pickets to give offence. They wish, of course, to conciliate the new-comers, if possible, and indeed a prompt adjournment to the public-house generally follows. In some cases the strangers push on without stopping to speak, but only the more resolute ones resist all parley. If the discussion does not proceed pleasantly, it becomes louder, and an oath or two is perhaps discharged in the rear of an obdurate fellow who will not listen to reason. Between this point and Messrs. Easton and Anderson's works there is another picket stationed about half way, and a third at a short distance from the works. There is no attempt, however, to beset the doors of the factory, nor indeed is there any necessity for doing so, seeing that there is no access to it on any other side. It will be seen that, in a small quiet place like Erith, nothing is easier than to detect strangers and to watch their movements, and obnoxious men are thus placed at a disadvantage. It is understood that the pickets have received special instructions from the officers of the Union to keep within proper limits in challenging new-comers, in order to prevent any prejudice being cast on the movement in which they are engaged. Judging from the look of the picketers themselves, there is certainly nothing very menacing or terrible about them. They have indeed rather a cowed, downcast look, as they shamble about in the cold; and are ordinarily quiet enough in their demeanour. We should not think that any man of ordinary spirit, who simply refused to have anything to do with them, would have anything to fear; but most of the men accosted get into talk, and possibly things may be said quietly which have a strong effect, and the two cases of assault show that some things are also done in the dark. The evil of picketing is that it is a perilous incline, on which it is difficult for men to avoid sliding downwards. It keeps up a perpetual state of irritation and ferment which may at any moment break out into mischief. It is like a pot on the boil which threatens to bubble over. Neither Unionists nor non-Unionists are exempt from the ordinary infirmities of human temper. Hot words are apt to lead to blows, and the parade of pickets leads by natural steps to more direct and violent molestation.

The truth is that picketing, even in its mildest form, amounts to

something more than merely holding aloof. It is distinctly an aggressive act. In any class of life a man may be in want of good advice in regard to his personal conduct, his relations with his family, or other such matters; but if a stranger presumed to stop him in the street, and to sermonize him on his iniquities, and suggest that, if he wished to escape a very bad end, only one course was open to him, which was to take the self-constituted mentor's advice, it would be thought to be a very intolerable impertinence, to say the least of it. Working-men have, no doubt, like other people, a perfect right to make speeches or vote at meetings, to publish articles in newspapers, to circulate hand-bills, or to come to any agreement as to whom they will associate with, or on what terms they may choose to work; but picketing clearly goes beyond this. It involves a personal attack, and implies in an offensive manner a right to scrutinize and criticize another person's behaviour, and to argue with him from a ground of superiority. If the pickets began by politely requesting permission to argue with those whom they take upon themselves to stop in the street, and if the request was granted, that might be very well; but they insist on introducing disagreeable questions, whether their interlocutor likes it or not, and without saying "By your leave." The Ancient Mariner who button-holed the Wedding Guest is perhaps the poetical ideal of a Trade-Unionist picket, and there can be no doubt that it was the weakness of mind of the Guest which gave the Mariner his opportunity. *De minimis non curat lex*; and it cannot be said that the State can undertake to teach manners to working-men. It would be obviously absurd that the law should prohibit one man from saying to another street, "Don't put your foot in that hole"; but, on the other hand, there is really a point at which officious advice becomes aggressive and insulting. Where to draw the line between what is allowable and what is not is no doubt difficult, but there are means of arriving at a conclusion. Take, for instance, this case at Erith. The justification of pickets is that they are intended to give information of value to working-men. So far the "strong recommendation" of the placards not to take work on certain terms is perfectly legitimate, and this might be enlarged upon, with appropriate arguments, in a handbill to be given to any one who chose to take it. But to bring a man whom you don't know to a peremptory halt in the street, and insist on having it out with him, is another thing. It is not to be supposed that any man who goes to Erith to get employment does not know perfectly well what the state of the case is. The matter has been taken up by all the Societies connected with the trade, it has been discussed for years, and every engineer perfectly understands the bearings of the question. It is obvious, therefore, that the picketing must be intended for something more than the giving of information which everybody directly affected by it already possesses. Any man may have a right to feel contempt and dislike for other people who will not do what he wants them to do; but the right to cherish this feeling privately is very different from a right to express it by an organized demonstration in an offensive and threatening sense. And this is what picketing does. To resolve to have nothing more to do with a man who acts in a certain way is one thing, but to take continual opportunities of going up to him in the street, and publicly remonstrating with him and blackguarding him is something very different.

This question of picketing, like that of piece-work, was very fully inquired into by the Trade-Unions Commissioners, and on the evidence before them, given in a great measure by enthusiastic supporters of the Unions, they came to the following conclusions:—"It is alleged that instructions are given to the pickets to confine themselves to a mere representation of the case of the Union promoting the strike, and to use argument and persuasion only, without resorting to violence, intimidation, or undue coercion. But, although such instructions may be given, it is hardly in human nature that the pickets, who are interested parties, and who are suffering the privations incident to the strike, should always keep within the fair limits of representation and persuasion when dealing with men whom they see about to undertake the work which they have refused, and who may thus render the strike abortive. Accordingly, experience shows, and the evidence before us leaves no doubt on our minds, that during the existence of a strike, workmen desirous to accept work are often subjected, through the agency of the pickets, to molestation, intimidation, and other modes of undue influence, and in effect are prevented from obtaining employment." The Commissioners further remark that, "So far as relates to members of the Union promoting the strike, the pickets cannot be necessary if the members are voluntarily concurring therein; so far as relates to the men who are not members of the Union, picketing implies in principle an interference with their right to dispose of their labour as they think fit, and it is therefore without justification; and, so far as relates to the employer, it is a violation of his right of free resort to the labour market for the supply of such labour as he requires." The outbreaks of violence into which the men at Erith have already been tempted are a significant illustration of the dangers of the system of picketing. At ordinary times the picketing may be mild enough, and of course there can be no harm in two workmen who are willing to argue with each other discussing the pros and cons of a question. But to call upon a man to "stand and deliver" his opinions on the highway, whether he likes it or not, smacks a little too much of a once familiar crime. The pickets may, in the beginning, mean to be extremely civil, and only philosophically argumentative; but their vocabulary is limited, and fervent feeling is a swift road to bad language. Even philosophers are not exempt from this temptation, and working-men are apt to consider expletives in the light of conclusive logic. A French writer who had been attacked by a rival on a question of grammar, remarked that he had been called a brigand and assassin, but that only meant that his friend did not agree with him. So, when a Unionist calls a non-Unionist by any of the ugly names which have been provided for the purpose, he perhaps means to express nothing more than a strong difference of opinion; but when such words are used, not in a treatise to be studied quietly in a library, but in the street, face to face with the person assailed, awkward consequences are apt to ensue. Therefore, if the Unionists really do not wish for a row in the streets, they will do well to withdraw their pickets at Erith. What has already happened may happen again, and perhaps in a more serious form. The new Act provides that "attending at or near the house or place where a person resides, or works, or carries on business, or happens to be, or the approach to such house or place, in order merely to obtain or communicate information, shall not be deemed a watching or besetting within the meaning of the section" in regard to intimidation; but hooting and crying bad names is evidently not a legitimate way either of obtaining or communicating information.

LAW FOR LADIES.

THE husband had by the common law power and dominion over his wife, and might keep her by force within the bounds of duty, and might beat her, but not in a violent or cruel manner; for in such case, or if he did but threaten to beat her outrageously or use her barbarously, she might bind him to the peace by application to Chancery or to the Court of King's Bench or to a magistrate, or might apply to the Spiritual Court for a separation. Lady Vane's case is commonly referred to as one in which the Law took the lady's side. She exhibited articles of the peace against her husband, charging that she was separated from him by arrangement: that she was seized by his servants and carried to his house, and confined eleven days; that she escaped, and that she had heard and believed that a servant said he was ordered by her lord to bring her alive or dead, and therefore she swore her life was in danger. Lord Vane moved, by counsel, to discharge these articles, and urged that, although [illegible] had been allowed to Chancery for protection of the wife against her husband's cruelty, and to compel him to find sureties that he did not beat or evil treat her, yet there was always a proviso "aliter quam ad virum suum, ex causa regiminis et castigationis uxoris suæ, licite rationabiliter pertinet." The Court, however, thought that Lady Vane had reasonable foundation to require sureties of the peace against her husband. In the case of Mrs. Cochrane, a judgment was delivered by Sir John Coleridge which deserves attention. That lady had been induced by stratagem to come to her husband's lodgings, and had been there confined by him until he was compelled by Habeas Corpus to bring her into the Court of Queen's Bench. The question then arose whether he had assigned an adequate cause for detaining her, and the Court said that our law, although expressed in terms simple almost to rudeness, proceeds on a broad and comprehensive principle. It has respect to the terms of the marriage contract, and to the infirmity of the sex. For the happiness and the honour of both parties, it places the wife under the guardianship of the husband, and entitles him, for the sake of both, to protect her from the danger of unrestrained intercourse with the world by enforcing cohabitation and a common residence. Mrs. Cochrane had lived apart from her husband for nearly four years, without loss of character; but her husband, with the highest opinion of her virtue, might yet be excused, even by her, if he felt uneasy when he learned that she had gone to masked balls at Paris with persons whom he did not know. He might well be desirous, and he had a right, to restrain her from frequenting such amusements unprotected by his presence and without his permission. She too, though she might feel secure, was not therefore the more safe at such places; and at any rate she had not the right to bring his honour or her own into possible or even imagined jeopardy. It had been urged that a refusal to discharge Mrs. Cochrane would be to sentence her to perpetual imprisonment; but she could not properly complain of the existing state of things, for it arose from her own breach of duty, and she might end it whenever she could resolve to perform the contract she had entered into. The moment that she should make restraint of her person unnecessary for keeping her in the path of duty it would become illegal, and nothing that had been said would prevent her from coming to the Court for protection. She must be restored to her husband.

But although the law exacts thus much from the wife, it also requires a good deal from the husband. Not only may she exhibit articles of the peace against him, but in a proper case she may make him liable for her costs of the proceedings, as she also may when she sues, on reasonable ground, for a divorce. A suit under such circumstances would be necessary and fit for the wife's protection, and she would be authorized to employ a solicitor, and her husband would be liable to pay the bill. If, indeed, a wife were to indict her husband for assault, he would not be liable for the cost of the prosecution, because that is not a proceeding for her protection, but for the punishment of the husband. But a divorce on the

ground of cruelty would be a proceeding for her protection; and, as she has no property of her own, she could have no redress unless she were able to pledge her husband's credit. Another of her privileges is that she shall not be punished for committing a theft in company with her husband. And she shall not be deemed accessory to a felony for receiving her husband, who has been guilty of it. On the other hand, while imprisonment for debt existed, she was liable to it. In an action for assault committed by the wife, both husband and wife might be taken in execution, and this perhaps was just. If she were taken in execution, together with her husband, for a debt due from her before marriage, she was not entitled to be discharged unless it appeared that she had no separate property, even although her husband had been discharged under an insolvent Act. It is lamentable to observe that in this respect we have degenerated from the courtesy of our ancestors. Blackstone says that, if judgment be recovered against husband and wife for the contract, or even for the personal misbehaviour of the wife during her coverture, the capias shall issue against the husband only, "which is one of the many great privileges of English wives." But this privilege, if it ever existed, had certainly disappeared before imprisonment for debt was abolished. It was undoubted law that the wife might be taken, and that it was discretionary with the Court to relieve her; and we find judges objecting to exercise this discretion, and protesting that they saw no reason for depriving a plaintiff of any part of his legal right. They admitted indeed that, if a wife were arrested by collusion between her husband and the plaintiff, they ought to interfere.

These were some of the privileges of women under the common law. But the passing of the Divorce Act has made some manifest change, to which all the consequences have not perhaps yet appeared. An attempt has been lately made to found on this Act a right in a divorced woman to sue her late husband for damages for assault, or other personal injury, committed on her during marriage. If such right exists, there must be a corresponding right in the man to sue his late wife, and it would seem that that right might extend to give him compensation even for an injury which had been the ground of divorce. In the case which came lately before the Queen's Bench Division of the Supreme Court, the divorce had been obtained by the wife; but, in this respect, the husband's divorce ought to have the same effect. It would not, however, have occurred to a person of ordinary intelligence to deduce from the Act any such right on either side; but then it must be allowed that many decisions of our Courts exhibit excessive ingenuity. The difficulty of this question is not diminished by recent legislation, and when a learned Judge refers to the ancient maxim that husband and wife are one person, we might ask whether this is not one of those rules of law which equity has upset dead. The Court of Chancery always recognized the separate existence of the wife, and even if it be doubtful whether husband and wife are two or one, it seems at least certain that they cannot be both two and one. Even if it be correct to limit this doctrine of unity to property, we must remember that it has been maintained by the Legislature as well as by the Court of Chancery. Under the Married Women's Property Act of 1870 courts of law were bound to recognize separate property in married women, and for one purpose, as we have already seen, they recognized it forty or more years ago. When a married woman was taken in execution and applied to be discharged, the Court inquired whether she had any separate property, and if she had it kept her in custody in order to squeeze out of it satisfaction to the plaintiff. An attempt was made a few years ago to sue a man after divorce for an assault committed by his wife on a third person during the marriage. For any wrong committed by the wife she was always liable, and her husband could not be sued without her, neither could she be sued without joining her husband. When the husband was thus joined "for conformity," as the lawyers said, if he died the action went on against the wife; but if the wife died the action abated. It is clear, therefore, that there was no cause of action against the husband. He was not liable for the wrong, but was joined only by reason of the universal rule that the wife during coverture could not be either sole plaintiff or sole defendant. Thus far the law was unquestionable, and it followed that the action could not be maintained against the late husband after divorce. This decision seems entirely satisfactory; but we fail to see how it helps the lady in the present case. Suppose that an assault was committed on the wife, and immediately afterwards her husband died, it may be admitted that she could sue for this assault. Then suppose that the marriage was dissolved not by death, but by a decree of a Court, the same consequence would follow. This seems to be the strongest way in which the lady's argument could be put; but there is still a wide difference between suing a third person and suing her late husband. It may be assumed, with some confidence, that the authors of the Divorce Act did not contemplate the result which this lady's counsel attempted to draw from it. The Court is undoubtedly required to look at the conduct of both parties. It would not of course follow merely because cruelty was one of the grounds of divorce that compensation for that cruelty was necessarily taken away. A man may be punished for felony or misdemeanour, and still remain liable to an action for damages for the very act for which he has been punished. But still we may venture to say, with some approach to certainty, that Parliament when it gave to a Court the power of divorce, did not intend that actions and cross-actions should be brought between the late husband and wife in respect of their conduct during marriage. But although you might feel tolerably sure of this when first the question was presented to your mind, you might be a good deal shaken after listening for half a day to arguments in which the old common law, the doctrines and practice of Courts of Equity, the criminal law, and the Married Women's Property Act were all jumbled up together. The Judges, with much doubt and difficulty, decided against the lady's claim, and we cannot help thinking that the case shows an almost hopeless confusion in a branch of law which concerns everyday life. Any so-called amending Act would probably make confusion worse confounded.

REVIEWS.

BELLEW'S KASHMIR AND KASHGHAR.*

DR. BELLEW is already favourably known to the public as the author of two works regarding countries that lie far away from the common route of tourists or Anglo-Indian officials. In 1857 he was attached to the Kandahar mission, of which Major-General H. B. Lumsden was the political chief; and, after helping to keep up our national credit at Kabul during the anxious period of the Mutiny, he published a journal which added considerably to our knowledge of Afghanistan. In 1875 we reviewed his volume entitled *From the Indus to the Tigris*, pregnant with facts accumulated by him when accompanying Sir F. Pollock on his deputation for the settlement of the boundary of Persia and Seistan. Dr. Bellew did not form part of the first expedition, headed by Sir Douglas Forsyth, to the capital of the energetic ruler who is now widely known as the Atalik Ghazi. But when Lord Northbrook, in 1873, following out the policy of Lord Mayo, determined on again sending a larger and better equipped party to Yarkand and Kashgar, Dr. Bellew joined the mission as its medical chief. When we add that, besides experience gained in his own profession, he is a naturalist and a botanist, and that he has a good knowledge of several Oriental languages, our readers may easily believe that the record of his adventures must possess matter of interest for more than one class. We do not forget that Sir D. Forsyth's first mission, if it had no other tangible result, produced a book from the pen of Dr. Henderson, who then filled Dr. Bellew's post. But on the former occasion Sir D. Forsyth never got a glimpse of the Atalik at all, and was either not allowed or did not find it possible to remain more than thirteen days at Yarkand. The whole trip was then comprised in some five months. Dr. Bellew and his party left the hill station of Murree in the Punjab on the 19th of July, 1873, and did not get back to that place until the 12th of the same month in the year following. Without instituting unfavourable comparisons, we may say that, while fully bearing out everything written by his predecessor as to the difficulties of the route, Dr. Bellew has traversed larger tracts of the country, mixed more with its inhabitants, eaten more copiously of the native dishes, with which all the members of the mission were literally surfeited at every visit, and has given us a graphic picture of native society under the rule of a capable, earnest, but severe religious dogmatician. Dr. Bellew's work may be divided into three main portions, with a few episodes or appendices. Four chapters are taken up with Kashmir and Ladak. Two more are occupied with the transit over the passes to Sanju and Yarkand. And the remainder of the work is devoted to an account of Yarkand, Kashgar, and as much of the interior as the officers of the mission could see. The return journey is wisely compressed into a single and a concluding chapter. The style throughout is easy, flowing, and animated, the anecdotes are well selected, and the criticisms err neither from severity nor favour. But there are two sad deficiencies. There is no index and no map. The omission of the first might have been condoned. The failure to give a map showing the passes and the routes taken by different portions of the mission is almost unpardonable. The pleasure of reading the narrative is marred by inability to see where the travellers shivered under twenty degrees of frost, or where they hailed the return to vegetable and animal life in the valleys.

We have so recently reviewed Mr. Wilson's *Abode of Snow* and Mr. Drew's *Jummoo and Kashmir* at some length, that we may pass lightly over the chapters in which Dr. Bellew describes this latter principality. His accounts of the vegetation; of the lakes, with their floating gardens, composed of material which supports breadths of melons and pumpkins in clusters, but engulphs heavy men; of the bridges at Srinuggur, which remind us of old Italian cities; and of the fruits, crops, manners, and scenery, have the merit of accuracy, if not of novelty; and we cordially endorse his remarks as to the character of the Kashmirian Government, and the loyalty and courtesy shown by the Maharaja of Jummoo. Nothing is more impolitic and discreditable than the style of letters which every now and then are allowed to appear in some of the Indian journals, written by some exasperated subaltern who shrieks for "annexation" because three of his porters have loitered behind and lost a package, or because he has had to pay a good price for supplies in a country swept by tourists. The Maharaja is evidently alive to reforms, and anxious to help local resources, and he has lately set up a silk filature on the Bengal system, at the head of which he has placed a Bengali Baboo. This gentleman's title or *gens*, by the way, may be either Day or Mukarji, but it cannot

* *Kashmir and Kashghar: a Narrative of the Journey of the Embassy to Kashghar in 1873-74.* By H. W. Bellew, C.S.I., Surgeon-Major, Bengal Staff Corps. London: Trübner & Co. 1875.

possibly be both, as Dr. Bellew appears to write it. The latter word implies that this superintendent is a Kulin Brahman from the Lower Provinces, and we are certain that he is far better employed in stimulating a rising and indigenous industry than in drawing the vapouring comparisons between English and Hindu civilization which several of his countrymen have lately given in pretentious letters to the *Times*.

Dr. Bellew's own camp required no less than 103 mules, nearly as many camp followers, 87 ponies, and two or three score of coolies. The number, for the whole expedition, was far in excess of this amount, and then there was an ample store of warm clothing, mattresses, wraps, and provisions packed in tin. The walnuts and apricots, and the comfortable homesteads of the Kashmirian peasantry were soon left behind, and exchanged—first, for birch and willow; then, for juniper; and, finally, for hills of a "dreary, bare, and treeless aspect." The air was dry and light, but the sun's rays had lost none of their power; and headaches and feverish attacks were not uncommon, followed by giddiness, fainting, and an intense feeling of discomfort as heights of 12,000 and 15,000 feet were reached. Once they paid a visit to a Buddhist monastery, where, amidst dismal defiles closed up by drifting snow in the winter, the monks live monotonous, useless, and, the author adds, "disreputable" lives. Their religious ceremonies consist in the vain repetitions and the worship of images with which we were first familiarized by M. Huc. Occasionally the mission had to march or encamp in ceaseless drizzle, or surrounded by a mist worthy of the Scotch Highlands. Avalanches of stone, set in motion by the rain, by melting snow, or even by the footsteps of the wild sheep, startled the travellers, who learnt to camp in the friendly shelter of a rock; and if they escaped being crushed by huge masses, they had occasionally to dodge loose rolling stones. The tops of the passes were ghastly with the skeletons of men and animals in every stage of decay, or rather of desiccation. The icy wind would have chilled the bones and marrow were it not for the ample supplies of clothing; but snow-blindness affected the camp followers, and cattle and ponies floundered over glaciers, got rid of their burdens, and were now and then left behind to die. Dr. Bellew found a pinch of salt and some drachms of chlorate of potash the best remedy against the suffocation produced by the rarefied air. No wonder that an Afghan mule-driver cursed the climate as that of a "God-forsaken country," and wondered what the *Sahibs* wanted with a land made up of such miserable mounds of gravel and slate. Wild animals and birds fared little better than the coolies. In one place two snipe were picked up, frozen to death, and a landrail was caught in a state of exhaustion close to the camp fire, and, we much fear, was not revived, but immolated in the interests of science for a museum. The mercury showed fifty-six degrees of frost, or twenty-four degrees below zero, at Actagh, and the passage of some rivers was perilous from masses of floating ice. To add to their difficulties, fuel and fodder, and even victuals, ran short on this side of the Sanju Pass; and at one difficult ascent they had actually to adopt the practice of the Alpine Club, and cut holes in the ice with pickaxes, into which, when lined with felt and blankets, the wretched cattle were made to plant their feet. After this, we are not surprised to hear, later on, of a Punjabi Sikh who came to the author for medical aid with his toes frost-bitten and sticking to the inside of his huge boot; of some Turkish officers from Constantinople who were benumbed and famished, uttering cries of "Ya Allah" with characteristic helplessness; or of the death of Dr. Stoliczka on the return journey, whose constitution evidently could not stand the trial of a plateau 17,500 feet above the sea level. It is satisfactory, however, to find that the travellers crossed the passes, accomplished the descent, and reached Sanju in safety; nor is it wonderful to find the author, after this severe test of his physical powers, heading a fresh chapter with the announcement that "Sanju is a delightful place."

The description of this city, as well as of Yarkand and Kashgar, their ruins, bazaars, traffic, and institutions, dress, manners, and morals, is extremely well done. We have only room for a few details, and we refer our readers, for a long history of this principality, to Dr. Bellew. In the middle of the last century the Chinese supplanted the weak and divided Government of the Mussulmans, and very recently they had in their turn to yield to the vigour and capacity of the present ruler, Yakub Khushbegi, who has hitherto disappointed the predictions of his critics and defied the assaults of his foes. We are constrained to say that his rule, as disclosed in these pages, is one of severity and asceticism. We do not hear of any vestiges of the cruelties of which M. Vambéry was an eye-witness at Bokhara, nor is there any hatred of the Christian white face. Crimes of violence have been put down. No insults, save on one very exceptional occasion, were offered to the members of the mission. The bazaars of Yarkand were fairly thronged and flourishing. Nearly thirty colleges were counted, frequented by students of the orthodox Mahommedan schools. There were infant schools in addition to these higher establishments. Gamblers and idlers, and shopkeepers with false weights and adulterated goods, had a bad time of it under the inspection of a dignitary who was at once head policeman, sitting magistrate, and inspector of nuisances, and who administered the strap with prompt and wholesome severity to women who neglected to veil themselves, and to bakers whose flour was mixed with earth. But the population were unnerved by the strictness and intolerance of their ruler; the bazaars appeared less redundant with active life than those of Benares, Lahore, or Delhi; one special industry of jade has been stifled; mines are no longer worked as they were by the Chinese, and the impression left on Dr. Bellew is that the inhabitants, though not actively disaffected, are gloomy, spiritless, reserved, and suspicious. But there are lighter touches in the narrative to relieve this dark colouring. The institution of the *dastarkhwan* is peculiar and universal. Literally, not metaphorically as put by Dr. Bellew, it signifies "table cloth." Practically, it is an array of trays, produced by the host for his guests, and laden with all the ingredients of a solid and elegant repast. Dr. Henderson, in his account of Kashgar, noticed that the native order of the courses is exactly the reverse of ours. Dr. Bellew, without dwelling on this point, writes of ragouts and *pilaos*; bread of various sorts; the soup, termed *ash*; sweet dishes in abundance; a marmalade of carrots in syrup, though this confection may, we believe, be easily eaten without going to Central Asia; pounded white sugar with egg-flip; a kind of fruit called "ice-apple," from its semi-transparency; cakes simply made of dough and fat; pasties cooked by steam; the *zan-bosa*, or lady's kiss, a delicate kind of cake; pies of jam and meat, and even mince-pies. The defect of the cookery was its greasiness, and the author admits that they began to loathe the sight of these eternal tea-trays, as no party, whether of business or pleasure, was free from such intrusion. Not only at ceremonial visits, but on excursions to ruins, to burial places of Mahommedan saints, or to the shops and the bazaars, they were pursued by attendants, and compelled to eat, out of sheer civility. The water supply was exactly what might be expected under native rule. Wells were thought unwholesome even by the natives themselves, but how the open reservoirs could supply better water it is not very easy to see. These spaces received the foliage of willows and poplars, contributions of dust and filth, and a man might be seen filling his gourd with water for domestic purposes on one side of a reservoir, while a woman was washing her dirty linen on the other. All this, and a great deal more, is well described in the volume. One more peculiarity of the country we must notice. Besides great extremities of heat and cold, the glass in the plains remaining during winter at three or four degrees below freezing point, towns and villages are exposed to be overwhelmed by moving sands, which ordinarily advance in long ridges at a slow pace, but every now and then take rapid strides and subject mosques and dwelling-places to the fate of Pompeii. For the physical causes which produce these disagreeable results we must refer our readers to the author's pages.

The suggestive facts collected by Dr. Bellew derive additional significance from his cautious opinions. The mission of which he formed part was deputed with the avowed intention of concluding a commercial treaty with the ruler of Yarkand, and of giving a fresh impulse to the enterprise and energies of British merchants, who, we are often told, only want fair play, and the moral and material support of the Indian Government, in order to inspire Yarkandis and Kashgaris with a taste for Indian articles of commerce, and to beat Russia quite out of the field. Those who weigh the difficulties encountered by a highly-equipped and well-organized party in crossing the Khardong, Karakoram, and Sanju Passes, may be able to calculate the chances of commercial ventures attempted by Afghans, Kashmiris, or Englishmen, with limited resources. Macaulay once said that there were few spectacles so ridiculous as that of the British public in one of its periodical fits of morality. We may say that this absurdity is matched or surpassed by the spectacle of certain journalists and speculators in one of their periodical fits of enthusiasm about the splendid openings for commerce *supra Garamantas et Indos*. For political reasons it is right to cultivate friendly relations with Yarkand. For our national credit it may be desirable that no dark or dismal corner of the universe should be unvisited by Englishmen. But Dr. Bellew, whether he intended it or not, has certainly exploded one Central-Asian delusion. We are aware that Sir Douglas Forsyth, on the other hand, has pointed out the possibility of another line, which he calls the Kogyar, which will shorten the journey by three days, and will avoid the Suget and Sanju Passes. This may be the case; but, if so, it is unexplained why this route was not attempted long ago. As the case now stands, to expect a vast increase to the transport of Indian products over the horrible route described in these pages is to expect that our Arctic discoverers, when they return in safety or triumph, will have exhumed an Hyperborean race in the Polar regions, whose lucrative traffic is to repay the cost of the expedition, and to quicken the industries of our great manufacturing towns.

MAXWELL LYTE'S HISTORY OF ETON COLLEGE.*

MR. MAXWELL LYTE'S work differs in plan from any historical account of Eton or its institutions that has yet appeared, and differs exceedingly both in matter and manner from two very superficial books concerned with Eton which we had the misfortune to review some weeks ago. We have here for the first time a continuous history of Eton College by a man who has had access to the right authorities, both documentary and oral, and has known how to make a right use of them. For the early part of the book Mr. Maxwell Lyte has been able to consult the MS. records in the College Library, which had hitherto remained untouched; and, by the way, we cannot help expressing a wish, which we believe is generally felt, that this library should be made rather more accessible than it is at present. For the

* *A History of Eton College, 1440-1875.* By H. C. Maxwell Lyte, M.A. London: Macmillan & Co. 1875.

recent period of Eton history which may be said to begin with Keate's headmastership, and is fairly within the memory of living men, Mr. Maxwell Lyte has been in communication with those who have the best means of knowledge, at Eton and elsewhere. Besides these advantages, he has brought to the task on his own part that scholarship and love of letters which are needful in such a case for turning to the best account even those materials which are open to all the world. The result is a book of more complete and authentic character than any which have gone before it, and one which may assume the rank of a standard authority, not merely because there is nothing else to compete with it, as is too often the case, but in right of its own just merits.

All public schoolmen know how difficult it is to keep oneself accurately informed of the actual state of things, and the minuter changes made from time to time, even at one's own school; and this is especially true of Eton, where in the course of the last generation changes have been extensive and rapid. Here the inaccuracies of detail are wonderfully few. Noting the first occasion on which the collegiate church of Eton is called a chapel—namely, in 1621-2—Mr. Maxwell Lyte says that "the older and more correct designation was not unfrequently used in common parlance till about fifty years ago." This is an under-statement. Within the last fifteen years "church" was at least as common as "chapel," except in speaking of the actual fabric; and in some phrases, if we remember right, "chapel" would have been a solecism. Nor are we prepared to allow, what is implied in another passage, that the name *Timbrells* is quite obsolete. In the last chapter there is a slight mistake as to the rifle corps, which on its first formation was a cadet battalion entirely officered by the boys themselves, and underwent sundry vicissitudes before it was converted into a small effective corps with masters for its commissioned officers.

But the distinguishing character and excellence of this book are to be chiefly sought in the early chapters. The modern history, or most of it, may be found elsewhere with more or less trouble; the earlier history, practically, not at all. Our author's clear and interesting account of the eventful first century of the life of Henry VI.'s foundation should meet with equal gratitude from Etonians, whether students of English institutions or not, and from students of English institutions, whether Etonians or not; not that the study of English institutions can justly be a matter of indifference to any English citizen, much less to any who have special associations with one that is ancient, renowned, and peculiarly national. One of the most striking things about the infancy of the College is the munificent, not to say lavish, outfit of ecclesiastical privileges and protection with which it started. Not only certain specific benefits were assured by sundry Papal Bulls to penitents resorting to Eton on the Feast of the Assumption (the College being dedicated to "Our Lady of Eton beside Windsor"), but the Provost received a standing power to grant indulgences to a considerable extent at this and certain other seasons. It was no doubt expected that the offerings of penitents attracted by these indulgences would be a material source of revenue; and in fact strangers did for some time appear in great numbers, but the cost of entertaining them was found to exceed the amount of their offerings. Mr. Maxwell Lyte's information on the original designs for the buildings, and especially the Church, of which last the plan was more than once changed in the founder's lifetime, and has remained unfinished, is very full and interesting. Not only the completion of the founder's schemes, but the very existence of his foundation, was in sore peril during the troubled times that followed the close of his reign. In 1463 all the preparations had been made for a complete suppression, even to procuring the Papal sanction. The details of this, "the most obscure as well as the most melancholy page in the history of Eton," cannot be filled up; however, the scheme was dropped, and Eton, though impoverished, survived this and other dangers of its early days. One feels a special grudge at Henry VIII. for a practically compulsory exchange of which we presently read, whereby the College parted with a considerable estate in what is now a central part of London, between Charing Cross and Hay Hill. The end of what may be considered the first period is marked by a descriptive chapter, founded on the *Consuetudinarium*, and showing the manner of life at Eton in the sixteenth century. Here and elsewhere Mr. Maxwell Lyte is something of an optimist in matters of education. He says "it is clear that Latin was almost the only subject of study"—and this, no doubt, was so—"and that no means of inculcating a sound knowledge of it was neglected." This must be taken at least with reference to the means known and customary at the time, for there is one way of imparting a sound knowledge of Latin or Greek—namely, to teach it from the beginning in a rational manner—which has been all but universally neglected down to the present time, and on this point we cannot claim for Eton the foremost place in improvement. The old official grammars lingered on in school long after they had become hopelessly obsolete in the "private business" of the tutors; and in the later pages of this book we find a man of Hawtrey's taste and refinement so imbued with them as to cling to the inexpressibly senseless rules of the Eton Grammar for the formation of tenses. Even that most perverse infliction on boys and men known as the *As in præsenti* is spoken of by Mr. Maxwell Lyte with a certain tender respect. The institution of school plays, both Latin and English, was in full force in the sixteenth century at Eton. There has been no continuation of this corresponding to the present Westminster play. "Speeches" are probably a distinct invention of modern times; nor can they be said to go far towards supplying the want of such training in elocution as the plays, if pretty frequent and tolerably well superintended, must have afforded. The value of money about this time is curiously illustrated by the quarterly bill of an oppidan, undated, but belonging to the earlier part of Mary's reign, and amounting to 16*s.* 7*d.*; and by the fact that in 1561 ten pounds was thought a proper, or at least not an illusory, compensation for a Provost who had been elected against the wishes of the Crown, when he was shortly afterwards compelled to resign. The quartering of the French Ambassador and his following on the College at a time when he was detained in a sort of honourable custody led to grave inconveniences, though the Provost's formal complaint of them is somewhat ludicrous:—

"7. Itm wheras their kichen ys under the ushers chambre they have sundry tymes thrust upp spittes in such places as the bordes be not close joyned and also dischardged their dagges uppon other places of the sayd bordes to the great daunger of those that be above, but wch of them did it yt cannot well be knowen because they that be above cannot see them that be beneth, save that the first of Januarie about three of the clock at afternoone oon of them was seen thrust opp a spitt wherwth hee had almost hitt a little boy that was in the chambre, and he that did this was in a graye fryse coate or jerkyn and therby it is thought to be Eustace the boye of the buttrie, for none other in the house hath at anie tyme worne graye fryse but he only.

"8. Itm. they have used to molest the sayd usher by imoderate noyse at unseasonable tymes of the night, and this was don by them wch lie nigh the Buttrie and Kytchen, and the like noyse hath ben made by them that lye on the other syde towards the Colledge whereof complaynt hath ben made to me by the fellowes of the howse dyverse tymes.

"11. Itm the laste of Decembre the lackye wch others whose names I cannot learne, spoyled a great manie of the Colledge bricks lying on the back side of ther kytchin wch they threw at the Schollers as they passed betwen the Schole and the fields, fyve of the sayd Scholers came to me the same daye to complayn and brought of the bricks wth them wch were throwen."

The gist of the offence in the last paragraph seems to be the spoiling of the bricks rather than the assault on the scholars.

The second period of Eton may be fixed as ending with Keate's headmastership; and Mr. Maxwell Lyte gives us an account of Eton habits under George III., which may be taken as representing almost the whole of this period, from a private contemporary document. Most of the arrangements here described have existed or left traces in our own time. We could mention some examples, not without their curiosity, of developments and rudimentary survivals, but Etonians will readily find them in the book, and it would require long explanations to make them generally intelligible. The book supplies us with one instance of a kind of migration of fables or anecdotes which is common enough, but has not to our knowledge been much noticed; we mean the appropriation of an old story to a younger generation by inserting contemporary names. Here is Mr. Maxwell Lyte's story of Major Hexter, the writing-master:—

He once made a formal complaint that his authority was despised, and requested the Provost's permission to wear a gown like the other masters. "By all means," replied Dr. Goodall, blandly: "you can do as you like." "And then, of course, the boys will touch their hats to me, and shirk me?" "As to that, Major Hexter, they must do as *they* like."

In the present writer's time this identical story was current at Eton, with the substitution, much to the loss of its point and probability, of living names. It would be rash, of course, to conjecture from this that it may be altogether mythical: yet one's historical faith is disturbed by such easy transformation. There is another story of a reply of Goodall to William IV. on one of his visits to Eton which we make no scruple of extracting simply for its own sake:—

On the second of these visits, in 1832 to wit, he promised the reversion of the Provostship to Dr. Keate in a strange way. Pointing to Dr. Goodall he said, "When he goes I'll make you him." Dr. Keate was wisely silent, but the Provost, who was first a gentleman and then a courtier, said with one of his most gracious bows: "Sire, I could never think of *going* before your Majesty." Some years later he was asked whether he had really used these words, and he replied, "Yes, and I meant to show the King how rude he was."

We may dismiss the third or modern period, from Keate to the present day, with brief notice, not for any decline of actual interest, but because Mr. Maxwell Lyte is here dealing with what is comparatively matter of common knowledge. The foundation of the Newcastle Scholarship is duly chronicled; but we see no mention of the celebrated answer of the late Vice-Chancellor Wickens on being asked to name the three Graces—"Grace before meat, grace after meat, and His Grace the Duke of Newcastle." A full description is given in a separate chapter of the rise, flourishing, and fall of Eton Montem, which may be read with interest by all, and with profit by those whose early knowledge of Montem may have been derived from a certain not very accurate little piece of Miss Edgeworth's. Montem died hard, and in some ways regretted even by those who condemned it; but "a custom for young noblemen and gentlemen to go about the country as sturdy beggars obtaining money from passengers," as Lord Denman called it in his letter to the Provost on the subject, could obviously be no longer sustained. Of the later changes in Eton government and studies Mr. Maxwell Lyte speaks in a rather conservative tone, but without partisanship; though it is a little irrelevant to say that, certain improvements, which were in fact important, but almost all improvements in *discipline*, "were not sufficient to bring the school up to the ideal standard of *educational* reformers." We must give a final word of praise to the manner in which the book is produced, and to the careful and faithful local illustrations; suggesting, however, that the index might well be made fuller. In a book of this kind the index, though not a vital point, is a material one.

SICILIAN POPULAR POETRY.*

FROM the earliest times, say the Sicilians, their isle has been, like Prospero's, full of "sounds and sweet airs that give delight and hurt not." Passing from one set of rulers to another, it has often changed its political allegiance, but never has it been known to prove unfaithful to its ancient love for song. To this day are kept up with unflagging spirit the poetic contests in which the island so delighted ages ago, and the Sicilian subjects of Victor Emmanuel are probably as capable of fluent improvisation as ever were their most tuneful ancestors. Thus, on the 24th of every June, a great gathering takes place at S. Giovanni di Galermo. Thousands of spectators come together from the neighbourhood, the patron saint goes forth in state at noon, and is solemnly deposited in the place of honour, doubtless occupied in Pagan times by the local divinity whom he has superseded; and, one after another, from among the common people, step forward poets eager to sing his praises. A spectator of one of these contests, a few years ago, speaks in high terms of the facility with which the competing minstrels improvised, and of the intelligent endurance with which their audience listened. There were four competitors, three of whom adopted the Sicilian *ottava*, and the fourth the *sestina*, and there were thousands of hearers, who for a couple of hours bore the virulence of the sun at its hottest rather than lose the delight of listening to the strains of a juvenile farrier, two tailors and a shoemaker. Nor is the spot we have mentioned at all singularly rich in local poets. All over the island, among the rustics in the cities, the fishermen along the coasts, the husbandmen on the slopes of Etna, humble bards are to be found in numbers, many of them totally unlettered. One of the best of these improvisatori is a blacksmith, Stefano Lo Stasio, by popularly known as "the Ariosto of the rustics." Higher in social rank stood [illegible] Pietro Fullone, statesman and [illegible] of Palermo, who died in 1670, whom Meli places on Parnassus along with Dante, Petrarch, and the other great Italian poets. But [illegible] the musical echoes which ring in the plebeian ears of Sicily [illegible], it must be admitted, to more patrician lyres. Ideas and [illegible] of literary origin there, as elsewhere, have been preserved [illegible] oral tradition, and made the property of the people, [illegible] which they cannot be styled popular in the scientific [illegible] the word. Some of these authors are utterly forgotten, [illegible] es the memory remains dear to the Sicilian mind, as [illegible] of Antonio Veneziano, lyrist, antiquary, and song-writer [illegible] phet who had such honour in his own country that he was [illegible] ed from Algerine slavery at the expense of the city of Pal[illegible] here the day of his return home was celebrated as one of pub[illegible] rejoicing. Sad to say, he was afterwards imprisoned by the Inquisition, and while in confinement was killed by an explosion at Castellamare in 1593—to the great grief of his friend Torquato Tasso, who was on his way to visit him when he was stopped by the news of the catastrophe. Of certain kinds of popular poetry the Island is, as in other countries, conscientious preservers, ruthless rhapsodists wandering about in numbers from one sacred place to another, and in all gatherings of the people singing the praises of the Saints or of Fra Diavolo. At Palermo, indeed, a troop of such blind minstrels as these formed a licensed Congregation, having obtained a charter in 1661, and being allotted quarters, in 1690, within the walls of the Society of Jesus. On the temporary suppression of the Order the blind men were turned out, and on its restoration in 1806 their income was seized by their late hosts, with whom they battled stoutly for years, jealously guarding their papers in an iron safe under three keys. Eventually, when the Jesuits fell, their fall was shared by the Congregation of the Blind, deserving as it was of a better fate.

Of the rich fields of Sicilian popular poetry Signor Lionardo Vigo was one of the earliest explorers. More than half a century ago he began to publish the songs in which his childhood had delighted, and which, as soon as he grew to man's estate, he set himself eagerly to collect. Like a bee craving after honey he haunted the pastures in which these wild flowers of poesy were to be found; he even ransacked the remotest valleys and scaled the loftiest heights, everywhere drawing from the lips of old and young the luscious nectar of Sicilian song. Nor, after he had left his quiet home for the busy haunts of men, did he prove unfaithful to his early love; but, laughed at as he was by doctors, notaries, clergymen, and other scullers of a similar nature, he occupied himself year after year in song-hunting during the autumnal *villeggiatura*, when recalled from college or University to the paternal roof. At first he published the results of his researches in periodicals, but in 1833, finding them little appreciated, he ceased to do so. In 1857 appeared his first large collection, a goodly volume, though somewhat "hacked by the scissors of the cut-thoughts." Recently he has republished it, amplified and rearranged, and rejoicing in "the fullest liberty and independence, both political and religious." The veteran editor will now, he says, leave the field open to other collectors, but he reserves to himself the right of publishing the works of Pietro Fullone, and a collection of those "political-historical songs" which are too numerous to be inserted in his present volume. His already published writings, it may be remarked, amount to twenty-one. Among those which he has in hand may specially be noticed a projected work, to be styled "Misteri di Lord Bayron (*sic*), o Rivelazioni intime di Marianna Segati," which will contain, it is said, a number of hitherto unpublished letters from Lord Byron, as well as other papers relating to his life at Venice.

The Sicilian dialect of the present day includes many foreign words—Greek, Hebrew, Arabic, French, and Spanish aliens, due to the strangers who ruled, or colonized, or visited the island at various times. But the wing of time has swept away all remembrance of the popular songs of Sicily during the Greek, Roman, Byzantine, and Arab epochs. They doubtless once flourished, but they have long ago disappeared. Of recent history poetic illustrations abound, but their numbers rapidly decrease as the date recedes to which they refer. The present volume contains a good many specimens of the popular poetry which the stirring events of the last score of years have evoked; but as they differ but little from those which we noticed when reviewing Dr. Pitrè's similar collection of Sicilian Popular songs some three years ago (November 9, 1872), we will not dwell upon them now. The *Canti Sacri*, however, are deserving of notice as representing the genuine and affectionate devotion of the people, their boundless credulity, and the strange medley of Christian and Pagan ideas to which they are addicted. Take, for instance, this well-known legend, as related by a Syracusan minstrel. A mother is told that she cannot be allowed to see her son, an innocent galley-slave, unless she brings with her a hundred pieces of silver. Away she wanders in search of alms, and has just succeeded in scraping together the modest sum of three *carlini*, farthing by farthing, when she finds a priest, apparently dying of hunger. On him she bestows the sum she has collected, asking him to say masses enough in return to liberate a soul from Purgatory. As she wanders on she is presently aware of "the form of a grand cavalier," who listens to her piteous story, and sends her to his castle with a letter to his son, ordering him to pay the hundred pieces. The son marvels greatly, seeing that the letter is in the handwriting of his father, who has now been dead many a year. But when he has heard the whole story, he understands that the poor woman's gift to the priest has brought about his deceased parent's release from purgatory. So he pays the money, with which she hurries joyfully to the captain of the galley. As the captain is "not cruel, but of a good heart, and devout towards God," he is so affected by what she tells him that he returns her the money and makes her a present of her son. The moral is that "almsgiving brings a blessing"—one which always comes home to the hearts of the poor, who in every land listen with special attention to the story of Dives and Lazarus. That story figures in the present volume in the shape of a "tragedia in canzoni." In the opening scene "Ju Ricco Epulone" orders his dinner with effusion. Lazarus enters, asking for alms, and is driven away. Presently news arrives of the death of Lazarus. "The Rich Glutton" rejoices at being rid of "that troublesome personage," but soon afterwards expires. In the next scene the glutton is seen carried downwards by Charon. In vain does he appeal to Abraham. He is told that he has not believed "Ablacucu o Geremia" and the other prophets who have inculcated almsgiving, and therefore he is now condemned. Thereupon Charon bears him to hell's gate, where Cerberus receives him as one well fitted "to be eternally with Pluto."

But it is to the songs about love that this collection owes its principal charm. Although its contents are arranged under fifty-nine different heads, yet they chiefly refer to that absorbing passion. Unfortunately it is impossible to give any idea by a translation of their tenderness, their fire, or their melody; and the difficulties involved in their dialect render them, if quoted in the original, somewhat obscure. Thus a song in which a youth upbraids the mistress who has deserted him for another ends with the lines:—

> Tu sarai l'acqua, ed iu sarò lo ventu:
> Sciusciu, e ti cacciu davanti di mia.

"Thou shalt be the water and I the wind; I *shoo-shoo*, and drive thee before me," the cry *shoo* being used in Sicily, as in Scotland and elsewhere, in turning poultry out of a yard, or the like. Another puzzling word occurs in the last line of a complaint in which an ill-used lover accuses Death of having refused to come to his aid, although entreated for two whole years to do so. Death indignantly replies that he is really dead, though he thinks himself alive:—

> Vera crudeli la tò amanti ha statu,
> Ca ti ammazzau senza 'ndingari a mia.

"Truly cruel has thy mistress been, for she has killed thee without having had recourse to me," the verb *'ndingari* properly meaning to accept a gift from an inferior. Quaint conceits are very dear to the Sicilian mind, and the lover delights in such assertions as that, if his body and his sweetheart's are opened after death, she will be found to have two hearts and he no heart at all; or that, if she looks within his breast, she will find her portrait there instead of his heart:—

> 'Nveci di lu mè cori, anima mia,
> Trovi lu tò ritrattu 'ntra stu pettu.

Jealousy gives rise in many songs to strong expressions. Here, for instance, is a complaint from Messina:—

> With sorrow and sighing I loved a lady; and now I see her held by another's hand. Not so great is the grief of him who loses relatives, as is that of him who loses her he loves. And to lose her by death, that is nothing. Little by little will his wailings die away. The real misery is when she thou lovest lives—but passes thee by.

Somewhat exaggerated also seem the declarations of a lover who exclaims that he could plant a nut-tree on the sea and make it bear fruit like a myrtle, or that it were for him an easy leap to pluck a

* *Opere di Lionardo Vigo.* Vol. II. Raccolta amplissima di Canti populari siciliani. Seconda edizione. Catania. 1874.

star from the sky. But to kiss his betrothed, he continues, is not now within his power; and so he has to content himself with kissing the cup whence she has drunk—

Ma la me' zita 'un la pozza vasari,
E vasu lu bicchieri unni vivi idda.

By way of conclusion here are three more specimens. One expresses a girl's views with regard to her two suitors:—

My heart says Yes and No. My head says No and Yes. Fain would I marry Totò; they want to force me to take Ciccì. Ciccì can never have this heart of mine. My senses say just the same. Before the priest I should say "No." But should Totò come; to him I would say "Yes."

The second is the cry for sympathy of a deserted lover:—

O turtle dove who hast lost the sweet company of thy mate, and flies! wailing through deserts! Come hither, and tell me thy bitter griefs, and I will tell thee mine. Thou lamentest because thy love is dead. I lament one who is living, but who is no longer mine.

The third, which, as the editor declares it to be worthy of being engraved on gold, is given in the original, describes how a fair one sleeps like a rose folded in the bud and dreams of her lover. He kisses her gently, and she awakes and gazes on him. Watching the locks which hang around her neck, and enraptured by her balmy breath, he asks whether any one on earth can be compared with the object of his worship:—

Comu 'na rrosa dintru lu buttuni
Durmia la bedda, e s'insunnava a mia;
Adaciu, adaciu cci dugnu un vasuni,
Si arrisbigghia, apri l'occhi e mi talia;
Cci sciaura di cannedda lu sciatuni,
La trizza coddu coddu pinnulia;
Guardati si a stu mumu c'è pirsuni
Ca ponna assimigghiari a la mè Dia!

THE CURATE IN CHARGE.*

IT is a subsidiary triumph of the writing faculty that it can entertain the reader for a time without any distinct subject-matter. The practised pen carries us along through suggestion, speculation, experience, and gentle satire so easily that we do not immediately detect a want. Mrs. Oliphant in the *Curate in Charge* has not much of a story to tell, and is very far from being at home in her subject; yet, by the aid of an easy agreeable style and a general habit of observation, she has produced a novel which carries us pleasantly on to the end. Only by degrees does the reader become alive to the fact that the story makes slow way, and that getting over the ground is no object with the author; and only later still he discerns that the meagreness of her material has been all along a conscious motive for diffuseness, without which the requisite number of pages could not be filled. When a skilled hand is sensible of this necessity, diffuseness becomes a characteristic of style, and ingenuity is put on its mettle to make it a graceful and natural characteristic. A diffuse style is different in its nature from prosiness; it implies more design and organization, and of course there are two opposite ways of telling a story well. Still we think this story would have been diffuse enough if told in one volume instead of two, the rather that amplification betrays the writer's want of real knowledge of her subject, and leads her into a repetition of pictures and images against which our experience rebels.

In the grievance of curates Mrs. Oliphant has found a popular and sensational subject; but, in fact, no one born and bred a Presbyterian can discuss the difficulties and anomalies of the English Church with the understanding of sympathy and long familiarity. She decides on the injustice which attaches to the position of curate without knowing the proper standpoint, and attributes to her characters speculations and indignations that are foreign to their actual circumstances. When her heroine, the Curate's sensible daughter, scorns and almost bullies the incoming Rector for stepping into her father's position and invading his natural rights, she writes what no reasonable Englishwoman could have written. It is an external view. Every curate's daughter fully understands the conditions of the parish which her father serves; and knows that, if it is a College living, a Fellow of the college will succeed to it. To be angry that her father may not remain as rector because he has been twenty years curate shows the temper of a born agitator. The poor girl will have many quarrels with circumstances and society, but that is not likely to be one of them—not, we mean, in any strength or coherence; not one to be set forth with a vehemence that should send the startled and convinced intruder back to his college to see if he could persuade its Head and the Fellows—*engaged* Fellows—below him to waive their claims and set aside old prescription in favour of the curate in charge. No doubt, in a great many cases where people have to write on a subject, it is a very inconvenient thing, very clipping to the wings of imagination, to know too much about it; and the *Curate in Charge* could never have been written by one intimately conversant with the laws and customs which regulate preferment and the prevalent ideas resulting from them; but, however weighty this consideration, the general fact is an important one to be pressed on the ordinary reader as a motive for keeping his critical faculty in some sort of exercise.

We see at once, however, that the ideal victim and sufferer in this vexed curate question is one quite in Mrs. Oliphant's range. An elderly curate touches on her speciality—one of her specialities, we should say. She feels herself quite at home in delineating an elderly gentleman, courteous, mildly selfish, the slave of habit, and incapacitated for change by that decay of mind and body which our author uniformly represents as setting in so early in the human race. With that delight in contrasting the pretended superiority of man with woman's practical power, which is common to the lively feminine mind, but exuberant in Mrs. Oliphant, she dwells on the weakness of purpose and imbecility of her hero till our sense of justice is stirred in an opposite direction to that in which she would lead us. The sort of man she describes, we coldly reflect, is made to come to grief, and so we dismiss his case; the parishioners, on the other hand, would have a right to complain, and certainly would complain, if the pastor who in the maturity of his powers has set them so poor an example in the management of his domestic affairs should be fixed for ever upon them in their decline. The truth is, the writer is run away with by the congeniality of her theme, and in fact the merit of her story lies in the delineation of Mr. St. John, and especially when he shows himself weakest and most bewildered—to use her very favourite and often repeated epithet. His character, rather necessarily, wants consistency, as the spirit of the portrait—a very able one—all lies in its domestic aspect, and his ministerial virtues have to be assumed for the sake of the grievance. Perhaps it was his misfortune to have set out in married life with too perfect a wife. The engagement had been a long one, which Mr. St. John had borne almost too patiently; for, though a constant, it was not his nature to be an ardent lover. He marries on being appointed to the sole charge of Breatburn in Berkshire, a village lying on the borders of Ascot Heath; the absentee rector leaving him the rectory and dividing with him the income of 400*l*. Here Mrs. St. John

managed to live upon her two hundred a year as few of us can do upon three or four times the sum. Waste was impossible to her; and want appeared as impossible. She guided her house as—well, as only genius can—without any pitiful economies, without any undue sparing, making a kind, warm, beneficent living house of it, and yet keeping within her income. I don't pretend to know how she did it any more than I can tell you how Shakspeare wrote *Hamlet*. It was quite easy to him—and to her; but if one knew how, one would be as great a poet as he was, as great an economist as she.

Such a wife is a positive misfortune if she dies, for the survivor retains false—fatally false—notions of what money can do. Not that these very broad distinctions make the difference between wise and bad management; there is no royal road to economy. Mr. St. John is left thus doubly desolate with two daughters, for whom his compassionate parishioners provide him with a safe governess, carefully chosen for her absence of attractions. Under her the girls grow up, till Cicely, the eldest, is fifteen, when an aunt from London suddenly descends upon the party and pronounces that the girls must go to school at her expense, and the governess must be told that her services are no longer required. There is an inertness in the Curate's nature that only woman can move. His Helen had learnt to doubt his power of taking the initiative even when the chance of marrying came, and he succumbs at once to Aunt Jane's plans, but dares not announce them to his household. To have to tell Miss Brown that her services were no longer required was an effort to which he was unequal. "A more miserable man was not in all the country" than the Curate with this speech yet unspoken. And when the news comes out, and the girls under Miss Brown's magnanimous efforts depart, leaving her behind at the rectory, preparing for her own departure, he has but one suggestion to make—"Would it not be better to stay here, Miss Brown?" On which the lady's sense of propriety naturally bridles:—

The poor curate did not move. He took off the lid of the big inkstand and examined it as if that were what he was thinking of. The Governesses' Institute sounded miserable to him, and what could he do? "Miss Brown," he said in a troubled voice, "if you think you would like to marry me I have no objection; and then you know that you could stay."

"Mr. St. John!"

"Yes; that is the only thing I can think of," he said with a sigh.

And this is how at the end of three years we find Mr. St. John a second time a widower with twin boys in addition to their grown-up sisters, and with 200*l*. a year wherewith to maintain the whole party. We cannot willingly admit the two babies and their nurse as constituting the additional claim upon the patrons of the living which they are assumed to be; but under Mrs. Oliphant's graphic treatment they add to the picturesqueness of the situation, and, to do her justice, she never sacrifices her art or the amusement of her readers to the dry consistency of her moral or to her devotion to the cause she undertakes to advocate. The death of the mother-in-law brings Cicely upon the scene—the image of her own mother, and inheriting her genius, though the condition of affairs is beyond remedy; for she finds her father in debt to every small tradesman in the place, and too passive and too practised in the art of shirking disagreeable topics to be brought even to enter into the subject of his embarrassments. At this stage the Rector, who has lived for twenty years a professed invalid in Italy, dies, and the news descends like a thunderbolt upon the daughters a fortnight after the event. The Curate, true to his character, cannot for some time be got to take in the consequences of the event; and when the ladies of his family urge upon him the duty of applying for the living, he declines, more on the general ground of never asking for anything than as understanding the futility of the application. However, in the speech put into his mouth we recognize feminine daring in unfamiliar regions rather than the bewilderment of any masculine brain:—

"It is my own college, too," he said reflectively, "and I suppose I am now the oldest member of it. It would not be amiss if they let me stay here

* *The Curate in Charge*. By Mrs. Oliphant. London: Macmillan & Co. 1876.

the rest of my days. But I never was distinguished. I never was a Fellow or anything. I never could push myself forward. No, we must just wait to see what is going to happen."

When the living was announced to the College as vacant, it comes to the choice of Mr. Mildmay, whom Mrs. Oliphant describes as—the ladies' favourite collegiate ideal—a Don. As a Don he seems to have unlimited command of money, an entrance into high society, and all this world's good things at his feet. Thus far Mr. Mildmay has thrown rather an elegant mind into the collection of china, bric-à-brac, and furniture; but he has become alive to the vanity of this pursuit, and awakes to the necessity of living a real life, and on this impulse accepts the living of Brentburn, and comes down to look at the place. Here he encounters the flashing indignant eyes of Cicely, and, probing what they mean, falls into her view—that her father, by all right, ought to be rector—and, after making acquaintance with the Curate, goes back to his College and suggests the thing to the Master, who pooh-poohs it all in a strain with which we are intended by the author to be indignant. Finding also that Ruffhead, the Fellow below him, who is engaged, is equally hard-hearted, Mr. Mildmay decides to hold the living in favour of the curate. The rest of the story, with its real lesson on the supremacy of the female sex in all practical matters, we leave the reader to find out for himself, assuring him on our part that it is all very easy reading when he once falls into the author's pace of telling what there is to tell. The real injury to the parish of Brentburn, the grievance of which its inhabitants have to complain, is the twenty years' non-residence of its absentee rector; for this they would have found little compensation in the appointment of Mr. St. John to the vacant office.

MISS CUSACK'S HISTORY OF CORK.*

WE do not know how a "Kenmare publication" is defined; but from this specimen we gather that, if we wished to know anything about Kenmare, it is not to a Kenmare publication that we should go to learn it. We cannot conceive a better way of having one's mind carried away from the city and county of Cork than studying their history under the guidance of Miss Cusack. That, we find from an advertisement at the end, is the received way of describing the writer; though it appears that she is also more poetically described as "the Nun of Kenmare," and we find that she is "pre-eminently the literary nun of the age." We are not sure that we ever before reviewed a nun; indeed our list of literary nuns would hardly go beyond Abbess Hroswitha and Dame Juliana Berners; and we have a sort of notion that some ancient privilege or other, like those which Dr. Stanley never forgets at Westminster, might possibly exempt nuns and their writings both from episcopal and from critical visitation. Besides, we should never have thought of calling a nun "Miss," any more than of calling The O'Donoghue "Mr." We might have been more inclined to speak of "Sister Mary Frances," as one authority does; but the balance of custom seems to lie in favour of the more temporal description, and it is always well to conform to custom when so to do involves no breach of principle. We are told further that Miss Cusack's "cell in the Convent of Poor Clares at Kenmare is no place of indolent repose, but a genuine place of study, a literary workshop of no common merit." But what is most puzzling is that the same page which announces one of the Kenmare publications, the Public Speeches and Letters of O'Connell, also announces "Vermin Paste, for destroying Rats," and other means of destruction for mice and bugs. We thought for a moment whether St. Francis, in his brotherhood with all things living, would not have begged mercy for the bugs, or at any rate have demanded for them a trial at canon law, such as that to which the cockchafers were summoned in the Bishop's court at Lausanne. And we confess that for a moment we doubted whether St. Patrick had not banished all noisome creatures from his island. But we remembered that it was reptiles only, toads and serpents, that he banished, and that he left insects and mammals alone. And we remembered further the "majores mures qui vulgariter vocantur rati," which ate up the books of an Irish Bishop, and were for that crime cursed—seemingly without any legal process—into something like the Buddhist paradise of Nirvana. Where then has that power fled? Has the oppression of the Saxon taken away that ancient gift of cursing in which it is certain that the saints of Ireland once surpassed all men? There must be lack of faith, even in the convent of Poor Clares at Kenmare, when the bugs have to be got rid of by the secular arm in the shape of "Persian Insect Powder," instead of by the anathemas of whoever may be the ecclesiastical superior of Kenmare.

Now we know a little about Kenmare and Sir William Petty out of Lord Macaulay's History; and we also know a little about Cork from the same source and from others. Perhaps the fact about those parts which is likely to make the deepest impression is that it was on the road from Cork to Dublin that the women insisted on kissing James the Second, and that his Majesty gave orders that he was not to be kissed. But it is wonderful how very little more we know about Cork after going through Miss Cusack's large volume on its history. It is not that there is absolutely nothing about Cork in the book. But the things which have most to do with Cork—the natural history, the topography, the municipal history—are all stowed away at the end, and some of them are not treated by Miss Cusack herself. There is a list of Sheriffs of the county and Mayors of the city, which, with singular perversity, is put in alphabetical order, or rather not in alphabetical order, for Spearing comes before Savage, and Supple before Silver. But even here we learn something. Thus among the Mayors there are many of the name of Sarsfield; among the Sheriffs only one, whose year, by an odd misprint, is given as 1938. Thus we seem to get a special connexion of one of the heroes of Ireland with the city of Cork; but his name occurs only once or twice incidentally at the place where we should specially have looked for it, in the chapter headed "William of Orange." We note that several of the High Sheriffs towards the end of the last century and the beginning of the present are said to have been knighted during office, which certainly is not, in England at least, the manner of High Sheriffs now. There is in these appendices a good deal of local history put together in a rather chaotic shape, and of course Cork is often mentioned, perhaps oftener than any other place in the course of the general narrative. Still Cork only peeps out now and then among other places. The book has really no pretensions to the character of a local history; what there is in it about Cork city and county is altogether smothered by matter about Ireland in general. And what Miss Cusack has to say about Ireland in general comes to little more than telling the old stories over again, and that in a great state of excitement awakened by the late work of Mr. Froude. Now what we think of Mr. Froude's work on Ireland we have said often enough. Miss Cusack may possibly know that we have no more love for Flogging Fitzgerald and his panegyrist than she can have herself. Still we doubt whether much good can come of sneering and nagging at Mr. Froude through page after page; and we are sure that a book of local history is not in any case the right place for it. If Mr. Froude has misrepresented any fact in local history, it is the business of a local historian to point it out. But it is not the business of a local historian to go scoffing at Mr. Froude sometimes by name, sometimes as "a certain historian," on account of general views which concern Cork only as they concern all Ireland. We might grant to human frailty the license of one outpouring of the kind in the course of the book. But a good many pages of it are rather too much. Nor do we know that it is exactly the business of a local historian of Cork to go minutely into the character of Henry the Second. The great lawgiver is in stronger hands than those either of Miss Cusack or of Mr. Froude, and his wonderfully mixed character is not to be judged of by little scraps from the declamations of his enemies. And anyhow, it is funny to see Giraldus quoted through "Cambrensis Eversus." And before Miss Cusack or anybody else builds up any theories on the words "oppressor nobilitatis," used more than once by Giraldus in a rage, it would be well for them to see in the more judicial pages of Peter of Blois, and, above all, of Ralph of Coggeshale, what the charge really means.

We do, however, learn one thing about Cork which, if true, would be worth remembering. "In the age of the world 3668, Cork was honoured by becoming the seat of monarchy." It is true that, on turning to the Four Masters, we find that the word Cork must here be taken as meaning, not the city, but the county; but it is something to have faith to believe in Irish chronology in the age of the world 3668. But Miss Cusack boldly believes everything. She asks in her first page, "Why should not the Irish Celt have as ancient and respected traditions as the Assyrian or the Indian?" And presently "The first immigrants of Erin left their archaic markings after them, and the ogham character may well dispute antiquity with the runes of the Scandinavians, or the cuneiform inscriptions of the Assyrians." We should be very glad to have any runes as old as the oldest Assyrian inscriptions, and we should receive with reverence oghams of the same date, if we were certified by competent Celtic scholars that they were of that date. But till we have this, cannot Miss Cusack or anybody else see that the reason why Irish traditions are not as much respected as Assyrian inscriptions is simply because the traditions are traditions, and the inscriptions are inscriptions? And so we have a prodigious deal of the same kind resting on evidence which is discussed in this fashion:—"Keating has given special and very full details of the arrangements at Tara, and it will be remembered that Keating writes from very ancient sources." And we may say that, while complaining of the neglect by English writers of the ancient Irish laws, it is rather unfair to pass by the elaborate use of them which has been made by Sir Henry Maine. But it is most likely in vain to talk about Sir Henry Maine or any other rational writer in the face of this kind of thing:—

> All early Irish history points not only to an Eastern but to an Israelitish descent. It is well known that the *Lia Fail*, or "Stone of Destiny," now most probably in Westminster Abbey, is supposed to be a pillar stone used by Jacob, and brought from the East by the Tuatha-de-Dananns. We have met recently with a curious little pamphlet, which has had a circulation of some 300,000, the object of which is to prove that the whole British nation are descendants of Eastern tribes. This is obviously incorrect as far as the Saxon race are concerned. The subject is so strange and so full of interest, both from historical, ethnological, and religious points of view, that we intend to enter on it fully in a note at the end of the present work.

We have tried in vain to find this note, and there is no index; but it is a certain relief that at any rate "the Saxon race" is let off from any suspicion of Israelitish descent. So in another page Miss Cusack tells us that she "reserves a fuller account of the ancient architecture of Ireland for a future page." That subject, moreover, has been dealt with by a stronger, though a purely Irish, hand, and we hope before long to have something to say about it. And again, we have not been able to find the "fuller ac-

* *A History of the City and County of Cork.* By M. F. Cusack. Kenmare Publications. Dublin: McGlashan & Gill. Cork: Guy. 1875.

count" in the "future page"; but on the opposite page we do find that "as early as fifteen hundred years before the Christian era sumptuary laws were passed to regulate the colours of dress. The Irish Celt was clothed, and well clothed, at a time when the Gaul and the Saxon were half-naked savages." We must leave the Irish Celt and the Gaulish Celt to fight out their own differences, but we do feel a pang at our own modernness when we have to confess that we have no notion whatever how our forefathers were clothed or not clothed in 1500 B.C. All that we can do is to appeal to Trajan's Column for the fact that they were very well and decently clothed about 100 A.D. But we may have our revenge, even at the expense of putting a new weapon into the hands of Mr. Froude. Sumptuary laws are not commonly looked on as signs of wisdom; and, if the Irish were the first nation to decree sumptuary laws, a scorner of Irish ideas might argue that this proved that the Irish had shot ahead of other nations in the race of what we will delicately call unwisdom. Far be it from us to say that it was so, because we do not profess to know in the least what went on in any part of Europe in 1500 B.C.; but if people will bind themselves to such rash chronology, they must take the consequences.

Here and there up and down the book we do find notices about Cork and its county, and something might doubtless be made out of the topographical guide at the end, which is put in alphabetical order—an arrangement convenient for a guide-book, but hardly for a local history. But why should the Nun of Kenmare come over to England to set us wrong about the burning of Friar Forrest? Now we have the greatest dislike to all burnings of anybody, and the burning of Forrest was on every ground one of the most unjustifiable of all burnings. So far there is no dispute between us and Miss Cusack; but she tells the story of Forrest somewhat differently from Hall:—

> The royal process of conversion to the royal opinions had at least the merit of simplicity. There is an old rhyme—one of those old rhymes which are often more effectual in moving the hearts of the multitude than the most eloquent sermons, and truer exponents of popular feeling than Acts of Parliament—which describes the fate of Forrest, the Franciscan friar, confessor of the king's only lawful wife, and the consequences of his temerity in denying the king's supremacy:—
>
> "Forrest, the fryar,
> That obstinate lyar,
> That wilfully will be dead;
> Incontinently
> The Gospel doth deny,
> The king to be supreme head."
>
> There is a grand and simple irony in this not easily surpassed. Some very evident proofs had been given in England that to deny the King's spiritual supremacy was "wilfully to be dead," although neither the king nor the parliament had vouchsafed to inform their victims in what part of the Gospel the keys of the kingdom of Heaven had been given to a temporal prince. Still, as I have observed, the royal process was extremely simple—if you believed, you were saved; if you doubted, you died.

Now in Hall the fourth line is given, not "incontinently," but "in his contumacy." But the point of the story is that the verses, as well as the other verses about Darvell Gatheren, were not an old rhyme describing the fate of Forrest, but the inscription which was set up in great letters upon the gallows which he died on. Anyhow, what has all this to do with the history of the city and county of Cork?

SHERIDAN KNOWLES ON *MACBETH*.*

IT is not a little singular that Sheridan Knowles's *Lectures on Dramatic Literature* have never been published. In the quotation from the *Noctes Ambrosianæ* which stands on the title-page of the Lectures now reproduced, Christopher North says, "Knowles is a delightful fellow and a man of true genius." This is a curious instance of the loose way in which the word "genius" is employed by English writers. By the French the title is bestowed with more discrimination, being reserved for the few who tower among their comrades like Saul. With them Sheridan Knowles would rank as a man of true talent, but not of true genius; for there have been many men of equal powers to his. It must be admitted that the precise French demarcation has the advantage over our helter-skelter lavishness of praise. When a man of extraordinary power arises among them, they have his description clear and ready to hand, while we in such a case can only distinguish the supreme from the admirable by a laborious heaping up of epithets. Again, if the title of genius were less carelessly given, it would be less easily usurped. That Sheridan Knowles was not a man of genius in the highest sense of the word is patent from the fact that, although the *Hunchback* is still occasionally performed, none of his plays can be said to have kept the stage. That he was a fine critic, a man who thought well and deeply, and expressed his thought in eloquent language, is evident from the *Lectures on Dramatic Literature*, all of which may, we hope, some day be published. Meanwhile, it was no doubt appropriate to select from among them those which treat of the play that has lately commanded special attention.

It is curious that at the very beginning of Sheridan Knowles's work is found almost its only blunder. The historical materials which Shakspeare had for *Macbeth* were, he says, Macbeth's success against the Norwegians, his murder of Duncan at his wife's instigation, his usurpation, and his death by the hand of Macduff. The opportunity given by the remote period for introducing supernatural scenes and persons was inviting, and therefore "the powers of the air, the mysterious, impalpable ministers that wait on nature's mischief, were summoned to his aid; and in all the potency of prophecy, illusion, and charm, appeared at the invocation of the enchanter." It is easy to believe that, had there been originally no mysterious prompting to spur Macbeth to evil deeds, such a motive might have been added by Shakspeare to the narrative which he took to mould into a tragic drama; but the fact is that Holinshed relates among other facts this one, which he chronicles as simply as the rest, that as Macbeth returned from victory he was met by three women of strange and wild attire, "resembling creatures of an elder world," who greeted him by the titles of Cawdor, Glamis, and King, exactly as they do in the tragedy.

Having noted this slip, we may go on to consider Sheridan Knowles's criticism of the play. As a good deal of one kind and another has been lately said and written concerning the character of Macbeth, it may be well to take the author's estimate of this first. On that subject he observes that "this impression (as to the vastness of the tragedy to be unfolded) is improved in the second scene, in which we are partly enlightened as to the character of Macbeth, by the Sergeant and by Macduff" (here is another slip; it should be Rosse, not Macduff), "who successively describe his prowess to the King, and whose relation tends powerfully to exalt our opinion of the importance of the hero, and to increase our anxiety to see him." This, a good reason enough for not omitting the dialogue between Duncan and the Sergeant, has been dwelt upon by critics of the present day. A yet better reason is given later by Sheridan Knowles. At the end of this scene, it will be remembered, Rosse announces the treason of the Thane of Cawdor, whose death Duncan instantly decrees, and in the same breath sends Rosse to greet Macbeth with the title of Cawdor:—

> Except for this preparatory step one of the most striking incidents in the following scene would have been deprived of half its force. The fulfilment of the second witch's prophetic "All hail!" without it would have appeared a mere trick of the dramatist, whereas now it falls out naturally. 'Tis by such means, that of all dramatists Shakspeare comes the nearest to nature. 'Tis thus that he gives plausibility even to the supernatural when he has occasion to resort to it.

One should remember this passage in reading another which comes much later on, and concludes with these words:—"Macbeth is the most melodramatic tragedy in the whole range of the drama, and it is to the credit of Shakspeare that it is so." Melodramatic, that is, in the sense that a constant and overpowering succession of incidents and situations is melodramatic. But the events are exalted into the highest regions of poetry by the dramatist, who commands and knits together the passions and the fortunes of his characters, and never presents a circumstance, important or trifling, with insufficient motive or explanation. A melodramatic writer, to use that epithet in its most common sense, would have thought it much finer to bring the announcement of Macbeth's new title to the audience, as well as to him, straight from the lips of the witches, without any forewarning. He would have been blinded to the truer order by the dazzling effect of a moment.

But consideration of these things has led us away from Macbeth himself. Before he appears "he is described to us by his deeds; deeds of prowess almost superhuman. One single arm decides the multitudinous strife of blood, and it is his." When he has been greeted by the weird sisters and observed by Banquo to start, he "cannot, dares not, trust his utterance, but he cannot refrain from betraying what he feels. The remark of Banquo is the officious tongue of Macbeth's thought; it lays open his soul to you to the bottom, as the salutation of the third witch falling upon Macbeth's ear rouses the slumbering demon within him, like a flash of lightning illuminating a cavern, and revealing to you a startled monster crouching there." From this and from the description of how the witches vanish when they have accomplished the "quickening of the evil seed that is to shoot up apace and flourish in baleful, irrepressible rankness," it is evident that the writer supposed, as seems to us natural, that there was at least some vague project of usurpation in Macbeth's mind before he met the weird women. He goes on to point out the deep abstraction which possesses Macbeth after the news of his fresh honour is brought to him, under the influence of which he should, according to the writer, address his thanks to Rosse and Angus mechanically, ignorant that they have changed their place and gone apart with Banquo, so that he should bow to empty air, not turn round deliberately to their new position. In the next scene some fine touches are pointed out:—

> From what we perceive of Macbeth when he is first introduced to us he is evidently a man whose nature is not exactly attempered to the commission of crime. He can admit the thought of the murder, but he cannot entertain it without shuddering. He wants provocation to nerve his hand for the dagger, and Shakspeare finds it for him in this scene with the advancement of Duncan's eldest son to the principality of Cumberland.

Further than this, the very occasion for carrying out his "black and deep desires" is given in the same scene by Duncan's proposed visit. An instance of the poet's surpassing truth in every lightest word of each of his characters, which might easily pass unnoticed, is dwelt upon. Banquo's answer to Duncan's kindly greeting is short, clear, and evidently heartfelt. Macbeth's is a vapid, but specious, piece of reasoning. In treating of the soliloquy which opens the last scene of the act, the writer points to various passages which show that the Thane had much that was noble in him; he had a moral sense, was jealous of honour, alive to the beauty of virtue, thoughtful of heaven; and was therefore such a man as could only be urged to execute the murder by such an ac-

* *Lectures on Dramatic Literature. Macbeth.* By James Sheridan Knowles. London: Francis Harvey 1875.

complice as his wife. This soliloquy, he further thinks, should be delivered with infinite discomfiture and confusion; by fits and starts; and by no means with an appearance of coolness and self-command. When we pass to the scene of the murder, we find our attention drawn to the powerful leading up by degrees to the deed, which we await with trembling lest it be done, and longing that it be done quickly:—"Where there is interest, there is generally a charm in gradual progression. . . . The long, fluctuating, rumbling roll of the thunder communicates to us the full conception of sublimity; but a single clap, howsoever sudden and loud, affects us little more than the close report of a piece of ordnance, or even a fowling-piece discharged unexpectedly." Thus it is not Macbeth, but Banquo, heavy with forebodings, who first appears; and, when the Thane himself comes on, there is yet delay and expectation before his purpose is put in force.

The opinion of Sheridan Knowles, which will probably be held a conceit by most readers, is to be noted, that the dagger is not, as Macbeth thinks, "a dagger of the mind," but an actual apparition raised by the weird women, and coming and vanishing as they do themselves. We have not space to dwell on or even glance at all the pregnant suggestions which are found in the criticism of this scene; we must content ourselves with touching upon what is said at the end of the part or chapter which treats of it. The writer asserts what, until a short time ago, one would have thought required no urging, that the effect of the scene is rather to denounce than recommend crime:—

> Contemplate Macbeth in this act, and recall the image of the man who in the third scene of the first act presented himself to you, flushed with the honest pride of victory achieved in a virtuous cause. What is he now? A livid, nerveless, quaking coward, whose eyes are plucked out, as it were, by the sight of that with which the havoc of a hundred fields has made them familiar and perfectly at home.

The remarks upon the last act, valuable as far as they go, are something too brief; and there is scarcely any mention of the banquet scene. Perhaps, in spite of this, we may be allowed to mention a suggestion which seems to us to have some force. It has been the custom to deliver the address to the ghost as though it were inspired merely by terror. Now, taking into consideration the side of the usurper's character which is too often neglected—his overpowering will—it seems tenable that the words "Hence, horrible shadow! unreal mockery, hence!" might rather be an effort overcoming the first horror, and banning the spectre by the mere force of command. The reaction would follow naturally enough afterwards, and in support of the theory it is suggested that the appearance of the Ghost is the last interference of conscience between Macbeth and his crimes. Till then some human scruple has always clung to him; afterwards, no atrocity appals him. That Macbeth did possess a will which may be compared to that of the first Napoleon is evident from the fact of his placing himself on the throne in spite of all suspicions aroused by Duncan's death; and if, with such a power, he had no weakness of hesitation or remorse, he would have been superhuman.

As to Lady Macbeth's character there has been less discussion than as to her husband's:—

> The historical fact [says Sheridan Knowles] that Macbeth was instigated by his wife to murder Duncan, suggested to Shakspeare the character of Lady Macbeth. From this single trait he inferred the whole of a character, for fidelity of keeping and force, if not superior to any, at least inferior to none in the wide range of his immortal drama. Here he has, indeed, realized the highest feat of the terrible in romance, by embodying the spirit of a fiend in a human form—a being composed of flesh and blood, and not without the sympathies which result from the living union of such ingredients; but possessing them in utter subserviency to the evil principle. . . . She takes no more account of blood than if it were water. That from the sight of which unused nature instinctively recoils, though shed for a salutary purpose, under circumstances the most revolting, only serves to furnish her with an image of pleasure—
>
> If he do bleed,
> I'll gild the faces of the grooms withal.
>
> She does so, and never hastens to wipe her hands, but brings them reeking, to taunt her pale and quaking husband with their colour.

The writer goes on to speak of Mrs. Siddons's Lady Macbeth. Nothing is so difficult to describe as a fine piece of acting which produces its impression by a gradual harmonious course of effects, some of which, and perhaps among them the touches whose force though the least evident is the greatest, cannot but be slurred in the telling. For this reason anything which conveys so clear a notion to a reader as Sheridan Knowles's writing on this matter is especially valuable. "The Lady Macbeth of Mrs. Siddons," he writes, "was the genius of guilty ambition personified—express in form, in feature, motion, speech; an awe invested her. You felt as if there was a consciousness in the very atmosphere that surrounded her, which communicated its thrill to you. There was something absolutely subduing in her presence—an overpowering something, that commanded silence, or, if you spoke, prevented you from speaking above your breath." Every word of the writer's description has weight, but we must be satisfied with quoting that of the sleep-walking scene, leaving readers to find the rest in its own place:—

> But the sleeping scene, where she walks and dreams! I could pity a murderess who should look upon that scene. The ghostly group that enter the tent and surround the couch of Richard bring with them not the tithe of the horror that attends that silent woman, Lady Macbeth walking in her sleep. Though pit, gallery, and boxes were crowded to suffocation, the chill of the grave seemed about you while you looked on her;—there was the hush and the damp of the charnel-house at midnight; you had a feeling as if you and the medical attendant, and lady-in-waiting, were alone with her; your flesh crept and your breathing became uneasy; you felt the tenaciousness of the spot which she was trying to rub out upon her hand; while the sigh of her remorse seemed to ascend from an unfathomable abyss of misery and despair.

There is much concerning minor matters in these lectures of which it would be pleasant to speak; but it is enough to say that, if any one wishes to read a fine and eloquent piece of criticism, he cannot do better than go to Sheridan Knowles's *Macbeth*.

THE NEW REFORMATION.*

THE Old Catholic movement has had the good or ill luck to draw upon itself the fire of three parties which have no other bond of union than this common hostility. To discredit, and if possible destroy it, is a matter of life and death to the Ultramontane party, for Ultramontanism and Old Catholicism are the negation of each other. They cannot agree to differ, for their differences are fundamental and necessarily irreconcilable. Till one or the other yields or is crushed a truce between them is logically impossible. And this is equally true of the relation between Old Catholicism on the one hand and scepticism and ultra-Protestantism on the other. For a time both ultra-Protestantism and scepticism adopted the policy of patronizing the Old Catholic movement the former hoping to utilize it against the historical view of the Church, the latter believing that it would run the career of Lamennais and Froschammer and reject the Christian faith altogether. The hopes of both have been signally disappointed, and their disappointment has found vent in a bitter resentment not always free from gross misrepresentation. The Old Catholics have taken their stand on history, and history is fatal alike to Ultramontanism and popular Protestantism. Ultramontanism, in either its ecclesiastical or theological aspect, is unknown to the era of the undisputed General Councils; and the same may be said with equal truth of Calvinism. The Churches of Calvin and of Manning would certainly have been repudiated by Athanasius and Augustine. Neither can have been developed out of the primitive Church, for development must be true to the essential attributes of its germ. The child is father to the man; but he cannot be sent to parrot or a chimpanzee. Ultramontanism and Calvinism are not developments, but revolutions, and the logical goal of both is scepticism. Admitting in word that Christianity is a revelation, a body of truth once for all given, they deny it in fact. In both systems the criterion of truth is not history, but individual illumination; in the one "private" verifying faculty" of each Christian; in the other, the verifying faculty" of one person, to whom the rest have agreed to delegate the exercise of their individual verifications.

It is not surprising, then, that Scepticism, Ultramontanism, and popular Protestantism, should have made common cause against Old Catholicism, and used the volume of "Theodorus" as a fulcrum for their combined assault. "Theodorus" himself, whoever he is, writes in a friendly spirit, and his book is evidently intended to put the position and principles of the Old Catholic party in a favourable light before the English public. But his benevolence is more apparent than his grasp of the question, and those who wish to master the issues involved in the Old Catholic movement must study them in the works of its recognized leaders and writers, such as Schulte, Friedberg, Mejer, Langen, Frommann, and Friedrich, to say nothing of Dr. Döllinger. It may suit the tactics of sceptics and Ultramontanes to treat the movement as a "microscopic spiritual faction," whose aims are as contemptible as the number of its adherents. Criticism of this sort may impose upon the ignorant, but the critics themselves can hardly share the misconceptions which they propagate. Nothing, for example, can be more fallacious than to estimate the strength and forecast the future of the Old Catholic movement by the rules of arithmetic. Let us grant, for the sake of argument, that the avowed Old Catholics among German-speaking populations do not exceed two hundred thousand, or even half that number. What then? When the Founder of Christianity left the earth the number of his avowed disciples was "about one hundred and twenty." Yet he would have been a shallow reasoner who would have argued from this that Christianity was but one of the many ephemeral sects which appeared about that time in Judea. When Edward VI. died the English nation submitted, with scarcely a show of resistance, to the rule of the Popish Queen Mary. Did that prove that the previous repudiation of Papal supremacy was merely the crotchet of a few professors and courtiers, and had no root in the national sentiment? The truth is, movements which are destined to succeed are necessarily of slow growth; it is the seed which falls upon stony ground that grows up rapidly, and as rapidly withers. The sympathy of the multitude is of course as necessary to the ultimate success of religious as of political reformations; but the multitude are slow to apprehend the significance of controversies of which the practical bearings do not appear on the surface. It was not because the doctrine of Papal supremacy or of Transubstantiation was capable of being refuted by historical or theological argument that the English Reformation at last succeeded, but because Englishmen resented the intermeddling of an Italian priest in their political and social life. And Luther's doctrine of justification by faith would never have been anything more than a barren speculation if Tetzel had not been there with his budget of in-

* *The New Reformation: a Narrative of the Old Catholic Movement from 1870 to the Present Time.* With an Historical Introduction. By Theodorus. London: Longmans & Co. 1875.

dulgences to give it a practical application. It is fortunate, for many reasons, that the battle of Old Catholicism should be fought on German soil. Nowhere else in the Roman Communion could the requisite learning and tenacity of purpose be found so happily blended. But, on the other hand, Germany offers in some respects a less promising field for the conflict than most other countries in which Roman Catholicism has an established position. Partly in consequence of the culture of its clergy, and partly by reason of its close contact with antagonistic systems, German Catholicism, even in its Ultramontane aspects, is for the most part free from the corruptions in doctrine and discipline which flourish in other countries. There are no crying scandals to which the preachers of Old Catholicism can point to illustrate their polemic against Ultramontanism. Yet he would be a rash man who would thence conclude that the Old Catholic movement has found no response among the Roman Catholic population of Germany. In several districts the people have risen against their Ultramontane pastors, and in more than one parish they have built a church and support a priest of their own.

So far we have argued on the ground selected by the adversaries of the Old Catholic movement. But the success and prospects of the movement cannot, in fact, be estimated fairly on that ground, for the number of its avowed adherents is no measure at all of its strength. The aim of its leaders is not to foment or perpetuate a schism, but to act as a reforming leaven within the Roman Church. They abstained for a considerable time from the formation of separate congregations, and for a still longer time from the creation of an Old Catholic Episcopate. "Theodorus" is quite accurate in saying that "wherever they were not debarred from access to the established ministrations of the Church, it was no part of their policy to found a rival communion." Even now it is no part of their policy to do anything tending to the breaking up of the Church of Rome. Their motto is reform, not revolution, and consequently they do not encourage secession from the ministrations of the ordinary parish priests except when un-Catholic terms of communion are imposed. The result is that sympathy with the Old Catholic movement, and wishes for its success, are by no means confined to those who have openly enrolled themselves under its banner. Even among the clergy a large number would side with Dr. Döllinger if they followed the spontaneous promptings of their consciences; and among the Roman Catholic laity the proportion of sympathizers is much larger.

The Old Catholics have been reproached with courting the aid of Prince Bismarck against their Ultramontane opponents. Bishop Reinkens, however, will be admitted to know more about that matter than the correspondents of English journals; and therefore we quote the following passage from one of his published speeches:—

> Our religious struggle against Rome was for a long time exceedingly irksome to the leading statesmen in Germany. We found not the smallest support amongst the governments, and only a partial negative protection.

And certainly the Falk laws are not conceived in the interest of the Old Catholics, nor did they derive any advantage, but much the contrary, from their operation. Indeed it is well known, for it has been publicly stated more than once, that Dr. Döllinger used his personal influence to induce the German Chancellor to mitigate the severity of his legislation against the Ultramontane party. Nor is it at all necessary to credit the Old Catholic leaders with any heroic chivalry in this intervention on behalf of their implacable foes: for their policy was dictated by the commonplace motive of regard for their own interests. The tergiversation of the German Episcopate in imposing as an article of faith a doctrine which they had denounced a short time before as an historical falsehood had shocked the national conscience, and alienated the respect of honest men. But Prince Bismarck's legislation gave the Bishops an opportunity of suffering for conscience sake, and thus of recovering to some extent the respect which, by their previous conduct, they had forfeited. In this way it happened that much of the sympathy which had been naturally attracted by the gallant bearing of Dr. Döllinger and his friends was transferred to their persecutors. What the effect of the Bismarckian legislation may be on the fortunes of Ultramontanism and Old Catholicism respectively, it is as yet too early to predict; but signs are not wanting to show that Ultramontanism may possibly be worsted in the struggle. Symptoms of weariness are visible here and there in the Ultramontane camp, and there are whispers abroad of a possible compromise. If Prince Bismarck succeeds in destroying the seminary system of clerical education, and in compelling the future priesthood of Germany to study in the national Universities, he will have struck a fatal blow at Ultramontanism as far as German Catholicism is concerned: for Vaticanism, Cardinal Manning being witness, cannot stand the scrutiny of independent historical inquiry.

A contemporary which now and then undertakes the defence of Ultramontanism for the purpose, apparently, of damaging the Church of England, asserted not long ago that the dogma of Papal infallibility is "a doctrine in which nothing is new but its official promulgation." This, however, is a sophistical way of stating the matter. It is true that the doctrine is not now as a debatable opinion in the Roman communion; but the "official promulgation" of a debatable opinion is, in fact, a new doctrine. We are told indeed that "there is a complete concurrence of scientific opinion against the allegation that infallibility is a revolutionary novelty." But of what kind of infallibility is this predicated? If the personal infallibility of the Pope is intended, the "concurrence of scientific opinion" is all against it; and nowhere was this concurrence more conspicuous than in the Vatican Council. The final surrender of the minority is without a parallel in ecclesiastical history. In the Council they rejected the doctrine on the ground that it was inconsistent with the plain facts of history, and in accepting it they have not attempted to reconcile it with historic truth. And so, again, with regard to the œcumenicity and freedom of the Council. The question, as respects the German Episcopate, is not whether the Council was really œcumenical and free, but whether the German Bishops declared that it was neither, and afterwards ate their own words. The following passage, quoted by "Theodorus," from a speech delivered by Bishop Reinkens at the Congress of Cologne, is hardly too severe, all things considered:—

> They again and again registered protests against the order of proceeding, and declared that the Council was not free, that its œcumenicity would be disputed; *and now they declare that they had after all the requisite freedom.* But the documentary evidence to the contrary is still on record in the acts. Further, they have declared in official documents that the doctrine of papal infallibility, both name and thing, was foreign to Christian antiquity; they have testified that even to this day it is unknown in name to entire dioceses and countries; they have boldly expressed their conviction that this is no Catholic doctrine, because it has no place either in Holy Scripture or in the traditions; they have said that if it be elevated into a dogma, the Church would commit suicide. In a paper circulated by Bishop Von Ketteler they have asserted that it would be a spectacle deserving the amazement of all centuries, if by such a dogma the Council should declare itself superfluous; *and now they come back and inform us that in substance this dogma has been taught in all centuries.* The bishops in Rome stood up as witnesses to the truth, and said, "We bear this witness, because the duty of our office commands us, because our oath requires it; we can testify no otherwise than we do"; and now, where is the duty of their office, where the oath which they swore? They said it would be the destruction of souls; *and now they themselves destroy souls!* Further, they declared in Rome, "We preach a doctrine of the relation between Church and State very different from the ecclesiastico-political system contained in the bulls of Boniface VIII. and Paul IV."—let us now add in the *Syllabus* of Pius IX.—according to which the Pope's sovereignty was exalted above every state dignity, judges, princes, and nations, constitutions and laws; they protested that it is impossible to remodel civil society by this system; now they come back and feign that they never preached any other doctrine; they attempt the impossible, and wonder that Governments should engage in conflicts with them, when they themselves predicted that a conflict was inevitable! At Rome they proved the design of Pius IX. by a mock council to abolish for ever the wholesome institution of councils; they proved this design by their own experience and from his own briefs, and now they deny what they proved. They registered reclamations and protests against all infringements on their dignity and office at the council on the part of the Pope and his officers, and declared that they only registered these reclamations as *perenne documentum*, as a testimony for ever, whereby before men and the terrible judgment of God they disclaimed the responsibility of all the consequences. Not two months later they took the responsibility upon their own shoulders; and so that document has become a testimony for ever, that in their appeal to God's terrible judgment they played a blasphemous game.

Those who have no access to original information will find the volume of "Theodorus" useful as a book of reference. It does not go deep into the question, nor is it always to be implicitly depended on either in its statement of facts or in its inferences. But it is written in an excellent spirit, and with an evident desire to be fair. We would mention, however, as an instance of hasty inference, the author's assertion that the discussion of the dogma of the Immaculate Conception in the Bonn Conference of 1874 "was remarkable for revealing among some members of the Anglican party a certain leaning towards the condemned tenet." And this, though he quotes immediately afterwards Dr. Liddon's emphatic declaration that he "rejected it whether as a dogma or a pious opinion." The author did not intend to misrepresent, else he would not have thus afforded the means of his own refutation; but a writer who was master of his subject would not have committed himself to so conspicuous a blunder.

DEMOSTHENES ON THE CROWN.*

IT would seem that to translate Demosthenes "On the Crown" has been deemed by common consent an appropriate feat for a lawyer who aims at distinction. Undaunted by the fire of criticism which assailed Lord Brougham's dashing and unequal version, unabashed by the admission of Mr. Charles Rann Kennedy (who, by the way, undertook in the notes to his translation a chivalrous defence of his brilliant predecessor's production) that "he must be a confident man who can satisfy himself upon such a task," not a few of our lawyers have committed themselves to this arduous adventure, whilst many others, we may be sure, have their "Crowns" wrapt up in paper and stowed away in their desks, to issue thence when a spirit of rivalry stimulates them to contend for the palm with the latest comer. It was but five years ago that a scholarly translation came, we fear without attracting much attention, from the pen of Mr. Brandt, a former scholar of Oriel and a member of the Inner Temple; and now Sir Robert Collier, already distinguished as an amateur painter, aspires to give proof of his scholarship as well as his legal acumen and experience by putting forth an English rendering of the most famous speech of the most renowned of Greek orators. In some respects the time of his appearance is fortunate. Greater predecessors have run the gauntlet. Sir R. Collier launches upon a sea where there are beacon lights to warn him, and on which of late years pilots have been multiplied. If some of Whiston's notes in the edition of the

* *The Oration of Demosthenes on the Crown.* Translated by the Right Hon. Sir Robert Collier. London: Longmans & Co. 1875.

Demosthenes and Æschines on the Crown. By G. A. Simcox, M.A., and W. H. Simcox, M.A. Oxford: Clarendon Press. 1872.

Bibliotheca Classica are doubtful, no handier or more useful annotated text within small compass than that of the late Mr. Arthur Holmes, of Clare, could be named to the student who wished to feel his way safely through the Greek. On a larger scale, yet in a compendious and convenient shape—especially as it contains within some two hundred and fifty pages the text of the two rival orations on the Crown, with ample notes and able introductory essays—the "Clarendon Press" volume of Messrs. Simcox throws new light on the subject, and brings all needful collateral matter within such compass that no one need be at fault respecting allusion or argument on either side. We do not quite hold with the practice of introductory dissertations stretching over 130 pages, and so discursive as to make us sigh for the old days of Latin notes and prefaces; but at all events a translator now runs much less risk of error, default, or misconstruction than formerly, and we are glad to make this passing recognition of an edition which was overlooked at the time of its publication. Not indeed that it is at all clear that Sir Robert Collier has availed himself of these later editions—possibly he may but have resuscitated and refurbished an early effort—though there are, it seems to us, plain traces of his resort to Mr. Kennedy's translation for guidance on difficult points, to say nothing of unconscious following in his very word-tracks in level passages. It is hardly possible that in § 7, where the authorship of the laws of Athens is referred to Solon, who is designated *εἶναι ὃν ὑμῖν καὶ δημοτικὸς*, Sir Robert Collier is not tracing Mr. Kennedy's lines when he translates "a friend to you and to popular rights," as against the other's, "a man friendly to you and to popular rights." The opening clause of § 10 runs almost word for word alike in both, and in § 223 Demosthenes's boast, *ὅτι . . . ἐγὼ τὴν τῆς εὐνοίας τάξιν ἐν τοῖς δεινοῖς οὐκ ἔλιπον*, reappears in Kennedy, "I alone deserted not the patriot's post in the hour of danger," and in Collier, "I alone deserted not the patriot's post in the hour of *peril*." It imputes no blame that we note such coincidences, but it may serve to show that the translator of the Oration of the Crown, since the appearance of Bohn's Classical Series, has his path made smoother for him than it was for Lord Brougham and other lawyers of his day.

In return for such advantages—although deprecating too much introductory and annotatory matter—we look for something further from modern translators; to wit, lucid parallelisms of Attic and English procedure and terminology in regard to the proceedings of the law courts, and clear, though brief, explanations of passing references in the course of the speech. On the first point, there is no fault to find with Sir R. Collier, who in his preface traces very clearly the marked difference between "trial by jury" at Athens and in England, and the restricted functions of the twelve jurymen in the latter as compared with their unlimited province in the former. He defines lucidly the meaning of the *γραφὴ παρανομῶν*, on which so much turns, and what is the distinction between a *ψήφισμα* and a *νόμος*. The grounds of Æschines's indictment against Ctesiphon, and the line of defence adopted by Demosthenes, are stated with commendable succinctness; and here and there a passing criticism, such as the remark upon Demosthenes's silence as to Æschines's imputation to him of bribery being possibly attributable to limited time for speaking ("one advantage, perhaps, of their procedure over ours"), shows a critical study of the whole forensic process, the results of which would have been welcome if even more thickly sown in notes and comments. But though it is conceivable that the translator in this case aims at an approximation in English to the original Greek masterpiece, and would hold that he is translating for the educated and not for the unlearned (a mistake, we suspect, because the only readers of an English Demosthenes will be those who cannot easily follow the Greek), it seems to us that a few brief notes to explain allusions in the course of the speech—*e.g.* § 29, *Εὐρυβάτου πράγμα*; § 87, *τὴν Μυσῶν λείαν καλουμένην*; § 326, *ὥσπερ ὀπωρώνης*—would not only make his work more acceptable to all possible readers, but also show his own familiarity with the literary stores of the orator he is representing. Such proverbial allusions as the first two of those which we have cited are very germane to the manner of a Greek speech—the second having reference to the defenceless state of the pirate-ridden Mysians in the absence of their king Telephus, and so to all helpless victims; the first to an historical traitor who, having taken Cresus's money to hire him mercenaries against Cyrus, straightway went and betrayed his employer. Had Sir Robert seen the necessity of inquiring into this latter reference with an eye to a note, he would have discovered that it was not the "part of an Eurybatus," but of an Eurybates, which Demosthenes charged Æschines with acting.

On the whole it is but fair to admit that the translation before us runs clearly and smoothly, and is calculated to give a good general idea of the arguments, artifices, thrusts, and counter-thrusts of the great orator. If it never rises to eloquence, on the other hand it is never rugged; and if it cannot be charged, to coin a Demosthenic word, with too much "Græcizing," at any rate it keeps in the main within the limits of textual exactness, and introduces nothing which is not conveyed directly or indirectly by the Greek. There is no pretence at a running commentary, which might have been a convenience and improvement, nor even a division of the speech into sections matching with those of Reiske or other text-makers for the purposes of comparing the Greek and the English. The object, therefore, seems to be to produce an English counterpart, if it may be, of a Greek oratorical masterpiece. One or two passages will suffice to show how far this object is attained. A good sample will be found in pp. 27-8, where Demosthenes justifies his having opposed subserviency to Philip, and even neutrality, at a time when that tyrant had shown by aggressions on his own allies that his object was simple and unscrupulous self-aggrandizement. "What language," he asks, "was I to hold when" (*cf.* §§ 82-3, *ἑώρων δ' αὐτὸν τὸν Φίλιππον—παραχωρῆσαι τῷ Φιλίππῳ*)

I beheld Philip, our antagonist, in pursuit of empire and sovereign sway, submitting to the loss of an eye, the fracture of a collar bone, the mutilation of a hand or leg; in short, readily sacrificing to fortune any portion of his body she might choose to seize upon, so that with the rest he might live in glory and renown? Who will have the audacity to assert that Philip, bad as he was at Pella, then an insignificant town, could possess such elevation of soul as to aspire to and compass the sovereignty of Greece, while you, Athenians, having before you day by day, in all that you hear and all that you see, the memorials of the greatness of your forefathers, could be capable of such degradation as *willingly* and *spontaneously* to surrender to Philip the liberties of Greece? This no man living will dare assert.

In the above passage the original is reproduced with good faith, even to the Englishing of *αὐτεπαγγέλτους ἐθελοντάς*, words which differ, as Messrs. Simcox point out, as *ultro* and *sponte*; and it would be unfair to deny its general title to a certain force and vigour. Still more so will be found the passage (§§ 218-20) which describes the effect of the news of the fall of Elatea on Athens, and the paralysis of all those who ought to have given counsel at that crisis, until "I, Demosthenes, arose"—until the orator and patriot came out as the man for the emergency. Here are a few lines of it:—

It what was required in the speaker then called for had been anxiety for the public safety, all of you, ay, and every other Athenian too, would have risen in your places, and mounted the tribune, for that you were all anxious to save the country, I know full well; if it had been wealth, the three hundred would have risen; if wealth and patriotism combined, all those who displayed both by the munificence of their subsequent contributions. But that crisis—that day called for a man not merely of wealth and patriotism, but for one who had followed the course of events from their commencement, and had arrived at a thorough comprehension of the motives of Philip's conduct, and of his ulterior designs; for without such comprehension, without careful study of remote as well as proximate causes, no man, were he ever so wealthy or ever so patriotic, could be qualified to form a sound judgment on the course to be pursued, or to give you trustworthy advice.—P. 68, *cf.* §§ 221-2.

This is adequately translated without the surplusage which here and there creeps into Sir Robert's renderings; as where, for instance, at § 110, he expands the question, *τίς δ' ἦν ὁ τῇ πόλει λέγων καὶ γράφων καὶ πράττων*, into "But who spoke in your assemblies, who proposed the measures, who saw to their execution?" instead of emulating the succinctness of the original, and of Mr. Kennedy's version, "But who advised, framed, executed the measures of State?" There are indeed some passages where a little manipulation and reconstruction in the English does fuller justice to the original sense, as in the case of the famous climax, which the ancient rhetoricians were so fond of citing, in § 230, *οὐκ εἶπον μὲν ταῦτα, οὐκ ἔγραψα δέ, οὐκ ἔγραψα μέν, οὐκ ἐπρέσβευσα δέ, οὐδ' ἐπρέσβευσα μέν, οὐκ ἔπεισα δὲ Θηβαίους*. Here there are various devices for giving an equivalent of the Greek construction—that of Kennedy and the Simcoxes, "did not make a speech without proposing a motion, &c.," coming as near to the force of the Greek as most. It must be owned, however, that Sir R. Collier has hit it off exceedingly happily in his way of putting its stages and steps—namely, "Not only did I make a speech, but I proposed a decree; not only did I propose the decree, but I went on the embassy; not only went I on the embassy, but I prevailed upon the Thebans."
